The greatest handicap of Negroes in getting fair employment on the basis of skill and ability, has come from organized labor itself, which either by written or unwritten laws and labor-union customs or traditions, barred Negroes from both the labor union and the job.

Despite the 18 years of New Deal and Fair Deal talk at Washington, with labor unions riding high, wide, and handsome, there are still reported to be 26 national and international labor unions that bar Negroes from the unions that control the best-paying jobs in America. This practice, on the part of labor unions operating in the North and South, has been more destructive and discouraging to the progress of the Negro worker than any other evils practiced in the country on account of race.

As I see it, the Taft-Hartley law which has so many Negro leaders, labor-union officials, and professional politicians squawking for its repeal provides for the right to work. Under this law, no longer can a worker be discharged for not joining a union. The anti-closed-shop provision of the Taft-Hartley law guarantees every person his God-given right to work and make an honest living regardless of race, creed, or color.

It is obvious that this provision of the Taft-Hartley law offers the Negro worker stronger protection as a group than the proposed FEPC, while the FEPC seeks to protect minority groups. The unions generally single out the Negro for discrimination.

What the union politicians claim to be asking the Government to do in the FEPC can be done in convention assembly. A weak FEPC as now operating in New York and Chicago offers little or no job security to Negro workers.

As I see it, the Senate should consider the right to work amendment to the FEPC bill now being proposed by Senator MCCLELLAN, Democrat, Arkansas.

Senator MCCLELLAN said he is working on an amendment that would also make it illegal to discriminate "because of membership or nonmembership in a labor union."

S. 1008 Threat to Robinson-Patman Act Cited by Original Sponsors—Spokesman for United States Wholesale Grocers' Association Warns Against Weakening Effect of S. 1008—Claims S. 1008 Is a Subterfuge "To Gloss or Conceal the Lethal Stabbing of Antitrust Laws"

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. PATMAN. Mr. Speaker, the United States Wholesale Grocers' Association was one of the original sponsors and supporters of the Robinson-Patman Act. This group of small-business men worked day and night to throw back the forces which would have perpetuated cutthroat pricing, price discrimination, and restraints of trade by the giant chain-store systems of our country.

This group of small-business men has been in the forefront of the fight to prevent the passage of S. 1008. At the convention recently held in Cincinnati, this fight was continued. An article by Harold O. Smith, Jr., executive vice president of the United States Wholesale Grocers' Association, Inc., which appeared in the New York Journal of Commerce on March 10, points up many of the dangers which will confront small business if S. 1008 is enacted into law. I commend to the Members of the House a careful reading of Mr. Smith's article, which follows in full:

WHOLESALERS' GROUP SEEKS CLOSER PROCESSOR ACCORDS

(By Harold O. Smith, Jr., executive vice president, United States Wholesale Grocers' Association, Inc.)

Wholesaler-manufacturer conferences will be an increasing important part of the annual conventions and mid-year meetings sponsored by the United States Wholesale Grocers' Association, Inc.

Working as a team, wholesalers and manufacturers will put into operation programs to aid retail grocers in better merchandising.

It is timely that we think soberly and act wisely—but get in there and pitch.

These are momentous times for all factors in the food and grocery trade.

Wartime scarcities and the sellers' market have given way to abundant supplies and even surpluses in many items.

TO FIGHT CHISELING

The past 14 years, under the Robinson-Patman Act, has placed the emphasis on efficient operations and good merchandising rather than chiseling in buying. As an association, we will continue our fight to keep it that way, strive to strengthen the law and oppose emasculating amendments.

The past is not where we are going to live. It is the responsibility of USWGA to help independent wholesale grocers and their retail grocery customers improve their position in their markets, assuring a stable future for the trade.

It is the responsibility of every member of the trade to support the efforts of USWGA in maintaining the American way of free enterprise. We must make certain that the protecting antimonopoly laws are not rendered ineffective since that would only lead us to a choice between private monopoly and Government monopoly.

UNITED APPROACH URGED

There will always be some difference of views, no matter how small a group may be. But, we believe that a united approach to the problems with manufacturers, wholesalers, and retailers, working together with confidence and integrity is the answer and will develop the aristocracy of service.

We have a great responsibility in that the biggest part of the family budget goes for food and other grocery items.

Before the Robinson-Patman Act large buying groups, such as national chains, sprang up and flourished on the tremendous extras they were able to wring out of their suppliers through their coercive pressure tactics. They also developed improved techniques of warehousing and merchandising.

Today, there are outstanding examples, among independent wholesale grocers, of the awakening in the trade.

Many big operators view with alarm their rapidly dwindling advantages when they realize the full meaning of wholesale grocers like Charlie Ragland, Tom Harrison, Bob Goff, Clem Kreckler, Van Salley, and a host of others.

How can the octopus organization hire enough top-flight warehouse executive personnel and retail store management to effectively compete with wide-awake owner-operated wholesale and retail grocery firms? The answer is plainly, they cannot compete with wide-awake independent wholesale grocers and retail grocers so long as the antitrust laws are strong enough to outlaw chiseling in buying. Therefore, they seek to drive a wedge into the antitrust laws or wreck the Robinson-Patman Act with the hope of personal advantage.

LEGAL SAFEGUARDS

Thrown into high light during the past year is the life or death necessity of the wholesaler and retailer maintaining unimpaired, the legal safeguards against price and other discrimination in favor of the big mass-buying organizations—safeguards that they attained at great expenditure of time, thought, and effort.

Insidious attacks have been made on the Robinson-Patman Act by forces which, to serve their own interests, would break down the prohibitions against unfair practices and restraints of trade.

Independent business, to too large an extent, has not realized the seriousness of these threats to its welfare. Seemingly, there has been forgetfulness of the conditions that prevailed prior to the passage of the Robinson-Patman Act—a time when one large chain system alone was receiving concessions amounting annually to $8,000,000 ($6,000,000 in extra quantity discounts and advertising allowances and $2,000,000 in brokerage fees)—concessions that the independent operator received not at all, or in very minor amounts.

MONOPOLY THREAT

Had the Robinson-Patman Act not stopped this racket run wild of advantages, exacted from manufacturers by concentrated purchasing power, grocery distribution would today be in the hands of a comparatively few large concerns, which might not include some independents who are now disposed to quibble over the dangers represented by S. 1008, the basing-point bill, and S. 2190, the brokerage raiding bill, and who delude themselves with thinking a few crumbs of benefit will come to them from enactment of these measures. They might indeed get the crumbs, but the chains and other big buyers would get the cake and the topping, too.

Truly no amendment to the Robinson-Patman Act, and the other antitrust laws, should be considered or approved which does not strengthen those statutes, and any amendment that weakens or confuses the language, provisions, or enforcement of those laws should be flatly and definitely rejected. No plea or subterfuge of clarification should be allowed to gloss or conceal the lethal stabbing of these protective measures. Obtaining the Robinson-Patman Act was hard bought. Any slicing of its effectiveness should be hard fought.

Red Professors in Our Educational Institutions

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1950

Mr. RANKIN. Mr. Speaker, Communists have mysterious ways their wonders to perform. One of those ways is to subsidize college professors throughout the United States to spread their communistic doctrines through the student bodies of America.

Several days ago, I pointed out that one Harlow Shapley, a Red professor in Harvard University, is going to try to dictate the appointments of members of the so-called Science Foundation in the event it is created. At this point, I am inserting a statement I received from the Committee on Un-American Activities showing the Communist-front organizations with which "Dr." Harlow Shapley has been affiliated.

The matter referred to follows:

[Information from the files of the Committee on Un-American Activities, U. S. House of Representatives]

MARCH 1, 1950.

For: Hon. JOHN E. RANKIN.
Subject: Harlow Shapley.

A search of the public records, files, and publications of the Committee on Un-American Activities has revealed the following information concerning Harlow Shapley:

A letterhead of the American Committee for Democracy and Intellectual Freedom, dated September 22, 1939, lists the name of Harlow Shapley as a member of the national committee of that organization. He signed the organization's open letter, setting forth a five-point program to aid refugees, which was sent to the Honorable Cordell Hull, Secretary of State. (See Daily Worker, July 25, 1940, p. 2.) Letterheads of the organization dated January 17, 1940, and May 26, 1940, list him as a member of the executive committee.

In 1942 the Special Committee on Un-American Activities found that "in recent years no other organization has been more clearly stamped as a Communist front" as the American Committee for Democracy and Intellectual Freedom. (Report of the special committee, dated June 25, 1942, p. 13.) Again, in 1944, the special committee cited the organization as a Communist front which has defended Communist teachers. (Rept. 1311 of the special committee, dated March 29, 1944.)

A folder of the Citizens' Committee To Free Earl Browder, issued in 1942, names Harlow Shapley as one of the prominent Americans who favored Presidential clemency for the release of Earl Browder, general secretary of the Communist Party in the United States. "When Earl Browder was in Atlanta Penitentiary serving a sentence involving his fraudulent passports, the Communist Party's front which agitated for his release was known as the Citizens' Committee To Free Earl Browder." (Report 1311 of the Special Committee on Un-American Activities, dated March 29, 1944, p. 6.) The Citizens' Committee To Free Earl Browder had previously been cited as a Communist organization by Attorney General Francis Biddle. (See CONGRESSIONAL RECORD, September 24, 1942, p. 7687.)

Harlow Shapley has been affiliated with the Council for Pan American Democracy as one of those who signed the open letter which that organization prepared and sent to the President of Brazil to save Luis Carlos Prestes, Brazilian Communist leader and former member of the executive committee of the Communist International. The list of signers appeared in the December 3, 1940, issue of New Masses (p. 29). The Council for Pan American Democracy, also known as the Conference for Pan American Democracy, has been cited as a Communist front in two reports of the Special Committee on Un-American Activities. (Report of June 25, 1942, p. 18; and report of March 29, 1944, pp. 161 and 164.)

The Council (or Conference) for Pan American Democracy has also been cited as subversive and Communist by Attorney General Tom Clark. (See press release of June 1, 1948, and September 21, 1948.)

The affiliation of Harlow Shapley with the League of American Writers is shown in the Daily Worker of July 31, 1940 (p. 7), which reveals that he was one of those who signed the League's open letter to Secretary of State Hull and the Pan-American Conference. The League of American Writers was cited as a Communist-front organization by the Special Committee on Un-American Activities in its reports of January 3, 1940, June 25, 1942, and March 29, 1944. Attorney General Francis Biddle found that the league was "founded under Communist auspices in 1945. The overt activities of the League of American Writers in the last 2 years leave little doubt of its Communist control." (CONGRESSIONAL RECORD, September 24, 1942, p. 7686.) The League of American Writers has also been cited as subversive and Communist by Attorney General Tom Clark. (See press releases of the United States Civil Service Commission dated June 1, and September 21, 1948.)

Harlow Shapley was one of the sponsors of the National Emergency Conference for Democratic Rights, as shown on a letterhead of that organization dated February 15, 1940. The Daily Worker of May 13, 1940 (pp. 1 and 5), disclosed that he was one of those who signed an open letter issued by that organization in support of one of its policies. The National Emergency Conference for Democratic Rights was cited as a Communist-front organization by the Special Committee on Un-American Activities in Report 1311 of March 29, 1944 (pp. 48 and 102).

According to the Daily Worker of March 18, 1945 (p. 3), Harlow Shapley was one of the signers of a statement issued by the National Federation for Constitutional Liberties which hailed the War Department order on Commissions for Communists. This organization was cited as a Communist-front by the Special Committee on Un-American Activities in report of June 25, 1942 (p. 20), and again in the report of March 29, 1944 (p. 50). Attorney General Biddle characterized the organization as "part of what Lenin called the solar system of organizations, ostensibly having no connection with the Communist Party, by which Communists attempt to create sympathizers and supporters of their program." (CONGRESSIONAL RECORD, September 24, 1942, p. 7687.) The National Federation for Constitutional Liberties has also been cited as "subversive and Communist" by Attorney General Tom Clark. (See press releases of the United States Civil Service Commission dated December 4, 1947, and September 21, 1948.)

Harlow Shapley was one of those who signed the New Masses letter to the President, as shown in the April 2, 1940, issue of New Masses (p. 21). Both the Special Committee on Un-American Activities and Attorney General Francis Biddle have cited New Masses as the weekly organ of the Communist Party. (See committee reports of June 25, 1942, p. 4, and March 29, 1944, p. 48; and Attorney General Biddle's citation which was printed in the CONGRESSIONAL RECORD of September 24, 1942, p. 7688.)

A telegram which was prepared by the New York Conference on Inalienable Rights and sent to President Roosevelt and Attorney General Jackson on behalf of the International Fur and Leather Workers' Union, defendants, was signed by Harlow Shapley. (See Daily Worker of September 17, 1940, p. 1). The New York Conference for Inalienable Rights was named as a Communist-front organization in Report 1311 of the Special Committee on Un-American Activities, dated March 29, 1944 (p. 149).

A letterhead of the Spanish refugee appeal of the joint anti-Fascist refugee committee, dated February 26, 1946, lists the name of Harlow Shapley as one of the national sponsors of that organization. An invitation to a dinner in New York City, March 31, 1948, listed Harlow Shapley as cochairman of the national reception committee for Mme. Irene Joliet-Curie, in this country for the purpose of making a speaking tour under the auspices of the joint anti-Fascist refugee committee. A letterhead of the organization dated April 28, 1949, still carried the name of Harlow Shapley as a sponsor.

The joint anti-Fascist refugee committee was cited as a Communist-front organization by the Special Committee on Un-American Activities in its report of March 29, 1944 (p. 174). The organization was cited as subversive and Communist by Attorney General Tom Clark. (See lists released to the press December 4, 1947, and September 21, 1948). On March 29, 1946, the chairman of the joint anti-Fascist refugee committee, and on April 16, 1946, members of the executive board of the organization, were cited for contempt of Congress for refusal to testify and produce records subpenaed by a congressional committee. All were convicted in the District of Columbia courts on June 27, 1947.

Harlow Shapley spoke at a meeting of the Brooklyn Chapter of the Congress of American Women, as shown in the Worker (Sunday edition of the Daily Worker) for September 28, 1947. Attorney General Tom Clark cited the Congress of American Women as subversive and Communist on lists furnished the Loyalty Review Board. (See press releases of June 1 and September 21, 1948.) The Congress was the subject of a special report by the Committee on Un-American Activities, October 23, 1949, in which it was stated that "the Congress of American Women is an affiliate of the Women's International Democratic Federation, which was founded and supported at all times by the international Communist movement. The purpose of these organizations is not to deal primarily with women's problems, as such, but rather to serve as a specialized arm of Soviet political warfare in the current peace campaign to disarm and demobilize the United States and democratic nations generally, in order to render them helpless in the face of the Communist drive for world conquest." (Report on the Congress of American Women, Committee on Un-American Activities, October 23, 1949, p. 1).

Harlow Shapley was one of those who signed a statement in defense of Gerhart

Eisler, which statement was printed in the Communist Daily Worker of June 28, 1947 (p. 6). On February 6, 1947, the Committee on Un-American Activities held public hearings concerning Gerhart Eisler, at which time Eisler was revealed to be an international Communist agent directing Communist activities in this country.

The Worker of April 13, 1947 (p. 3M), reprinted a speech which had been delivered by Harlow Shapley. The Worker is the Sunday edition of the Communist Party's official organ, the Daily Worker.

Harlow Shapley was one of the sponsors of the Bill of Rights Conference of the Civil Rights Congress, held in New York City July 16-17, 1949 (see Call to the Conference, p. 4; and Daily Worker June 17, 1949, p. 5).

The Civil Rights Congress was formed in April 1946 as a merger of two other Communist-front organizations (International Labor Defense and National Federation for Constitutional Liberties); it is "dedicated not to the broader issues of civil liberties, but specifically to the defense of individual Communists and the Communist Party" and "controlled by individuals who are either members of the Communist Party or openly loyal to it." (Report 1115 of the Committee on Un-American Activities dated September 2, 1947, pp. 2 and 19.) Attorney Gen. Tom Clark cited the Civil Rights Congress as subversive and Communist on lists furnished the Loyalty Review Board. (See press releases of December 4, 1947, and September 21, 1948.)

Harlow Shapley was one of the sponsors of the Cultural and Scientific Conference for World Peace, held in New York City March 25-27, 1949, under the auspices of the National Council of the Arts, Sciences and Professions. (See Conference Program, p. 13; and Conference Call); he was chairman of the program committee of the conference (Conference Program, p. 3); and also chairman of the National Council of the Arts, Sciences and Professions (letterhead received January 1949.)

"Parading under the imposing title of the Scientific and Cultural Conference for World Peace, the gathering at the Waldorf-Astoria Hotel in New York City on March 25, 26, and 27, 1949, was actually a supermobilization of the inveterate wheelhorses and supporters of the Communist Party and its auxiliary organizations." (From a Review of the Scientific and Cultural Conference for World Peace, released by the Committee on Un-American Activities April 19, 1949, p. 1.)

An interview with Dr. Harlow Shapley by Abraham Chapman was reported in the March (1949) issue of Fraternal Outlook. Mr. Chapman relates that "no gathering of artists and scientists has aroused as much interest as this conference (Cultural and Scientific Conference * * *). The United States State Department issued a statement criticizing the conference in advance of its deliberations. Most American newspapers featured a wide assortment of attacks on the conference. To ascertain the true character, scope, and purpose of this unprecedented gathering, I interviewed Professor Shapley (chairman) * * * on the eve of the conference. * * * Professor Shapley personifies the highest achievements of American science. Born in Missouri and educated at the University of Missouri and Princeton University, he rose rapidly in his field, attaining degrees and honorary degrees from many universities here and abroad. From 1914 to 1921 he was astronomer at the Mount Wilson Observatory in California, and in 1921, while still a young man in his thirties, he was appointed director of the Harvard Observatory, a post he holds with distinction. He is a past president of the American Academy of Arts and Sciences and has won awards and honorary degrees for his research and scientific work from universities and scientific bodies all over the world. He is without question one of the world's top-ranking scientists."

Fraternal Outlook is the official publication of the International Workers Order, "one of the strongest Communist organizations" (Attorney General Francis Biddle, CONGRESSIONAL RECORD, September 24, 1942, p. 7688). The organization has also been cited several times by the Special Committee on Un-American Activities (reports of January 3, 1939, March 29, 1944, January 3, 1940, and June 25, 1942); it was cited as subversive and Communist by Attorney General Tom Clark (see press releases of December 4, 1947, and September 21, 1948).

Mr. Speaker, if we are going to permit this spread of communism through our educational institutions to continue, then God save America.

American Give-Away Mania

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I include a very excellent article by Mr. Henry Hazlitt, which appears in the current issue of Newsweek. I commend it to all Members as it relates to the ECA bill which will soon be under consideration by the House. It is time that some common sense be used in the further expenditure of taxpayers' dollars that we do not have. Reckless spending is the order of the day under Truman's New Deal "Fair Deal" program. This "Deal" is fair to everybody but the American people.

THE AMERICAN GIVE-AWAY MANIA
(By Henry Hazlitt)

The administration is now possessed with a mania for "lending" or giving away the American taxpayer's money to any foreign government that it can coax into taking it. This mania grows by what it feeds on. The Marshall plan is only one channel for it. In addition there are the Export-Import Bank, the International Bank, the International Fund, the arms aid program, and the proposed global catch-all, point 4. Our foreign policy can almost be summed up in four words: "Give 'em more money."

If none of these Government hand-outs had been devised, Europeans would still have had great need for American capital. They would have had to apply for private loans. And they could have got these only by restoring the confidence of American private investors. It is not difficult to specify the reforms they would have had to make to inspire such confidence:

1. They would have had to assure anybody who put money into Europe that he could get it out again. This means that they would have had to make their own currencies freely convertible into dollars. They could have done this simply by dismantling their wartime exchange control.

2. They would have had to assure foreigners holding pounds, francs, or lire that these currencies would not depreciate. This means that they would have had to halt monetary inflation. To do this they would have had to return to balanced budgets.

3. To return to balanced budgets European governments would have had to give up nationalization, which has meant huge deficits in the nationalized industries. They would have had to reduce to manageable dimensions food subsidies and overgrown relief and social-security programs.

4. They would have had to stop threatening still further nationalization, expropriation, and seizure.

5. They would have had to relax or abandon controls over wages, prices, interest rates, and profits.

6. They would have had to reduce excessive taxation.

If Europe had been obliged to attract private capital, such reforms would already have gone far farther than they have. They would have brought not only far more production, but the freer and more balanced trade, the currency convertibility, the multilateralism, and the integration for which our ECA officials have made futile exhortations. The reason for their futility is clear. As long as foreign governments can pick up easy money from our own Government they don't have to make these reforms.

As a result European recovery has not only been slow and precarious, but the recovery that has taken place has been in the wrong direction. Production indexes have gone up; but the added production is not primarily for export, as it should be, but for home consumption. So foreign trade is still unbalanced, and Europe's self-induced dollar shortage remains.

The dilemma of the Marshall plan and of point 4, the dilemma of every government-to-government hand-out, is plain. If our Government imposes no conditions on its hand-out, the money is worse than wasted. If it does impose conditions, they provoke foreign resentment.

Our ECA officials vacillate between the horns of this dilemma. First they say that they won't interfere in the internal affairs of these countries. Then, of course, the European governments getting our aid make in return none of the economic reforms so desperately needed. The British bureaucrats repay us by discriminating against American motion pictures and American oil companies. The French repay us by threatening the sale of Coca-Cola. Then our ECA officials talk of getting tough. But when it comes to a show-down they cannot risk insisting on reforms that would be really effective. So we end by subsidizing foreign-government discrimination against our own industries.

In short, Government loan and gift programs like the Marshall plan and point 4 do not promote world recovery; they retard it. We are subsidizing and prolonging statism and socialism abroad, and imperiling our own free-enterprise system to do it.

Statement of S. Abbot Smith

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the statement of Mr. S. Abbot Smith, president of the Thomas Strahan Co., Chelsea, Mass., before the House Ways and Means Committee on February 28, 1950. I believe this statement to be worthy of the serious consideration of the Members of the Congress as he is speaking in behalf of small business.

The statement follows:

Mr. Chairman and members of the committee, my name is S. Abbot Smith. I am president of Thomas Strahan Co., a small company manufacturing fine wallpapers in Chelsea, Mass. I am also a director of the

Smaller Business Association of New England, Inc., and a member of their committee on taxation.

The first objective of any tax bill is to raise the revenue needed but how it is done may produce very different results. We might girdle a maple tree when collecting sap in the spring, which would produce a lot of sap once, but never again. We don't girdle it, but tap the tree to obtain the sap and not injure its growth. Likewise with taxes, we want to obtain the revenue but at the same time want to keep business and employment expanding with consequent growth in Treasury revenues.

Taxation is at the root of one of the most important problems of all business, especially small business, namely, the lack of long-term and equity capital financing. Consequently, if we can improve the tax situation we may be able to so help small business that some of the suggested legislative remedies may be unnecessary.

If small businesses were able to retain a larger part of their profits, they would to that extent be able to plow back those earnings, thus lessening the need for that outside financing which is so difficult to obtain for growth and expansion.

With that end in mind, Congressman PHILBIN last April at the request of Smaller Business Association of New England, Inc., introduced a bill, H. R. 4431, which would exempt from Federal income tax the first $25,000 of corporate income. This exemption would apply to all corporations but it would of course be of more importance to small businesses than to large ones.

Another provision of this same bill would eliminate the so-called notch rates on corporate income between $25,000 and $50,000. I am glad to see that the Treasury recognizes the injustice of those higher rates and also recommends their elimination.

This bill if passed would enable more small businesses to grow and expand by plowing back earnings, thus creating more jobs, more buying power and so directly increased revenue for the Treasury. Another result would be that as these small companies are thus strengthened it would be easier for them to obtain short-term financing at once. In the long run, too, it is probable that investors would look upon them more favorably when it came to supplying equity capital.

It is also encouraging to see that the Treasury proposes the reduction of certain excise taxes, especially those on transportation of property and persons. Obviously, they are treated as a part of cost by each processor and so pyramid rapidly, raising costs and hence prices to the ultimate consumer way out of proportion to the tax itself.

Small businesses are especially hurt by these taxes. Since many of them were imposed or raised as a war measure to discourage the use of the materials and services, not primarily to raise revenue, they should be eliminated now when the need is to encourage business and the use of those same materials and services, thus creating more jobs and raising incomes.

The Smaller Business Association of New England, Inc., has for some time pointed out the injustice of allowing competing businesses to be tax-exempt just because they are owned by educational, charitable, or cooperative institutions. This exemption not only gives them an unfair advantage as competitors but whatever tax burden they escape must be shifted to the shoulders of those who do pay taxes. We believe, therefore, that if the earnings of cooperatives are retained in the business for business purposes they should pay the same taxes as those with whom they are competing. We believe also that businesses run or owned by charitable and educational institutions but not directly connected with their main purposes should likewise pay the same taxes as their competitors.

We applaud the Treasury suggestion of a 5-year carry-over and 1-year carry-back of earnings. Our association has for some time stressed the fact that the income of small businesses fluctuates much more widely from year to year than does that of big companies, so a provision of this kind is essential to iron out somewhat the peaks and valleys.

Believing as we do that the health and prosperity of small business have a major influence on the strength of the economy of the United States and on the revenues of the Treasury, we strongly urge that your committee give consideration to several other points not yet touched on. One is flexible depreciation rates so that businesses may charge off their equipment as best suits their interest and thus stimulate capital expenditures and growth. This would be of especial value to small businesses. No more than 100 percent could be charged off anyway, the companies would have better up-to-date equipment, the Treasury would gain ultimately from healthier businesses, the public from better products and services at lower prices.

We believe, too, that some steps, even though necessarily small now, should be taken toward the reduction and eventual elimination of the double tax on dividends. Only in this way can we start to loosen up the flow of equity capital which alone can keep business expanding and the standard of living constantly rising in our free enterprise economy.

It is perhaps outside our discussion today but I should like to remind you, gentlemen, that our Smaller Business Association of New England, Inc., feels strongly it would be most helpful to all business to eliminate the present tax exemptions accorded State and municipal bonds. Not only does being able to borrow so easily encourage unnecessary spending and extravagance but, more important, we feel those bonds are a haven for capital which would otherwise be invested in industry where it would be put to work expanding our whole economy, i. e., those bonds are draining off potential equity capital badly needed by business.

Finally, gentlemen, when writing the new tax bill, please make it as simple and clear as possible and direct the Treasury to make their forms simple and clear also. That alone would be a boon to small business.

I recognize that in this statement, I have outlined several proposals which would at the moment decrease Treasury income, while making only two which would produce an immediate increase. However, we small-business men are hopeful that governmental expenditures can and will be reduced at every possible point by the firm determination of top operating officials like Secretary of Defense Johnson, and Secretary of the Treasury Snyder. We read that plugging tax loopholes will also produce more income and better enforcement of present tax laws.

In the final analysis, however, we must all remember that the bulk of our revenue comes from business. Oppressive taxes retard business, may kill the goose that lays the golden eggs. As a practical matter, just as a mountain climber can carry a heavier pack farther and longer if it is well adjusted, so business can pay more to the Treasury if the revenues are raised through a system of taxation carefully devised to hinder its growth and expansion as little as possible. Lower rates with large volume will produce more than high rates and low volume and will provide more jobs, too.

The present tax structure bears too heavily on small business, both directly and indirectly. Did you ever stop to think how many thousand more employees the Treasury would have to hire if we businessmen did not collect so many of their taxes for them—and without recompense? (To be sure, the cost goes into general expense and is charged off before taxes, but what about the company which makes no profit? The expense of collecting those taxes comes right out of that chap's pocket.)

When 1 big company with 2,300 employees is about to shut down, everybody scurries around trying to help it continue in business. On the other hand, if a hundred small companies with 23 employees each were to shut down it would cause scarcely a ripple. Small-business failures are on the increase.

Our tax system must be such as to foster the small businesses upon which almost half of the people of this country are dependent for jobs, which are the mainstay of so many of our communities, which are the seedbed for our big business, the best customers of big business, in short—the backbone of our American economy.

I am sorry it is not possible to open the whole tax structure for review and revision because both are badly needed but we all hope that the new tax bill will at least provide for:

1. Exemption from income tax of the first $25,000 of corporate profits.
2. Elimination of wartime excise taxes.
3. Taxation of charitable, educational, and cooperative organizations on same basis as competing businesses.
4. Five-year carry-over and 1-year carry-back of earnings.
5. Flexible depreciation rates.
6. A start toward elimination of double taxation of dividends.
7. Simplification of tax law and forms.

Thank you, gentlemen, for giving me this opportunity to lay before you these ideas of the Smaller Business Association of New England, Inc. which, if adopted, we believe would be of great help to business in general and especially to small business.

Hell-Bent for What?

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. ANGELL. Mr. Speaker, pursuant to permission heretofore granted, I include as part of my remarks an editorial entitled "Hell-Bent for What?" which appeared in the Oregon Journal on March 5, 1950:

HELL-BENT FOR WHAT?

Progress report for 1950 A. D.—Lucifer to Satan: "Plans are progressing nicely to blow the world to hell."

Ridiculous? Not at all. This could well be the last generation of so-called civilized men. There's no place to hide our civilization if ever the A-bomb and the H-bomb are released with insane furies behind them. Men, women, and children will die like flies. That is, the lucky ones will die. A few will be unfortunate enough to live.

What if Hitler had possessed a large stock pile of A-bombs and H-bombs and means of getting them all over the world? Do you think he would have hesitated in taking civilization along in his suicide? In his crazed mind he would have thought it a great and heroic joke. There have been other Hitlers in history. There may be another.

Almost 5 years have passed since the fateful day that a special crew of the United States Air Force dropped an atomic bomb over Hiroshima, followed by another bomb in a few days on Nagasaki. Those terrible explosions, utilizing the primary forces of nature, left

in their wake almost 100,000 men, women, and children dead, and about twice that number injured in varying degrees.

NOW A NEW HORROR

Almost 5 years have passed. The atomic bombs have been improved. Tests at Bikini and Eniwetok showed greater destructive power. President Truman has announced Russia has the atomic bomb—and that was expected. President Truman announces the decision to go ahead with the hydrogen bomb, many times more powerful and destructive than the atomic bomb.

We talk of the cold war, of civilian defense and start to reorganize that defense; we talk of bombs and atomic spies; we see a mockery made of justice and democracy in the Soviet satellite states. In many mouths there is the continuing assertion that war is inevitable. We see nations again playing the old balance-of-power game, increasing armaments, and using diplomacy as the basis for obtaining advantages against potential enemies.

It is a game as old as history. It is a game that always has led to war.

Are the people of Oregon so mad at the people of Bessarabia that we feel that all of them should be killed off—wiped out, every man, woman, and child? Are the people of Budapest so angry at the people of Montreal that they'd like to put every one of them in an unmarked grave?

Of course not, and it seems absurd even to talk that way. But that's exactly about what will happen in an atomic war—atomic and hydrogen bombs are not discriminating against any flesh, or sex, or age, or nationality.

Why then are the people of the world allowing an atomic arms race, the results of which may well be atomic war and the virtual destruction of world civilization? Before discussing atomic control—its failure to date—we should keep four things in mind:

1. There will be no winners in an atomic war.

2. We, the United States, set the precedent for the use of atomic bombs at Hiroshima and Nagasaki. In 1947 former Secretary of War Henry L. Stimson asserted that nine men made the decision to use the atomic bomb against Japan as "our least abhorrent choice" to save American lives. But, once there is war, any nation can use that argument.

3. Virtually all nations can make atomic bombs, and possibly hydrogen bombs. It is no secret. As early as March 1946 the Atomic scientists of Chicago told us this: "All large nations, and perhaps some smaller ones as well, will be able to produce atomic bombs within not more than 10 years, and some will probably be able to do so within less than 5 years. In fact, it is possible that the U. S. S. R., for example, will have atomic bombs within 2 or 3 years, quite independently of any technical disclosures which may be made on our side." (This statement, remember, was made 4 years ago.)

4. We cannot expect to meet on a common moral ground for agreement between Christian nations and Russia. Our morals are based upon the teachings of the Bible and Christ. Soviet Russia's are based upon Marxian materialism. Any agreement reached must be on check and balance based upon mutual healthy suspicion and inspection, for the very simple reason we cannot give an oath of faith before the same God.

Now, with those things in mind, let us look at the record—

Shortly after the Japanese blasts and ending of the war, there was definite worldwide action to try to act like human beings. In London the United Nations Political and Security Commission adopted unanimously the Moscow resolution, previously worked out at Moscow by representatives of Russia, Britain, United States, China, and Canada, for establishment of an Atomic Commission. The resolution stated that "the work of the Commission should proceed by separate stages, the successful completion of each of which will develop the necessary confidence of the world before the next stage is undertaken."

This met with general approval—as a start, at least.

TALK, IDLE TALK

Many significant statements were made in this country in 1946. Senator TYDINGS, of Maryland, demanded in the Senate that President Truman immediately call a world disarmament conference to prevent an atomic world war. Dr. Arthur H. Compton, Nobel peace prize winner, urged all nations to surrender the right to make war by putting the atomic bomb and other weapons of mass destruction exclusively in the hands of an international police force.

And thus the talk went. This country, at least, was ready to surrender part of its sovereignty, it was indicated, to make atomic control really work. There were similar expressions from all over the world. Russian dictators remained comparatively quiet except for periodic blasts about warmongers.

In June 1946, elder statesman Bernard Baruch made his proposal for the international control of atomic energy, outlawing bombs, providing for practical inspection to see that outlawed bomb making was not violated.

He asked for a security program not composed merely of pious thoughts but of enforceable sanctions—an international law with teeth in it.

HOPE IN THE UN

Here in the United Nations was the hope. Seven members of the UN Security Council, the Atomic Energy Commission's parent organization, sat listening—The Netherlands, Poland, Russia, the United Kingdom, Australia, China, and France. Also at the table were representatives of the United States, Mexico, Brazil, Canada, and Egypt. Here was the power to institute a practical plan. Here was the hope for a world at peace. Here was the hope of settling the fears generated by the awesome atomic bomb.

Baruch laid down this simple plan:

"When an adequate system for control of atomic energy, including the renunciation of the bomb as a weapon, has been agreed upon and put into effective operation and suitable punishments set up for the violations of the rules of control which are to be stigmatized as international crimes, we propose that—

"1. Manufacture of atomic bombs shall stop.

"2. Existing bombs shall be disposed of pursuant to the terms of the treaty; and

"3. The authority shall be in possession of full information as to the know-how for the production of atomic energy."

He emphasized that the matter of punishment "lies at the very heart of our present security system," and pointed out that such punishment goes directly to the veto power contained in the Charter of the UN.

"There must be no veto to protect those who violate their solemn agreements not to develop or use atomic energy for destructive purposes," he stated. (Any one of the big five—China, Britain, France, Russia, United States—could veto any punishment action.)

This meant giving up a certain amount of national sovereignty for common world good and security. It was a new and daring plan that met the problem honestly. It was generally applauded.

But as time went on it became apparent that Russia would not give up the veto power; it would not consent to inspections. The plan bogged down in red tape and propaganda contributed largely by the vocal Soviet delegation. Finally, at Lake Success, on March 6, 1947, Andrei Gromyko jolted the hopes of immediate control with the blunt statement that—

1. Russia will not permit UN agents to roam unrestricted through the Soviet in search of illegal atomic activities.

2. Russia will not let an international agency manage its atomic activities.

3. Russia will not give up its power to veto the punishment of a country caught making atomic bombs illegally.

4. Russia will find it "difficult, if not impossible," to agree to any kind of control machinery unless the United States first junks its existing atomic bombs.

"VAGUE INSPECTION"

What plan, then, did Russia have? Its plan was to set up vague inspection and control organs under a commission which would make decisions by majority rules and the veto power would not apply in them. Their work, however, would be subject to review by the Security Council, where there was the veto power. They proposed a conference to outlaw the bomb.

But all knew that a statement to outlaw the bomb without inspection and enforcement meant nothing. And so time went on.

A conference was held in Paris the fall of 1948 between foreign ministers. Atomic control was discussed. Soviet Deputy Foreign Minister Vishinsky delivered bombastic abuse at the United States. Nothing was settled on atomic matters.

The year 1949 saw little, if anything, accomplished on atomic control. Berlin blockades, Communists in China, seething in the Balkans, Tito's mutiny, words and words, more armaments. From time to time someone who could tear himself away from atomic spy scares and international anglings and fulminations would ask that the "big brass" of the major countries get together to solve this atomic control problem.

ARMAMENT RACE

We enter 1950, facing a dismal and frightening picture—bigger and more powerful bombs, bigger armies and air forces, fear and mistrust, a weakened United Nations unable even to settle such a minor international problem as Jerusalem. The A-bomb and the H-bomb swing pendulum-like closer to humanity.

President Truman on February 10 announced he isn't budging from the Baruch plan for international inspection and asserts a little cooperation from Russia is all that is needed to set up effective world atomic controls.

Will that cooperation be forthcoming? It is time, past time, to find out. It is time for meeting at the very highest levels.

It is time to make another attempt to remove the threat of destruction from world civilization. Now we are on the way to create our own hell here on earth.

St. Patrick's Day, 1950

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. LANE. Mr. Speaker, I wish to include the St. Patrick's Day greetings of Tom Brawders, of New York City, which I feel are most appropriate this week due to the fact that we celebrate St. Patrick's Day on March 17.

This statement of Mr. Brawders contains some good common-sense advice and is worthy of the serious consideration of every Member of the Congress. I sincerely hope that by the time another

Irish week rolls around in the history of our country that Ireland will be blessed with the abolition of partition.

TOM BRAWDERS' ST. PATRICK'S DAY GREETINGS, 1950

This year I am devoting my annual St. Patrick Day greeting card to my personal friends and public officials, where it might help, throughout the United States. My one desire for 1950 is that partition of Ireland will get the consideration it deserves from those who are in position to help. You and I can help by passing along the truth as to the tyranny that allows this desperate condition to exist.

In the summers of 1946–47–48 and 1949, wherever I was registered throughout the 26-county area, each hotel was packed with English and 6-county guests. The hotelkeepers certainly showed no animosity toward them in any way. It proved to me that the average Irishman, whether he lived within the 6-county or the 26-county area could get along together if there was no official obstruction. I met shipyard workers, bank clerks, civil-service employees, etc., from the Belfast vicinity whom, after meeting at the dining-room table for, say a day or two, you might get in a political question, with practically the same answer. When you would take the liberty to say, "What is wrong between the South, where you come, annually, to enjoy the good wholesome living conditions for your holiday, and the North, that even up to this date is merely getting sufficient rationed subsistence as will keep body and soul together?" The answer, to me, for four consecutive summers, has almost been identical: "What can we do about it, if our government refuses to come into diplomatic agreement with the Dublin government?"

During the past summer I enjoyed my usual annual vacation in Ireland and spent 1 week of my sojourn in and around Belfast. Before World War II, I had often included such lovely spots of interest as Warrenpoint, Glens of Antrim, the unforgettable coast road to the Giants Causeway, Portrush, and Derry. These summers the natives of those lovely six-county resorts are to be found on the various hotel registers at Killarney, Tralee, Rosslare Strand, Kilkee, and Dublin. All happy in the 26 counties—the land of plenty. To me this partition of Irish people, who constantly demonstrate that they could live happily together, is one of the most ridiculous of geographical fantasies.

Our Government, down through the years, has definitely shown sympathy that has materialized into justice. What about these six counties? Take a look at the map on the cover of this folder. It could remind you of the State of Maine remaining aloof, for one reason or another, from the rest of our Union. Under these geographical conditions the six counties have the most violated freedom of elections. These six counties, of course, vote strictly for the Crown; exactly as if the Beacon Hill section of Boston was gerrymandered from the rest of the city; or the Park Avenue section of New York spoke for the rest of the electorate.

Ulster, down through the centuries, contained nine counties, but the Government of Ireland Act, 1920, tossed off Donegal, Monaghan, and Cavan and formed a government consisting of Armagh, Antrim, Tyrone, Londonderry, Down, and Fermanagh.

We here in the good old United States are continually putting pressure on our governmental representatives, pleading for a fair plebiscite in some far-away place. Yet in Ireland, the birthplace of our parents, where there exists the most severe example of gerrymandered elections, we sit by without one word of protest. I know that many of us make governmental appeals; get them in the CONGRESSIONAL RECORD and then sit back. That is merely the start—not the finish. Your governmental representative is a busy, poorly paid individual who has so many calls on his time that unless you keep constantly on the subject it will lapse behind the immediate pressure of other important items on his agenda. We, of Irish descent, are definitely looking for someone in Washington powerful enough, politically, to fight and win enough support to be heard in the British Colonial Office in London, saying, "we demand a plebescite of the 32 counties of Ireland"—or even dare them to hold an election in the original nine counties of Ulster.

In Belfast a prominent businessman, sitting at my hotel luncheon table, chock full of conversation and austerity food, came sort of sharp when the partition subject was broached. "How is it, sir," asked my table neighbor, "that you first- and second-generation Irish, in America, hate England so much?

"Only, sir, because we want to see the 32 counties of Ireland enjoying the same mode of life and opportunity that our fathers and mothers, irrespective of their native county, enjoy in America. As for hating England, we will go along with you on that item, too. Name one country that was, or is, a colony that does not feel the same way? The policy of your British Colonial Office down through the centuries from the days of our Thirteen Colonies, down to the present, has never changed. In America, sir, we always say, 'freedom is everybody's business' and that goes for Ireland, too, until her 32 counties are all of one government. Our help will continue to come from across the seas in any way the majority of Irish people ask for it. They are the ones to say in which manner the 6 counties are to come over to the other 26.

"This I will say: That no colony of England, America included, ever got complete severance from your colonial office through any graceful, diplomatic gesture. There is only one medicine that England doesn't like—even though it is her greatest reliance—the bayonet. As we say in America, 'England likes to dish it out—but she can't take it.' In other words, England can hold the six counties only by the enormous number of military personnel that she now has throughout these held counties.

"Should the people of the 26 counties decide to do it 'the Tom Barry way' (remember him?)—America will say, it is the will of the majority of Irish people, and help accordingly. Sir, may I give you my personal opinion, humble as it is, from a first-generation Kilkenny man, who loves Ireland, as to an immediate cure for all partition evils? Take the British soldiers out of the six counties and the question will automatically rectify itself."

Red Termites

REMARKS
OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. RANKIN. Mr. Speaker, I agree with the statement of the gentleman from Georgia [Mr. COX].

America is in graver danger from within than she has even been before at any time in her history.

The petted enemies within our gates who are plotting the destruction of our Government are more bold, more aggressive, and more effective than they have ever been before at any time.

Since my extension of remarks in which I included the Communist record of Albert Einstein it has developed that said Einstein was instrumental in getting into this country Klaus Fuchs, one of the most dangerous Communists who ever betrayed this country, as well as Great Britain, and who has just been convicted of treason in the British courts.

It has developed that Einstein was instrumental in getting in this country Gerhart Eisler, who is now leading the Communist forces in Germany.

Turning from faker Einstein to the other enemies within our gates, I want to quote from a part of a broadcast made by the Honorable Henry J. Taylor on February 13, 1950, which every American should read.

The matter referred to follows:

RED TERMITES' PROGRESS

Subject: Have you further information on the Communist spy plot, Mr. Taylor?

Mr. TAYLOR. Certainly. The Red termites have eaten into our Government house so that the pillars of security just are not there any more. Listen, if you will, to the case of Nathan Gregory Silvermaster.

Courageous J. Edgar Hoover, who fears no one, and the FBI have a file on this man a mile long. So did the House Un-American Affairs Committee, until that committee was throttled by the present Congress. Now the committee appears ready to come up with one whitewash after another.

HE CLIMBED UP AND UP—ON THE INSIDE

My information about Nathan Gregory Silvermaster goes back nearly 9 years. On my return from trips overseas during the war—especially from Finland and Turkey and from Germany itself—I would report, at the request of the Army, to war agencies on economic affairs affecting the enemy abroad. During that time I saw Nathan Gregory Silvermaster sitting in Washington as head economist of the Board of Economic Warfare, of all places.

He is Russian-born, and a former $10,000-a-year, top-pay Government economist on the public pay roll.

Silvermaster was born in Odessa. He came here in 1915. He sailed into Federal authority, and onto the Government pay roll in 1935—2 years after Alger Hiss.

Starting in the Resettlement Administration, he moved to the Maritime Labor Board as chief economist, then to the Labor Division of the Farm Security Administration, as its director, no less. In short, he climbed up and up, and on the inside, like Alger Hiss.

By 1944 Silvermaster was over in the Treasury Department, and he finally wound up with the RFC. Along the way, just as Alger Hiss sat in on international conferences with the Russians, Silvermaster helped Assistant Secretary of Treasury Harry Dexter White—later named by Whittaker Chambers and other confessed Communists as a source of information for Stalin—to draw up the Bretton Woods international conference agreement for American funds, which involved the Soviet Union.

Meanwhile, Silvermaster served as United States Department of Commerce representative on the Inter-Department Committee which decided what American exports, including uranium, could or should not be sent to Russia.

LET'S LOOK AT THE FILES

Now, remember, this is not hearsay. This is firsthand reporting. For here is the official Civil Service Commission finding on Silvermaster—and I quote from the official files:

"Silvermaster has been known and listed in the files of the Seattle Police Department, the Thirteenth Naval District, the San Francisco Police Department, and the Federal Bureau of Investigation as a member and leader of the Communist Party."

Accordingly, civil-service investigators recommended—as early as 1942, 8 years ago—and I quote from the official file—that "Silvermaster be declared ineligible for the position of head economist, Board of Economic Warfare" and—at last—proposed to "bar him (from official authority) for the duration of the national emergency."

But the Civil Service and FBI findings didn't mean a thing to Silvermaster. He was able to sail right along. To do so, he admitted, he obtained the aid of Lauchlin Currie, economic adviser to the President inside the White House.

Now, let me turn to the files of United States naval intelligence. They, too, were looking at Silvermaster. The naval intelligence report bluntly called Silvermaster a Communist, not to be trusted in his office. Nevertheless, for four solid years after these security checks had been presented, and overruled from the inside, Silvermaster held important places in the Government of your land and mine.

ALMOST UNBELIEVABLE EFFRONTERY

Now, as I begin to find out more and more about Silvermaster, a known Communist agent described him as in the straight pay of the Soviet secret police, as an NKVD agent in America. He testified before Government authorities that Silvermaster maintained, in his Washington home, photographic and microfilming equipment on which he allegedly photographed and microfilmed Government documents for delivery to Russia.

One confessed agent testified to having actually seen Silvermaster do so, allegedly in cooperation with a Major William Ludwig Ullman, of the United States Army Air Forces in the Pentagon Building. Silvermaster had lived in Washington with Ullman since 1937.

Yet, when Silvermaster was officially questioned on August 4, 1948—over a year and a half ago—he refused even to say whether or not he was a Communist. His grounds, and now I quote Silvermaster himself, were that "any answer I may make to this question may tend to be self-incriminating."

So the outcome is "Step down, brother. That's all." Whereupon Silvermaster lets out a laugh and disappears.

But Silvermaster did not disappear completely. I can tell you that at this moment he is on a little island off the Jersey seacoast. If the newspapers are interested, the name of the island village he has gone to is Harvey Cedars.

A CLEANING-OUT LONG OVERDUE

No, the remarkable thing is not that Stalin has had, and has today, his inside workers here. The remarkable, incredible thing is that anybody in an official position, or of any standing, would for any reason—year after year—call this vicious threat to our country a "red herring" or a "witch hunt" or try to distract the country from the importance of cleaning this place out.

The safety of America is at stake in the face of a barbarically cruel, stealthy, ruthless, and clever Asiatic enemy, and his fifth column in your land and mine.

The Sick Industry

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include the following well considered and thought-producing editorial appearing in the Boston Post of March 6, 1950, entitled "The Sick Industry":

THE SICK INDUSTRY

President Truman may soon have a study authorized by the Congress looking into the economics of the coal industry. It is certain that the Congress will have a committee looking into the deficiencies of the Taft-Hartley law. Both of these add up to the danger of a degree of nationalization of the coal industry, or, at least, stronger Federal controls in the public interest.

Coal is unquestionably a sick industry, but what kind of ailment has not been determined. It all depends upon what doctor looks the patient over. The union will claim that the operators have made the industry sick by inefficient operation and by attempts to exploit the miner. The operators will claim that the union has made the industry ill by excessive wage demands which forced up the price of coal and compelled industry and the railroads to seek some other cheap source of fuel.

None of the doctors seem to have admitted to the clinical history of the sick industry the plain fact that there are too many miners and not enough work for all of them. The United Mine Workers went on a 3-day week from last July until mid-September, and then went into a series of "no day" work weeks until November, when John L. Lewis called a truce and sent the miners back to work. In December the miners' leader put the miners back on a 3-day week.

By January there were spontaneous strikes and on February 8 there was a Nation-wide stoppage in the soft coal fields.

Not until the middle of February were the coal stocks on hand, necessary to industry, depleted to the point where there was alarm and lay-offs of workers in other industries. It is fair to say that for 5 months out of the year the miners produced enough coal on a 3-day workweek to provide the Nation at the height of its productivity with enough coal to operate industry. Plainly there are too many miners, and probably too many mines, or, at the very least, too many inefficient mines.

John L. Lewis has been able to force up wages only by work stoppages that depleted the stocks of coal above ground. It is his sole weapon—and he has used it effectively to collect a total of 79 cents an hour in four rounds of wage and welfare increases for his followers. But, he hasn't raised their living standards by any comparable degree, because their payless periods have eaten up most of their gains.

Truly, coal is a sick industry, and will be as long as there are too many miners and not enough work for all of them. Let it be determined now, however, that the nostrum for the patient is not nationalization in any form. The remedy was tried out in Britain. It very nearly killed the patient.

The Coal Strike—The Winner and the Losers

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, the editor of the Racine Journal-Times has made some very pertinent observations on the Lewis coal strike in its issue of March 6, 1950. So that his timely comments may be brought to the attention of the people of this country I shall include it as part of my remarks:

THE WINNER AND THE LOSERS

Once again a coal strike has been settled at the eleventh hour—just short of real disaster, but not soon enough to avert a considerable degree of suffering, much economic paralysis, and interruption of normal life in this Nation.

Once again the miners have successfully defied the Government of the United States.

Once again John L. Lewis has emerged with a measure of victory—not with everything he asked, but with enough to save face adequately, strengthen his hold on the miners, and satisfy his power ego.

Once again the public, innocent victim of hardships imposed by the strike, will pay for its fruits through inevitable further boosts in the price of coal.

The big loser of face in this deal is the Government of the United States, and the Truman administration cannot dodge its share of the blame.

A Federal court ordered the miners to return to their work. They refused. Their union was tried for contempt. Federal Judge Richmond Keech found the union not guilty. His reasoning was that the organization has asked the men to obey the return-to-work order, but they had refused as individuals. Perhaps this was the only conclusion the judge could reach on the basis of pure legality, though there might have been strong suspicion that union officials had issued their work "command" with their tongues in the cheeks hoping that the men wouldn't obey. And certainly the end result of the union members' defiance of the Government was pleasing to United Mine Workers' officials, including the top boss himself. By holding out, the men forced a settlement much in the union's favor.

Here was a case of a union with the power to bargain for the men, but without the power to control them. Common sense would dictate that if a union cannot control its membership, how can it rightfully make contracts for them? If it cannot keep them from disobeying the Government, how can it guarantee that they will observe the terms of a contract?

Some may say that the strike proved the Taft-Hartley law to be ineffective and unworkable. But though we think it demonstrated the need for strengthening that law for protection of the public against too-powerful combines of either industry or labor, it should be obvious to even the most casual observer that the existing law was not given a fair test in this case. It was not applied in time to give such protection and relief as an 80-day stay of the strike might have provided through the cold winter months, when coal is most needed.

And here the fault rests with President Truman himself. Though others saw the emergency coming when the strike started last October, the President refused to recognize it. As late as January 20 he said "the coal situation does not constitute an emergency." Finally he appointed a fact-finding board to work outside the Taft-Hartley law, which he does not like for political reasons. Even when efforts of this board came to naught, Mr. Truman stalled. It wasn't until March 2, with industries crippled, thousands of men laid off, schools closed, and coal bins empty in many homes, that he finally conceded the situation was serious.

No matter what kind of law you have, if those charged with enforcing it don't make the best possible use of it, the law will fail.

Now we're going to have a Government study of the whole industry, including the situation of the operators and the miners. If the resulting report is honest, unbiased,

and without political tinge, it should be helpful. It should give public backing to whatever law is necessary to avert a repetition of what Americans have gone through year after year through closing of the mines upon order of John L. Lewis.

Adenauer's Challenge

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans Item of March 9, 1950:

ADENAUER'S CHALLENGE—TIME TO JUMP IN AND PUSH

Chancelor Konrad Adenauer, crusty leader of the West German Republic, has thrown down the gauntlet of peace.

He has proposed a complete union between West Germany and France as the basis for a United States of Europe.

In an interview with Kingsbury Smith of International News Service, he has struck at the heart of the matter in devastating fashion.

Do we save Europe or don't we save Europe? That is Adenauer's question. The answer cannot safely wait.

Three years ago the Item urged Congress to press for the speedy realization of a United Europe. In the interim we have frequently discussed the need for a genuine federation on the continent. The subject is not new.

The argument for European union is simple. No one nation standing by itself can enjoy the security necessary to its physical safety and economic development. Banded together, the various states can realize the full potential of their peoples and resources.

Leading statesmen of Europe have conceded the ultimate need for union. Some, like Winston Churchill, have openly urged immediate steps. A consultative assembly has met. Observers on the scene report widespread popular support for a close federation.

These people know just how senseless are the barriers that divide and weaken them. They understand the vicious circle of currency restrictions, quota systems, and other artificial restraints on the free flow of goods. They sense the disaster that might befall them in the event of an attack from the east.

Why, then, are they so reluctant to take the necessary plunge?

The reasons are many. They boil down to the fact that "the spirit is willing but the flesh is weak." Western Europe was smashed by the war. With our help, she has regained some of her former tone and color. But the strength both to initiate and put through a revolutionary change of pattern is lacking.

The time has come for the United States to jump in and push.

The American people have shown a great willingness to put forward the effort and money needed to secure peace. Their misgivings about ECA stem from the suspicion that it is not enough to do the job. The widespread response to Senator MCMAHON'S $50,000,000,000 "peace crusade" is sufficient proof of a desire to avoid war at whatever monetary cost.

Nothing less than a United States of Europe, we believe, can provide the basis for independent and lasting security. For political, economic, and military reasons, federation is urgent.

The man to pick up Chancelor Adenauer's gauntlet is not France's Premier Bidault, but the President of the United States of America.

We suggest that Mr. Truman prepare a message for delivery before both Houses of Congress pledging this Nation's all-out support for a Union of Europe.

With the sanction of Congress, Mr. Truman should then call on the heads of European governments to meet with him in Paris to discuss the ways and means of bringing federation into being.

For historical impact and statesmanship, this assertion of American leadership would surpass all previous efforts for peace. It is our great opportunity to influence permanently the course of human events.

The High Cost of Low Incomes

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. BIEMILLER. Mr. Speaker, nearly 10,000,000 American families are making a futile effort to make ends meet on an annual income of $2,000 or less. This is a matter of public concern, because most of these people are a charge on the public for aid of some kind to supplement their incomes. What is the best way to handle this situation? What conditions cause this poverty? Are they correctable?

These and other questions about our lowest income families are answered by Prof. Sumner Slichter, of Harvard, in an article appearing in the New York Times magazine. I should like to insert this most important article in the RECORD. It is as follows:

THE HIGH COST OF LOW INCOMES
(By Sumner H. Slichter)

In 1948, the most prosperous year in the history of the country, nearly 10,000,000 American families had cash incomes of $2,000 a year or less. The condition of such families concerns the entire country. For one thing, these families contain about 9,000,000 children, and the small income of the family may deprive the children of fair opportunity. Moreover, low incomes are frequently the result of low productivity; if the productivity of these families could be raised the whole country would have more to consume. Apart from these considerations, low-income families contain a high proportion of people hard hit by misfortune, and all humanitarian peoples want to do what they can for the unfortunate.

The situation of the nonfarm low-income group, numbering about 6,300,000 families, is probably more difficult than that of the farm families, so this article will center on impoverished people living in towns and cities. Three principal questions stand out: Who are these families and what are the reasons for their low income? What kind of lives do they lead? What can be done about the problem of low incomes?

Over two-thirds of the low-income families fall into one of three large groups: (1) Families whose head has been disabled by accident or disease; (2) broken families—that is, families headed by women because of widowhood, desertion, or divorce; and (3) families whose head is 65 years of age or more.

The exact size of the first group, headed by persons permanently disabled for long periods, is not precisely known, but it numbers well over a million. These are persons of working age who at one time were members of the working force but now are totally disabled for an indefinite period. The second group, headed by women who have lost their husbands, includes 1,500,000 families. More than one-third of these families have no earners. The third group, headed by older persons, includes 1,700,000 families—more than one-fourth of all nonfarm families with incomes of less than $2,000. About half of these families have no income earners among their members.

In addition to these three major groups, there are many other kinds of low-income families. Some families are in the low-income class only temporarily—because they are starting new businesses or have experienced business losses, or because the chief earner has been temporarily disabled. Then, too, the low-income families naturally include many headed by persons who are incompetent, or misfits, or maladjusted, and who have trouble in getting and holding jobs. The misfits include persons with low intelligence who require so much supervision that they are hardly worth employing and persons who suffer from phobias and complexes of various sorts and do not easily fit into an organization.

Included among the misfits are many alcoholics. Information about their numbers is not reliable, but a recent conference on alcoholism in Chicago concluded that about 1,300,000 alcoholics are regularly employed. Of course, not all alcoholics are in the low-income class, but alcoholism frequently results in low income.

What kind of lives do the low-income families lead? Here is the part of the population, of course, where hardship is concentrated. The best measure of this fact is the high proportion of low incomes absorbed by expenditures on food. Nearly three-quarters of the income of nonfarm families receiving less than $1,000 a year and nearly half of the income of families in the $1,000–$2,000 class goes for food—in comparison with about one-third for the average-income nonfarm family.

Nevertheless, many of these families are not so badly off as one might suppose. In the first place, there is a general tendency for people to understate their cash incomes. In the second place, many families have resources apart from cash income, particularly in food and in shelter of their own houses. Also, the low-income families are smaller than the average. In addition, such families tend to be concentrated in the smaller cities and the rural nonfarm areas, where, as a rule, it is easier to live simply and cheaply than in a large city.

In fact, the low-income families have a surprising amount of property. This probably reflects the fact that at some earlier time—before the family head retired or died or was disabled—these families were better off. At any rate, almost half of such families own their own homes, and about three out of four of these homes are owned mortgage-free. Over one-fourth own an automobile—of sorts—and the ownership of United States savings bonds and saving accounts is equally frequent. In 1948, over one out of four of these families purchased such goods as furniture, radios, refrigerators, washing machines, or television sets.

What can and should be done about the problem of low-income families? Since there are many causes of low income and many kinds of families in the low-income group, there is no panacea. Many of those persons who have suffered severe disabilities can learn new work or, in a few cases, new ways of doing their former jobs. In 1948,

53,000 persons were rehabilitated under the joint Federal-State retraining program, but there are about 1,500,000 persons in need of retraining. Great expansion of retraining programs is indicated.

Many disabled persons are prevented by illness from holding jobs and some of them are not able to learn new ones. In nearly all of these cases public or private assistance is needed. The Federal Government now helps the States that provide assistance to the blind and to families having dependent children, and last summer the House of Representatives passed H. R. 6000, which provides for grants to the States for assistance to permanently and totally disabled persons not covered by existing programs. It was estimated that this program would help about 200,000 totally disabled persons.

If there are dependent children in the family of the disabled worker, help may be given under the Federal-State program of aid for dependent children. In July 1949 about 540,000 families were being assisted under the program by an average monthly payment of more than $70. Federal participation in aid to dependent children is not as liberal as Federal participation in old-age assistance or aid to the blind. The Advisory Council on Social Security, appointed by the Senate Finance Committee of the Eightieth Congress, has recommended that this difference in Federal help be eliminated.

A long-range program dealing with the problem of disability should include insurance against the loss of income because of temporary or permanent disability. Under present conditions the problem of temporary disability can be handled best by the States, and New York and several other States already have started such schemes. More important is the insurance against disability of indefinite duration (say 6 months or longer), or so-called permanent disability.

Many insurance experts do not believe that it is practical to write such insurance because the possibility of getting an income for many years, and perhaps for life, creates too powerful a temptation to malinger. Others believe that total and permanent disability is an insurable risk provided it is required that the disability be medically demonstrable.

The Advisory Council on Social Security has recommended that the present old-age and survivors insurance plan be broadened to cover insurance against permanent and total disability, and such insurance is included in the social-security bill passed by the House of Representatives last summer. The insurance would be limited to persons who have been in the labor force for at least 10 years and whose disability can be medically proven.

In nearly two out of three of the broken families, the wife or one of the children is gainfully employed. The proportion of widows or divorced mothers and of children between 14 and 17 years of age who are in the labor force has increased substantially since 1940. Hence, the maintenance of a high demand for labor is particularly helpful to members of broken families. While certain jobs are not good for children, children of 14 and over are likely to be helped by some employment if it does not interfere with education.

In the main, however, the income problem of broken families must be solved in ways other than by employment of the mother or children. Where there are dependent children in the family, the help can be obtained through the Federal-State program of aid to dependent children.

Nearly four out of five broken families have lost their chief breadwinner by death. Hence, a great step would be taken toward reducing destitution if the Federal old-age and survivors insurance plan were extended to the 25,000,000 jobs not now covered. The benefits also need to be made larger and eligibility requirements more liberal. At present the average primary benefit (on which survivors' benefits are based) is only about $26 a month.

Two changes in the law would be particularly helpful to families broken by the death of the chief breadwinner. One would raise the benefit of the first dependent child or of a dependent parent to three-fourths of the primary benefit. The other would permit widows of deceased workers to begin drawing benefits at the age of 60 instead of 65. Widows caring for a minor child of the deceased worker draw benefits now.

The largest class of low-income families comprise those in which the breadwinner is retired. Consequently, measures to meet the needs of these families offer the most promising way of attacking the broad problem of low incomes. Three changes would be particularly useful: (1) Raising the usual retirement age in industry, (2) modifying the so-called work clause in the present Federal pension laws, and (3) providing a more generous Federal pension system.

A large proportion of persons 65 or over are quite capable of continuing their occupations, so the practice of some companies of retiring all employees at the age of 65 is quite unnecessary. Furthermore, it increases the number of low-income families, and thus aggravates the problem of low incomes. Studies of the Social Security Agency show that most retirements occur against the will of the worker. The problem of low-income families would be substantially reduced in importance if the retirement age in industry were made 68 or 70 instead of 65. In addition, the output of industry would be raised, and the standard of living of the country as a whole would be improved.

The present Federal old-age pension law contains a peculiarly vicious work clause. It is designed to prevent persons from drawing pensions who are also receiving income through employment. The law provides that a pension recipient who earns $15 or more a month shall lose his pension so long as his earnings equal or exceed that amount. The obvious effect is to discourage beneficiaries from supplementing their pensions by useful work.

A more sensible arrangement would be to permit pensioners to earn a fairly liberal amount, say $75 a month, without losing their pensions, and to provide that for every dollar above $75 a month earned by the pensioner a dollar would be subtracted from his pension for that month. This would encourage retired workers to help themselves.

The third change—to extend and liberalize the present old-age insurance scheme—is the most promising way of dealing with low incomes among retired workers. As has been pointed out, the plan at present covers only about three out of five jobs. It should be made virtually universal. In addition, the benefit payments should be raised to about 50 percent of a man's earnings before retirement. This would eliminate much of the problem of low-income families. The present pension payments of $26 a month for persons without dependents and $40 for persons with dependents are far below a decent level.

In addition to these direct measures, there are numerous indirect ways to help low-income families, some important, others less so. Since a high proportion of low-income families have their savings in Government savings bonds, one form of help to them (and to many other families as well) would be for the Government to issue a savings bond payable in a fixed amount of purchasing power rather than a fixed number of dollars. Persons who bought Government savings bonds in 1943, 1944, or 1945 have lost a large part of the purchasing power which they put into those bonds. Small-income families wishing to save should not be compelled to gamble on whether the price level will rise or fall.

Another kind of indirect help would be the removal of economic barriers to opportunity. More abundant scholarships to young persons of demonstrated ability would be one way to do this. Setting limits on the initiation fees that men must pay in order to join unions would also help. Fortunately, most unions are opposed to high initiation fees, but a minority charge $100 or more. An amendment to the Taft-Hartley Act should impose a maximum $25 initiation fee for admission to any union which is granted exclusive bargaining rights or which is permitted to establish a union shop.

Still another form of help would be modification of the Government program of supporting the prices of farm products. Because low-income families spend a high proportion of their cash incomes on food, the price-support program, which now includes wheat, corn, pork, butter, eggs, potatoes, cheese, apples, pears, concentrated orange juice, lard, and other commodities, is especially burdensome to nonfarm families with low incomes. The so-called Brannan plan of agricultural aid has grievous faults—in particular, it undertakes to support farmers' incomes at too high a level—but it would have the important merit of letting farm products be sold at free-market prices.

The most important indirect aid of all is encouragement of technological research, because it is from a rise in all incomes that more adequate support can be given the low-income groups. Not only does technological progress raise the incomes of all classes, but it has had the important result of reducing the proportion of unskilled jobs and of increasing the proportion of jobs that require semiskilled or skilled workers. Between 1910 and 1940, for example, common laborers dropped from 36 percent to 26 percent of the labor force. Converting of common-labor jobs into semiskilled or skilled jobs reduces the proportion of workers receiving low pay and helps people rise out of the impoverished class.

These measures—direct and indirect—to aid low-income families are of great importance, not only to the persons immediately concerned but to the Nation as a whole. They would raise the contribution of the low-income families to production, and thus diminish the extent to which these families are supported at the expense of the rest of the country. Broadening and liberalizing social insurance would reduce the dependence of low-income families upon relief, and thus reduce—though not eliminate—the possibility that help for the low-income groups could become a corrupting influence in politics.

Most important of all, good arrangements for meeting the problems of low-income families would raise the esteem in which the American economy is held both here and abroad. Critics of American economic institutions have been forced to admit that these institutions are remarkably efficient and give the country an unmatched standard of living, but they insist that this highly efficient economy neglects human needs.

As a matter of fact, few other countries distribute as large a proportion of income on the basis of need as does the United States. Income distributed on this basis was about $11,000,000,000 in 1949, and was about three times as large relative to all personal incomes as in 1929.

Nevertheless, a rich and successful economy such as that of the United States must be expected to look out for the nonproducers or low producers more adequately than do the less efficient economies. Arrangements for meeting the problem of the needy more generously will show the critics of American institutions that this economy is the most efficient in the world.

Basing Point Aimed at South, West, and New England

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. BOGGS of Louisiana. Mr. Speaker, I believe that most Members of this body from the South, the West, and New England would like to see steel mills established in their regions. And why should they not have them?

Certainly, in each of these areas the demand for steel is far in excess of the supply. Certainly, each of the regions is either naturally endowed with the necessary raw materials for steel making as is true of the South and the West, or can readily secure them at low cost from nearby sources, as is true of New England, which will be able to use the newly discovered Labrador ores. Certainly each of these areas has the labor force required to operate a steel mill. Certainly, the capital is locally available for the construction of the mills. In other words, the demand, the raw materials, the labor force, the capital—all of the necessary ingredients are present. But will steel mills in these areas be erected?

If S. 1008 is passed, the answer is no. The restoration of the basing-point system spells finis to the hopes of these great areas for a steel industry of their own. Why is this so? Let me answer by recounting what has actually happened to the mills located in one of these areas, the South. The experience of the mills at Birmingham, Ala., provides a vivid illustration of what happened to a mill in an outlying area under the basing-point system.

As is well known, the Birmingham mills are the most efficient in the country. They are the only mills in the land which are located virtually in the midst of the three raw materials required for steel production—iron ore, coking coal, and limestone. Hence, the failure of the Birmingham mills to gain anything more than a relatively small share of the southern market cannot be traced to high costs or inefficiency.

One would think that under normal conditions southern buyers would secure a fairly large proportion of their steel requirements from the Birmingham mills not only because of their lower mill costs but also because of the smaller transportation charges involved.

Actually, under the basing-point system both of these advantages are wiped out, since the delivered price to any given buyer is the same from all mills. The delivered price to the buyer in Birmingham, itself is the same whether he buys from the Birmingham mills, from Pittsburgh, from Chicago, from Sparrows Point, from Cleveland, or from any of the other places where steel is produced. This is the unique feature of the basing-point system—identical delivered prices from all mills to any given destination point.

Therefore, since under the basing-point system there is no advantage to the southern buyers in purchasing their steel from Birmingham, they have bought in large quantities from the distant northern mills. We have always believed this to be true. Now we have the facts to prove it. On February 20, 1950, I put into the CONGRESSIONAL RECORD some very interesting figures, prepared by Dr. George Stocking, of Vanderbilt University, showing the extent to which, under the basing-point system, the Birmingham mills have been deprived of the southern market.

These figures show that during February 1939 the nine Alabama counties surrounding Birmingham obtained no less than 37.4 percent of their structural shapes from distant sources, most of which—27.9 percent—coming from faraway Chicago. Buyers in all other Alabama counties relied to an even smaller extent on Birmingham mills, obtaining nearly half—47.5 percent—of their structural shapes from northern mills.

The neighboring State of Mississippi obtained no less than 72.1 percent of its structural shapes from the remote northern production centers. Georgia secured 33.5 percent of its structural shapes from the northern mills; Tennessee, 45.6 percent; Florida, 36.6 percent; North Carolina, 91.4 percent; Kentucky, 94.7 percent; and Texas, 82 percent.

Obviously, if the basing-point system had not been in existence, there would have been two incentives for southern buyers to purchase from the Birmingham mills: First, the lower costs of the Birmingham mills and, second, lower transportation expenses—which in a heavy product such as steel is an important factor. Thus, if the buyers in the nine Alabama counties surrounding Birmingham had obtained their structural shapes from Birmingham their freight charges would have only been 94 cents a ton as compared to $11 to $15 a ton for shipments from the northern mills. In all of the Southern States the saving in transportation costs as a result of buying from Birmingham rather than from the northern mills would have been substantial. By buying from Birmingham Mississippians would have saved about $11 a ton; Georgians would have saved about $7 a ton; Tennesseans about $5 a ton; Floridians about $5 a ton; Carolinians from $3 to $4 a ton; and Kentuckians from $3 to $10 a ton.

The material prepared by Dr. Stocking shows that the same situation prevails with other steel products such as steel plates, plain drawn wire, hot-rolled strip and hot-rolled sheets, the Birmingham mills obtaining only a small share of the southern market and southern buyers paying delivered prices which contained high-freight costs from northern mills.

There is one other lesson to be learned from these figures. If the delivered price to a southern buyer is the same from Birmingham as from a distant northern mill—as is the case under the basing-point system—then it must follow that the delivered price must necessarily have been established at an extremely high level. Only if the delivered price in the South is fantastically high could northern steel mills ship into the South, absorbing freight charges ranging from $10 to $20 a ton and still make a profit. All of us know that the northern steel mills are not in business for their health. When they ship into the South it is for the purpose of making a profit, but if on such shipments they are absorbing freight charges of from $10 to $20 a ton they would obviously lose money unless the delivered price in the South were set at an extraordinarily high level. This, of course, is exactly what occurs under the basing-point system. As the Supreme Court held in the Cement case, the basing-point system is a handy instrument to bring about elimination of any kind of price competition. In other words through the mechanism of the basing-point system the steel companies have been able to eliminate price competition and set delivered prices at levels so high as to enable the established northern mills to make a profit on sales to practically any area. Without the basing-point system, they will find it extremely difficult to engage in this form of price fixing.

In conclusion let me raise this question: If under the basing-point system the Birmingham mills, with all their advantages, have not been able to secure more than a small share of the southern market, how could it be expected that if the system is restored new mills in the South or the West or New England will fare any better? If the Birmingham mills get only 28 percent of the adjoining Mississippi market, only 12 percent of the Texas market and so on, how could it be expected that under the basing-point system a new mill in the West, in New England, or in the South, for that matter, could do any better? It is most unlikely that the cost of such a mill would be any lower than those of the Birmingham mills. It is unlikely that the excess of demand over supply would be any greater than it has been in the South. It is unlikely that such mills would have available a larger labor force. On what basis then can it be expected that under the basing-point system such mills will succeed in obtaining a reasonably large share of their home market, when the Birmingham mills—the lowest cost mills in the country—have so conspicuously failed?

That, Mr. Speaker, is the question with which every Member of this body from the South, the West, and New England should be immediately concerned.

Basing-Point System

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. RAINS. Mr. Speaker, every student of southern history knows that the expansion of the South has been re-

tarded, more than anything else, by the practices of northern monopoly interests. Perhaps the most well-known of these practices aimed against the South has been the freight-rate discriminations. The facts have conclusively proved that this particular form of discrimination stems from the efforts of northern financial interests to protect their own established investments from any possible competition which might develop from an expanding southern economy.

But while the character and effect of freight-rate discriminations are known to practically all southerners, there is another form of discrimination practiced against the South which has equally injurious effects but which has been surrounded in mystery. I am referring to the regional discrimination inherent in the basing-point system. Under the basing-point system it makes no difference to the buyer what mill he buys from. He receives the same delivered price down to the last ten-thousandths of a cent from all mills. Therefore, he obviously fails to receive the benefit of the lower costs which one mill may have as against other mills.

This characteristic of the basing-point system is peculiarly disadvantageous to the South in that there is located in our region the most efficient, lowest-cost center of steel production in the country. I am referring of course to the mills at Birmingham, Ala. The Birmingham area is unique in its possession of the three raw materials required for steel production—iron ore, coking coal, and limestone. Other mills throughout the country have to obtain one or more of these raw materials from distant areas, involving heavy transportation expenses. But in Birmingham the materials are all at hand. The advantages to the Birmingham mills resulting from this situation were revealed in a study made just before the last war by the Board of Investigation and Research. This Board which was established by Congress to formulate a national transportation policy, issued a report, the Economics of Iron and Steel Transportation, which shows the number of ton-miles required to bring together at a steel mill the iron ore, coal, and limestone required in steel production. Only 49 ton-miles were required to assemble these various raw materials for the production of one ton of pig iron at Birmingham—22 ton-miles being required to bring in the iron ore, 24 miles for the coking coal, and 3 miles for the limestone. How does this figure of 49 ton-miles stand up against comparable figures for other steel production centers in the country? It takes no less than 832 ton-miles to assemble the raw materials for the production of one ton of pig iron at Pittsburgh, and the same amount for production at Chicago-Gary; 507 ton-miles are required to assemble raw materials for production at Youngstown; 582 are required for Sparrows Point, Baltimore; with usually greater distances being required for the country in other steel-producing centers.

Because of the fact that practically no transportation charges are involved in bringing together these raw materials, the assembly costs of raw material for iron and steel production are much lower in Birmingham than in other parts of the country. According to this same report, in 1939 the cost of assembling the iron ore, coking coal, and limestone required to produce one ton of pig iron was $2.69. This is to be contrasted to a comparable figure at Pittsburgh of $5.99; at Chicago-Gary of $7.31; at Youngstown of $6.56; and at Sparrows Point of $9.93. In other words, the total cost for assembling the raw materials required to produce pig iron was from two to three times higher in the northern steel mills than at Birmingham.

Similarly the cost of assembling raw materials required to produce one ton of finished steel was only $4 at Birmingham, as compared to $7.36 at Pittsburgh, $10.28 in Chicago-Gary; $8.66 at Youngstown, and $13.86 at Sparrows Point. Again, costs at Birmingham are from 50 to 70 percent lower than in the North.

I believe these figures reveal one of the reasons why the northern steel interests are moving heaven and earth to get S. 1008 passed. They simply want to bring about the restoration of a situation in which it makes no difference to the buyer what mill he buys from. And if it makes no difference to him, why should he buy from the Birmingham mill just because it is the lowest-cost mill?

On the other hand if this bill is not passed, it could be expected that over the long-run the Birmingham mills would obtain the natural advantage of their lower costs. Buyers would be expected to purchase their steel at Birmingham for the simple reason that it can be produced there more cheaply than anywhere else. It could be expected that southern steel consumers would at long last secure their advantage of proximity to this low cost source of steel production. It could be expected that southern steel consumers, by obtaining steel at lower prices made possible by the low costs at Birmingham, would be able to widen the area in which they are able to compete. It could be expected that as a result of this expansion, southern industries would be able to provide more jobs for southern workers, more profits for southern investors, and more expansion and greater well-being for the South generally.

But it should be obvious that these benefits will be denied the South if this bill is passed. The steel companies have clearly indicated their intention to return to the basing-point system immediately upon its enactment. And if this happens, the potential great expansion of the South will be nipped in the bud. This is evident from what has happened to the South under the basing-point system in the past. It is a fact that during the existence of the basing-point system, despite their lower costs, the proportion of the Nation's pig iron capacity held by the Birmingham mills actually declined. In 1925 Alabama mills held 7.1 percent of the Nation's pig iron capacity. By 1938 its proportion had declined to 6.2 percent.

Similarly, the proportion of the Nation's steel capacity held by Birmingham mills remained about constant. In 1925 Alabama mills held 2.7 percent of the Nation's capacity to produce finished hot-rolled steel products; by 1938 the proportion had risen only slightly to 3.2 percent. And this, I repeat, despite assembly costs which were from 50 to 70 percent lower in Birmingham than in the northern mills and despite total costs which were more than 20 percent lower in Birmingham.

In short, we are presented with the paradoxical and fantastic situation that the lowest-cost mills have actually lost ground in pig iron and failed to gain in steel. Yet the relative importance of the higher-cost producers has increased. Only under monopolistic conditions could such a flagrant reversal of all of the laws of economics take place. If S. 1008 is defeated, Birmingham will regain its birthright of efficiency and the normal operation of competition will bring about one of the greatest expansions in southern history. But if the bill is passed, Birmingham mills will be denied the benefit of their natural location, the southern consumers will be denied the advantage of the low costs at Birmingham, and the South in general will once more be placed in the position of paying prices which the northern monopolists set and of producing only what the northern monopolists permit.

Forceful Presentment of the Viewpoint of the Famous Atomic Scientists of the Nation on the Smith Amendment to the National Science Foundation Bill

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. O'HARA of Illinois. Mr. Speaker, in the Washington Post of March 11, 1950, appeared an article by Clifford Grobstein, vice chairman of the Federation of American Scientists, aptly titled, "Time Bomb in the Science Foundation." This is so clear and poised a presentment of the viewpoint of the scientists and educators of the Nation in the matter of the Smith amendment to the National Science Foundation bill that I think it should and will receive the thoughtful attention of the conferees on the Science Foundation bill when named.

I might explain that the Federation of American Scientists had its beginning during the war in the atomic-energies laboratories. Three years ago the group expanded to admit all scientists, but its primary concern is still with matters of atomic-energy control, both domestic and international. The stated purpose of the organization is to direct the flow of the benefits of science into constructive social fields. The chairman of the Federation is Dr. Hughe C. Wolfe, head of the Department of Physics at Cooper Union. The greatest of living scientists, Albert Einstein, is a member. Included on the advisory panel are Dr. J. Robert

Oppenheimer, head of the Institute for Advanced Study at Princeton University, and formerly director of the Los Alamos project, also two of my very distinguished constituents of the second district of Illinois, Dr. Harold C. Urey, Nobel prize winner, and Dr. Leo C. Szilard, the outstanding atomic scientist who was the first to present to President Roosevelt the designs for the atomic bomb. Dr. Urey and Dr. Szilard, I am happy to say, are on the faculty of the Institute for Nuclear Study of the University of Chicago, which numbers among its distinguished alumni many members of this body.

The article by Dr. Grobstein follows:

TIME BOMB IN THE SCIENCE FOUNDATION

(By Clifford Grobstein, vice chairman, Federation of American Scientists)

In your editorial of March 3 you refer to the drastic provision for FBI investigation of National Science Foundation employees and fellows contained in the bill passed by the House on March 1. You ask, "Where is this absurdity to stop?" May I suggest that it will not stop so long as democratically minded citizens resign themselves, as you suggest, to the view "that it is better to have the bill with the restriction than not to have it at all."

The Federation of American Scientists has urged the importance of this legislation, as the Washington Post has so splendidly done, but it knows, too, the nature of the time-bomb planted in the legislation by a misguided group in the House. There are at least two good reasons why this legislation, now unfortunately loaded with political dynamite, is not better than none at all.

First, the chances of success of the House proposed NSF are jeopardized at the outset by its violation of a first principle of scientific tradition—freedom from political qualification. Scientists will not strike against legislation. But more and more of them simply will prefer to look elsewhere for their support, or go without it, rather than subject themselves to procedures so unnecessary and repugnant.

Second, the issue raised goes beyond the Science Foundation, indeed almost relegates it to the background. It is not only as scientists, but as citizens concerned for the future of our way of life, that we protest this new height in antidemocratic measures offered to protect democracy.

The loyalty provision of the House version reads as follows: "No person shall be employed by the Foundation and no scholarship shall be awarded to any person by the Foundation unless and until the FBI shall have investigated the loyalty of such person and reported to the Foundation such person is loyal to the United States, believes in our system of government, and is not and has not at any time been a member of any organization declared subversive by the Attorney General, or any organization that teaches or advocates the overthrow of our Government by force and violence."

In light of the fact that this provision is applicable to an agency intended to devote itself primarily to education in the sciences and basic, nonsecret research, it deserves comparison with the provision governing the Atomic Energy Commission, an agency concerned with highly secret research and information: "Except as authorized by the Commission in case of emergency, no individual shall be employed by the Commission until the Federal Bureau of Investigation shall have made an investigation and report to the Commission on the character, associations, and loyalty of such individual."

The proposed NSF provision is far more drastic than the AEC provision in at least three important respects.

1. Membership in a single organization on the Attorney General's list, of however short duration, demonstrates disloyalty, regardless of other evidence to the contrary. Evaluation is based not on an individual's total record, but on what may have been a single action.

2. Not only present membership, but past membership demonstrates disloyalty. An individual who has performed a single purportedly disloyal action can never again be regarded as loyal. And, according to the language of the NSF provision, this applies ex post facto—an individual is disloyal even though he resigned from an organization before it appeared on the Attorney General's list.

3. The FBI is given not only investigative responsibility to establish facts, but evaluative responsibility as well. Before any person is employed or awarded a scholarship, the FBI must certify that he is loyal. If this provision is accepted, Congress, for the first time, would have declared that the FBI is more than a fact-gathering agency, that it is responsible for judging, and certifying to the loyalty of free citizens. Whether or not this is regarded as a proper function of the FBI, the question certainly should not be decided in legislation to establish a Federal science agency. If we wish the FBI to do this, it should be accomplished in legislation specifically designed for the purpose.

How far this absurdity is to go, to use your apt phrase, depends upon how far we will allow ourselves to be led without more than grumbles and protests for the record. In the opinion of the Federation of American Scientists, loyalty checks of any kind are unnecessary and unwise for scientists not having access to secret information. The Foundation is expected to support very little secret research, and we would prefer, in fact, that it support none at all.

What secret work it may do is adequately protected in both House and Senate versions by the provision that the Foundation, with the concurrence of the Secretary of Defense, "shall establish regulations and procedures for the security classification of information or property (having military significance) in connection with scientific research under this act and for the proper safeguarding of any information or property so classified." Under this provision, if necessary, the FBI could be called on to investigate particular individuals in sensitive positions. There is no reason for a blanket provision applying to the great majority of persons associated with the Foundation who will be concerned only with information of completely unrestricted nature.

Under these circumstances, the drastic general loyalty provision is completely inappropriate and must be viewed as a maneuver designed for other purposes. Either the hope is to kill the bill by including a provision completely unacceptable to its supporters or to use the bill to establish a precedent for later legislation involving Federal support, as, for example, to education.

If these tactics are to be beaten, the grave general issue must be recognized and public opinion mobilized to insure deletion of the provision by the Senate-House conference committee which will be appointed shortly. The Senate version of the legislation, written in more temperate days, contains no unnecessary loyalty provisions. Conference committee members may be expected to exercise more reasoned judgment than did the House, particularly if it is made clear that the House version is totally unacceptable, not only to scientists but to all those who are more concerned with free thought than with safe thought.

Statement of A. B. Averill Presented to the Honorable Jamie Whitten, Chairman of the Subcommittee on Agricultural Appropriations of the House of Representatives

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. MURRAY of Wisconsin. Mr. Speaker, Mr. A. B. Averill, of Fremont, Wis., presented the following testimony.

This statement is a grass-roots opinion of a public-spirited constituent that came to Washington, at his own expense, to make constructive suggestions. His opinions on the farm problem is very much in keeping with the expressions of a majority of the farmers of our district.

The statement:

Mr. Chairman and gentlemen of the committee, my name is Pat Averill. I reside in Fremont, Wis., a litle village of 437 inhabitants, in Waupaca County, Wis., about in the south central part of the State.

In this village I own a small meat market and grocery store. I also own a small farm on the outskirts of this village where we milk from 25 to 30 cows, have about 100 hogs, and a family-size flock of chickens. We raise practically all of our own feeds, only buying a few concentrates. On this farm we employ help the year around.

I feel that I can speak from a small-town businessman's and a small farmer's point of view.

As we all know, the farmer's income has shrunk considerably within the last couple of years and at the rate it is going it does not paint too bright a picture for a small farmer nor for the small-town businessman. As a businessman we depend upon the greater majority of our business from the farmer and if the farmer does not thrive, the small-town business suffers equally as much.

I recently talked with nearly all of the businessmen up and down the street and they all tell me the same story. For example, your farm implement dealer; a few years ago the farmers were all clamoring for farm machinery. Now it is being stockpiled in the dealer's yards and warehouses and the dealer can find no other cause for it than the small income among farmers.

Our bankers also tell me business is not as good as it was a few years ago. Farmers who had their account paid up are now coming back for new loans.

I feel that every effort must be put forth to maintain stable prices and assure reasonable living conditions for all parties concerned. None of us want to hit the skid row we did back in the thirties.

I realize the fact that the Government has had a triple A program for several years, though now they have changed it to PMA, whatever that means, but to me it is still a triple A program under which we have worked for some time and I firmly believe in a program of that kind. Both as a farmer and businessman, I am thoroughly convinced that this is the proper program for agriculture. Practically all the members on this committee in this program are farmers elected by farmers who know what is best for farmers in their immediate locality. To

me the only thing wrong with the program is—there isn't enough of it.

Before I came here I had a talk with our PMA chairman. I was surprised to learn that 85 percent of the farmers in our county take part in this program. He also told me that in recent years the budget for this program has been cut to a point where it is hard to get some of the small farmers interested in building up their soil. The family-sized farm needs it most of all.

A number of the farmers are hard hit and this is no fault of their own. They may have large families or poor farms, or both. And it is extremely difficult for them to improve their farms without a little more assistance. I am sure they are all grateful for what the program has done for them in the past. It has done a great job in protecting our top soil and I feel it is the only program that is working on a large scale and in order to really accomplish conservation it must work on all farms; at least if we are going to continue to feed the greater part of the world.

I did not come here to ask for more money, but I would like to see you rearrange and earmark some of the money so more of it would get into the hands of the family-sized farmer. The commercial farmer has the knowledge and the finances to investigate these programs from all angles while the small farmer does not see where he can afford the time and money when he gets only a comparatively few dollars a year for his benefits.

And while on the subject, I think it would be of great benefit if there was more of an educational program put on so it could be thoroughly understood by all concerned. I, as a farmer, feel it would be a great benefit to me. By building up the soil one gets good crops and nothing makes the farmer feel happier and more light-hearted than to have good crops even though he doesn't get much for them.

It has been a privilege for me to meet with you and try as best I could to have you understand the situation as it exists in my part of the country.

I am extremely proud to have met you and I want to take this opportunity to thank you for permitting me to express my views.

Springfield High Schools Win Honors

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. FURCOLO. Mr. Speaker, I am very pleased to be able to tell the Members of Congress that the young people in my district have been winning national honors for school publications. The competition includes every State in the Union and it is described in detail in the accompanying newspaper article.

I know the Members will want to join with me in congratulating the young people from the Second District of Massachusetts who have done such an excellent and outstanding job.

The article from the Springfield (Mass.) Daily News of Friday, March 10, 1950, follows:

TWO LOCAL SCHOOL PAPERS JUDGED BEST IN COUNTRY—CATHEDRAL AND CLASSICAL IN FIRST PLACE; BUCKINGHAM AND WEST SIDE JUNIOR HIGH ALSO HONORED

Competing with school publications from every State in the Union, the products of two Springfield high schools have won highest honors in their respective groups, it was announced today from Columbia University, where 3,500 school journalists are attending the twenty-sixth annual convention of the Columbia Scholastic Press Association.

First-place honors go to the Cathedral Chronicle in the division for printed newspapers in high schools with enrollments of 1,500 to 2,500, and the Classical Recorder in the same category for schools with enrollments of 750 to 1,000.

Four other schools in this area share in the contest awards. Next highest honors go to the Scribe, put out by students at Easthampton High School, in competition with other duplicated magazines of high schools with 300 students or less.

Suffield High School's Reader's Reflection took second place in the duplicated senior high-school magazine division of 300 to 750 enrollment.

A third-place award was won by the publication of Buckingham Junior High School, the Beacon, in the division for printed newspapers in junior high schools with enrollments of 700 to 1,200.

Another third-place award goes to the Observer, of West Springfield Junior High School, competing with duplicated newspapers of junior high schools with 700 or less students.

In rating the 1,300 entries, the judges considered such factors as make-up, typography, news, and story content.

The awards will be presented tomorrow at a luncheon at the Waldorf Astoria Hotel, marking the conclusion of the 3-day convention. President Dwight D. Eisenhower, of Columbia, will address the final session.

A Sell-Out of American Workers by the State Department

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. PATTERSON. I take this occasion, Mr. Speaker, to call to public attention the serious plight facing workers in the rubber-footwear industry. Some of the nonreciprocal trade agreements negotiated by our State Department are resulting in reduced standards of living in this country.

Since 1933 import duties on both waterproof and rubber-soled canvas footwear have been applied on the American selling-price principle. While this did not totally discourage imports, it did afford some measure of protection to the American workingman. Under this system labor costs in this country were a consideration in the amount of duty paid. There is now a movement afoot to abandon this system and to apply duties on invoice value. Not content to strangle the rubber worker economically in only this one regard, the diplomatic "bright boys" are preparing to negotiate the present 25-percent to 35-percent tariff rates downward at a reciprocal-trade conference later this year.

Let me state unequivocally that employees in the rubber-footwear industry and their families will not long tolerate this complete disregard for their welfare. In the town of Naugatuck, Conn., alone more than 3,000 are employed in the manufacture of rubber footwear and allied products. Many thousands more depend upon the continued prosperity of this single facility. Most of the manufacturing plants for rubber footwear are located in the two New England States of Massachusetts and Connecticut. Is it not enough that every administration policy seems dedicated to removal of these industries to other sections of the country?

Indignity is heaped upon indignity, and it is now proposed that we relinquish employment and manufacturing opportunities to the Russian satellite, Czechoslovakia. It is proposed that slave labor in a nationalized, Communist industry compete evenly with free Americans paid a decent, living wage.

How, in Heaven's name, can a Congress representing the American people countenance this outright give-away of the birthright of citizens of the United States? All anyone asks, in this instance, is the opportunity to be employed at a task of one's own choosing.

I call upon Congress to reject any proposal which would substitute the principle of invoking tariff duties on invoice or foreign value rather than upon the American selling price principle. This thesis was upheld by two former Presidents, Herbert Hoover in 1933 and Franklin D. Roosevelt in 1937.

I submit for inclusion, with these remarks, a letter from the president of the Goodyear Rubber Co., Middletown, Conn., and the Case for Rubber Footwear:

GOODYEAR RUBBER CO.,
Middletown, Conn., March 7, 1950.
The Honorable JAMES T. PATTERSON,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: Once again the American rubber footwear industry is facing a serious threat from foreign imports and from efforts of our Government to encourage further the flow of manufactured goods from abroad. As one of the threatened American manufacturers, we appeal to you to use your good offices to obtain for us the protection we need to continue to operate and provide jobs for our present employees.

At the Reciprocal Trade Agreements Conference in Geneva, 1947, the duty on waterproof rubber footwear was cut virtually in half. Since that time, imports, especially from Czechoslovakia, have increased steadily and have reached dangerous proportions.

Now two new developments are in the making in Washington. The more serious is the attempt to abolish the American selling price principle, under which duties on waterproof and rubber-soled canvas footwear now are applied. This method was invoked by President Hoover in 1933 and sustained in 1937 by President Roosevelt. It is our understanding that the provision to remove the essential protection of the American selling price principle is contained in a bill, now being drafted, to revise procedures of the Bureau of Customs.

From our long experience in competing with goods made abroad with cheap labor, we know that the removal of the protection given under the American selling price principle will have disastrous results on the American footwear industry. Facts and reason supporting our position are give in concise form in the booklet the Case for Rubber Footwear, issued by the Rubber Manufacturers Associaton, Inc., which we are sending with his letter.

The second development which we anticipate is involved in the next conference on reciprocal trade announced for September of this year. It is expected that the American delegates will offer to negotiate the tariff on rubber-soled canvas shoes. We are conscious of the harm a reduction in this duty would do us in particular and the industry generally; and we respectfully urge you to do whatever you can to prevent such a reduction.

At present, the duty is 35 percent based on the American selling price. While this may appear to the uninformed as a high duty, we have evidence that even today rubber-soled canvas footwear is being offered for delivery in New York far below the lowest American price, and far below the point at which American manufacturers can hope to compete successfully for their own domestic market.

Within the past 20 years, the American rubber footwear manufacturers have on two occasions satisfied the proper governmental officials and the President of the United States that it needed tariff protection for its very existence. We respectfully ask you to help us retain this essential protection.

Your interest in this matter is earnestly solicited.

Respectfully,

THE GOODYEAR RUBBER CO.,
ALBERT A. LAPPIN, *President.*

THE CASE FOR RUBBER FOOTWEAR

The rubber footwear industry is an American enterprise.

It was founded by Americans more than 100 years ago. Although its early history is vague, 1843 is generally accepted as the year of its birth.

It was developed by Americans, and American manufacturers have been foremost in the promotion of design, quality, and efficiency.

The American pioneers in the rubber footwear industry had the entire world for their market.

While foreign competition was developing, American manufacturers maintained their leadership in the world markets for more than three-quarters of a century.

This leadership in the export field was lost in the late twenties to Japan and Czechoslovakia.

United States Department of Commerce statistics tell dramatically how American manufacturers of rubber footwear were driven virtually out of the export field by Japan and Czechoslovakia.

In 1919 American manufacturers accounted for more than half the total world exports of footwear. In 1936 (the last year the Department of Commerce issued its report) the American exports were just over 1 percent.

The decline of the United States and the ascendency of Japan and Czechoslovakia are graphically shown in the following table showing percentages of total world exports of rubber footwear (waterproof and rubber-soled canvas):

1919:	
United States	58.87
Japan	0
Czechoslovakia	0
1924:	
United States	26.31
Japan	2.93
Czechoslovakia	0
1929:	
United States	17.24
Japan	29.15
Czechoslovakia	.26
1934:	
United States	1.35
Japan	63.72
Czechoslovakia	8.23
1936:	
United States	1.11
Japan	62.83
Czechoslovakia	7.80

NOTE.—For the sake of brevity the above table covers the Department of Commerce report in 5-year steps, except for 1936 which was the last year the report was published.

These foreign competitors who swallowed the world markets and moved menacingly into the domestic market contributed nothing new to the development of rubber footwear. They merely copied American designs and American methods.

Their sole advantage was cheap labor which enabled them to undersell American manufacturers in their own markets.

These foreign offerings did not in the slightest expand the domestic market. Each pair of imported rubber footwear sold to American buyers simply took the place of an American pair which either remained unsold on the dealer's shelf or unmade by the higher-paid American workman.

In 1932 the influx of rubber footwear imports was so great the Tariff Commission made an investigation of costs in both the foreign and the domestic industries and reported to President Hoover.

The threat to the American rubber-footwear industry was so serious, that President Hoover issued a proclamation making duties on rubber footwear applicable on the American selling-price basis. The rates of duty (25 percent on waterproof and 35 percent on canvas) remained unchanged, but they applied to the domestic selling price of American-made footwear like or similar to the imported articles. Prior to the Hoover proclamation these rates were assessed generally against the invoice or foreign value of the imports.

This saved the American industry.

In 1937, when the Czechoslovakian Trade Treaty was under consideration, President Roosevelt sustained the action taken by President Hoover and refused to negotiate on rubber footwear.

Shortly after the conclusion of the Czechoslovakian Trade Treaty, the world started on its path to total war and for the next decade there was no import problem. With the end of the war, foreign manufacturers turned their eyes toward the American market.

Czechoslovakian rubber footwear manufacturers—now nationalized—began shipping their products into the United States. American manufacturere were aware of the danger that threatened. They realized that the margin of protection granted by two past Presidents would be ineffectual if the Czechoslovakian Government chose to use its nationalized rubber-footwear industry to obtain dollar credits in the United States.

It was at this time—1947—that the American delegation to the Reciprocal Trade Conference in Geneva granted to Czechoslovakia concessions on waterproof rubber footwear, which, for practical purposes, cut the American duty in half.

The trade treaty became effective in April, 1948.

Czechoslovakia accelerated its exports of rubber footwear to the United States. Receipts up to the present are not large when compared to American production, but they are steadily increasing.

The imports are priced at from 20 percent to 40 percent under the usual American prices. The presence of even a small amount of low-price goods in an industry as seasonable as rubber footwear can be most upsetting to the market. The least damage is the retarding of buying. Inventories are piling up more than usual as American manufacturers build against expectation and store the finished goods in order to provide continuous employment for their workers. While it is normal to build up some inventory in this period of the year, gambling on economic and weather conditions 6 months or more ahead, the industry's hazards are increased this year by the foreign offerings in the market and the threat of unknown future importations under the reduced tariffs.

Unrestrained importation of rubber footwear can lead only to the curtailment of the American industry, and probable failure of some companies.

It will not put more rubber footwear on American feet.

The domestic industry—except during the recent war when it was restricted to the manufacture of military footwear and a limited list of essential civilian items—always has been able to supply the public demand for its goods. Every year in its history its manufacturers have carried over substantial inventories from one season to the next.

Imported rubber footwear, produced by workmen whose wage level is far below American rates, may give the public the questionable benefit of temporary lower prices. Such imports are priced low because they have to be to compete. No guarantee is given that they will remain low if they can oust their competition from the market.

If American manufacturers are forced by such competition to cut prices below what sound business demands, the differences must come out of the manufacturers' pockets or out of their workmen's wages, or both.

Is the American rubber footwear industry worth saving?

There are 13 ccmpanies engaged in the manufacture of standard line rubber footwear. They produce 98 percent of the rubber footwear made in the United States. Several specialties manufacturers account for the remaining 2 percent.

These 13 have given steady employment to more than 20,000 men and women. An unusually high percentage of the industry's costs are for labor. In 1948 factory salaries and wages were 47 percent of total factory costs.

Since the end of the war the industry has produced rubber footwear with an annual average value of well over $100,000,000 at the wholesale level.

During the war the industry made more than 45,000,000 pairs of rubber footwear for the armed forces and at times half its capacity was devoted to military orders.

In addition, allocations of rubber—the most critically short war material—were made to enable the industry to produce a restricted list of civilian footwear which the Government held to be essential to the national health and welfare.

Is the American rubber footwear industry worth saving?

New Gouge for Consumers

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following article, which appeared in the New Republic of March 13, 1950:

NEW GOUGE FOR CONSUMERS

(By Robert Wallace)

The petroleum interests which monopolize the Nation's natural-gas resources have found a new way to remove billions of dol-

lars from the consumers' pockets and will soon begin doing so if Congress will pass one little law.

This bill, sponsored by Senators ROBERT KERR and ELMER THOMAS, of Oklahoma, and Representative OREN HARRIS, Democrat, Arkansas, passed the House handily last summer; it is close to passage in the Senate today. If it does become law, the gas bills of 40,000,000 natural-gas consumers will rise by one hundred and thirty to five hundred and fifty million dollars annually, with total extra costs of four to sixteen billion dollars over a period of 30 years. These levies on cooking and on the heating and lighting of our homes will add to the immense fortunes of the Rockefellers, the Mellons, the Pews, the Phillipses, and the other monopoly combines which control the oil-and-gas industry.

The gas bill would prohibit the Federal Power Commission from regulating the prices charged by independent gas producers to the operators who pipe the gas to consumers and allow them to charge what the traffic will bear. Among these independents may be found Standard of New Jersey, Standard of New York, Standard of Indiana, Gulf, Shell, Sinclair, Phillips, Texas, and Cities Service. They are independent because they sell to the pipe-line companies but are not affiliated with them.

Representative ROBERT CROSSER, Democrat, of Ohio, who led the fight against the bill in the House, has named 24 of the gas producers who would profit by this bill. They are all mammoth corporations. Their total assets amounted to $14,000,000,000 in 1948 and their profits averaged 24 percent after taxes; they are hardly distressed companies in need of relief.

The backers of the bill maintain that if it passes, competition among the producers will keep both prices and profits down. They point out that the prices of coal and oil are not regulated by Government. Why not depend on competition to suppress prices in the gas industry as well?

The answer lies in the concentration of ownership in the production of natural gas and the monopolistic control of its distribution.

There are 2,300 gas producers who sell to interstate pipe-line companies. Three percent of them account for 70 percent of the sales. The seven Southwestern States of Arkansas, Kansas, Texas, Louisiana, Oklahoma, Mississippi, and New Mexico contain nearly 90 percent of all the gas reserves in the country. There are 600 nontransporting gas producers, but only 12 of these producers sold more than half of all the gas going into interstate pipe lines from the Southwest.

Coal can be transported by truck, barge, or rail, and fuel oil can use these means as well as pipe lines. If prices are unreasonable at any particular coal mine or oil refinery, a buyer can get trucks or railroads to haul from another. For these reasons competition is at least feasible among the producers of coal and oil. But gas does not lend itself to such freedom. If a pipe-line company decides to buy gas from a particular field, it lays its pipe line. But if the producers in that field get together and raise their price, the company must either pay the increase or tear up the pipe line and lay a new one to a field with lower prices. Once a pipe line is laid, the competition of other fields is almost nil.

What about the possibility of competition among the various producers in a given field? Cannot one producer underbid another in the same area? The Federal Power Commission posed this question. It carried out studies of fields with combined reserves of 15.5 trillion cubic feet of natural gas. It found that in each case, one, two, or three companies owned from one-half to all of the natural gas.

Price fixing is, of course, contrary to the Sherman Antitrust Act. That means simply that companies which conspire to fix prices take care not to leave any documentary evidence lying around. Even though the same prices may be charged by all the producers in a single field, proof of conspiracy is hard to obtain.

From 1938, when the Natural Gas Act was passed, to 1947, the price of gas at the well was generally reasonable. Gas reserves, usually discovered during a search for oil, were considered a consolation prize and sometimes a liability. The FPC did not regulate the prices of the nontransporting gas producers during this period. But as the remarkable growth of pipeline companies created an ever-expanding demand for gas in the North, East, and other regions, prices at the wells soon began to skyrocket.

In recent years, gas prices have doubled and sometimes tripled. Speculation has been widespread, and reserves have been held off the market in the expectation of even higher prices. Yet producers had one great apprehension—the possibility that the FPC might move in to protect the public by regulation.

The oil and gas lobby began a campaign during the Eightieth Congress to remove this possibility. Their campaign produced the Moore-Rizley bill, which undertook to prohibit regulation of the nontransporting producers and to permit the pipe-line companies which owned their own gas wells to charge higher prices to the tune of $50,000,000 a year.

The primary emphasis of the Moore-Rizley bill was placed on allowing higher prices for gas produced by pipe-line companies, since, up to that time, no real attempt had been made by the FPC to regulate the nontransporting gas producers. The bill failed. But the campaign of the lobby gained in force.

Early in 1948, the FPC completed a study of the natural-gas industry. It indicated the startling degree to which prices had gone up and the concentration of ownership of gas reserves increased. As a result of this study, Commissioner Leland Olds began his fight for regulation of the prices charged by the nontransporting producers. This effort to protect the public welfare cost Olds his job. Senators from the gas-producing States blocked his confirmation for another term.

The monopolists of the natural-gas industry had good reason to fear Olds. One struggle before the FPC involved the Phillips Petroleum Co. In 1945, the Michigan-Wisconsin Pipeline Co. contracted with the Phillips Petroleum Co. for gas at a price of 5 cents per 1,000 cubic feet. But after pipe-line construction was well under way, the contracts were renegotiated and additional contracts signed which increased the minimum price to 8.5 cents, with some gas going at 10 and 11 cents. Added yearly costs to consumers amounted to $5,000,000 in this case alone. The price had doubled in 4 years.

If the gas bill is defeated, the FPC will probably bring producers' gas prices under regulation and, while allowing a fair return on investment, will protect consumers from excessive charges. But if the Kerr bill passes, the gas industry will aim for the highest profits possible and will charge the limit. Natural-gas prices may well go as high as oil and coal on an equivalent heat-value basis, and perhaps higher, since the cleanliness of gas makes it preferable for domestic use. This is already the case in Maryland, Virginia and the District of Columbia, where gas costs more than other fuels.

If the price of gas rises in this way, it could ultimately increase as much as 20 cents per 1,000 cubic feet on an average for the whole country, assuming 1947 fuel-oil prices. Based on 1952 consumption, this would mean an ultimate annual increase of more than $500,000,000 in amounts paid by consumers to the big gas companies.

Were gas to increase by the more conservative estimate of 5 cents per 1,000 cubic feet—and it has already done so in some areas—consumers would still pay an extra $132,000,000 annually. Additional amounts paid out by the various regions would be approximately as follows:

Middle Atlantic States	$5,200,000
East North Central States	13,400,000
West North Central States	13,400,000
South Atlantic States	5,800,000
East South Central States	4,000,000
West South Central States	21,500,000
Mountain States	3,700,000
Pacific States	2,700,000

The strangest phenomenon shown here is that the consumers in the West-South Central region, containing the four States of Texas, Louisiana, Arkansas, and Oklahoma, would suffer more than any other region if the gas bill becomes law, and yet this is largely where pressure for passage of the bill is coming from. While the big gas companies, having wells located in this region, would profit greatly, the consumers in the same region would be hard hit.

The fate of the gas bill will be decided very shortly in the Senate. Senators KERR, of Oklahoma, and JOHNSON of Texas, Democrats, backed by other Senators from gas-producing States, are leading the fight for the bill. Senator FRANCIS MYERS, of Pennsylvania, Democratic whip; Senator JAMES MURRAY, Democrat of Montana, veteran liberal, and Senator PAUL DOUGLAS, Democrat of Illinois, who also helped to lead the fight against the basing-point system, are leading the opposition. Senators AIKEN, Republican, of Vermont; KEFAUVER, Democrat, of Tennessee; HUMPHREY, Democrat, of Minnesota, and GILLETTE, Democrat, of Iowa, have also indicated a keen interest in fighting the gas bill.

The oil-and-gas lobby is, of course, all out for the bill. Labor and consumer groups as well as municipalities have begun to move into opposition.

Many Senators have not made up their minds on this issue, and the outcome will, to a much greater extent than usual, be decided on the basis of the debates and the mail basket. Rumors about President Truman's attitude continue to fly, but the Budget Bureau has stated that the bill is "not in accord with the President's program." As of this writing, the President has not repudiated this position. In view of his blasts at "special interests," it is difficult to imagine his accepting this bill. It is an outstanding example of the efforts of selfish interests to profit at the expense of the public welfare, against which he successfully campaigned.

Rulers of Red China Call on British To Negotiate Return of Hong Kong

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. LARCADE. Mr. Speaker, I am submitting an article by Constantine Brown, columnist, which appeared in the Sunday Star, of Washington, D. C., of date March 12, 1950, with respect to a question which was of the utmost interest to the United States, that is, the recognition of the Red regime in China by the British Government and the abandonment of their, and our former, ally, the Chinese Nationalist Government.

Mr. Speaker, this seems to be one instance where British diplomacy will boomerang.

The article referred to is reproduced as follows:

RULERS OF RED CHINA CALL ON BRITISH TO NEGOTIATE RETURN OF HONG KONG

(By Constantine Brown)

The new Chinese People's Republic has told the British representative, with whom it has been negotiating in Peiping, that it cannot accept Britain's recognition unless the British support Chinese Communist entry into the United Nations and are willing to negotiate the return of Hong Kong to China.

The first condition could easily be met by the London Government, since it officially has broken relations with the Nationalist regime. The situation is more difficult with respect to Hong Kong, the preservation of which was one of the main reasons for Britain's haste in recognizing Moscow's newest puppet.

The British administer the crown colony under a charter dated April 5, 1843. In recent years the Chinese have disputed British rights to that territory. At the Cairo conference in 1943 between President Roosevelt, Prime Minister Churchill, and Chiang Kai-shek the generalissimo insisted on retrocession of Hong Kong to China, but eventually he yielded when Mr. Churchill reminded him and Mr. Roosevelt that he did not become His Majesty's First Minister in order to preside over the dissolution of the British Empire.

QUESTION GLOSSED OVER

Thus, while Manchuria and Formosa were "returned" to China, the question of Hong Kong was glossed over. Chiang did not press the matter, but Mao Tze-tung and Chou En-lai, the Chinese Communist leaders, pressed it.

They have now informed the British negotiator through a minor official of the Peiping Foreign Office that the question of Hong Kong must be discussed and settled before the Chinese People's Republic can consider the British offer to resume normal diplomatic relations. What the Chinese Communists now are asking is that Britain admit that Hong Kong is a mere leasehold, which they will pledge themselves to evacuate a number of years hence.

The actual time for the British departure is left open for negotiation. But the principle that the crown colony actually is a Chinese territory and eventually is to be returned to China must be settled before the Peiping government will agree to exchange ambassadors with Great Britain.

The new situation may result in reversal of Britain's policy toward the Chinese Communists. There is an outside chance that Mr. Churchill, in agreement with the Government, will raise the question in the House of Commons, require Foreign Secretary Bevin to explain the status of the negotiations, and then force—by a vote of confidence if necessary—withdrawal of the preferred recognition of the Communist regime.

REQUEST OF BIG BUSINESS

Strange as it seems, the Labor government rushed into recognition of the Peiping government at the pressing request of Britain's big business. Banking and export firms which have been making handsome profits in China for the last 150 years pleaded with Mr. Bevin to consider their vital interests rather than political and ethical considerations in dealing with the Moscow puppets.

Unable as they are to make good profits in socialistic Britain, businessmen are trying to revive their old trade with the Far East, where they once reigned supreme.

Since the requests of the business firms did not conflict with the ideology of the Labor Party, the British Government decided to recognize the Communist regime in China about 3 months ago. The Foreign Office and the old "China hands" were taken back, however, when the Communist leaders were less than lukewarm to this offer of recognition.

Because of Britain's past prestige in the Far East, the Government and businessmen believed that Mao Tze-tung and Chou Enlai would accept eagerly the extended hand of British friendship. Instead, both Chinese leaders went for a long stay in Moscow, and the British diplomat assigned to negotiate resumption of relations was left cooling his heels in Hong Kong. He could not get a permit to enter Communist China.

Normally the British would have been indignant at the insult by the Chinese Reds and would have ordered their diplomat back to Britain. Eventually the Foreign Office representative received a visa to go to Peiping. He was received by underlings in the Peiping Foreign Office, who transmitted to him the conditions under which China was willing to consider conversations leading to eventual resumption of normal relations.

From Dear Hearts, Gentle People, a New West Springfield Plan

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. FURCOLO. Mr. Speaker, the country already knows about the famous Springfield plan which is mentioned in the accompanying newspaper article.

I also want to call the attention of the Members of Congress to another plan in a neighboring community called the West Springfield plan. I hope all the Members will take the time to read the description of it.

FROM DEAR HEARTS, GENTLE PEOPLE, A NEW WEST SPRINGFIELD PLAN

A few years ago much was heard about the so-called Springfield plan, the basis of which was the very simple idea that people of different races and creeds can get along together and work toward common desirable objectives.

The plan caught hold and received national attention. Books were written about it, magazines and newspapers sent special writers to Springfield to see it in action, and the radio used it effectively in programs designed to stimulate neighborliness and fair play.

WORLD-WIDE IMPACT

Indeed, the good that grew out of the Springfield plan cannot be measured, and the spirit it engendered spread throughout the country and, via our soldiers in foreign lands, was known even in far corners of the world.

GI's serving overseas from this area came to be asked about the Springfield plan.

There was a heartening contagion about this idea, as people of good will everywhere sought to uproot prejudice and promote better understanding.

It was and is such a good and effective idea that it is worth a new impetus, and the purpose of this article is to suggest that West Springfield furnish fresh drive for the spirit that created it.

Let's have a West Springfield plan.

Since this is already the Friendly Town, bustling with dear hearts and gentle people, it would be quite in line with our normal outlook to seize hold of this idea of community good will and give it a new fling that it might light other fires of good will in other good hearts.

DIVIDE AND DESTROY

If there is any enemy at work today seeking to destroy America or what America stands for—and there are signs that we have such foe—certainly one of the weapons they are turning loose against us is that which seeks to divide, that we might be the more easily conquered.

Beware the whispered word that seeks to poison our mind against a neighbor!

Tear through the insidious insinuations that seek to lump all those of opposite color or creed in separate camp, that would have us build fences to keep out fellow citizens.

Remember, that whatever our differences, nothing is so vital in the world today as that men of good will should stand together.

Some such slogan might be the basis of a West Springfield plan.

It takes more than writing about it, of course to make such a plan. The community must practice it.

There is ample opportunity in many existing frameworks, which by simple recognition of a West Springfield plan and extension of program could make it a vital force in the community.

ALREADY AT WORK

Already it is a dominating factor in some of our groups, such as the West Springfield neighborhood house, where program and good will cut through all superficial barriers of race and creed.

In our schools, both public and parochial, there is much to encourage the fundamental allegiances that make for a strong democracy and effective brotherhood.

Indeed, in almost every circle within the community there is a force for the West Springfield plan. A consciousness of the objectives could rouse a considerable activity town-wide in impact which could thrust this community into the forefront of a movement world-wide in scope.

There is no lack of good will in West Springfield, but even the most optimistic among us knows full well what opportunity there is for amplifying and insuring the continuity of this good will.

BUT NEEDING LEADER

It requires intelligent program and some effort to promote a plan such as this. The latent materials are at hand. The leadership is needed.

The importance of the work is beyond dispute in this troubled day. The reward is peace.

Atomic Crisis Needs Action

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include the following interesting article written by Judge Thomas F. Quinn, of Boston, Mass., and appearing in the Boston Post of March 5, 1950:

ATOMIC CRISIS NEEDS ACTION—KNOWLEDGE OF FISSION GIVES NATIONS TOO POWERFUL WEAPON—CHANGE IN UN CHARTER CAN HELP

(By Judge Thomas F. Quinn)

We have heard much about social security. We recognize and we are concerned with a general insecurity. In a free America these concerns may not be left to a select few.

The aggravated atomic crisis confronting all of us requires more than receptive bravery. It requires an insistent demand by the people for action broad enough to deal with and control this unleashed power.

Social security forever more on this earth depends upon peace between nations. The world-wide knowledge of atomic fission and thermonuclear weapons has placed in the hands of nations and in the control of national political leaders, war weapons sufficient to destroy all life on earth. The Russians may match and outdo us. We may match and outdo the Russians. It appears certain that on such a course we will both undo each other, undo other nations, undo future generations, and social security to boot.

Our national leaders in aid of our defense have done much more than authorize extermination weapons. Confronted by a cruel and tyrannical Soviet expansionism that has marched into Europe, that has crushed peoples as far as the Danube, that has swept over Asia to the Pacific, that has infiltrated its agents of hatred and fury amongst all the peoples on earth, we have moved slowly but inexorably to create a common defense with all people outside the iron curtain.

IN MANY FIELDS

We have moved in the field of international politics, with economic aid to other nations, with economic aid to our own citizens to secure our internal stability, with military arms to those who will stand for freedom and justice and honor. We are participants with nations abroad in Atlantic and Mediterranean defense pacts in which an armed attack on any national signatory is regarded as an attack on all so bound.

We are sharing in the physical protection of the countries of North Africa and southern Asia. We are pouring our wealth into many lands without hope of any return other than a common sustenance. We have encouraged a European economic union. We look with favor upon stability in Europe in a community of nations or through federation. We are aiding upon the rearmament of England and part of the European Continent. We have bolstered the United Nations Organizations with hope for their future. Our national political leaders, our officials, our industrialists, our bankers, have not been idle.

COLD WAR HOT CONTEST

After all these temporizing activities, where do we find ourselves? What of our security? We find ourselves directly or indirectly cheek by jowl with Communist militarism in every corner of the world. We find ourselves engaged in a cold war that is in fact about the hottest contest in the history of mankind, with no normal interchange of goods or services or information with the mass of humanity imprisoned by the Soviet war machine. We find humanity marshaled or joined in two great camps, madly testing great instruments for mass destruction.

There is no earthly security through our present split global arrangements. The mere marshaling of human labor to produce the enormously expensive and burdensome instruments of destruction will corrode a free society, and soon may wipe out any extensive holdings of private industry or any proper individual economic freedom. The two great armed camps are likely to destroy earthly freedom without moving into any explosive action. If they move, they are likely to destroy life on earth. In any event, we, the people, cannot permit the development of destructive power to move on to obliterate our lives or our freedom.

Our political leaders do not like this situation. The Russians could not be so stupid as to be either apathetic or content with their position. None wish to be the Pied Pipers of doom. Where then is the path through the maze? Where are the chains that bar the road to sanity and peace, that we may cut them?

MILITARISTIC CHAINS

We should consider whether the chains that bind all of us are militaristic chains now united with the chains of nationalism. Nationalism is good and proper and necessary for national affairs. The militaristic chains are so monumental now that they have become galling in the common affairs of all mankind. Atomic fission is such a common affair. Mass destruction is such a common affair.

The basic power to cut these chains lies under God with the people of the world. May we use any part of the United Nations to institute the organization of this power of the people? I think so. The preamble of the Charter of the United Nations, placing the source of authority in the peoples of the United Nations, sets forth a determination to live together in peace with one another as good neighbors, and "to unite our strength to maintain international peace and security."

A proposal for amendment to the Charter might be made in the Assembly in accordance with article 108; so that regulation adequate for survival may be vested in the United Nations free of veto in the Security Council. The ultimate objective would be to activate and implement all the structures of the United Nations to their proper ends, but we are considering initially only a resurgence of the spirit and the will of the peoples of the world for definite and effective controls of armaments.

COULD SPONSOR PROPOSAL

Our Congress, by joint resolution, might direct our representatives in the United Nations to sponsor the initial proposal. This proposal might affirm that the security of the peoples of the world is endangered by weapons for mass destruction, and by the inability of member nations to formulate separate agreements adequate for national defense and for the supervision and control of such weapons.

Then we would sponsor an amendment to chapter V, article 27, by adding after the words "including the concurring votes of the permanent members" the words "excepting votes upon any and all destructive armament the maintenance of which shall be regulated by the Security Council upon principles common to all nations by votes of two-thirds of the members, and for said purposes of regulation, complete and continuous rights of inspection in every part of every member nation are granted to the Security Council." This amendment would be effective upon adoption in accordance with provisions of chapter XVIII, article 108.

It seems to me that such an amendment under present conditions would not impair the right and duty of the Congress to provide for the common defense. International regulation upon principles common to all nations may be the most effective and practical way now to insure our defense. We will be obligated to abide by these common regulations only upon assent by all the permanent members of the Security Council, including the Soviet. We grant none of our sovereignty, nor any part of our domestic responsibility. It is about as far as we may expect other nations to advance now with us.

We must act boldly for the security of all people. If we fail to act we leave ourselves and all the world in serious and imminent danger. If others fail to agree to regulation, world opinion may arise in a more common unity with us to impel common protection.

CAN HAVE NO ILLUSIONS

We should have no illusion that a mere writing of words or a mere agreement in words will keep the peace. International regulation of destructive armaments, including the elimination of certain types of weapons, and the limitation of others, may provide further time for the people to lay the foundations for an enduring peace.

Common inspections will generate common talk at the peoples' level. Common concern to alleviate suffering in most depressed areas should give rise to considerable common action to that end. Reasonable access to the most important natural resources upon fair terms should be facilitated and encouraged. We should study with other peoples the intricate task of developing fair exchanges of all necessary goods and services. In short, we should acquire time to search for peace, and we should use that time to reduce the economic causes of war. We must activate our proclaimed spirit of good will by sacrifices necessary to save humanity.

Some may say that this program means communism for all of us, however good our intentions, and that Red Riding Hood with her market basket will never survive against the wicked revolutionary gutter tactics of the big bad wolf. There is that danger. But why send Red Riding Hood? After all, we are talking about human beings—Russian human beings—with whom we propose to compete and cooperate, depressed human beings that we propose to place on their own two feet, human beings all over the world who react very much as we do.

I think that many of our business leaders may think too narrowly, but for weal or woe we are world leaders and the best that we have, backed up by the most skillful free people on earth will not be afraid to tackle any necessary economic assignment on the face of the earth.

NEED PLANNING AND HELP

We need not lose our right to hold all the private property necessary to our freedom. We do need guidance and planning and governmental help to reconvert haphazard processing for domestic waste to a balanced abundance for domestic and foreign peoples.

If we can find the way to turn our energies away from the destructive armaments now fabricated by our taxes, to useful goods, the distribution of which may be accomplished by similar taxes, we may save the lives of our children. A common survival need not mean stagnation. A common survival need not mean loss of individuality or of any appropriate freedom.

On the path that I indicate lies the hope of survival. We may remember that the path of good will is our only hope of reaching temporal security, and if it lends us hope for fair days hereafter we might try that together, for we are all headed that way.

Federal Officers or Employees Convicted of a Felony in Connection With Their Service Should Be Barred From Annuity Benefits

---

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. KEATING. Mr. Speaker, any Federal officer or employee, including a Member of Congress, who commits a felony in connection with the conduct of his office should forfeit any claim he may have to a Federal contribution to retirement benefits. Adjudged faithless to his trust, he should not ask the Government to assist in paying the cost of a retirement annuity appropriately awarded to conscientious and faithful public servants. His only right should be to recover the amount of his own contributions to the retirement fund.

Chapter 15 of title 18, entitled "Crimes and Criminal Procedure," contains provisions relating to the conduct of Federal officers and employees, including Members of Congress. I am today introducing a bill to add a new section to this chapter to provide that anyone convicted of a felony committed in connection with his service as an officer or employee of the Government shall receive no award of annuity under the provisions of the Civil Service Retirement Act. One so convicted, under this measure, will only be repaid the amount credited to his individual account arising from his own contributions to the fund less any sum which he may already have received on an annuity previously awarded.

Conviction of a felony already carries with it forfeiture of the franchise and frequently disqualification from holding an office of honor or trust in the Government. Certainly when an offense has to do with the performance of one's official duties, conviction should carry with it loss of the benefits designed to reward those who serve with integrity and fidelity. Insofar as pension rights derive from the purse of the American public, they have a right to insist that malefactors in office shall not share in the annuity benefits which they provide.

It may be argued with considerable force that the bill I have offered does not go far enough in that it is limited to a conviction of a felony committed in connection with or related to the service of the Federal officer or employee. It may be considered desirable by the Committee on the Judiciary to extend these punitive provisions to one convicted of any felony whatever. I have endeavored, however, to design a measure which would have the widest possible support. Thinking it might be contended that conviction of a felony provided in some of the States' statutes or arising possibly as the outgrowth of political rivalries should not carry with it this additional penalty, I have limited the applicability of this legislative proposal strictly to malfeasance in office.

The fact that Members of Congress under existing law might profit from their own wrongdoing at the expense of the public makes it imperative that we act and act quickly to indicate our recognition of the need for change in existing law. The preservation of public respect for Federal officials is essential to the successful functioning of our form of government. This is an issue upon which we cannot afford to delay or equivocate.

The Red Famine

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the March 11, 1950, issue of the New York Journal-American relative to famine in China which is the rest of the Communist conquest of that country:

THE RED FAMINE

In the wake of the Communist conquest of China has come the inevitable tragedy of a helpless and hopeless nation whose bewildered people have been uprooted from their homes and their productive lives.

Infinitely worse than the destruction and devastating Red conquest of China is the ensuing Red famine.

Ten millions of the Chinese people will surely die of starvation in the next few weeks, and ultimately as many as 70,000,000 may perish—a horror of such vast proportions that the annals of human history may be searched in vain for a parallel.

This is happening because the conquering Communist armies have swept through the land like thieves and locusts.

The available supplies of food have been confiscated for the use of the Communists alone, leaving the masses of the people to starve and die.

The people are not planting new crops, because they would only feed those whose ruthless and crushing heel is on the neck of China.

So the great Red famine is stalking throughout the land and spreading like a plague to the uttermost reaches of the enslaved and agonized country.

There is no relief for China in this grim disaster, for only the Communists are in a position to help the people and, of course, it is the Communists who have caused the disaster and are reaping the gruesome profits from it in terms of the power and authority they are now able to wield over the people and at their expense.

The bitter irony in this situation arises from the fact that China has many friends among the nations of the world, but none of them can help her.

None of China's friends are more able and willing to help than America, but Americans too must sit back and watch China die.

Communism has brought this ghastly tragedy to China, as to all other countries that have fallen under its evil spell, even and especially Soviet Russia itself.

It is not a new experience in world history for famine and pestilence and death to descend upon a people, in the wake of conquerors who have laid the land waste by despoiling it.

But it is new for all the rest of the world to be compelled to stand by helplessly while the whole work of horror is wrought, not by the violent acts of nature but by the deliberate designs of evil men.

The Budget

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BOLTON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. BOLTON of Maryland. Mr. Speaker, the one question uppermost in the minds of the American people today is economy in Government. This is especially true now when we are all called upon to pay our Federal income tax and it certainly does not make us any more anxious to pay our taxes when we realize that much of the money paid is wasted in unnecessary and unessential governmental spending.

At the beginning of the present session of Congress, President Truman estimated that the 1951 deficit would be $5,100,000,000. Last year the President estimated that the deficit this year would be $300,000,000. He could, of course, be just as wrong on the 1951 estimate as he was this year, in which event the deficit could be considerably more than the present estimate.

Based on the President's present estimate, the 1951 budget is $8,200,000,000 more than the expenditures in 1948. Under the 1951 budget, domestic civilian expenditures—exclusive of veterans and interest—would total $12,250,000,000 as compared with $6,900,000,000 in 1948, and $11,400,000,000 estimated for 1950. This amount for non-war-connected purposes is far more than the total budget, including defense, foreign, veterans, and interest, in any peacetime year before the war.

In this budget, foreign expenditures are reduced by $1,800,000,000 and domestic expenditures are increased by nearly a billion dollars, indicating that as foreign expenditures and recovery programs are decreased, expenditures are to be increased for domestic programs.

As the budget now stands, the proposed program for the military will cost more than any year since demobilization was completed in 1948—this in spite of the fact that this will be the third year of unifications, which was to materially reduce the cost of the armed services.

Frankly, I am opposed to many of the policies financed in the pending budget, and I think it imperative that we reduce, rather than increase, our governmental expenditures and make a sincere effort to balance the budget. No other big business could long continue deficit spending, and, in my opinion, neither can the Federal Government. It is the responsibility of the Congress alone to appropriate money for Federal expenditures, and I sincerely hope we will make a real effort to reduce Government spending and try to balance the budget.

Too many people are asking the Federal Government to perform the functions of State and municipal governments. Too many people want to lean upon the Government. Too many people are thinking of security instead of opportunity. Too many people are going to sleep dreaming of economic security guaranteed by the Government, and I fear they will wake up in a nightmare of austerity guaranteed by socialism.

We are today spending more than tax revenue justifies. Without adopting any of the new programs urged by the administration, it is conservatively estimated that during the fiscal year ending June 30, 1950, we will have spent between five and seven billion dollars more than our income, but if we adopt all of those new programs, no one can tell exactly how much we will have to borrow. We do know, however, that deficit financing as a result of spending beyond our revenue is destroying the purchasing power of the dollar, destroying the value of every insurance policy, every deposit, every pension, social security, and so forth.

Today our banks have more money on deposit than ever before in peacetime history. Farmers are reasonably prosperous. Few factories are idle. More men are employed than ever before, and our people are better fed and better clothed. If our Government cannot live within the national income today, what will it do should we have a serious recession in business?

Senator BYRD, of Virginia, has submitted a budget to the Senate amounting to $36,000,000,000, a cut in the 1951 budget of $6,000,000,000. I have no doubt the affairs of Government could be efficiently carried on with this amount. We must economize and we must confine our expenditures to conform to our income. If we do not reduce our expenditures, we necessarily will have to increase taxes by more than $7,000,000,000, if we expect to preserve the purchasing power of the dollar. God knows none of us want to raise taxes, because taxes are already so high that they are choking the life out of the incentive to do business.

I am confident that achievement of a sound balanced budget would reaffirm the confidence of the public in prospects of our continued solvency, and strengthen the private-enterprise system which is our basic form of government. This confidence is based upon the conviction that a sound and reasonable budget would—

First. Balance the budget and create a surplus sufficient to justify correction of tax inequalities and injustices which admittedly exist, and this might provide a business stimulus to pave the way for tax reductions.

Second. Break the momentum of deficit financing policies.

Third. Dispel the fear of private enterprise inherent in Government encroachment through public debt and by Federal controls which lead to socialism.

Fourth. Stimulate constructive investment, development, and expansion in industry and agriculture for the production of more of the still tremendous backlog of things people everywhere need and desire at prices they can pay.

Fifth. Put savings to work through private enterprise creating the wealth which is required to lift the great millstone of debt from our backs and leave us erect with the dignity of a sufficient and creative people, free and unregimented in the pursuit of happiness.

Should we accept Senator BYRD's recommendation of a $36,000,000,000 budget, it would result in a saving of $108,000,000 a year for the people of Maryland, which is about one-seventh of the amount of Federal taxes paid in Maryland in a year. I was interested in reading the following editorial in the Baltimore Sun of February 27, 1950:

WHAT FEDERAL BUDGET PRUNING COULD MEAN TO MARYLANDERS

When someone suggests a pruning program for the multi-billion-dollar Federal budget, the average person, if he gives the suggestion any thought, is very likely to push it hurriedly out of his mind with a frustrated "So what?" That is so because the Federal budget is too big and complicated for the average person to be able to translate a pruning program into anything remotely resembling personal pocket-saving terms.

Senator BYRD has now come forward with a statistical table which should be of great help to those who want to know what Federal budget pruning could mean to them. The table shows how much the taxpayers of each State would save if the Byrd plan to cut the Truman budget proposal were to be adopted. The cut would reduce the budget from $42,400,000,000 to $36,000,000,000.

The result in savings to Marylanders would be $108,000,000. What would that mean in terms of reducing the taxpayers' burden in this State? To make a comparable saving in State taxes it would be necessary to slash the State budget by 70 percent. That would then allow the elimination of the State sales tax, income tax, gasoline tax, property tax, alcoholic-beverage taxes, automobile taxes (licenses, titling, etc.) race-track taxes, inheritance taxes and half of the tuitions at the University of Maryland.

There were loud cheers when Governor Lane put forth his plan to reduce the State tax burden by $3,750,000. But that reduction, welcome as it is, is chicken feed in comparison to the saving that would accrue to Maryland taxpayers if Senator Byrd's plan to prune the Federal budget were adopted.

Mr. Speaker, I intend to vote at every opportunity for a reduction in governmental expenditures, and I firmly believe that if we all try, we can keep the budget within the $36,000,000,000 a year recommended by Senator BYRD.

American Legion Supports Cooperative Housing

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

THE AMERICAN LEGION,
Washington, D. C., March 13, 1950.

Hon. GEORGE D. O'BRIEN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN O'BRIEN: The American Legion at its national convention in 1949 unanimously endorsed Senate bill 2246 having to do with housing legislation. The House last year passed part of that legislation in H. R. 6070 and will soon consider H. R. 7402, which includes cooperative housing and other perfecting amendments. The American Legion strongly urges the passage of H. R. 7402.

Prior to our endorsement of the cooperative housing proposal we gave it serious and conscientious study. We consider it to be in keeping with the private-enterprise system and we cannot agree with the objections raised by its opponents.

In passing H. R. 6070 last year the House eliminated the direct loan back-up for veterans. The American Legion respectfully urges that this provision be added as an amendment to H. R. 7402 or that it be agreed to in conference between the Senate and House conferees. The American Legion further urges that no action be taken that would increase the rate of interest under the Servicemen's Readjustment Act beyond 4 percent.

Thanking you for your favorable consideration of the above, and with kindest regards, I am,

Sincerely yours,

MILES D. KENNEDY,
Director, National Legislative Committee.

Unions Necessary, But Improvement Needed

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, few familiar with industrial problems object to unions which obey the law, maintain fair play in their own organizations as well as in their disputes with employers.

From the Allegan Gazette of March 6 comes an editorial written in answer to the president of a local union who evidently can see no fault in unions or their practices.

One thing union men apparently forget and that is that as wages to meet the increased cost of living go up, so does the cost of living.

The remedy? You ask. A return to the law of supply and demand. Following that law there is always some injustice, some inequality, but the injustice and inequality are far less when we stick to nature's laws than when man attempts to avoid those laws, run the universe under those he makes.

Prices for everyone sometimes are too high, sometimes too low, but never, so far as I can recall, has there been as much injustice as under the laws which we have recently used in our so-called planned economy. All one needs to do to realize this is to think of the price the grower receives for potatoes, the price the consumer pays, and the subsidy paid by the taxpayers generally. Nor need we confine our argument to potatoes. The same result in greater or less degree has followed every attempt of every Government to fix prices.

The editorial is as follows:

UNIONISM AT ITS WORST

For the past month the people of this country have seen unionism at its worst. During that period, union coal miners in mobs up to as many as 1,000 men have roamed through the coal districts attacking nonunion coal workers and operators, destroying property, and kidnaping workers; all in an attempt to enforce union will upon the people of this country.

To be more specific, a mob dynamited two loading docks at Brockway, Pa., the explosions damaging 30 nearby homes and stores and injuring 3 women living nearby. Damage to the docks was estimated at $9,000 and to private property (homes and stores) at $3,000.

On the same day a mob chased a truck driver to his home at Grafton, W. Va. There this man surrendered to the mob so as not to endanger his family. The mob then took this man to a mine and attempted to question him relative to nonunion activities, telling him when he refused to talk that they would refresh his memory. At the mine, police rescued him from the mob.

Near Murraysville mobs destroyed property and attempted to ignite coal piles by throwing Molotov cocktails.

More recently two nonunion mines were blasted by dynamite northwest of Birmingham, Ala., total damage estimated at $115,000.

Last September at one of these mines, owners and employees defended the mine against an armed attack by 200 pickets and

in the pitched battle one of the pickets was killed by a shotgun blast.

These are just examples of what has been going on in the coal districts for the past month.

According to the Department of Labor, the coal miners for the year 1949 received a pay averaging $76.32 a week.

During this period of violence union mobs have committed arson, assault and battery, kidnaping, malicious destruction of property, and felonies by the score, all under the benevolent pretext of advancing the case of unionism.

Meanwhile, President Truman has done practically nothing to prevent what we believe is civil war.

We predict that the United States Government headed by Truman will in the end take over the coal industry, surrender to the union mobs, and give them whatever it is that they want.

If Mr. Gibson thinks that this is kicking the wrong dog we will publish any reply he chooses to make provided he limits it to a half column and provided it is in answer to this editorial.

Today Russia Is Really a Weakling and Not a Tower of Strength

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. O'SULLIVAN. Mr. Speaker, we hear and read a great deal these days about the war might of the U. S. S. R. and perhaps most of us who are not too well informed on the subject anyhow, and have not resorted to individual thinking, are prone to believe implicitly what we have heard and read on the subject.

In the March issue of the National Grange Monthly, beginning at page 12, appears a most enlightening article written by Mr. J. T. Sanders, legislative counsel of the United States Department of Labor, entitled "Russian and American Food Potentials," which is a real eye opener for everyone who will take the time to read it.

The real test of the war might of any nation is not its population, or its soldiery, or its battle armament, but its food and water supply and the efficiency of its networks of transportation facilities.

A great American general once said that an army marches on its soldiers' bellies, and that statement is as true today as it was when it was first spoken. The last war proved that fact when almost invincible forts, such as Corregidor fell, largely for the want of food and water. So also on other theaters of World War II activities, food supply and the ability to move it, if it was available, where needed, were the controlling factors and upon which was spelled out either defeat or victory.

This splendid article, which I recommend to my readers, is as follows:

RUSSIAN AND AMERICAN FOOD POTENTIALS

(J. T. Sanders)

One very important difference between the economic position of Russia and the United States, the difference in costs of food supplies, is often overlooked in comparing the present and future economic strength of the two nations. Despite the popular belief of the contrary, Russia is and will continue to be at a great disadvantage to the United States in abundant and cheap food to feed a rapidly growing population.

Take a look at the simple table on this page and note the present great disadvantage of Soviet Russia compared with the United States. These figures were issued by the United States Department of Labor and reveal that, measured in terms of the unweighted average of the seven basic foods shown, Russia now pays for a composite pound of food 16 times as many minutes of toil and sweat as we do. Part of this great difference is the greater degree of mechanization and efficiency on American farms. How much is due to this we do not hazard a guess. Despite their 30 years of intensive totalitarian efforts to collectivize and mechanize farms it certainly would be humiliating, I should think, for the Communists to admit this, although they must know that their farmers are far behind American farmers in mechanization and efficiency. We are convinced Russia's farmers will never equal ours in this respect; but this is not the main purpose of our discussion. Our main purpose is to show that there are important reasons other than basic inefficiencies in the two kinds of economies, which account for this extraordinary difference in the cost of foods in Russia and the United States. One very significant reason is the unbelievably great handicap of transportation that hangs like a millstone around everything that Russia does. The word "transportation" should be written in bold letters across all Russia's 5-year plans to remind her of handicaps that she must overcome to surpass her hated capitalistic America. Here is surely the physical Achilles' heel of Russia.

If one could accurately measure the physical cost of moving a bale of American cotton from Chickasha, Okla., to Moscow, and a bale from the Russian cotton-growing areas around Tashkent to Moscow, he would find that the shipment of the Oklahoma bale costs considerably less. Shipping a commodity 2,000 miles over a desert most of the way is indeed expensive freight, especially when the railway is mainly supported by a one-way haul.

Minutes of labor required to pay for a pound of various indigenous foods in the United States and U. S. S. R.

[Basic data from Labor Review, November 1949, of U. S. Department of Labor]

	Minutes of labor required to buy a pound of—							
	Flour	Rice	Beef	Butter	Milk	Egg	Sugar	Unweighted average of 7 foods
United States	4	8	29	32	9	27	4	16
U. S. S. R.	52	145	254	542	59	158	141	264
U. S. S. R. as a multiple of United States	13	18	6	17	6	6	35	16

Take a close look at the figures of the different food costs in the table above, and it will be seen that transportation is accountable for an important part of the differences in costs. In Russia, beef, milk, and eggs are consumed near production areas and are not shipped long distances, partly because of poor refrigeration facilities, but also for other economic reasons. Flour, rice, butter, and sugar, on the other hand, are transported over much longer distances. In Russia a pound of the first group is marketed for only six times the amount of labor that this group costs in the United States. The second group, where longer hauls are involved, requires from 13 to 35 times as many minutes of labor to purchase, as is the case in America. This statement does not imply that all this great difference is traceable to transportation.

Let us look at the physical basis for this great influence of transportation, and why there is such a handicap placed on Russian farm production and sale to consumers. The good agricultural lands of Russia are to a large extent in the so-called black and brown earth soils which stretch, with minor interruptions, over 5,000 miles from western Ukraine to eastern Russia at Vladivostock. Almost all Russia's land other than the black and brown earth soils are either too infertile, too rugged, too dry, or too cold for good agriculture. This area of productive farm land averages about 200 to 270 miles across. In other words, it is 20 times as long as it is wide. The area in the United States where the great predominance of the food shown in this table is produced, is a great compact triangular area about 1,200 miles in extent on each side, embracing roughly the Mississippi River drainage area, lying in the heart of America. It stretches from Pittsburgh to the northwest corner of North Dakota, thence to near Austin, Tex., and back to Pittsburgh.

TRANSPORTATION

Thus our food-producing area is located in the very center of the Nation and shipment is from this center to the outer edge. Our food haul probably will average not over one-fifth that of Russia when the latter develops its undeveloped agricultural resources as completely as we have ours. Practically all of the undeveloped agricultural resources of Russia lie in Asiatic Russia where the body of good cropland is 3,000 miles long, averages only a little over 100 miles wide, and is much less in an uninterrupted body of good land than is true in European Russia—that is, the good agricultural land in Asiatic Russia is probably 30 times as long as it is wide. The whole 5,000-mile narrow stretch of productive land is bounded almost every mile on the south by barren deserts and at least all of its 3,000 Asiatic miles to the north by the Siberian frozen wastes. Since European wheat lands in Russia have long been intensively used, future new areas of crops must be developed east of the Ural Mountains in Siberia with longer and longer hauls.

Another important difference to note between Russia's agricultural land and that of the United States is that Russia's good land gets from 10 to 20 inches of rain with an average of not over 15, whereas the great agricultural triangle of the United States gets a rainfall about double that of Russia. As a consequence, per-acre wheat yields in the United States average around 50 percent more than those of Russia. Year to year fluctuation in yield is also about twice as high in Russia as in the United States. In other words, yields of wheat in the United States are and will continue to be 50 percent greater and twice as dependable as those of Russia. Since future expansion of agricultural production in Russia must be in the main toward drier and drier, as well as more distant areas, yields will almost certainly tend to be smaller and less reliable in the future than at present or in the past.

Despite Russia's great effort to conserve moisture and make rain artificially, this great handicap compared with the United States will remain with Russia as long as

time lasts. It will always make food costlier in human toil in Russia than in the United States. Improvement in transportation efficiency will help, but will never eliminate this handicap.

LOW YIELDS—HIGH RISK

Since wheat at present is grown in all parts of the good agricultural lands of Russia, this wheat handicap of low yields and high risk characterizes and indicates the extent of Russian agricultural handicaps for most farm products except possibly barley, rye, potatoes, and some other root crops. Certainly its dairy, pork, and, to a less extent, beef production is similarly handicapped. Russia has not the physical basis for producing great quantities of feed grain that will even remotely compete with our Corn Belt—by far the world's best.

Americans should not view these great unsurmountable handicaps of our present greatest and most bitter antagonist either in a gloating spirit or with complacency. We should get from this knowledge a better perspective of relative economic strength of Russia and America; but we should also recognize that Russia can in part meet this handicap by pitifully low living standards for the great mass of her people. Neither would we appraise the situation honestly if we contend that free enterprise and democracy for her would remove her handicaps, for it would only do so partially.

STANDARD OF LIVING

To maintain even the present comparative lower standard of living of Russia, is certain to require in the future a far greater part of Russia's total labor capacity than we as a Nation will ever require. We will in the foreseeable future be fed much better and cheaper than Russia will, thanks to America's unsurpassed natural agricultural resources. Our implicit faith in the superiority of our democratic and free-enterprise system gives us the added consolation that our farmers' efficiency will for decades to come be unsurpassed and unequalled by that of Russia.

These few simple comparative agricultural facts should give us e perspective that adds to our faith in America. We can only hope that in the not too distant future we can have a relationship with the great Russian people that substitutes friendship for hostility, for only in friendship can the handicap of Russia be softened and reduced. Until that blessed day we can get comfort from a realization of the natural superiority of our position and form of government.

The Dawn Is Breaking

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, for a long time the Detroit Free Press, under the guidance of John S. Knight, followed to a certain extent, the New Deal line, praising it and abusing and vilifying Congressmen who, in the beginning recognized the New Deal for what it was.

That Editor Knight is repenting—and I hope his repentance will stick—is evidenced by the following editorial from the Detroit Free Press of Sunday, March 5, 1950:

POINT 4 CALLED A POINT OF NO RETURN

An old-time friend of mine is a retired newspaper editor who used to work for one of those rare specimens, a New Deal publisher in the South.

"Tom," I said one day, "did you always share the views of your liberal, world-saving boss?"

"I'm afraid not, Jack. You see I was never that enlightened."

Editor Tom was reflecting the viewpoint of millions of other Americans who want to see the world progress but are not sufficiently "enlightened" to go into raptures over President Truman's proposed global Fair Deal.

Of course, they may be slightly on the stupid side and lacking in the finer understanding that impels other big and noble-minded people to accept development of the world's backward areas as the primary responsibility of the United States.

But, in their literal, unimaginative way, they can't figure out why the American taxpayer should finance "Backwardarea" when our own Government is running better than $5,000,000,000 in the hole with the highest peacetime taxes in history.

The Truman plan for "Backwardarea" is better known as point 4.

It was first proposed by the President in his inaugural address of January 20, 1949, when he said:

"We must embark on a bold new program for making the benefits of our scientific advances and industrial progress available for the improvement and growth of underdeveloped areas.

"We should make available the benefits of our store of technical knowledge and we should foster capital investment in areas needing development. The program can greatly increase the industrial activity in other nations and can raise substantially their standards of living."

In 1944, Earl Browder, then head of the American branch of the Communist Party, proposed substantially the same program in a book called, Teheran: Our Path in War and Peace.

Comrade Browder maintained that Government-financed giant industrial-development corporations, each in partnership with some other government, or group of governments would become the best investment the American capitalist class had ever made in its whole history.

As Henry Hazlitt points out in an interesting little booklet, Illusions of Point Four, there is nothing new in the belief that sound international investment promotes world production.

What is new is the paternalistic assumption that the process of international investment must not be undertaken, as hitherto in modern times, by private investors at their own risk, to private borrowers who have proved their credit worthiness and responsibility, but must be nursed, spoon-fed, furnished with crutches, and guided at every step by the Government.

Like Browder, President Truman assumes that it is this Nation's duty to raise standards of living in the underdeveloped areas of the world.

This may be a fine humanitarian concept of America's responsibility, but nevertheless the weary United States taxpayer should understand that as the world's standards of living are raised by point 4, his own living standards will have to come down.

For example, if we spend millions for a housing project in Patagonia, less money will be available for housing in Detroit.

The proponents of point 4 would have us believe that the United States can become richer by giving our money away, on the theory that merely by investing capital anywhere in the world, you necessarily add to the wealth of the world.

Actually, nothing of the kind can be accomplished by point 4.

Money taken away from American taxpayers to assist the natives of "Backwardareas" simply means that the "Backwardareans" will have more, and the Americans less.

In addition, when we have accepted the premise that it is our duty to help everyone, everywhere, when and where can we ever call a halt without being threatened that "Backwardarea" will go Communist or Fascist unless we come through with more money pronto?

We have been "blackmailed" in Europe and South America ever since World War II. Every nation with a shaky economy has "communism for sale." Our overseas friends have shrewdly capitalized upon our propensity for believing that dollars will cure anything.

Three years ago, in an editorial opposing the Truman doctrine, I said "that if this policy is carried out to its logical conclussion, it will drain our treasury while destroying any hope that the United States and Russia can ever work together.

"Since virtually everyone concedes that the next war, if it comes, will be fought with atomic weapons and rockets, perhaps some apologist for the Truman program will explain how the expenditure of $400,000,000 in Greece and Turkey will 'contain' Russia when she has learned how to manufacture atomic bombs and decides to use them on us."

Three years later, Where do we stand? Is Russia being "contained" by the Truman doctrine and the Marshall plan or is she more powerful in every way?

The President's point 4 program is even more fantastic than his earlier visionary schemes. The original cost, thirty-five to forty million dollars a year, seems so small in comparison to other Washington projects that few voices have been raised in protest.

But a principle is involved which, if adopted, would commit us morally to following the recommendations of the Government's technical commissions in underdeveloped areas.

If our experts find that "Backwardarea" needs a hydroelectric plant, the assumption normally follows that the United States Government will put up the money.

By taking on the first obligation, we suggest the second.

Do the American taxpayers want to let themselves in for that kind of a deal?

If, for the sake of argument, we concede (1) that there can be no lasting prosperity in the United States with a world in disorder and (2) that the world is in need of development, why cannot private-venture capital be substituted for Government aid?

If, instead of volunteering to pour the money of American taxpayers into foreign lands, the Government would obtain assurances from these nations that private-risk capital would not be confiscated, nor the profits of the American investor wholly retained in the country where his plant has been built, there would be ample venture money available for foreign investment.

Undertakings of this nature could be negotiated by the State Department with countries seeking development capital. The State Department could be tremendously helpful in showing these nations that it is to their self-interest to encourage the investment of American capital, possibly with a minority stockholding interest.

Such arrangements would work to the advantage of both the American investor and the nation in need of industrial development.

This thoroughly feasible plan has no chance whatsoever if President Truman's point 4 is given congressional approval.

A bill has already been introduced in Congress which would insure all risks in foreign investment.

This means that an automobile manufacturer who built a plant in Europe or South America could keep his profits but his losses would be taken out of the hides of the United States taxpayers.

Such a cockeyed deal would lead to the eventual nationalization of all foreign investments and the further dilution of our competitive profit-and-loss system.

And have you noticed that Secretary of State Dean Acheson and ECA Administrator Paul Hoffman are proposing some form of direct relief for victims of foreign competition?

In other words, we have been taxed to build up Europe so that the Marshall plan nations can sell their products abroad. Acheson and Hoffman would now tax us again to subsidize American industries suffering from European competition which has been financed with our own dollars.

How nutty can we get?

The President, who professes to be neither a Socialist nor a believer in deficit financing, is constantly flirting with schemes that are socialistic in character and so costly as to make impossible a balanced budget and ultimate reduction of the national debt.

Point 4, the maddest of them all, may appear to him as a cooperative enterprise with other nations of the world, but to the United States citizen who pays the bills, it should more accurately be renamed "the point of no return."

JOHN S. KNIGHT.

National Correct Posture Week

EXTENSION OF REMARKS

OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. LOVRE. Mr. Speaker, for many years past the first week in May of each year has been designated by the National Chiropractic Association as National Correct Posture Week and observed throughout the United States unofficially, with special educational campaigns conducted through schools, social and fraternal organizations, professional and labor groups, and others.

The huge economic loss due directly or indirectly to the poor posture habits of the American people, measured in lowered efficiency, less production, lost wages, and doctor bills is serious. There can be no doubt that the better posture campaigns of the chiropractors and the remedial treatments have helped to reduce that staggering loss. The National Chiropractic Association and the chiropractic profession have been valiantly performing an invaluable public service.

MARKED BY LOCAL OFFICIALS

As Members know, Mr. Speaker, National Correct Posture Week has been recognized by many State and local officials and legislative bodies. A complete listing of the proclamation or legislative enactments would take too much space; but I can mention that our former colleague, the Honorable Thomas D'Alesandro, Jr., now mayor of Baltimore, has already called on that huge city to observe National Correct Posture Week from May 1 to 7, inclusive, urging all our citizens to give serious thought to the importance of correct posture and to join in the various educational programs being arranged.

The Governors of Minnesota, New Jersey, and Arkansas have issued similar proclamations for 1950, and many more announcements are expected.

It is my sincere hope that my resolution may be acted upon promptly in order that national observance may be made.

GOOD POSTURE CONTRIBUTES TO GOOD HEALTH

The National Chiropractic Association calls Correct Posture Week "a week devoted to reminding all Americans that long life and sound health demand correct posture."

It is hardly necessary to say, Mr. Speaker, that for the content of these remarks I am indebted to the information supplied by the National Chiropractic Association, and especially to its excellent and eye-catching literature on the subject; for I am an attorney by profession, not a practitioner of the healing arts. I am especially indebted to Dr. Emmett J. Murphy, of Washington, D. C., director of public relations of the National Chiropractic Association.

RESOLUTION INTRODUCED

If so much good can be done without official notice from the Federal Government, it seems to me that more good could be done by the official designation, through proclamation by the President, of the first week in May each year as "National Correct Posture Week."

Accordingly, on February 20 I introduced House Joint Resolution 422, the text of which I wish to include at this point in my remarks:

House Joint Resolution 422

Joint resolution designating the period beginning May 1 and ending May 7 of each year as National Correct Posture Week

Whereas clinical and statistic evidence proves conclusively that correct posture in childhood and in maturity has a great and beneficial effect on the health of the individual and thus on the collective health of the Nation; and

Whereas it is self-evident that the general welfare of the people of the United States, both in peace and war, is best served by promoting a general high level of good health in the Nation; and

Whereas it has been adequately demonstrated that habits of correct posture can be readily acquired through self-discipline of the individual when properly instructed; and

Whereas for many years the first week of May has been sponsored by the National Chiropractic Association and observed unofficially as National Correct Posture Week, with special educational campaigns conducted through schools, social and fraternal organizations, professional groups, and other media of information: Now, therefore, be it

Resolved, etc., That the period beginning May 1 and ending May 7 of each year is hereby designated as National Correct Posture Week. The President is authorized and requested to issue annually a proclamation calling upon schools, social organizations, and professional groups to cooperate in the observance of such week by conducting educational campaigns to provide instruction in the acquisition of habits of correct posture and to demonstrate the beneficial effect of correct posture in health.

GOOD POSTURE IS GOOD SENSE

Good posture is more than standing or sitting straight. It is that position of the body in which all of its parts are working effectively and with proper balance, ease, and comfort. Good posture is important. The internal organs have plenty of room and nerves are free from pressure at the spine when the body has good posture. Lungs, heart, and digestive organs function better when they have room.

You feel better.

Chiropractors—and for that matter other orthopedists—have traced bad posture, in a majority of instances, to specific causes. Among them are poor diet, lack of rest, poor shoes, soft mattresses and chairs, bad eyesight, too little exercise, and worry.

POSTURE HABITS FORMED EARLY

No child is too small to begin the formation of posture habits which will affect his carriage in later life.

If, from the beginning, the baby is trained and encouraged to stand, walk, sit, and lie correctly, and if those specific causes I have named are removed, his chances are good for growing into maturity without the consequences of bad posture.

With the growth of true sciences of healing, it is recognized that good posture is the foundation of good health. The White House Conference on Child Health stressed this in its recommendations to the Nation.

POOR POSTURE IS EXPENSIVE

The chiropractors of America tell us that poor posture is expensive. Poor posture habits—improper body mechanics if you prefer—are responsible not only for many days of lost time and wages, which means lost productivity and purchasing power, but also for poor response to the needs of a job, or of everyday living, and eventually for a shortened life of top efficiency.

I agree with Dr. Murphy that no greater contribution can be made by the chiropractors of America to the Nation than by improving posture and thus increasing the efficiency of Americans.

Our industrial civilization has encouraged bad-posture habits. Workers are required to remain in unnatural positions, frequently under nervous and emotional strains, for hours on end, while the cry for more and more speed is heard.

BAD POSTURE WIDESPREAD

Studies conducted by the Chiropractic Research Foundation indicate that 35 percent of all children have faulty posture and that 35 percent of all adults have spinal defects likely to lead to organic disease unless corrected.

Good posture and good health go together; conversely, bad posture and bad health seldom part company.

CHIROPRACTORS RECOMMEND

These are the recommendations made by the National Chiropractic Association:

First. Learn to stand tall, sit tall, and walk tall.

Second. Follow a few simple exercises daily to preserve the strength and tone of the ligaments and muscles which support the spinal column.

Third. Learn to relax completely

More About This Socialized-Medicine Scare

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. O'SULLIVAN. Mr. Speaker, the American Medical Association representatives on every possible occasion, and sometimes also when it seems impossible to a clear thinking mind, point to the British health plan as the terrible thing which brought old England on bended knee into the circle of socialistic governments. Of course, almost any child who is not halfwitted, knows that that is not true, but this medical society persistently and closely follows the pattern of other dictators and keeps repeating the lie in the fond hope, I guess, that sheer repetition will in and of itself, cause the people to believe the claim to be the truth, even if the falsely spoken words are not believed by the very praters themselves.

They say they do not want any outsiders to set their fees, but they forget that every compensation and liability insurance company for lo these many years has been doing just that very thing and that the practice-mad doctors of the Nation have been fairly trampling each others shoe-pinched toes off to get the business.

Health and accident insurance companies also set the fees of doctors and the doctors just love it.

The Blue Shield and the Blue Cross set the fees of the doctors and also the hospital charges, and the doctors just love it.

All insurance-company-kept doctors know if they are yet capable of knowing anything for sure, that fee setting by the big and little industries of our country has been the order of the day and the doctors have just loved to get the business.

However, when national health insurance might provide a fee schedule for doctors they throw an intellectual fit which would do credit to any old-time fit maker.

They say that our national health insurance plan is socialized medicine like the British plan is, when that is as false as most any old doctor's United States income tax return, and the hypocrite doctors know it full well.

I guess no greater truth was ever spoken than the words of the poet Milton that hypocrisy is the only evil which walks concealed except to God alone.

Heretofore, I have always been a real friend of doctors in my practice of law. I have protected them and have helped them. I never sued any doctor but one and that was shortly after I was admitted to the bar.

The doctors never had occasion to kick me upstairs politically as they have some other Members of Congress.

I want to tell them here and now that if they ever kick me downstairs they will wish to God that they had left me upstairs.

I do not know what has come over the great bulk of the medical profession which I am acquainted with. They do not seem to have a profession any more at all. It seems now to be a harsh, cruel business. I believe that my friend, Dr. Hart of outstate Nebraska, had the correct answer when he told me that the medical profession was running out of humanity and character; that the storehouse which God had given them containing character and humanity was nearly exhausted through misuse and general neglect and spoilation. Today they seem to have no more character and humanity left to draw out of the great bank and storehouse of good deeds.

Many doctors today, will not face up to simple truths let alone great truths.

When running for office, I sent out letters telling the doctors and other of my district that I was against socialized medicine and that my examination and evaluation of national health-insurance bills, filed as of that time, convinced me that they were not socialized medicine.

After I came to Congress I sent out to doctors and others of my district a pamphlet which analyzed three of the pending bills and accompanied it with a letter stating that I was favorable to a national health-insurance plan. The reactionary Republican doctors of my district then seized upon the thought that I had broken faith with them and had falsified to them in my first letter, when such a claim was far afield from the real facts and was a deliberate falsehood told so as to furnish them with a reason to cudgel me politically.

During the vacation period I tried to convince these golden-calf worshippers, and otherwise evil men again, that I was against socialized medicine and would not support any national health plan but a voluntary one, and I explained that by that I meant that the insured should have the right to say whether or not he wanted national health insurance, and should have a right to personally select his own doctor, and that every doctor should have the right to say whether or not he desired to accept the patient I could have employed my time, however, to better advantage by talking to the monkeys in any old zoo than by talking to them.

All they would carp back was that I advocated socialized medicine. What can one do for such hideously benighted people? You tell me and I shall try it.

Any national health-insurance plan should be voluntary, because many people now have health and accident insurance which is to their liking, and why load them up with additional insurance, and be the cause of their losing insurance which they have carried for a long time, and in which they might have a real investment perhaps. I was loaded up myself on life insurance and lost it all during the depression and I have no insurance now. I know from experience what that means.

No veteran would need national health insurance because he can receive now, medical and hospital attention from the doctors of the Veterans' Administration and the veterans' hospitals. He can also secure dental care. Why load the veteran up with insurance he does not need or perhaps want. Let him say whether he wants national health insurance or not.

Also many persons who have worked years for railroads and industry may have paid into a fund for medical and hospital care. Why load them up with insurance they do not want or need?

It has been said that in a special congressional election held some time ago, the American Medical Association spent in excess of $300,000 to defeat a woman candidate. It is claimed that an exposure of this matter is due very soon.

Is not it just too bad that this organization did not see fit to pour this money back upon the neglected and needy members of our present-day society as a humanitarian gesture to the general public of the Nation upon whose bounty they, the doctors, have lived so long, so splendidly, and so well?

In conclusion, I wish to quote the following article from the March 13, 1950, issue of the CIO News, because it is indeed very enlightening to say the least:

LIGHT, NOT HEAT, ON BRITISH HEALTH PLAN

YOU'RE RIGHT, SOLDIER

A State-wide lobby tie-up in Wisconsin between the American Legion and the American Medical Association to fight the proposed national health insurance bill was exposed recently in the Capital Times, of Madison.

On its front page, the Times reproduced a letter from the president of the State medical society to Legion post commanders urging the posts to adopt resolutions opposing the program as socialized medicine.

One commander sent the letter to the Capital Times with this note scrawled across the top: "I received this as county commander of the American Legion. Alas, we have fallen upon evil days."

(By Hollace Ransdell)

If all the articles and news stories written about the British health system were laid end to end, it would undoubtedly take quite a walk to pace them off. Yet few Americans really know much about the subject and too often what they think they know is inaccurate or entirely untrue.

The American Medical Association can take much of the credit for this. Their $100,000-a-year publicists, Whitaker & Baxter, a husband and wife team, can be criticized harshly for the type of lurid propaganda they turn out, but they can't be accused of laziness. Millions of copies of the pamphlets, leaflets, and other releases they issue in behalf of the AMA's fight against national health insurance circulate throughout the country.

(The AMA tops the list of lobbyists with the whopping total of $1,500,000 spent in 1949, according to figures given in the year-end financial reports filed under the Federal Regulation of Lobbying Act.)

Britain's health system is a favorite topic in the AMA propaganda, although just what it is or how it works is never explained. Instead of facts or honest analysis, the AMA gives rumors, prejudiced opinions and calls names.

Representative BIEMILLER, Democrat, of Wisconsin, one of the sponsors of a bill for a national health insurance system for the United States, last week called the attention of Congress to the general misconception in this country about the British health plan. Everyone has an opinion on the experiment, he said, "but very few people know the facts about it."

To throw some much needed light on the subject, he asked to have an article by Dr. James Howard Means on England's public medicine inserted in the CONGRESSIONAL RECORD.

Dr. Means is a professor in the Harvard Medical School and chief of the medical services at Massachusetts General Hospital. He is the author of many books and over 150 articles on medical subjects. The article quoted in the CONGRESSIONAL RECORD appears in the March issue of the Atlantic Monthly.

Dr. Means explains that he holds no brief either for or against the British health service, but believes that information about it will be of great value to Americans. "We can be aided by the experience of others," he says.

The article is of special interest because it not only explains from an unbiased viewpoint how the British system works, but also takes up the objections made against it in this country and Britain, and examines their validity. Dr. Means says his analysis is based on observations extending back to 1913. Last year he spent some time in England and Scotland studying various phases of the present health system.

"Americans either hold up the British health service as a horrible warning," the doctor writes, "or use it as a talking point in favor of compulsory health insurance for the United States," whereas what is needed "is less recrimination and more investigation."

Dr. Means found a practically unanimous opinion in Britain at present that the health service is there to stay. He quoted, however, there was much discontent among British doctors running all the way "from trifling dissatisfaction to something approaching actual hostility."

The direction taken by the present health service was set by the Emergency Medical Service, set up to take care of the military and civilian wounded and sick, he states. Although set up hurriedly, the EMS worked smoothly and efficiently.

The service is not compulsory, he points out, although it is intended to provide medical care for all people, even aliens temporarily in the country. Any doctor or person who wants to can stay out of it. Doctors may serve under it and keep their private practice at the same time.

Here are some of Dr. Means' answers to questions raised about the British plan and to attacks constantly made on it:

How well is the health service working? Fairly well, he says, though, of course, not perfectly. After all it has been in effect only about 19 months. Efforts to improve it and to remove the bugs are continually being made.

Has medical care deteriorated under it? Based on observations extending back to 1913, Dr. Means says he found no important change, and certainly no deterioration in the quality of the care provided. At no time either in Britain or America, he declares, has medical care been as uniformly good "as medical knowledge of our time would permit it to be. * * * There is always abundant room for improvement."

Isn't it true that America has the best medical care in the world? "Possibly, but how many people get it?" replies Dr. Means. "I am unable to assert that the general standard is higher in Britain under the National Health Act than it was before that went into effect, but on the other hand, I have encountered no convincing evidence that it is lower, and certainly more people get it."

Is it undermining the incentive of doctors? Dr. Means admits that this would be a serious defect, if true, but he admonishes prophets of doom to remember that there is nothing available on the subject at present but opinion. "Only experience will answer the question, and 19 months' experience with the health service is not enough time by which to judge it accurately," he says.

What about the complaints that general practioners are overworked? It is true that at present they are overworked, underpaid, and insufficiently related to the hospitals, answers Dr. Means, but amendments to the bill to correct these and other abuses are now before Parliament.

Don't patients abuse their privileges and go to the doctor more often than necessary? Steps are being considered to remedy this difficulty, possibly by imposing a token fee to put a slight brake on such a tendency, Dr. Means states.

What about this clamor about free eye glasses, dentures, and even free wigs?

All this would seem to mean "when viewed dispassionately," says Dr. Means, "is that under the previous system there were great numbers of people who needed prosthetic appliances and could not afford to get them. The stories of abuses of these privileges I am convinced are exaggerated, and I am assured that steps are being taken to eliminate such abuse as does exist."

In rounding out his analysis of the British system, Dr. Means emphasizes the fact that local health centers are one of the important elements of the program, although so far they are still largely in the blueprint stage. When they get going, they will implement and facilitate the work of general practitioners and even provide them with office space in many instances.

Although our own problems are in many ways different from those of the British, Dr. Means feels that we have much to learn from Britain's momentous experiment.

"We should be grateful to Britain," he concludes, "for making this venture."

New Postage Bill Reduces Revenues and Increases Deficits to the Post Office Department

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1950

Mr. HAGEN. Mr. Speaker, during the recent debate on the administration's bill to increase postal rates on first-, second-, third-, and fourth-class mail. Members of the House will recall that I made quite a point of the fact that many of the larger publications throughout the country would set up their own distribution systems if postage rates were increased on second-class mail. I claimed at that time that if the increases were adopted by the Congress, and of course I opposed most of the increases, many users of the mails would adopt other methods of distribution.

It has now been revealed publicly that the larger magazines of the country will do so, and a number of test programs have proven economical and now it is proposed that a plan be expanded to additional magazines and additional areas throughout the country. In other words, because of the threatened increase in rates, magazine publishers in order to keep their subscription rates as low as possible to the public, will now adopt a more economical distribution program for their magazines.

If the Post Office Department still believes that it loses money on magazine second-class mail, they perhaps will at least not oppose the new plans, of the publishers to distribute their publications

The plan has generally proven successful and now it is likely to spread through the publishing industry and especially in the case of the larger publications of the country. As I predicted during the debate on the postal bill, this will increase in less volume to the Post Office Department and no doubt greater deficits. It also will result in decreased jobs for post-office employees. Furthermore, it will set up a situation which will result in eventual poorer service and further curtailment of service to the public.

The plan is outlined in detail by an article published in the Wall Street Journal for March 6, by two writers, Michael J. Saada and J. Howard Rutledge.

The article is as follows:

Magazine publishers are thinking of saying good-by to the postman.

Mail costs of selling and distributing their periodicals to householders are already as high as many publishers can afford—and the possibility of higher postal rates is in the offing. So in Reading, Pa., they're having a first try at doing for themselves the job which now is performed elsewhere by the mailman.

Curtis Publishing Co.—Saturday Evening Post, Ladies' Home Journal, Country Gentleman, Holiday, and Jack and Jill—is currently operating the plan—on its own behalf and for the publishers of eight other top magazines—through a subsidiary, Curtis Circulation Co.

The plan is already slated for extension in April into Columbus, Ohio, and South Bend, Ind.; field men are now studying routes and other details. Other cities to which it may be extended later include Cincinnati, Pittsburgh, and Baltimore. Ultimately, Curtis thinks in terms of putting the program on a Nation-wide basis with additional magazines participating.

THE SIDE-STEP

The scheme for side-stepping the post office is simple enough. It provides for freighting the magazines to a central point in each city. Salaried agents pick these up and distribute them by auto to subscribers' doors. They also take subscriptions and renewal orders, further lightening the pay load of Uncle Sam's carriers, who have been toting publishers' form letters by the millions.

Immediately, it's true, the plan offers no savings over mail delivery. President Walter Fuller, of Curtis Publishing, says the comparable costs in Reading are close. But hanging over publishers' heads is a House-passed postal bill which would raise rates for distributing most magazines and some newspapers by about 50 percent. In addition, it calls for a stiff hike in fees for letters and post cards used by publishers to solicit readers. Passage of this measure by the Senate is regarded in Washington as a 5-5 possibility.

If this happens, says Marvin Pierce, president of McCall Corp., a major publishing house, the Curtis plan might very well work out to be cheaper than postal methods of delivery and subscription of magazines. Even if the bill is sidetracked, as it was at the last congressional session, he favors further experimentation with the new undertaking to make it more economical. Curtis is determined to continue.

PASSENGER LIST

Two of Mr. Pierce's journals—Redbook and McCall's—are included in the Reading delivery-sales plan. Other magazines entered are Better Homes and Gardens, Coronet, Cosmopolitan, Esquire, Good Housekeeping, and Sports Afield.

Three Curtis publications are participating—Saturday Evening Post, Ladies' Home Journal, and Holiday. Omitted as yet are

Country Gentleman, designed for rural readers, and Jack and Jill, which, because it carries no advertising, would be much more lightly afflicted by the postal bill.

Time, Inc. (Life, Time, Fortune, Architectural Forum) is still outside the plan looking in. "We are following the development with great interest," says P. De W. Pratt, circulation director.

Most publishers like the dodge-the-postman plan as a way of distributing magazines, but some firmly opposed any arrangement that would take control of their subscription programs.

DEBATE

One publisher-dissenter says: "We think subscription selling know-how is a big factor in keeping up our circulation; we don't want to entrust this important job to anyone else."

Objects another: "It's bound to work out that an agent selling subscriptions for a group of magazines—as under the Curtis program—would favor some over the others."

Declares a third: "Costs of hiring men to solicit magazine business are at least three times those of doing the job by mail—and I'm putting it mildly."

Curtis President Fuller takes exception. He insists that, far from being more expensive, the door-to-door salesmanship of the Reading magazine squad is achieving savings that pay the major share of expenses for the entire experiment.

And he observes he is quite aware of the fear that agents might show sales favoritism. Some executives of other publishing houses have suggested that if any single national agency is to be soliciting subscriptions for rival journals, it should be a co-op. "My best answer," Mr. Fuller says to this sort of comment, "is that under the Reading operation we are doing very well for other publishers in the sales of subscriptions and in renewals to their magazines."

Actually, subscription field forces for Curtis Publishing and two other big magazine houses—Hearst and Crowell-Collier—have for many years written new subscriptions for one another and for other publishers. Nevertheless, most magazines now make their heavy subscription selling efforts individually—customarily through the mails.

HOW SYSTEM WORKS

Enthusiasm runs high among the Curtis forces in Reading, where the sales-delivery plan has been operating 6 months.

As in other localities to which the experiment will be extended, the city is divided into districts—six in this case. One agent is assigned to each; he gets a salary, a car allowance—and a bonus for writing new subscriptions and renewals in excess of his quota.

Issues of the 11 magazines distributed under the Reading experiment reach town 3 to 5 days in advance of delivery date. "We plan it that way to be sure of deliveries," says Harold J. Bean, vice president and subscription manager of Curtis Circulation Co.

Copies are given to householders without the usual label, the agent merely checks his subscription list as he covers his territory. Since the magazines are shipped into Reading in neatly wrapped bundles, each copy is fresh on receipt and the men are careful to keep them that way.

The group of agents is headed by a local subscription manager, in Reading he's named George Bortz, and he has this to say:

"The most favorable aspect as I see it from the front line is the personal contact with subscribers. It opens wider fields for magazine selling, puts more finesse into the job. Subscribers like the personal touch."

The public tends to think about magazine delivery as an ethical problem, Mr. Bortz has discovered. One woman who recently signed up with this service explained she had never subscribed to any magazine before because she didn't like to burden the poor mailman. Against this, he encounters numerous complaints that we are doing the mailman out of a job, that we are cheating the Government, that it isn't right to bypass the Government's organized postal service.

At such times he patiently explains the new method takes no bread from any postman's mouth, post office hirings and assignments are governed largely by the burden of first-class letter mail.

Governor Dewey's Rent Hoax

EXTENSION OF REMARKS

OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. DOLLINGER. Mr. Speaker, the Governor of the State of New York, in a recent message to the State legislature, discussed his plan for having the State take over rent control. Upon analyzing the projected GOP law, I contend that the Governor is attempting to perpetrate a fraud upon the people of the State of New York. The proposed rent-control law will not only be another spineless attempt by New York State to regulate the vital matter of rent control, but also will not provide adequate safeguards against increases and evictions.

I recognize the Governor's plan as an attempt to garner votes because of the confusion which now exists regarding rent controls in general. It is attempted by the bill, to sound the death knell of Federal rent control. I predict right now, that after election, rent control in New York State will be ended. Then, the people without any protection whatsoever, will be left to the mercy of the real-estate wolves.

It is of paramount importance that rent control be continued on a Federal basis. We must do everything we can to obtain a strong rent-control bill. However, even a weak Federal rent-control law, inadequately administered, is preferable to none at all, and the New York State bill is none at all.

I am including in the RECORD, a copy of an editorial which appeared in the New York Post of March 10, on this subject, which also points out the necessity for the continuation of Federal rent controls:

GOVERNOR DEWEY'S RENT HOAX

In his special message to the legislature on Wednesday Governor Dewey denounced Democratic failures in rent control and promised that this State's Republicans would show us how it should be done. Not many hours later the GOP State rent-control measure was made public. It is a cynical repudiation of the Governor's pledge and we do not believe that Dewey will be able to get away with it. The detailed, eight-point attack on the bill released by the Democratic leadership is a devastating document and ought to be widely read in this city.

The Democrats admittedly face a tough problem—a problem initially created by the weakness and ineptitude of Federal Housing Expediter Tighe Woods. It was largely as a result of Woods' performance that the city administration was forced to create its own rent commission; it was because of Federal failure that the drive to substitute State for Federal controls in this State gained headway. We have generally supported that move; we have felt that New York—whether under State or city rule—can have stronger rent controls than Woods is able to offer. That has been demonstrated in this city under the rule of the city rent commission. But the Dewey formula is a fraud. It is, we think, another dramatic example of the Governor's fatal tendency to try to play both sides of any public street. He has talked tough and given the realtor lobby an incredible series of concessions. He has offered us a high-toned hoax.

The loopholes in the projected GOP law are big and numerous; each rereading of the draft seems to reveal another thinly disguised joker. Eight major deficiencies were cited by the Democratic spokesmen yesterday as they submitted alternative legislation. They pointed out that the proposed measure did not require a hearing in individual cases as the city rent law does. (After the protests started, the GOP legislators hastily amended the bill to require such hearings, but there is still no provision for a stay of increases pending appeal.) The bill permits increases based on the vague formula of "comparability" as well as hardship—and "comparability" is the open door for large-scale rent boosts. It exempts all housing accommodations produced by conversion since February 1, 1947. It offers far less adequate protection against eviction than residents of this city now possess and places no limit of any kind on evictions where landlords propose to alter or remodel the premises. It proposes a fantastically small appropriation for administration of the law. The GOP measure also contains no provision for rent reduction where services and property have deteriorated.

But the most flagrant give-away clause in the bill is the provision which would, in effect, enable the State rent commissioner to write his own rules after March 1, 1951, regardless of whether they are consistent with the proposed law. In short, the limited protections afforded by the Dewey bill could vanish soon after election day this year. Nice timing. In his message Governor Dewey decried the atmosphere of uncertainty created by bungling in Federal rent rule. The GOP now proposes to enact uncertainty into law.

We still have no nostalgia for retention of Federal control in New York. Belated efforts by Tighe Woods to regain public confidence are unconvincing. In any case, the issue is academic at Albany; the real battle is over the State bill. If we were a Congressman in Washington we would vote to continue the Federal set-up only because some States are unwilling or unable to establish any form of rent regulation; in those areas even Woods' inadequate administration is preferable to none at all. But that isn't the choice for the people of this city.

We have established effective municipal rent control; we are living under it now. If the State won't give us substantially better protection than the Federal Government offers, the city's representatives at Albany must renew the fight for municipal option. In the long run that may be the best solution for this crowded metropolis. At this moment neither Federal control nor the Dewey blueprint offers real safeguards for the inhabitants of our town. Unless public pressure forces a major Republican retreat at Albany, the answer for this city is continuation of local rent control.

California State Works for Veterans' Employment Issues Special Pamphlet of Advice and Information to Help Veterans

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. DOYLE. Mr. Speaker and colleagues, a very valuable booklet has been issued by my native State of California Department of Employment. One good thing about the veterans' employment service is that it has a veterans' advisory committee made up of the commanders of the American Legion, AMVETS, Disabled American Veterans, and Veterans of Foreign Wars. I congratulate my State upon this vigorous, vigilant service being rendered.

I bring it to your attention in anticipation of the fact that no doubt many other States who are not doing substantially the same thing will be glad to have this information.

The following is a copy of the booklet:

VETERANS' EMPLOYMENT HANDBOOK

(State of California, Department of Employment, James G. Bryant, director. The Veterans Advisory Committee: commander, American Legion; commander, AMVETS; commander, Disabled American Veterans; commander, Veterans of Foreign Wars)

INTRODUCTION

The California State Employment Service provides special services to all veterans in accordance with Federal and State laws. Regulations of the Veterans' Placement Service Board further stipulate that disabled veterans shall receive preferential treatment from the local employment office.

In order to provide the best possible assistance to veterans, it is necessary that veterans themselves be familiar with these special services in order that they may cooperate in filling job openings for which they are qualified. The term "qualified" means fitted by vocational experience, training, and education to perform the work described in orders received from employers.

PRIORITIES AND PREFERENCES

(A) A veteran is a person who:

Served in the active service of the armed forces of the United States during any of the following periods and has been discharged or released under conditions other than dishonorable:

Spanish-American War: April 21, 1898, to August 12, 1898.

Philippine Insurrection: August 13, 1898, to July 4, 1902. (If service in Moro Province, ending date is July 15, 1903.)

Boxer Rebellion: July 20, 1900, to May 12, 1901.

World War I: April 6, 1917, to November 11, 1918. (If service in Russia, ending date is April 1, 1920.)

World War II: December 7, 1941, to December 31, 1946.

(The determination of eligibility for special services because of veteran status is based on documentary evidence of periods of service and character of separation.)

(B) A disabled or "PT" (preferential treatment) veteran is a veteran who:

1. Is currently rated 10 percent or more disabled by the Veterans' Administration; or

2. Meets the Employment Service definition of a "handicapped applicant" regardless of whether or not the disability is service incurred.

SPECIAL SERVICES AND PREFERENTIAL TREATMENT

Special services to veterans include:

1. Priority in referral to open jobs for which they qualify, except that first priority of referral shall be given qualified disabled (PT) veterans.

2. A job development program through which veterans who have individual vocational problems can be placed in suitable employment.

3. Employment counseling to assist veterans to:

(a) Evaluate their aptitudes, experiences, and training, and job preferences in the light of current and prospective job opportunities.

(b) Determine additional training required to prepare themselves for suitable employment.

(c) Adopt practical plans for obtaining such employment.

4. Information and assistance concerning the training on the job program.

5. Advice regarding services available through other public and private agencies and referral to the appropriate agency.

6. Current labor market information about job openings and employment prospects locally and elsewhere.

Veterans Employment Representatives are on duty in California State Employment Service offices. It is the VER's responsibility to insure that veterans receive the special services created and maintained for them and to see that veterans entitled to preferential treatment, as well as other veterans, are given the best possible assistance and attention.

HOW VETERANS CAN HELP CSES HELP THEM

When a veteran applies for employment to the CSES, he will be asked to submit a record of his past employment, training, education, and provide other necessary information.

It is important that the employment record be completed carefully, since it will represent the veteran to the Employment Service in his absence. Whether he can be referred to a certain job may depend upon his written application.

Veterans are registered on salmon (pink) work records and are issued identification cards of the same color. In addition, the work records and identification cards of veterans who are entitled to preferential treatment are marked with a red "PT."

Incoming job orders are checked against active work records and applicants are called in and referred in accordance with their qualifications and priorities. (To make certain that a work record is in the active file, the veteran must make a personal contact with the employment service at least once each calendar month.)

Applicants are urged to register for work regardless of whether they are claiming unemployment insurance.

Applicants may register in as many CSES offices as they will accept referrals from and maintain active records in, providing they possess qualifications for occupations handled by those offices.

VETERANS ADVISORY COMMITTEES

Through the State veterans advisory committee to the director of the department of employment, and through local veterans advisory committees to local office managers, CSES cooperates closely with veterans' organizations and all other groups with a primary interest in the placement of veterans in employment.

All veterans can participate in the job-development program effectively. The veteran who knows of a job for which he does not qualify, or in which he has no interest, will be of service to other veterans if he will report existence of the job to the employment service immediately; or if he is a member of a veterans' organization, to the employment officer of his post or chapter.

OTHER INFORMATION

The California Department of Employment administers the California Unemployment Insurance Act, including disability insurance provisions of that law. The department also administers title V of the Servicemen's Readjustment Act.

More comprehensive information will be found in the booklet, California's Employment Security System, available upon request at local offices of the department of employment.

The California State Employment Service is a public employment service operated by the California Department of Employment with offices located in the principal towns of the State.

Competition Is Coal's Problem

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, March 14 (legislative day of Wednesday, March 8), 1950

Mr. JOHNSON of Texas. Mr. President, the New York Times of March 12, 1950, printed a pointed and interesting editorial defining the principal problems confronting the Nation's coal industry. Chief among the coal industry's problem, according to the Times editorial, is the ever-growing competition of other fuels and the end of the long monopoly which coal has held in many regions.

This is an editorial all Members of the Senate should read, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COAL'S NO. 1 PROBLEM

The President has asked Congress to set up a commission to study the basic problems of coal. The end of the coal strike, he observes in letters to his congressional leaders, "has in no way diminished the need for a long-range study of the coal industry, with the view of finding * * * the best solutions of its problems from the standpoint of the miners, the operators, and, above all, the national interest."

It was following an earlier strike in the bituminous coal fields that another President proposed an inquiry of this kind. The year was 1922 and the President was Mr. Harding. And strange as it may seem, the basic problem then—or what seemed to be the basic problem—was strikingly similar to that of today. Said Mr. Harding on August 18, 1922:

"In the bituminous coal fields are vastly more mines than are requisite to the country's needs, and there are 200,000 more mine workers than are needed to produce in continuous employment the country's normal requirements. * * * Men divide the working time, and high wages are necessary to meet the cost of the barest living."

Mr. Harding had declared that even then, nearly 30 years ago, the country was "at the mercy of the United Mine Workers." The Commission's report, which emerged 3 years later, found that the principal need of the industry was "constructive leadership to solve its own problems," and urged that the policy of the UMW be shifted "from a purely militant basis to a more constructive one."

Today's sickness in coal stems basically from the difficulty of making the adjust-

ment from the monopoly position which the industry long enjoyed to the competitive role it occupies today. Why has the transition been so difficult? Why has a temporary maladjustment become a chronic ailment? It does not require a four-volume study such as the one produced in 1922–25 to provide the essential answer to that question. The coal industry's problem stems from the fact that it has to dispose of its production in a highly competitive market, while its costs are determined by a dictator who holds a complete monopoly on the labor supply in that industry. Wages, which represent the principal element in the cost of producing coal, are not established through collective bargaining, and they are not established with reference either to the market or to the desirability of providing a maximum number of jobs. The result is constantly mounting costs, a steady shrinkage in the market for coal, and a continual decline in the number of work hours for labor. Efforts are made to shore up the slipping structure by shortening the workweek and providing huge welfare funds to care for the idle and the aged. But both these processes themselves add enormously to the cost of doing business. And since it is more and more difficult to pass such costs along to the public, the net result is to speed up still further the vicious circle of mounting prices and contracting markets.

For anyone who doubts that this is basically what was going on in the bituminous coal industry—and is now going on at an accelerated rate—attention is invited to some pertinent facts presented in this newspaper a few days ago by A. H. Raskin. These show, for example, that even the two major strongholds of demand for soft coal have been crumbling since the war—namely, the railroads and the power companies. It is greatly in the interest of the railroads, as haulers of coal, to encourage the use of that fuel. Yet they are turning away from it more and more as a source of their own power. According to Mr. Raskin, out of a total of 5,083 locomotives delivered to the railroads since the war only 348, or less than 7 percent, have been of the coal-burning type. For those currently on order the figure is about 1 percent. In the cities oil has in many cases completely or largely supplanted coal as the source of municipal power. In Cleveland, for example, oil is used exclusively; Philadelphia uses 70 percent oil; the Public Service Co. of New Jersey is using oil for 90 percent of its power.

It may be desirable to make a fresh study of the ills of the coal industry, but that does not lessen in any way the necessity of dealing realistically with the problem of John L. Lewis. As a matter of fact, we might well find that if we really solve this, the industry's No. 1 problem, we shall have made further study largely redundant.

He Fought for Freedom

EXTENSION OF REMARKS

OF

HON. JAMES V. BUCKLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. BUCKLEY of Illinois. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include the following talk delivered by Dorothy C. Salisbury during a program on March 6 over radio station WBCC:

HE FOUGHT FOR FREEDOM

(By Dorothy Cleaveland Salisbury)

On Pennsylvania Avenue at Thirteenth Street NW., there stands the bronze figure of a cavalry officer wearing the round fur hat and military cape of a European army's uniform. The inscription below the horseman reads: Brig. Gen. Casimir Pulaski. Fell in battle at Savannah. Brigadier General of the United States. Marshal General of Poland. Brandywine, Valley Forge, Egg Harbor, Charleston, Savannah, Germantown.

Within these few words are compressed the career of perhaps the greatest military genius of his time and one of the most zealous and indefatigable fighters for freedom of any age.

Day before yesterday, March 4, was the two hundred and second anniversary of the birth of this Polish-American patriot.

In one of his first military engagements after reaching America, Pulaski probably prevented a premature end to the young republic when he warned Washington of a British ambush near Warren's Tavern. Five days after the battle of Brandywine, the American troops under Washington had halted for rest and refreshment at this spot on the Lancaster Road, 23 miles from Philadelphia. Within the tavern Washington was holding a council of war.

Suddenly up dashed Count Pulaski, newly-commissioned brigadier general of cavalry. He demanded of the startled sentry that he be admitted instantly to General Washington. "The general is in council and must not be disturbed," was the reply.

But the excited cavalry officer insisted with vehemence, till the commander in chief himself came to the doorway to demand the cause of the disturbance. To him Pulaski explained in a torrent of French and broken English that while he was on reconnaissance with a detachment of cavalry, he had come upon the whole British Army under General Howe, encircling the American position, and dangerously close. He had delayed only long enough to charge the vanguard and so halt the advance for a time.

Washington, dismayed and at first incredulous, was soon convinced of the truth of the report. Promptly dispatching 300 infantrymen to reinforce Pulaski's cavalry, he quickly withdrew his remaining forces to safety.

Just 202 years ago, on March 4, 1748, Casimir Pulaski was born on an estate in southeastern Poland. His father, Count Joseph Pulaski, was a successful and wealthy lawyer and able magistrate. His sons, Casimir, Francis, and Anthony, spent their boyhood in the saddle. Taught by the armed Cossack retainers on the family estates, the boys became unexcelled riders and crack swordsmen and pistol shots in a land of fighting horsemen.

On February 29, 1768, when Casimir was barely 20, the Pulaskis, father and sons, together with a few close friends, organized the Confederation of Bar, a patriotic movement to drive the encroaching Russians from Poland and restore Polish independence. The next 4 years Casimir spent as a cavalry commander of the confederation. By brilliant marches and dashing cavalry raids, he covered the country—recruiting peasants, enlisting the aid of patriotic nobles, and making his name a terror to the Russian troops sent against him.

But patriotic zeal and military genius were not enough to stand against the overwhelming numbers and resources which the Empress of Russia poured upon the confederates. Casimir's father, military head of the confederation, was treacherously seized and died in a Tartar prison. His brother, Anthony, was taken prisoner by the Russians. Francis was killed, almost at his side, in battle. Yet Casimir, taking his father's place as marshal of the patriot army, fought on with undiminished ardor, scorning the enemy's offers to him to capitulate.

Finally Casimir was persuaded to join in an unsuccessful plot to kidnap the King of Poland. When it failed, Casimir, now Count Pulaski, was outlawed and his estates confiscated. This brought to an end his work in Poland.

For the next years the Count was a wanderer. Finally the exile arrived in France sick, half-starved, in tattered clothes, and without a sou. There he heard of the battles of Lexington and Bunker Hill, of General Washington and the Declaration of Independence. With the fall of his hopes for a free Poland, he had despaired for the future, but now his courage and his enthusiasm returned. "My country has lost her freedom," he exclaimed, "but let us fight for that of a new people."

On June 13, 1777, when the brig *Massachusetts* slipped out of the harbor of Nantes, Pulaski was aboard her. He landed at Marblehead on July 23 and pushed on immediately to Boston to interview General Heath as to the American situation. These were dark days for the new Republic. General Burgoyne was on his march by Lake Champlain and Lake George to cut the Americans in two. Fort Ticonderoga had already fallen.

From Boston the eager warrior rode nearly 400 miles on horseback to join General Washington at his encampment on the Neshaminy, a few miles north of Philadelphia. While waiting for the Continental Congress to grant him a commission, Pulaski joined Washington's staff as a volunteer. During the battle of Brandywine on September 11, the Polish patriot saw his first active service for his new country. As the battle turned against the Americans, he led Washington's bodyguard in a sudden cavalry sortie which threw back for a time the British advance and gave the Americans a breathing space. Four days later Congress commissioned Count Pulaski "brigadier general in command of the horse," uniting under him, for the first time, all the American cavalry.

Next day came the skirmish at Warren's Tavern.

After the battle of Germantown in October, the Army went into winter quarters at Valley Forge. All that winter the new cavalry general worked incessantly with his command, teaching cavalry riding and military drill and tactics to men little used to discipline.

The count was recognized as the best swordsman in the Army and on horseback he was a veritable centaur. He delighted in practicing on the drill field the stunts he had learned as a boy from the Cossacks. With his horse at full gallop, he would fire his pistol, toss it in the air, and catch it as it fell. Or he would hurl it far ahead, dash up to it, and, leaning with one foot out of the stirrup, would snatch up the weapon and, without slackening speed, regain his seat.

Recruiting, drilling, providing for both men and horses kept the energetic Pole hopeful and exasperated by turns. By many short forays and scouting expeditions in small groups he gave his men experience in the field, and by harassing the British foraging parties he helped to keep General Howe's men closely penned in Philadelphia. And with it all, the cavalry veteran found time to write out his regulations for the cavalry as a separate division of the Army.

But the jealous hostility of some of his subordinate officers who resented serving under a foreigner speaking English brokenly, disheartened him. Only Washington's friendship and confidence kept him from resigning his commission and returning to Europe. He did relinquish command of the cavalry. He then prevailed upon Congress to authorize the formation of an independent mobile unit, the famous Pulaski's Legion.

The first of April 1778, Pulaski opened a recruiting office in Baltimore, Md. For the next 4 months he was busy organizing and training his corps. His officers were largely former officers in the armies of Europe, some of whom had served under him in Poland.

The Legion at full strength consisted of three companies of cavalry armed with lances and three companies of light infantry, three hundred and thirty all told. The commander and his officers soon successfully welded them into a splendid fighting machine. He had the gift of inspiring his men with something of his own ardent spirit.

In place of the motley rags and tatters on most of the American soldiers, Pulaski supplied his Legion with brilliant new uniforms of green coats, red vests, and white buckskin breeches. On the march he rode proudly at their head, his military cloak billowing behind him and the gay cockade on his great bearskin shako dancing. Over their heads floated the crimson banner embroidered for him by the Moravian "single sisters" of Bethlehem, Pa.

By the end of July the Legion was ready for the field, but it was weeks before they were to see active service. Except for a few minor engagements, another winter of inaction followed for the impatient Pulaski. But with the spring came a new campaign and renewed hope and enthusiasm.

Early in 1779 the Legion was ordered to join General Lincoln's army in the southern theater of war. The British had captured Savannah in December, and from there were threatening the rest of Georgia and South Carolina. Leaving Minisink on the Delaware River in February, Pulaski's corps started on its long and strenuous march southward. The infantry was dispatched by the post road through York, Baltimore, and Richmond. The general led the cavalry south through the Shenandoah Valley. Both groups hurried by forced marches to reach the scene of action before it would be too late.

On May 11 the two forces were reunited outside Charleston. Not a moment too soon. As the Legion reached the Cooper River, General Prevost, British commander, crossed the Ashley River and sent a message to the city fathers demanding surrender. With one or two other militant leaders, General Pulaski fairly browbeat the councilmen into defying the British demand. "As an officer of the Continental Army I forbid you to surrender," he stormed at them.

Next day, while enthusiasm still ran high, he led his cavalry in daring charges against the superior British forces, cutting his way back, often without loss. Pulaski's praises were on every tongue. General Prevost gave up his plan to take the city. The British commander, harassed by the Legion Cavalry which hung on his flanks, stinging like botflies, retreated down the sea islands to Savannah.

With Charleston safe, the Americans set about ridding the Carolinas and Georgia of hostile troops. By September the British retained only a toehold at Savannah. Hopes were bright that before winter the entire South would be cleared of the invaders. To add to the feeling of assurance, Admiral d'Estaing with a squadron of the French fleet arrived off Tybee Roads, 20 miles off Savannah. Pulaski spearheaded the American advance, picking off British outposts on his way to make contact with the French. By September 16 the allied blockade of Savannah was complete.

But d'Estaing, impatient with the slowness of seige operations and fearing the autumn storms, urged an assault on the well-fortified city. General Lincoln, in command of the American army, reluctantly consented, and on October 9 the allies attacked. Plans had been carefully made, but a deserter had learned of them and carried them to the enemy. Thus all advantage of surprise and uncertainty was lost to the attackers. The ensuing battle was one of the bloodiest of the war.

One of Pulaski's officers vividly describes the scene. "For half an hour the guns roared and blood flowed abundantly. Seeing an opening between the enemy's works, Pulaski resolved to charge through. Imploring help from the Almighty, Pulaski shouted to his men, 'Forward,' and we, 200 strong, rode at full speed after him, the earth resounding under the hoofs of our chargers. For the first few minutes all went well. We sped like knights into the peril. Just, however, as we passed a gap between the two batteries, a cross fire, like a pouring shower, confused our ranks. I looked around. Oh, sad moment, ever to be remembered. Pulaski lies prostrate on the ground."

The fallen leader was rescued by some of his soldiers in the face of the enemy's fire and carried on board the United States brig *Wasp*, to be taken to Charleston. In spite of the care of French surgeons, he died on board her 2 days later and was buried at sea.

So died, at 31, the first commanding general of the United States cavalry, a gallant but ill-fated fighter for freedom both in his homeland and in the land of his adoption.

Today, more than 200 years after Pulaski's birth in far-off Poland, his spirit lives on in the hearts of his compatriots on both sides of the Atlantic, through whose efforts we may yet see fulfilled the dreams of a free Poland beside a free America in a free world.

Promises Versus Performance

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 14 (legislative day of Wednesday, March 8), 1950

Mr. CAPEHART. Mr. President, in Chicago there is a great Negro newspaper known as the Chicago Defender. Most Democrats are familiar with this newspaper, and have had a right to be familiar with it for the last decade and more.

Many of its fine articles have from time to time been honored in many ways by members of the Democratic Party, for reasons of benefit to them. However, on the front page of the Chicago Defender for Saturday, March 4, 1950, there appeared a two-column editorial which has not been properly honored by the Democratic Party.

I ask unanimous consent, Mr. President, to insert this editorial from the Chicago Defender in the Appendix of the RECORD, so that all the Members of the Eighty-first Congress will have opportunity to read it, and so that the article may be given due honor.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROMISES VERSUS PERFORMANCE

As we enter the 1950 election campaign, the Democrats, both locally and nationally, should do a little soul searching.

Locally there seems to be a growing conviction on the part of Boss Jack Arvey and company that the Negro vote is in the bag for the Democratic Party. As the song goes, they seem to think that they have the world in a jug and the stopper in their hands.

We would like to remind them of that delightful tune from Porgy and Bess, It Ain't Necessarily So.

The Democrats here have, as we pointed out some weeks ago, ignored the wishes of the people in the First and Fifth Senatorial Districts by putting up hand-picked hacks. They have shown similar stupidity by refusing to give Judge Wendell Green the designation for the superior court.

As a matter of fact, the Democratic Party as a whole seems to be suffering from indigestion. They have apparently been eating too high on the hog, and now they are sleeping on a full stomach. The Democrats in Illinois and in the Nation have been and are now in a position to live up to their promises.

Here are some of the questions in the minds of the voters:

1. When will the people see some leadership in breaking the bottleneck on Mayor Kennelly's housing program?

2. Can Governor Stevenson compare his record to date with past administrations?

3. What happened to the administration's leaders in Congress in the fight for a strong FEPC?

4. How did it happen that Chairman Boyle, of the Democratic National Committee, stated that Congressman DAWSON was vice chairman of the committee and now nobody in Washington is quite sure what position DAWSON has on the committee?

5. Why were the qualified Negro candidates overlooked in the appointment of the new Governor for the Virgin Islands?

The action promised by the Democrats in 1948 caught the imagination of the people. Now, 2 years later, we have more promises and few accomplishments. This lack of action is cause for grave concern among voters who turned the tide in 1948 and who may turn the tide again.

The wishes of the people have been ignored and forgotten for the benefit of a small group of selfish men concerned only in maintaining their own little selfish political interests.

They have forgotten the people, but the people have yet to be heard.

Performances, not promises, will set the course.

United States Losing a Market

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, March 14 (legislative day of Wednesday, March 8), 1950

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "United States Losing a Market," which appeared in the Kansas City Star of Kansas City, Mo., under date of March 1, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES LOSING A MARKET—SOUTH AMERICA TURNING TO EUROPE, PUBLISHER REPORTS

LAWRENCE, KANS., March 1.—Dolph Simons, publisher of the Journal-World, said today the United States has temporarily lost its markets in South America to European competitors.

He expressed the opinion the Marshall plan had boomeranged to our disadvantage in 9 out of 10 South American nations.

Simons returned today from a tour of Latin America. He said "our neighbors south of Panama are not asking for big chunks of financial aid, but they can't understand why they don't get a single dime while Uncle Sam is giving away billions in other parts of the world under the Marshall plan."

"Everywhere except in Venezuela," he said, "European countries have been given the green light to fill Latin-American stores with manufactured goods * * * while bans have been clamped on nearly all imports from the United States.

"South Americans largely prefer United States cars, radios, and other goods, but they don't have the dollars necessary to buy them. So they buy from England, France, and other countries which are breathing with new industrial life, thanks to billions of dollars from America."

Equal Rights Proposal Called Two-Way Street

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

EQUAL RIGHTS PROPOSAL CALLED TWO-WAY STREET

To EDITOR, THE NEWS:

In an editorial on equal rights you have used a clever phrase, "This will be a neat trick if it can be done." I agree. You are referring to Senator HAYDEN'S rider to the equal rights amendment. The amendment says "equality of rights under the law shall not be denied or abridged on account of sex." The rider says that this shall not be construed to impair any benefits or exemptions conferred upon the female sex.

The rider tries to freeze laws about seats in factories, hours for day and night work, etc., which it is the job of men in the State assembly to discuss. They make statutory law.

But the amendment, adopted in the Senate on January 25 is to be added to the Bill of Rights, like the principle guaranteeing freedom of the press.

New Jersey State Bar Association made an appeal which resulted in equal rights which resulted in equal rights under the law for women in that State, given by the new constitution adopted 3 years ago: "In spirit women have attained a legal status equal with men, but in fact they are still in a subject class. This is incompatible with the right to vote and with the responsibilities women are assuming." New Jersey is the only State in the Union where women have full citizenship; where they are not treated as adolescent and incompetent by the law.

Strange as it may seem, the word "persons" in our Constitution has been interpreted by the Supreme Court as male, so equal protection of the laws guaranteed in the fourteenth amendment omits women.

Now the equal rights amendment is a two-way street. It does not mention women, or men. If Senator HAYDEN feared it would impair protection for women, why not for men? Are legal safeguards for sailors on the high seas, miners in coal pits, soldiers risking their lives to be thrown overboard, while seats in factories for women are saved? That would be a neat trick—and make of women the most selfish and unlovely of mortals.

FLORENCE L. C. KITCHELT,
Chairman, Connecticut Committee.
NEW HAVEN.

Seeking Security in Prayer

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 14 (legislative day of Wednesday, March 8), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Seeking Security in Prayer," by Mary Hornaday, which appeared in the Christian Science Monitor.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEEKING SECURITY IN PRAYER—AN INTIMATE MESSAGE FROM NEW YORK

(By Mary Hornaday)

NEW YORK.—Readers of the New York Times have been surprised recently to see among the clothing and housefurnishing advertisements, two large displays—one entitled "God and the Atom," and a second, "Prayer, an Answer to 'God and the Atom.'"

In both cases, names of the persons sponsoring the ads were omitted. The first merely gave the name of an advertising agency for replies; the second was signed by a generally unknown group, "Fellowship in Prayer."

Reporters seeking out Ferris Booth who inserted the original "God and the Atom" ad in the Times on October 3, half expected to find what in the newspaper business is referred to as a "crackpot." Instead they located, in one of New York's swankiest hotel-apartments, a six-foot-four bachelor, son of a former vice president of the Guaranty Trust Co., and former manager of the Columbia University crew, who has been spending much time lately thinking about the big problems of the world.

Mr. Booth belongs to no church but usually attends St. John the Divine, the Episcopal Cathedral. He pointed to a shelf full of books on world problems that he had read before he decided to spend $2,500 on the "God and the Atom" ad. The announcement of the Russian bomb gave him his cue.

"There's no angle at all," he told surprised reporters, "but I always thought it was silly to have fights all the time. We can always get worse weapons but what's the use? The money we are paying out for past and present wars only means bankruptcy for all of us. There has to be some other answer, that's all."

Since Mr. Booth specifically addressed his ad to President Truman as a "sincere and most respectful suggestion," he naturally turned there for the first reaction. But a reporter who asked the President about it at a press conference was brushed aside.

But Mr. Booth said he expected God's help in getting a response to the ad. To date he has received 700 letters. In addition it evoked a second large ad in the Times of December 13, placed by C. A. Evans, retired associate executive secretary of the United Board for Christian Colleges in China, who heads a group of 15 calling themselves the "Fellowship in Prayer."

Mr. Evans sits modestly in what would normally be the public-stenographer's office in a hotel just across from the famous Little Church Around the Corner. After 20 years with Protestant church organizations, Mr. Evans, like Mr. Booth, came to the conclusion that there must be an interdenominational turning to God to meet the threat of communism and other antireligious forces. Thus far, he has received enough money from similarly-minded people to put the ad in the Times.

Mr. Evans calls his ad an answer to Mr. Booth because he does not agree with everything Mr. Booth said. He sees no use in bolstering Confucianism in China, for instance.

Also, he believes that, instead of putting responsibility in President Truman's hands, it should be put upon each individual who believes in God, regardless of his religious affiliation.

"The new approach that is needed," Mr. Evans says, "is simply prayer—prayer which recognizes that all great religions believe in the fatherhood of God and the brotherhood of man; that there are basic truths which apply to all great faiths and which may present a common denominator of attributes for which all people may pray. Truth, justice, mercy, and honesty are fundamentals over which there should be no controversy."

People are already writing to Mr. Evans to ask what they can do to further the spiritual renaissance on which both he and Mr. Booth set to work almost simultaneously. He put some recommendations into his ad: Begin now to pray in your own manner. Do it frequently or at stated times. Talk it over with your family, your neighbors, your friends, your spiritual adviser. If possible, get your local newspaper to copy this article or comment upon it. Fellowship circles could be formed. Do not, however, let it interfere with your regular religious duties—rather combine it with them.

The next step in the God and the atom campaign? "It may sound corny and trite," says Mr. Booth, "but I really believe God will take care of that." Says Mr. Evans, "No elaborate organization is planned. God has so far inspired the various steps of progress and he will direct and lead developments. All we know is we can't let the antireligious forces in the world win."

Many who are already effectively applying religion in their own way to the problems of our day will be interested in these efforts as new evidence of the widespread desire for more active peacemaking through religion.

One Great Hour of Sharing

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 14 (legislative day of Wednesday, March 8), 1950

Mr. WILEY. Mr. President, I believe that we are all familiar with the magnificent job that was performed in the 100,000 Christian churches throughout our country 2 days ago, Sunday, March 12, in collecting contributions for world relief.

This was the program known as the initial One Great Hour of Sharing.

Throughout Wisconsin as throughout the Nation, churches of the Protestant and Catholic denominations joined together in this heartwarming application of the principles of the Great Teacher. I have in my hands, Mr. President, an advertisement carried in the Janesville Daily Gazette of March 10, sponsored by the Christian churches of that fine city. This advertisement mentions a series of radio programs on Station WCLO which were designed to spearhead the One Great Hour of Sharing drive. I believe

that the spiritual and layman leaders of the Christian churches throughout our country who initiated and carried through this great drive should indeed be congratulated. It is a magnificent demonstration of American unity in fulfillment of our Christian responsibilities to the suffering, the hungry, the naked, and the diseased. It is indeed an "operation good Samaritan."

I believe that this one advertisement shows perhaps more clearly than a Nation-wide summary exactly how the One Great Hour of Sharing program worked in one city. I ask unanimous consent that the text of this advertisement be printed in the RECORD.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

"Am I my brother's keeper?"—Genesis 4: 9.

ONE GREAT HOUR OF SHARING

Tonight, March 10, from 6:45 to 7 o'clock, and on Saturday evening, March 11, from 6 to 6:15 o'clock, WCLO will broadcast the last two programs in a dramatic series titled "Operation Good Samaritan" as part of the Nation-wide One Great Hour of Sharing overseas relief program to be held in your church on Sunday, March 12. This appeal will take place in more than 100,000 Christian churches throughout America. And we, the churches of Janesville, ask you to listen, attend, and give.

Listen, attend, share. Nearly 25,000,000 members of 19 major Protestant and Catholic denominations are participating in the One Great Hour of Sharing. The success of One Great Hour of Sharing, designed specifically to raise many millions of dollars for world relief in the thousands of churches throughout America, depends entirely on the number of people who give at 11 a. m. on Sunday, March 12, following the broadcasts. It is for this reason that we, the churches of Janesville and America, urge you, the reader, to listen tonight and tomorrow night, and to tell your friends to listen, and then go to church on Sunday and give. The hunger of heart, the nakedness of mind, the sickness of soul of millions of men, women, and children of Europe and Asia need help—your help. Only when all men can hold their heads high will the world be truly on the road to peace.

Sponsored by First Lutheran Church, St. John's Lutheran Church, First Congregational Church, First Baptist Church, First Christian Church, Cargill Memorial Methodist Church, Christian and Missionary Alliance Church, Emerald Grove Congregational Church, First Presbyterian Church, Church of the Nazarene, Evangelical United Brethren Church, St. Patrick's Roman Catholic Church. St. Mary's Roman Catholic Church, Salvation Army, Rock Prairie Presbyterian Church.

The President's Handling of the Coal Strike

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 14 (legislative day of Wednesday, March 8), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Clifford B. Ward, appearing in the Fort Wayne News Sentinel under date of March 6, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOOD EVENING

(By Clifford B. Ward)

President Truman's handling of the coal strike is sufficient grounds for his impeachment on a basis both of incompetence and malfeasance.

Obviously, he played the worst kind of cheap partisan politics with a situation more threatening to the general welfare of the United States than any plot, real or fancied, on the part of Communist Russia.

In effect, he violated for many months his oath of office by refusing to recognize a Federal law and by refusing to treat as an emergency something which every schoolboy knew was an emergency. When he did take recourse to the Federal law which covers such a situation he did so in a manner that was contemptuous of that law.

At no time did the President make any serious appeal to the coal miners of this country to go back to work and it is likely that an appeal, made by Truman, as President of the United States to the miners might have worked, if he had shown that he meant it.

WORST TYPE OF ENEMY

John L. Lewis was able to do what any avowed enemy of the United States would wish to do but would not be able to do. He was able to take a country which was headed for an unusually prosperous year of business and knock it back on its heels economically even worse than Communists would have been able to do if given full permission to do so. Today there is not a person in the United States who has not been hurt seriously by Lewis' coal strike.

That the Taft-Hartley law is a slave-labor act has been shown to be the most silly sort of charge. The Taft-Hartley Act is on the books and a national strike threatening the welfare of all the Nation occurred.

The contempt charges against Lewis were predicated on the basis that Lewis is the union. He is not. The union, even if Lewis did not, ignored the orders of a Federal court to go back to work until a fact-finding board completed its work.

NOT RESPONSIBLE UNITS

If unions are not responsive to court orders, they are not responsible organizations and cannot be so treated by Government or by those who deal with them and sign contracts with them. If union leaders cannot handle wildcat strikes, unauthorized union actions, and if they can't exercise the leadership to get their members to obey court orders, then it is silly to suppose that there is such a thing as union responsibility.

Every human being in this country has certain inalienable rights, but no human being in this country has an inalienable right to use an inalienable right to deprive some other citizen of an inalienable right. One man in defense of his rights cannot seriously threaten the rights of everyone else.

WOULD BE HISSED

If any capitalist were to willfully damage this Nation's economy as Lewis has done, his name would be hissed by every other citizen in this country. If a capitalist were to refuse to feed our army of occupation in Japan until he was promised the best profit on food needed, we would ask him to be tried for something comparable to treason.

Yet, Mr. Lewis, in effect, said that he was willing to hurt every innocent person in the United States, if necessary, to see to it that miners got what they were demanding.

A public official who takes an oath to preserve law and order and carry out the requirements of his oath can be impeached if he does not do his duty. Mr. Truman is such a public official.

Housing

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. BECKWORTH. Mr. Speaker, I desire to include in the CONGRESSIONAL RECORD some letters I have received about housing:

OFFICE OF THE SECRETARY OF DEFENSE,
PERSONNEL POLICY BOARD,
Washington, D. C., December 9, 1940.

HON. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: In contacting the military departments and agencies of the Department of Defense, I found that the information which you requested in your note to me on October 25 was being compiled and sent to you by the Secretary of Defense. Therefore, I waited until that letter was sent to you before responding to your request. I hope that this letter from Mr. Stephen Early, as Acting Secretary, sent you on November 30 supplied the desired data on family housing in Alaska.

Vice Admiral McCrea is sending additional housing figures to you in compliance with your notes on his letter of October 3. This should reach you in a few days.

I have been very happy to furnish you with what information was available because of your deep interest in the welfare of the families of men and women in the service.

My delays, and those of Admiral McCrea's, in answering your inquiries promptly have been occasioned by the fact that the Personnel Policy Board does not normally deal with statistical data on housing. This is the responsibility of the Munitions Board and the Office of the Budget, Office of the Secretary of Defense. Therefore, the information which we gathered for you was second or third handed, coming first from the services and then through these two mentioned agencies. I have a suggestion which is respectfully submitted in case you desire further family housing data. There is now another group within the Department of Defense which is going into the housing business very deeply. I refer to the Department of Defense Housing Commission, which was appointed by Mr. Johnson on November 16, 1949, to study all phases of the family housing problem and to plan for an over-all solution to these problems. The studies and research of this commission should produce more complete and accurate figures than have been available heretofore.

I hope you enjoyed your recess and were able to spend most of the time in your home at Gladewater and in your district. I envy you in this respect because my military service has kept me away from my home in San Antonio for about 6 years now.

For your information, I have recently been assigned from the Personnel Policy Board to the Joint Technical Planning Committee, the group which is responsible for operations in connection with the atomic bomb test scheduled for Eniwetok at a later date. I'm very enthusiastic about the new job because of the background it will give me in the use of this most important weapon.

Again, I repeat, it has been a pleasure to furnish any assistance which I could to you. I am apologetic about the delays in time, and I am sincere when I say that these delays were necessary in order to insure that the data was correct and based on sound facts.

Respectfully,

ROBERT R. GIDEON, Jr.,
Colonel, United States Air Force.

P. S.—Attached please find Air Force magazine with an article about housing. Thought you might be interested in reading it.—R. R. G., Jr.

HEADQUARTERS, BENJAMIN HARRISON AIR FORCE BASE,
Indianapolis, Ind., January 24, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: With reference to your letter of January 10, 1950, the following information is furnished:

Officers with families at this base	168
Airmen with families at this base	331
Officers with families furnished Government housing by this base	63
Airmen with families furnished Government housing by this base	86

No information on additional housing units needed at this base can be furnished inasmuch as this base will be transferred to the jurisdiction of the Department of the Army on February 1, 1950, and future plans for this base are not known by this headquarters.

Very truly yours,

ROGER E. LEE,
Lieutenant Colonel, United States Air Force, Commanding.

[Headquarters, Three Thousand Three Hundred and Tenth Technical Training Wing and Scott Air Force Base, Ill.]

OFFICE OF THE COMMANDING GENERAL,
January 31, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN BECKWORTH: In reply to your inquiry of January 25, 1950, the following information is furnished:

Number of officers with families assigned to the base	908
Number of enlisted men with families assigned to the base	2,534
Number of officers with families occupying Government quarters	205
Number of enlisted men with families occupying Government quarters	213

Additional housing units needed: Officers, 703; enlisted, 2,321.

Sincerely yours,

JOHN F. McBLAIN,
Brigadier General, United States Air Force, Commanding.

[Headquarters, Ninety-first Strategic Reconnaissance Wing]

BARKSDALE AIR FORCE BASE, LA.,
January 30, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: In answer to your letter received at this station January 25, 1950, the following information is offered:

1. Number of officers with families at this base, 1,175.

2. Number of airmen with families at this base, 2,546.

3. Number of officers with families now occupying Government quarters on the base, 106.

4. Number of airmen with families now occupying Government quarters:

(a) On the base, 123.

(b) Barksdale Homes (off the base, but immediately adjacent), 101.

(c) Greentree Homes (22 miles from the base, 115. (Homes are not considered adequate due to the distance from the base and the present condition of the homes.)

5. Additional housing units required at this station for officers with families, 855. (This figure is based on the total married officers, less the number now furnished Government quarters, less 20 percent who would not desire Government quarters.)

6. Additional housing units for airmen with families, 2,322. (This figure includes those airmen presently living at Greentree Homes.)

Your attention is invited to the fact that a total of 1,500 additional housing units was recommended by the Federal Housing Administration, of which 692 have been approved and contract let.

We are pleased to furnish you with this information. If we can be of any further assistance to you, please do not hesitate to write us.

Sincerely yours,

HORACE M. WADE,
Colonel, United States Air Force,
Deputy Commander.

HEADQUARTERS FORT BRAGG,
OFFICE OF THE COMMANDING GENERAL,
Fort Bragg, N. C., January 31, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: In reply to your letter of January 19, 1950, the following information is furnished:

Number of officers with families at this station	1,531
Number of enlisted men with families at this station	5,903
Number of officers with families furnished Government quarters by this station:	
Permanent	124
Mobilization type	[1] 589
Number of enlisted men furnished Government quarters by this station:	
Permanent	140
Mobilization type	[1] 1,012
Number of additional housing units needed for officers at this station	818
Number of additional housing units needed for enlisted men at this station	[2] 4,751

[1] Converted from mobilization-type buildings.

[2] 475 units (Honeycutt housing area) are located 8 miles from the post. 537 units converted from mobilization-type buildings.

[2] This figure includes 2,550 enlisted men for whom housing on or offpost is desirable.

The requirement for 818 officer units and 4,751 EM units is the current need. To this figure must be added units required for replacement of the converted mobilization-type housing, which has an estimated life of not to exceed 5 years.

The above figures do not include 1,000 units which are to be constructed by civilian contractor under the provisions of the Wherry bill.

Trusting that the above covers desired information, I am

Sincerely yours,

HOMER W. KIEFER,
Brigadier General, General Staff Corps,
Chief of Staff.

[Headquarters, Mitchel Air Force Base (Twenty-five hundredth Air Base Group)]

NEW YORK, *January 30, 1950.*

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: In reply to your letter of January 19, 1950, please be advised of the following status of family housing at this station.

(a) There are 642 officers assigned this station with families.

(b) There are 1,525 airmen assigned this station with families.

(c) There are 100 officers assigned Government family quarters at this station; these quarters are in the following categories:

1. Permanent, 59.
2. FPHA, 29.
3. Converted barracks, 12.

(d) There are 307 airmen assigned Government family quarters at this station; these quarters are in the following categories:

1. Permanent, 68.
2. FPHA, 145.
3. Converted barracks, 94.

(e) There are 36 airmen residing in privately owned trailers on Government trailer lots at this station.

(f) Based on availability of housing in the adjacent communities, housing is required for personnel of this station as follows:

1. Officers, 315.
2. Airmen, 315.

Please be assured of our continued cooperation in this and other matters within the confines of existing regulations.

Very sincerely yours,

ROBERT W. C. WIMSATT,
Colonel, United States Air Force,
Commanding.

[Headquarters, Four Thousand Four Hundred and Eighth Air Base Squadron]

LAWSON AIR FORCE BASE,
Fort Benning, Ga., January 30, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: Reference is made to your communication of January 27, 1950, regarding Government housing for military personnel assigned Lawson Air Force Base.

For your information, Lawson Air Force Base is on the military reservation of Fort Benning, Ga., and a pro rata share of housing is available to this station from that headquarters. At present we have 33 officers with families stationed at Lawson Air Force Base, 7 of these presently assigned Government quarters on the Fort Benning Reservation. We have 122 airmen with families assigned this station with 7 being furnished Government housing on Fort Benning. To provide adequate housing for all military personnel at Lawson Air Force Base, we presently would need 26 sets of quarters for officer personnel and 115 sets of quarters for airmen.

For your information, 600 units are presently under contract under the Wherry bill on the Fort Benning Reservation. Also approximately 200 sets of noncommissioned officers' quarters are almost completed. A pro rata share of these quarters will be made available to Lawson Air Force Base upon completion.

Yours truly,

RICHARD O. JOHNSON,
Major, United States Air Force,
Commanding.

[Headquarters, Four Thousand One Hundred and Eighth Base Service Squadron]

SMOKY HILL AIR FORCE BASE,
Salina, Kans., January 30, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: Reference your recent inquiry of January 25 relative to the number of officers and enlisted men with families stationed here, the following information is submitted:

(a) Number of officers with families, 14.

(b) Number of enlisted men with families, 106.

There are no officers or enlisted men occupying Government quarters at this station, and no additional units are required at present, since this station is in process of being deactivated and is scheduled to be placed on a stand-by basis on April 20, 1950.

Sincerely yours,

D. M. JONES,
Lieutenant Colonel, United States Air Force, Commanding.

HEADQUARTERS, FORT DEVENS, MASS.,
February 1, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: As requested by you, the following housing information is furnished:

Officers with families at this station	226
Enlisted men with families at this station	1,236
Officers with families in Government housing	200
Enlisted men with families in Government housing	531
Additional housing units needed for officers with families at present time	26
Additional housing units needed for enlisted men with families at present time	705

The forecast for the future is more unfavorable, although definite figures are not available at this time. An increase in the permanent garrison is anticipated which will increase the shortage by approximately 500, should current plans, as yet unannounced, materialize.

Sincerely,

R. W. GROW,
Major General, United States Army, Commanding.

HEADQUARTERS, CAMP LEE,
Camp Lee, Va., February 1, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: I have received your letter of January 27, 1950, in which certain information was requested as to the family housing situation existing at Camp Lee, Va.

The information requested is being compiled and will be submitted through the Legislative and Liaison Division, Department of the Army, for coordination.

Sincerely,

R. C. L. GRAHAM,
Major General, United States Army, Commanding.

HEADQUARTERS, THE INFANTRY CENTER,
Fort Benning, Ga.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: In response to your inquiry of January 19, the following information is furnished:

(a) Number of officers with families, 2,005. Of this number there are 133 living in bachelor-type quarters who draw family allowance. Due to nonavailability of Government quarters or reasons of their own, including compassion, the families of these officers have remained in their home communities throughout the United States. There will always be a certain number of officers and enlisted personnel of this category. Practically all of these officers are in non-Regular Army components.

Number of enlisted personnel with families, 3,209. Of this number 239 are in the status of the 133 officers described above. (The figure 3,209 includes enlisted personnel authorized quarters or quarters allowance only. In addition there are 4,232 enlisted personnel of lower grades with families who are authorized neither quarters nor quarters allowance.)

(b) Number of officers with families in Government quarters, 894.

Number of enlisted men with families in Government quarters, 338.

(c) Number of quarters required for officers, 1,111. This figures includes quarters for the 133 officers described in (a) above.

Number of quarters required for enlisted personnel, 2,871. This figure includes quarters for the 239 enlisted personnel described in (a) above.

For your further information, 200 units of $60 to $70 rentals have been built on the Fort Benning Military Reservation under the act of August 5, 1947 (61 Stat. 774) (per 10 U. S. C. 1270), that are now occupied. Contracts have been let for 600 housing units with rental value at $70 through $95 to be built on the Fort Benning Military Reservation under the Wherry bill. In addition, 80 housing units (Government quarters for authorized enlisted personnel) are under construction on the main post with target completion date April 1, 1950. For planning purposes these 880 units reduce the requirements in paragraph 1 (c) above.

The foregoing indicated requirements are based on actual existing conditions, whereas requirements used in submission of budget requests are ordinarily based upon projected peacetime strengths utilized for long-range planning. The projected strengths for Fort Benning represent a total peacetime requirement of 5,601 family units for officers and 9,859 family units for noncommissioned officers, resulting in a total family housing requirement of 15,460 units.

Yours very truly,

J. S. BRADLEY,
Brigadier General, United States Army, Commanding.

[Headquarters, Westover Air Force Base (One Thousand Six Hundredth Air Transport Wing, ATLD-MATS)]

WESTOVER AIR FORCE BASE, MASS.,
February 2, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN BECKWORTH: Acknowledgement is made of your letter of January 25, 1950, in which you request information regarding housing available and required for officers and airmen at this installation.

In accordance with the provisions of Air Force Regulation 11-7, dated April 25, 1949, your inquiry is being forwarded to the Director of Legislation and Liaison, Headquarters, United States Air Force, for reply. Pertinent information will be furnished you by that office in the near future.

Sincerely,

J. E. BARZYNSKI, Jr.,
Colonel, United States Air Force, Commanding.

AIR PROVING GROUND,
EGLIN AIR FORCE BASE, FLA.,
February 1, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: I am in receipt of your letter of January 26, 1950, in which you request information relative to the numbers of officers and enlisted men with families who are stationed at this base and the numbers of such personnel who are furnished Government-owned housing.

In answer to your specific questions and to provide you with a comprehensive picture of the current housing requirements at this station, the following table of information is offered:

1. Total personnel strength by categories, Eglin Air Force Base, Fla.: Officers, 625; airmen, 5,662.

2. Total personnel strength by categories with families: Officers, 499; airmen, 2,302.

3. Total personnel by categories with families who are furnished Government-owned housing: Officers, 149; airmen, 544.

4. Number of existing Government-owned family units deductible from (2), above: Officers, 149; airmen, 544.

5. Present housing deficiency by categories: Officers, 350; airmen, 1,758.

The above figures, relating to personnel with families, are supplied from a survey recently completed as of December 31, 1949, and will not normally vary over an extended period by more than 5 percent up or down. Any attempt to furnish more current information, as to the numbers of officers and airmen with families, would necessitate an additional survey which could not be completed for approximately 15 days, however, experience shows the percentage of officers and enlisted personnel with families will vary only slightly with any normal turn-over of personnel.

It is anticipated that the figures given herein regarding the present housing deficiency will increase in the near future, consistent with proposed future expansion of Eglin Air Force Base; however, justification for future deficiency cannot be made at this time.

It may be noted that the above table indicates 2,302 enlisted men with families for whom a definite housing requirement is established, however, of that number only 1,419 are within the pay grades for which Government housing is normally furnished under current regulations.

I trust this information will be satisfactory for your use.

Sincerely yours,

W. E. KEPNER,
Major General, United States Air Force, Commanding.

HEADQUARTERS, OFFUTT AIR FORCE BASE,
Omaha, Nebr., February 3, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: Furnished below is the information requested in your letter of inquiry dated January 26, 1950.

Officers with families at this base	449
Airmen with families at this base	929
Officers having Government housing	37
Airmen having Government housing	27
Additional units needed for officers	412
Additional units needed for airmen	902

Sincerely,

GERALD G. ROBINSON,
Lieutenant Colonel, United States Air Force, Deputy Commander.

HEADQUARTERS, CAMP LEROY JOHNSON,
New Orleans, La., February 3, 1950.

Mr. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

HONORABLE SIR: In reply to your letter of January 26, 1950, requesting data on the housing situation at this post, the following report is submitted:

Number of officers with families assigned	51
Number of enlisted men with families assigned	390
Officers furnished Government housing	5
Enlisted men furnished Government housing (the above housing is not on the post, but furnished by the Navy Bienville Housing project)	38
Housing units needed for officers	34
Housing units needed for enlisted men	352

Trusting that this information is what you desire, I am,

Yours very truly,

M. C. SHEA,
Colonel, Field Artillery, Commanding.

[Headquarters, Lowry Air Force Base and Three Thousand Four Hundred and Fifteenth Technical Training Wing]

DENVER, COLO., *February 3, 1950.*

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: Reference your letter of January 23, I regret that I am unable to furnish you the information requested. However, your letter has been referred to the Director of Legislation and Liaison, Office of the Secretary of the Air Force, and you may expect a reply from him.

Sincerely yours,

WARREN R. CARTER,
Brigadier General, United States Air Force, Commanding.

HEADQUARTERS,
THE ARMORED CENTER,
OFFICE OF THE COMMANDING GENERAL,
Fort Knox, Ky., February 6, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: This is in reply to your letter of January 19, 1950, regarding housing statistics at this station, and the following information is submitted:

(a) Number of officers with families assigned to this post	1,328
(b) Number of enlisted men (consisting of grades E–5, E–6, and E–7; and grade E–4 with seven or more years of service) with families assigned to this post	2,597
(c) Number of officers with families occupying Government quarters	680
(d) Number of officers with families occupying Government substandard quarters	15
(e) Number of enlisted men with families occupying Government quarters	629
(f) Number of enlisted men with families occupying Government substandard quarters	317
(g) Number of officers with families living in privately owned trailers located on the post	117
(h) Number of enlisted men with families living in privately owned trailers located on the post (all grades)	159
(i) Number of officers with families living on post, totals of subparagraphs (c), (d), and (g)	812
(j) Number of enlisted men with families living on post, totals of subparagraphs (e), (f), and (h)	1,105
(k) Number of additional housing units needed for officers with families at this post	516
(l) Number of additional housing units needed for enlisted men with families at this post	1,492

Under current Army regulations, enlisted personnel of the three highest grades with dependents are assigned quarters if available. Enlisted personnel in the remaining lower grades with dependents may be granted authority to occupy public quarters when such quarters are not required for assignment to personnel of the three highest grades.

At the present time there are additional housing units in process of construction which includes 152 Government units plus 1,000 units by private concern under Government lease (Wherry bill) or a total of 1,152 units.

Upon completion of these new units, the housing shortage at this station will be relieved considerably, and the 856 officers and/or enlisted men—totals of subparagraphs (k) and (l) above 2,008, less new units being constructed 1,152—will be able to find family quarters in communities adjacent to this post due to personnel moving into the new units.

In view of above no justification for additional housing can be foreseen at this time.

I will be very pleased to be of further assistance if you find it desirable to call upon me.

Sincerely yours,

WM. G. LIVESAY,
Major General,
United States Army, Commanding.

HEADQUARTERS,
FORT WILLIAMS, MAINE,
February 3, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

SIR: The following information is furnished in response to your inquiry of February 1:

(a) Number of officers, with families, assigned to this command, 22.

(b) Number of enlisted men, with families, assigned to this command, 161.

(c) Number of officers, with families, furnished Government quarters, 19.

(d) Number of enlisted men, with families, furnished Government quarters, 42.

(e) In view of the fact that this station and its satellite stations is scheduled for a drastic reduction in strength and eventual deactivation, no additional housing units are needed for either officers or enlisted men and their families.

L. W. GOEPPERT,
Colonel, Coast Artillery Corps, Commanding.

HEADQUARTERS,
WENDOVER AIR FORCE BASE,
Wendover, Utah, February 6, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: Reference your letter of February 1, 1950, requesting information relative housing of military personnel assigned this station.

Presently there are 2 officers and 23 enlisted men, with families, assigned this station. These personnel are housed in a Government housing project in the adjacent town of Wendover, Utah. There are no quarters available on the station for military personnel.

This station is in the process of inactivation and it is not anticipated that housing units will be required.

Sincerely yours,

JOHN C. CRUM,
Major, United States Air Force, Commanding.

HEADQUARTERS, CAMP CARSON,
Camp Carson, Colo., February 9, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: In answer to your communication, dated January 26, 1950 pertaining to housing at this installation, the following information is submitted:

Total officers with families	464
Total enlisted men with families	1,349
	Apartments
Total government housing for officers	136
Total Government housing for enlisted men	266
Additional housing needed for officers	121
Additional housing needed for enlisted men	803

I am sorry to have caused you this delay but the compiling of this information through a thorough screening of our records necessitated more time than contemplated.

Sincerely,

THOMAS E. MOORE,
Colonel, Field Artillery,
Deputy Commander.

DEPARTMENT OF THE AIR FORCE,
Washington, February 13, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives

DEAR MR. BECKWORTH: This is in further reference to your letter of January 9, 1950, addressed to the Commanding Officer, Andrews Air Force Base, Washington 20, D. C., in which you requested housing information.

The following information has been supplied by the Commanding Officer of Andrews Air Force Base:

Officers with families	610
Officers furnished Government quarters	182
Additional housing units needed for officers	428
Airmen with families	1,127
Airmen furnished Government quarters	12
Airmen quarters under construction and nearing completion	120
Additional housing units needed for airmen	995

Sincerely,

J. F. MCCLENDON,
Colonel, United States Air Force, Chief, Congressional Liaison Division.

HEADQUARTERS, MARINE CORPS SCHOOLS,
Quantico, Va., February 14, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR MR. BECKWORTH: The information requested in your letter of February 10, 1950, concerning the housing at the Marine Corps Schools is as follows:

(a) Number of married officers, 814.

(b) Number of married enlisted, 1,152.

(c) Number of married officers occupying Government quarters, 322.

Number of married officers occupying Government-controlled rental quarters, 66.

(d) Number of married enlisted occupying Government quarters, 207.

Number of married enlisted occupying Government-controlled rental quarters, 271.

(e) Number of quarters now under construction, none.

(f) 450 units have been requested under the provisions of the Wherry Housing Act.

As you know, the housing situation at the Marine Corps Schools, Quantico, Va., is one of our major problems at the present time. Your interest in the situation is deeply appreciated.

As you requested, I am returning your letter.

Sincerely yours,

LEMUEL C. SHEPHERD, Jr.,
Major General, United States Marine Corps, Commandant, Marine Corps Schools.

HEADQUARTERS,
HOLLOMAN AIR FORCE BASE,
Alamogordo, N. Mex., February 3, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: In reply to your letter of January 23, 1950, relative to housing at this base, the following information is furnished:

(a) Number of officers with families, 102.

(b) Number of airmen with families, 392.

(c) Number of officers occupying Government quarters, 60.

(d) Number of airmen occupying Government quarters, 240. (These 240 quarters are of the "cracker-box" variety built as temporary housing in 1942. They are substandard, inadequate, and have deteriorated to a point where they cannot be economically maintained.)

(e) Number of quarters now under construction, 82.

(f) Total number of quarters required by both officers and airmen, 350. (This number

has been requested under the Wherry Housing Act.)

Your interest in the housing situation at this station is deeply appreciated and I will gladly furnish any further information that you request.

Sincerely,

CARL B. NELSON,
Lieutenant Colonel, United States Air Force, Coordinator of Congressional Matters.

DEPARTMENT OF THE AIR FORCE,
DIRECTORATE OF LEGISLATION AND LIAISON,
Washington, February 15, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: This will acknowledge receipt of your letter of February 1, 1950, requesting information about the housing at Williams Air Force Base, Chandler, Ariz.

Information in regard to this matter is being obtained and you will be advised further in the near future.

Sincerely,

J. F. MCCLENDON,
Colonel, United States Air Force,
Chief, Congressional Liaison Division.

DEPARTMENT OF THE AIR FORCE,
Washington, February 21, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: This is in further reference to your letter of January 10, 1950, addressed to the commanding officer, Kirtland Air Force Base, New Mexico, regarding Government housing.

The following information has been supplied by the commanding officer of Kirtland Air Force Base:

Officers with families	338
Enlisted men with families	900
Officers with families having Government housing	25
Enlisted men with families having Government housing	75
Additional housing units needed for:	
Officers with families	313
Airmen with families	600

Your interest in this matter is appreciated.

Sincerely,

J. F. MCCLENDON,
Colonel, United States Air Force,
Chief, Congressional Liaison Division.

DEPARTMENT OF THE AIR FORCE,
Washington, February 21, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: This is in further reference to your letter of January 25, 1950, addressed to the Commanding Officer, Westover Air Force Base, Mass.

The following information has been supplied by the commanding officer of Westover Air Force Base:

Personnel occupying family-type quarters on the base:

Officers	98
Airmen	87
Civilians	2

An estimate of family housing needs as of December 31, 1949, was as follows:

Officers	612
Airmen	1,638
Civilians	338

Your interest in this matter is appreciated.

Sincerely,

J. F. MCCLENDON,
Colonel, United States Air Force,
Chief, Congressional Liaison Division.

DEPARTMENT OF THE AIR FORCE,
DIRECTORATE OF LEGISLATION AND LIAISON,
Washington, February 21, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: This is in further reference to your letter of January 10, 1950, addressed to the Commanding Officer, Wright-Patterson Air Force Base, Dayton, Ohio, requesting housing information.

The following information has been supplied by the commanding officer of Wright-Patterson Air Force Base:

Officers with families stationed at base	1,546
Airmen (enlisted) with families stationed at base	1,042
Officers with families furnished housing on base	343
Airmen (enlisted) with families furnished housing on base	372
Number of additional housing units required for officers' families	1,203
Number of additional housing units required for airmen's families	670

Sincerely,

J. F. MCCLENDON,
Colonel, United States Air Force,
Chief, Congressional Liaison Division.

DEPARTMENT OF THE AIR FORCE,
Washington, February 23, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: This is in reference to your letters of January 10 and 14, 1950, addressed to the Commanding Officer of Hamilton Air Force Base, Hamilton, Calif., concerning housing data and black-eyed pea procurement at that base and to your communication of January 31, 1950 on the above matter.

One hundred and forty-four pounds of black-eyed peas were purchased at Hamilton Air Force Base from Tiedemann and McMonan, 65 Berry Street, San Francisco, Calif., at $.0979 per pound. One hundred and ninety-two pounds were purchased from Haas Brothers, Third and Channel Streets, San Francisco, Calif., at $0.1637 per pound.

As of January 1, 1950, there were 607 officers and 1,710 airmen with families at Hamilton Air Force Base of which 108 officers and 268 airmen were assigned public quarters.

Your interest in the Air Force is appreciated.

J. F. MCCLENDON,
Colonel, United States Air Force,
Chief, Congressional Liaison Division.

DEAR MR. BECKWORTH: Please be advised that the information desired of the number of officers with families at Hamilton Air Force Base and other related questions in your letter of January 10, 1950, and the number of black-eyed peas or beans that are purchased annually and the source and price in your letter of January 14, 1950, has been referred to the Director of Legislation and Liaison, Office of the Secretary of the Air Force, Washington, D. C.

The Director of Legislation and Liaison has been requested to furnish to you the pertinent information requested.

If I may be of any further assistance, please do not hesitate to call upon me.

Sincerely yours,

GEORGE L. USHER,
Colonel, United States Air Force,
Commanding.

DEPARTMENT OF THE AIR FORCE,
Washington, February 27, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: This is further reference to your letter of February 1, 1950, addressed to the commanding officer, Williams Air Force Base, Chandler, Ariz., requesting information concerning housing at that base.

Following is the information relative to the housing accommodations at Williams Air Force Base:

Personnel occupying family-type quarters:

Officers	54
Enlisted men	64

An estimated need for family housing was—

Officers	226
Enlisted men	851

Your interest in this matter is appreciated.

Sincerely,

J. F. MCCLENDON,
Colonel, United States Air Force,
Chief, Congressional Liaison Division.

DEPARTMENT OF THE AIR FORCE,
Washington, February 28, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: This is in reference to your letter of February 14, 1950, addressed to Mr. Symington, relative to the housing situation at March Air Force Base, Calif.

Following is the information relative to the housing accommodations at March Air Force Base:

Personnel occupying family-type quarters:

Officers	65
Enlisted men	105

An estimated need for family housing is:

Officers	217
Enlisted men	807

Your interest in this matter is appreciated.

Sincerely,

J. F. MCCLENDON,
Colonel, United States Air Force,
Chief, Congressional Liaison Division.

HEADQUARTERS, FIFTEENTH AIR FORCE,
March Air Force Base, Calif., February 10, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: Your letter of February 1, 1950, has been forwarded to me by the commanding officer of the caretaking detachment of the air field at Victorville, Calif., for the purpose of answering the questions contained in paragraph 3 of your letter.

Unfortunately, specific answers are not available, as the personnel from March Air Force Base who are to go to Victorville with the First Fighter Wing when it moves to that station have not been definitely selected. It has been estimated, however, that at least 400 units will be required for airmen's housing and 250 units for the officers. These units are presently planned for construction under the provisions of Public Law 211.

Information on the current housing status at Victorville is contained in the enclosed letter from the commanding officer of that station.

It is hoped that the information contained herein is a satisfactory answer to your questions. If additional information is desired, this office will make every effort to provide it.

Sincerely yours,

GEORGE MCCOY, JR.,
Colonel, United States Air Force,
Liaison for Wherry Housing, Victorville.

DEPARTMENT OF THE AIR FORCE,
Washington, February 28, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: This is in reference to your letter of January 23, 1950, to the commanding officer of Lowry Air Force Base, Denver, Colo., concerning housing data at that base.

There are 99 officer families and 61 families of enlisted men quartered on Lowry Air

Force Base. An additional 326 family quarters would be required to house all married officers and 1,591 additional family quarters would be required to house all married enlisted men at this base.

Your interest in this matter is appreciated.

Sincerely,

J. F. MCCLENDON,
Colonel, United States Air Force,
Chief, Congressional Liaison Division.

DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF STAFF,
Washington, D. C., March 10, 1950.

Hon. LINDLEY BECKWORTH,
House of Representatives.

DEAR MR. BECKWORTH: Permit me to refer to your recent memoranda to various commanding officers of Army installations, wherein you requested information on family housing requirements.

In accordance with our telephone conversation, complete information relative to the housing requirements at Army installations has been consolidated in a single report and is enclosed herewith. In view of this report, it is assumed that individual replies from commanding officers are not required.

Sincerely yours,

T. A. YOUNG,
Assistant to the Chief, Legislative Liaison.

Soviet "Freedom"

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. MULTER. Mr. Speaker, the following two items which appeared in the New York Herald Tribune, the first on March 9, and the second on March 13, typify the operation of "people's democracy" in Soviet Russia:

UNITED STATES PRIEST FINALLY IN RUSSIA BUT STILL CAN'T HOLD SERVICE—FATHER BRASSARD'S VISA DOES NOT ENTITLE HIM TO SAY MASS, HE LEARNS

(By Joseph Newman)

BERLIN, March 8.—The Reverend John O. A. Brassard, an American priest of Assumption College, Worcester, Mass., waited 10 months for a Soviet visa so he could conduct services for Americans and other foreigners in Moscow.

Finally, when he arrived in Moscow last January, Soviet agents refused to let him hold any services on the ground that he did not have authorization for such activities. Father Brassard is therefore singing in the choir with other members of the foreign colony, according to a private report received today from Moscow.

On the first Sunday after his arrival Father Brassard went to the Church of St. Louis of the French, the only Roman Catholic Church in Moscow, to say mass. He was stopped by a Soviet agent who had taken control of the church some time ago and told that he could not conduct mass.

The reason he was given was that he had not been registered by Soviet authorities either as a resident of Moscow or as a priest. When he protested that he had been given a Soviet visa for the purpose of conducting services, he was told that his visa was to make it possible for him to look after foreigners but not necessarily at the church.

Father Brassard, accompanied by an official of the American Embassy, called at the Foreign Ministry to inquire about the latest twist in the treatment of American clergymen in Moscow. They were told that Soviet authorities would look into the matter. Several weeks passed without any word from the Soviet Foreign Ministry and as far as is known Father Brassard, who is said to have a rich baritone voice, is still singing in the choir in the noon mass held at the church for foreigners every Sunday.

This service is conducted by a French priest, Jean de Matha Thomas, who was permitted to say mass once a week after he surrendered the keys to the church in May 1949. At that time he was told he could no longer be in charge of the church, which was turned over to the Rev. Mr. Adamovitch, who was imported by the Russians for that purpose from Latvia. The Church of St. Louis, established by the French colony many years before the Bolshevik revolution, had always been in the hands of French or American priests.

Soviet actions against American clergymen began early last year when Father Antonio LaBerge, an American priest, previously stationed in Moscow, was denied permission to return from a vacation in the United States. The Russians invalidated a reentry visa which they had previously issued to him. Requests were then made for a visa for another American priest to replace Father LaBerge. After repeated demands by the State Department and the American Embassy in Moscow, a visa was finally issued to Father Brassard.

The Soviet censor refused to permit foreign correspondents to report the treatment accorded Father Brassard. Earlier they had been allowed to report his arrival in Moscow, but when they referred to the Church of St. Louis of the French, where he was expected to conduct services, the censor eliminated the words "of the French." To the censor the abbreviated name "Church of St. Louis" evidently sounded more Russian and less foreign.

JEWISH LABOR GROUP ACCUSES SOVIETS ON JEWS—EXILE TO SIBERIA, SPIRITUAL ANNIHILATION AND PHYSICAL DESTRUCTION ARE ALLEGED

(By Paul Tobenkin)

ASBURY PARK, N. J., March 12.—Jews in Russia and other Communist-dominated countries are facing spiritual annihilation, mass exile to Siberia, complete degradation, and in some cases physical destruction, it was alleged today by the Jewish Labor Committee, an organization representing more than 500,000 American Jewish trade unionists.

The JLC at its convention a year ago made the first public allegation of widespread antisemitism in iron-curtain countries. Today's report, delivered by Jacob Pat, secretary of the organization, to the JLC's national executive committee, outlined the changes that have taken place during the last year.

The 150 delegates, after hearing the report, unanimously adopted a resolution asserting that "this horror-ridden situation can no longer be tolerated" and protesting "the brutal inquisition which has been visited on the surviving population of 2,500,000 Jews behind the iron curtain."

REPORTS ON WEST EUROPE

The report will be transmitted to the State Department, to William Green, AFL president, and Philip Murray, CIO head, in an effort to enlist their support in bringing about a change in conditions described.

In dramatic contrast to the condition of Jews in Russia and her satellite nations, Charles Kreindler, a vice president of the International Ladies' Garment Workers' Union, AFL, who has just returned from Europe, reported the condition of western European Jewry has greatly improved economically and culturally during the last year.

The report was prepared by the research staff of the JLC on the basis of information obtained from newspapers, documents, and persons who have escaped from behind the iron curtain. Some of the unions which are part of the JLC have close affiliation with European trade unions.

The report, covering Russia, Poland, Rumania, Hungary, and Czechoslovakia, differs from last year's report in that for the first time conditions within the Soviet Union itself are described. Last year, while there were indications of what was going on in Russia, the specific information available was too sparse to be included in the report.

Discussing Russia and its incorporated territories of Latvia, Lithuania, Esthonia, eastern Poland, and Bessarabia, the report stated that of a prewar Jewish population of 5,300,000 only 2,000,000 Jews were left, the rest having been victims of Nazi legions, died in Siberia or been liquidated.

LITERARY FIGURES VANISHED

"During 1949, almost all Yiddish literary figures, even though they were members of the Communist Party, vanished," the report stated. The most outstanding of these were Itzik Feffer, Peretz Markish, David Bergelson, L. Kvitko, S. Alkin, and Nistor. Inquiries by American Jewish organizations at the Soviet Embassy concerning the fate of these Yiddish literary figures have met a stone wall of silence. When the Yiddish literary almanac, the Star, in the Ukraine, was closed, the reason given was that it cultivated Jewish national consciousness.

"Simultaneously," the report said, "a drive started against all Jews who occupied important places in general Soviet life—the struggle against so-called cosmopolitanism. Of all the so-called followers of cosmopolitanism who were liquidated about two-thirds were Jews. The most important of them were active in Soviet literature, science, philosophy, history, the theater, and included even special writers, on sports matters. The Communist line was that Jews are landless, stateless, and are not an integral part of Russia and her people, and that they are devoted to abstract Jewish nationalism, which is basically Jewish chauvinism.

"During the year," the report said, "concrete signs of antisemitism emerged. In a very prominent position among those attacked were persons who had Jewish names, and who for years had been writing under Soviet pseudonyms. In numerous instances the Russian names were followed by the original Jewish names in parentheses."

MASS DEPORTATION CHARGED

"The worst, however, that the Jews had to go through in 1949 was the mass deportation to Siberia of Jews from the Ukraine, eastern Galicia, Bukovina, Bessarabia, and the Baltic states. Some 30,000 Jews were deported from the city of Lemburg alone. Very little information about this forced exodus has reached the outside world. American relatives of some of these victims have given up hope of locating them."

The conclusion drawn in the report about Russia is that today "there is not a shred of Jewish cultural life" remaining; that all contact between Russian and western Jews has been destroyed; that Israel is considered an American-British colony; that emigration is forbidden, and that the Jews left face spiritual annihilation. Birobidjan, which had been set up as a Jewish republic in Russia, was dismissed as a complete failure.

In the discussion of Poland, it was said that the 60,000 or 70,000 Jews in that country in 1949 were subjected to a savage liquidation of their cultural life similar to that in Russia although not quite so intense.

Let's Look at the Record

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. ABBITT. Mr. Speaker, I desire to point out briefly the critical situation facing dark-fired tobacco growers in Virginia. When the Government-controlled program for tobacco was inaugurated some years ago, Virginia dark-fired tobacco type 21 was combined into the same program with types 22, 23, and 24, which types are grown in Tennessee and Kentucky and are dark-fired tobacco but of different texture from Virginia type 21.

Historically, Virginia type 21 dark-fired tobacco has brought a better price than the other types, and has different marketing qualities and uses. In the past 10 years, Virginia dark-fired tobacco harvested acreage has been cut from 23,000 in 1939 to 10,600 acres in 1949. The other types of dark-fired tobacco have only been cut from 91,500 acres to 47,700 acres. We will see from this that even though Virginia dark-fired tobacco is in the same farm program with other types of dark-fired tobacco, type 21 has been reduced substantially more in harvested acreage than have the other types of dark-fired tobacco. This is equally true as to poundage.

In 1939 there was a production of type 21 tobacco of 20,900,000 pounds. In 1949, this was reduced to 11,900,000 pounds. Types 22, 23, and 24, in 1939 produced 73,500,000 pounds of tobacco, and, in 1949, had been only reduced to 59,200,000 pounds. This shows on its face that type 21 Virginia dark-fired tobacco has been reduced in acreage approximately 54 percent; whereas, the other types have been reduced approximately 47.9 percent. The difference is even more marked as to the reduction in poundage in type 21 as distinguished from the reduction in the other types.

For the past 8 years, we have, each year, sold and disposed of more Virginia dark-fired tobacco in the normal trade channels than has been produced by our growers, with the exception of 1946; whereas, this is not true of the other types of dark-fired tobacco.

In 1939 stocks of Virginia dark-fired tobacco amounted to 23,400,000 pounds. In 1949 it amounted to only 21,900,000 pounds. The other three types in 1939 had 112,800,000 pounds in stock, and in 1949 had 135,300,000 pounds, an increase of nearly 23,000,000 pounds; whereas, the Virginia dark-fired tobacco stocks have been reduced; particularly has this been true in the last several years.

Production and sale figures for the last several years show conclusively that Virginia dark-fired tobacco planters are not producing an ounce more than the trade can afford. In fact, the production is slightly under the needs of the market. This is not true of the other types of dark-fired tobacco, but, as a matter of fact, they continue to pile up a surplus, which is increasing rather than decreasing year by year.

Auction prices for types 22–23 averaged 28.8 cents per pound for the season's sales through February 23; about 8 percent lower than last season. Virginia fire-cured type 21 auction closed February 16, and prices for the season averaged a record 33.5 cents per pound compared with a previous high of 32.9 cents last season.

When the price, 33.5 cents, received for Virginia fire-cured tobacco is compared with the average price received for types 22–23, 28.8 cents, Virginia fire-cured tobacco sold for 4.7 cents per pound more in 1949–50 than the other dark-fired cured types. If this 4.7 cents is applied to the 12,300,000 pounds sold, a total in excess of $500,000 was paid Virginia growers above Kentucky-Tennessee growers for this amount of tobacco. Surely buyers do not, out of the generosity of their hearts, pay as much as $500,000 more for Virginia fire-cured tobacco than they would for an equal amount of Kentucky-Tennessee fire-cured.

Supplies of type 21 are inadequate in many of the grades necessary for buyers buying to fulfill a brand requirement, therefore necessitating paying higher prices for our type of tobacco. This is not as it should be. We should be permitted to produce 15,000,000 pounds of fire-cured tobacco in order to satisfy the demands of the trade in the number of

the grades necessary for them to fulfill their requirements.

In the face of all this the Virginia dark-fired tobacco growers have been given over a 15-percent cut in their acreage allotments for 1950. This is due to the fact that type 21, the Virginia dark-fired tobacco, is lumped with types 22, 23, and 24 of dark-fired tobacco, which is grown in Tennessee and Kentucky. These are separate and distinct types with different markets from type 21.

Fortunately, the law permits the Secretary of Agriculture to separate the different types of tobacco if a proper case is made out showing the difference in markets, prices, and so forth. I am convinced that the above makes out a case which will permit the Secretary of Agriculture to disassociate type 21 dark-fired tobacco and set it in a program separate and apart so that it can stand on its own merit, thereby permitting the growers of Virginia dark-fired tobacco to produce sufficient poundage to meet the needs and demands of the market. That is all our growers are asking—to be allowed to produce a sufficient quantity and only a sufficient quantity to meet this need.

On behalf of the dark-fired tobacco growers of Virginia I am calling on Secretary Brannan to go into this matter carefully and to make that decision that will carry out the full intent of the law that was passed by this Congress and do justice to those people who till the soils of Virginia, the greatest State of the Nation and the best people on the face of this good earth, who are asking for justice and only justice on the merits of their case.

Mr. Speaker, under leave to extend my remarks I was granted permission to include an editorial carried in the Farmville Herald, Farmville, Va., on Friday, March 10, 1950. This editorial was written by Mr. J. Barrye Wall, a distinguished and honored citizen of Farmville, Va., who is known far and wide for his intense interest in his fellow men, for his outstanding contribution toward the development of southside Virginia, and for his sterling character. He has the admiration and respect of our entire section of Virginia, as well as people of other sections who know him. He has worked untiringly for those things that go for the betterment of the community in which he lives. He is an outstanding newspaperman, the owner and publisher of one of the finest newspapers in Virginia, and I heartily commend his editorial.

LET'S LOOK AT THE RECORD

The meeting of Virginia growers of dark-fired tobacco Saturday in Farmville to discuss tobacco acreage allotments in this belt is of utmost importance to the future of south-central Virginia. For well over 150 years the economy of this area of 16 counties has been based upon the production of Virginia dark-fired tobacco, known as type 21. In no other place can tobacco with the texture, taste, and tone be grown. This type, Virginia dark-fired, is in a class by itself.

Let's look at the record and see what has happened and what the future outlook is. Since 1922 production has steadily declined from 50,000,000 pounds to 25,000,000 pounds in 1933, 18,000,000 pounds in 1940, and 12,000,000 pounds in 1948. The 1950 acreage allotments further reduce acres to be planted by 15.9 percent, which will be reflected in a corresponding decrease in poundage. The trend is obvious.

Older growers will recall the hectic days of 1933 when tobacco prices and everything else were very low. It was then that Virginia farmers, and rightly so, voted for the Government-control program which placed a floor under prices and a ceiling on acreage. Allotments were made to individual farms according to past records of the farm. Dark-fired tobacco has been under this program since 1934 with exception of the war years of 1943, 1944, and 1945, during which period acres harvested in Virginia declined because of lack of manpower. It is interesting to note that during this period production increased in Tennessee types 22, 23, and 24. Reference will be made to this later.

At the beginning of the Government-control program Virginia type 21 was combined with types 22, 23, and 24, it was said, to facilitate administration of the program. Tobacconists agree that the types are different in character. The difference is further substantiated by the fact that for the past 8 years the production of type 21 has not supplied the demand. In other words, the growers have produced less tobacco than has disappeared through normal trade channels. The mere fact that type 21 fails to meet the market demand is prima facie evidence that it is a different type of dark-fired tobacco from the Tennessee and Kentucky types with which it has been combined under the Government program. This fact needs no further proof—the buyer so decrees.

The case with the other types is exactly opposite. Production has exceeded demand by approximately one-third. This excess production in relation to disappearance in types 22, 23, and 24 has caused an overproduction in the dark-fired types as a whole, and the administrators of the control program have continued to order a reduction in acreage throughout the area. Virginia growers are being penalized by being classified with growers of our sister States. Further inequalities in the allotment program came about when the program was reinstituted in 1946. Future quotas were based on production during the 1943–1945 period, which we have shown decreased in the Virginia belt, but increased in the Kentucky-Tennessee belts. Thus the Virginia base was further reduced, which contributes to the acreage decrease now faced.

But let's look further into what is happening. The best way to understand is to bring it down to specific cases or areas. How does this condition affect the individual grower?

Let's look at the record.

In the belt the average acres allotted to each farm was 3.1 in 1934. It has dropped to 1.4 in 1950.

In Prince Edward County there are 780 dark-fired tobacco growers, of whom 370 have an allotment of less than an acre of tobacco for 1950, and of this number 143 growers will have an allotment of half an acre or less. Tobacco growers agree that it is not economically sound to raise less than an acre of tobacco. Furthermore, at the average yield of 1,125 pounds to an acre sold at the average price of $33 per hundredweight, a half an acre would net a grower $167.14. It is obvious that 143 half-acre growers in Prince Edward are about out of the tobacco growing business, and possibly 227 with an acre or less allotment. The danger is that 370 growers, approximately one-half of the growers in the county will either go out of the business now or relatively soon. Multiply this by 10 and you would have a fair belt average.

The pity of it is that these farmers are less able to adjust their production to other products. Why don't they go into cattle? It takes capital to go into the cattle business, and furthermore these men know how to grow tobacco. There is a demand for the tobacco that they know how to grow. Why shift them into the highly competitive cattle business or perhaps the potato business?

There are many reasons for the decline in production of dark-fired tobacco, among them, the change from chewing tobacco usage to cigarettes; the culture of tobacco in foreign countries, which can be substituted in part for Virginia dark-fired, and others. But there is one thing which can be done, namely, to place Virginia dark-fired tobacco on its own and allot Virginia farmers enough acreage to supply the demand for this type.

In order to bring this situation to the attention of the United States Department of Agriculture officials, a meeting has been arranged in Farmville Saturday, March 12 at 10 o'clock in the Farmville High School auditorium and gymnasium, to discuss the situation.

Mr. Farmer, Mr. Businessman, if you are interested in what is happening to your tobacco industry in central Virginia you should attend this important meeting.

The problem is acute—the remedy urgent. It means dollars in your pocket; it may mean more to you.

Mr. Lie Opposed on China

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication which appeared in the New York Times of March 14, 1950, relative to the suggested replacement of the authorized representatives of the Government of China:

[From the New York Times of March 14, 1950]

MR. LIE OPPOSED ON CHINA—PROPOSAL TO REPLACE REPRESENTATIVES CALLED STAB IN BACK FOR UN

To the EDITOR OF THE NEW YORK TIMES:

Friends of the United Nations are deeply shocked at the suggestion of Trygve Lie, Secretary General of that body, that the authorized representatives of the lawful Government of China, be repudiated and replaced by the designees of a group which through fraud and force of arms has imposed its will for the moment upon a large part, but not all, of the Chinese people and Chinese territory.

International law and order cannot exist unless founded upon elementary morals. Nor can any instrumentality of international law and order long survive the negation of elementary morals. Counsels of expediency wrecked the League of Nations. Trygve Lie's proposal in the name of expediency is a stab in the back of the United Nations.

His argument is simple enough: The United Nations in order to function as intended requires the cooperation of the five great powers. One nation, Soviet Russia, refuses to cooperate unless the existing and lawful Government of one of the five—namely, China—is repudiated and a self-consti-

tuted, usurping Government is accepted in its place. Therefore, says Mr. Lie, repudiate the lawful government, notwithstanding its great contributions to the United Nations, and accept a government which has demonstrated itself to be the very antithesis of international peace and goodwill.

Entirely apart from bad morals which condemn the suggestion on its face, what does Mr. Lie hope to gain as a matter of expediency? Had Russia cooperated in furthering the aims of the United Nations before this issue was raised? Is there any reason to suppose that if the free nations yield despite the resulting injustice any genuine cooperation could be expected from Russia? Having yielded in this case, could the free nations consistently decline to refuse a similar demand when the next country in Asia or elsewhere is partially overrun by Communist aggression?

It would be an incalculable tragedy if the United Nations were to fail the hopes and prayers of the peace-hungry peoples of the world. If that failure should flow from Russian contumacy, Russia will inevitably answer sooner or later for that result. If failure should come because the free nations sacrifice justice and morals to Russian contumacy, the United Nations would still fail, though it might simulate continuance, but only as a symbol of universal cynicism and cruel mockery of mankind's noblest aspirations; and the free nations could not evade responsibility for that result. It was not Italy in Abyssinia or Japan in Manchuria which wrecked the League of Nations. It was the weak-kneed, spineless reluctance of the other powers to take a resolute stand upon the ground of manifest morals and justice.

The indication that the United States of America refrain from defining its opinion of Mr. Lie's proposal until a majority of the Security Council had expressed itself is unworthy of the position of leadership which events have accorded America.

The issue is clear and calls for forthright policy.

There is a lawful constitutional Government of China. In the critical years when our own fate was in the balance that Government faithfully, loyally, and successfully defended the bastion of Asia against our mortal enemy—and Russia's. With our allies we entered into a solemn obligation to defend the integrity of China against aggression.

We have done badly enough in fulfilling that obligation without participating in this final, fatal betrayal suggested by Mr. Lie.

HAROLD RIEGELMAN.

NEW YORK, *March 13, 1950.*

Mr. Hope's Opinion of the Brannan Plan

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, Congressman HOPE, of Kansas, is an outstanding member of the House Committee on Agriculture. On March 3 he aired his views on the Brannan plan over the radio of NBC. He scored heavily against the plan and I am including his speech as a part of my remarks. It is a timely answer to those who would fool the farmer and the consumer as well if Mr. Brannan's ideas were to be adopted by this Congress. Here is good campaign material. The address follows:

PRO AND CON

It is now almost a year since the Brannan farm plan was presented to the public. During that time it has been widely discussed. In fact, during a period which has been notable for the happening of many world-shaking sensation occurs almost every day, the Brannan farm program has continued to be a subject of great interest. This interest is due, in part at least, to two things: First, the plan's unquestionable political appeal, and, second, its questionable economic soundness.

The secret of its political appeal is that it offers something to everybody. From that standpoint, it's a stroke of political genius. On the one hand, its advocates say to the farmers, "The United States Government is going to guarantee you an income at high wartime levels." And to consumers they say, "We are going to give you low-priced food." That comes mighty close to being Utopia. It sounds too good to be true. And, unfortunately, it is—because when you bring the plan down from the stratosphere and look it over to see what makes it tick you find that a lot of ugly, un-Utopian things show up.

You find that this isn't legerdemain, after all, and that if farmers are to get high incomes and consumers are to have cheap food, someone is going to have to pay a bill, and a pretty big bill it's going to be, if the plan is carried out on the scale envisioned by its proponents. How big? Secretary Brannan says he doesn't know. Up to date no advocate of the plan has come along with any figures. They don't like to talk about that part of it.

A good many people have tried to make an estimate. The department of agricultural economics of the University of Illinois has said: "It could easily be as much as the total Federal budget before the war." The same department, taking hogs as an illustration, has estimated that hog supports alone might cost $700,000,000 annually, and hogs represent only one-seventh to one-eighth of the output of our farms. The American Farm Bureau Federation, after a study of the cost of the plan as to milk alone, estimated it would amount to $2,480,000,000 annually.

Other estimates as to the cost of the plan as proposed have ranged from two billions to ten billions per year. Some of the advocates of the plan have compared it to the British food-subsidy program, the cost of which has increased every year, amounting in 1948 to the colassal sum of $2,272,000,000. Our population is three times as large as that of Britain so on the basis of population alone the cost of a similar plan here could run to almost $7,000,000,000. But that doesn't take into account that the British are on an austere diet. If they consumed per capita the food we do in this country their cost would undoubtedly be higher and so we are safe in assuming, I think, that the plan here would cost more than three times as much as the British plan is costing.

To make the plan work someone is going to have to dig up billions of dollars because there's no other way to give the farmer high income and the consumer low prices. And where will the money come from? Well, from Uncle Sam—and the only money Uncle Sam has is what you and I give him. That means that every consumer and every farmer is going to have to dig down in his pockets and fork over the money to carry out this gigantic spending operation, and when you count taxes this cheap food may be pretty high priced food.

But suppose we don't dig up the dollars? Suppose Congress says that with a $5,500,000,000 deficit already existing, we just can't appropriate the additional billions which will be necessary to enable Uncle Sam to pay a part of everybody's grocery bill.

What will happen then? Well, initially at least the farmer will be left holding the sack. He will have done his part. He will have produced all that the Secretary of Agriculture asked him to produce. By reason of this heavy production his prices will have declined just as they always do in a time of heavy production when there are no price supports. The consumer will be getting his cheap food but the Secretary will have to tell the farmer, "It's too bad but Congress didn't appropriate the money." Maybe consumers will think that is a good thing but if they do they will be taking a very short-sighted view because low farm prices and bankrupt farmers in the end mean depression and hard times for everyone. At least that's been the case in the past.

So the Secretary will have to look around for some other means to make good his promise of high incomes for farmers. What can he do? Well, for one thing he can start limiting and controlling the production of farm products on the theory that scarcity will bring high prices. To do that in any effective way will in all probability result in the ultimate nationalization of agriculture. We'll have in this country exactly the same thing they have in England where the Government tells every farmer what he must produce and how much he must produce and if he doesn't carry out the orders in that respect he loses the use of his farm and it is turned over to someone else to operate.

If this sounds farfetched to anyone, I suggest they write their Congressman and get a copy of the bill S. 1971 which puts the Brannan plan into legislative form. This bill was written in the Department of Agriculture and sent to Congress for introduction. It was introduced in the Senate on May 31, 1949. It is 86 pages long. A part of it is a restatement of some of the laws already on the books but much of it is new. Fifteen pages of the eighty-six relate to penalties upon farmers and there are more pages with penalties for those who deal in agricultural products. I think most farmers would be interested in reading the provisions of section 401 (b) on page 79 of the bill.

This section provides that all farmers must keep such books and records and make such reports as may be required by the Secretary; and that if they fail to keep these reports and records they will be deemed guilty of a misdemeanor and upon conviction fined not more than $500. And if they make a false report or record they shall be guilty of a misdemeanor and upon conviction fined not more than $1,000 and imprisoned for not more than a year. My prediction is that if this bill ever becomes a law we'll either have to have more farm bookkeepers or bigger jails.

We've never had any experience here with an absolute Government-controlled agriculture so we don't know exactly how it will work out but if the history of other countries in any criterion we know that such control will eventually mean less production and more inefficient production. It will mean higher food prices. So in the end the Brannan plan will be just as much of a gold brick for the consumer who has been led to think he will get cheap food as it is for the farmer who wakes up some morning and finds that he has lost control of his farm. Is all this an exaggeration? Not in the least, if the Brannan plan is actually carried out to the extent necessary for its proponents to make good on the promises which they have been making to both producers and consumers.

I think it should be said in justice to the farmers of this country that the Brannan

plan did not originate with them. They were not consulted. They had no part in formulating it. Rather it originated with the political leaders of organized labor. It is frankly an effort on their part to form a political coalition between farmers and organized labor. They say, in effect, to farmers, "Help us elect Members to Congress who will repeal the Taft-Hartley law and we'll help you get the Brannan plan." The labor politicians can't lose on that one. If successful they get repeal of Taft-Hartley toward which they've been moving heaven and earth, and cheap food temporarily. And I know of no way farmers can win on it because the ultimate result must inevitably be lower farm prices, or in the alternative Government control of all agricultural production and ultimate nationalization of the industry. Politically, what will happen is what has always happened when a farmer-labor coalition has been attempted. The labor politicians take over the organization and the farmer is left out in the cold.

Now let me make it clear that what I have been discussing is the political Brannan plan of something for everybody. That's the basis on which its proponents are trying to sell it and the basis on which it must be judged. I don't think the farmers of this country will fall for this political Brannan plan. They are too smart to be caught that way. The wonder is that anyone who knows farmers would expect them to be for it. I am afraid that the labor politicians who concocted this plan have gotten their idea of a farmer from the funny papers and are laboring under the delusion that he will buy the Brooklyn Bridge if a sufficiently clever line of sales talk is used.

A lot of farmers are wondering why, if the Brannan plan is such a good thing for farmers, it wouldn't be just as good for the manufacturer and the workingman. Why not apply it to the production of automobiles or farm machinery or much-needed housing? Everybody knows the prices of those things should come down. This could be done by reducing wages and cutting other costs. No one would lose. Workers would get a subsidy out of the Treasury to make up the loss of wages. Employers would be given Government payments to make up their losses. And the public would get cheap automobiles and farm machinery and housing and maybe a lot of other things. Something for everybody. Isn't it lovely?

Our Immigration Authorities Are Doing a Good Job

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. MULTER. Mr. Speaker, irresponsible statements have appeared from time to time to the effect that hundreds of thousands of aliens are illegally entering this country annually and that millions of illegal aliens are roaming the United States. All of this is, of course, nothing more than a concerted effort to defeat the current attempt in Congress to liberalize the Displaced Persons Act, which presently contains discriminatory clauses aimed against certain religious groups.

Fantastic stories are spread about 5,000,00 illegal aliens running loose in the country. Today there are only about 3,000,000 aliens in the United States registered pursuant to the Alien Registration Act of 1941. With relatively few exceptions, nearly all of them entered as legal immigrants.

The Immigration and Naturalization Service, which is entrusted with guarding the thousands of miles of our borders and the numerous ports along the Atlantic and Pacific, are doing as good a job as can be expected with their limited appropriations. In 1948 a total of 20,371 persons were deported from the United States, about three-fourths of them on the grounds that they had entered without inspection or by false statements, without proper documents, or overstayed the time granted them.

This shows that our immigration authorities are on their toes. It also shows that the fantastic charges about numerous loopholes in our immigration laws, inadequate immigration surveillance, and refusal of the courts in New York or elsewhere to enforce the immigration laws, are simply not true. It is high time that anti-immigration forces stop trying to fool the American public with such scarecrows. Let us proceed to amend the DP Act in a liberal manner and thereby continue our reputation as the land of asylum for the oppressed and the persecuted.

It's Time To Stop Spending

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. COLE of New York. Mr. Speaker, political fearlessness is one of the attributes of public service highly desired but not generally found to a degree commensurate with the requirements of the public interest. Representative WADSWORTH is such a public servant, possessing as he does to an unusual degree the quality of honest forthrightness in performance of his public duties irrespective of the effect upon his personal political fortunes. This has been typical of him for the many, many years of his great career as a public servant and has served as a model for some of his associates to emulate.

Recently he announced his determination to oppose all Federal expenditures for a new purpose no matter how laudable except such as might be absolutely essential to the national interest. This policy will offend many people who taste the sweetness of Federal expenditures in some special plea or another. For this positive position he has been hailed and properly so.

Until such time as the Members of Congress find the courage to turn a deaf ear to the persuasive pleadings of special groups for portions of Federal revenues to support new programs, even though of great merit, the budget will continue to be impaired, deficits will become a permanent part of our structure, public debt will mount in ever greater proportions, taxes will continue stifling, inflation will be fanned, production will be restricted, and bankruptcy inevitable. More power to JIM WADSWORTH and men such as he.

In this connection I am pleased to include an editorial from the Rochester (N. Y.) Times-Union of March 11, 1950, as follows:

IT'S TIME NOW TO STOP SPENDING—LET'S BE OBSTINATE

Representative JIM WADSWORTH told Congress the other day that from here on he is going to vote against every measure that will increase the future financial commitments of the Federal Government.

"Even though I may be called an obstinate old man," he said, "I shall fight against every bill that does so unless I am confronted with some dire crisis in which dollars and cents can't count."

Well, the word obstinate is JIM's word. Maybe we'd have picked another one. But somewhere between headstrong, refractory, intractable, or stubborn we need a word that implies persistent resistance to a wrong course.

And Mr. Webster says obstinate means not yielding, not easily subdued, adhering to an opinion, purpose, or course. So we're for you.

That's what this country needs on new schemes to spend. There are times when obstinacy is the highest virtue. This is one of them.

The Government is the biggest banker, the biggest merchant, the biggest consumer, the biggest employer, the biggest spender on earth.

It is the biggest debtor.

And it's the biggest fall guy for any new scheme for going further into debt.

The maw that devours what you and your neighbors produce by your labor staggers the imagination. This year Government is taking in taxes one and a half times the cost of the First World War. But after spending this, it is going into debt as much as the total cost of Government in any peacetime year up to 1935.

And still the new schemes for spending come. Yet Government has nothing and can have nothing except what all of us produce. There simply isn't anything else.

Isn't it time to stop? Now? Isn't it time to be obstinate?

The Times-Union believes the only way to stop this free-wheeling ride to bankruptcy is to mobilize Nation-wide demand for an end to new Federal outlays. Commitments already on the books will make the burden even harder than it is now.

Below is your certificate of membership in the Legion of Obstinate Men and Women. Oh, sure, the spenders are going to pounce on JIM WADSWORTH's word obstinate and try to have fun with it. They've been doing that for 20 years.

And they've laughed you into a debt of $260,000,000,000 that even your great-grandchildren will be struggling to carry.

Let's laugh last. If they're going to load you with a mule's burden, as they are, let's be as obstinate as a mule about carrying any more.

This isn't a partisan proposition. Democrats and Republicans both carry the same load. Zip out the coupon and send it to your Congressman, and every other Congressman and Senator whose name you know.

Tell them you're obstinately sure you're carrying enough now.

Thomas Jefferson on the Presidential Tenure of Office

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1950

Mr. MACK of Washington. Mr. Speaker, Thomas Jefferson once said of the Presidency that—

The service of 8 years with the power to remove at the end of the first 4 comes more nearly to my principles.

This is the proposal for limiting the term of the President that was submitted to the States by the Eightieth Congress. It is interesting to note that already, less than 2 years after this proposal was sent to the States, 23 of the necessary 36 States have approved this proposed amendment.

This prompt approval by so many States seemingly indicates that the amendment will be approved by the necessary 36 States probably by 1952, in which event the tenure of all future Presidents will be limited to two terms.

States which have so far approved this proposed constitutional amendment are: Maine, March 31, 1947; Michigan, March 31, 1947; Iowa, April 1, 1947; Kansas, April 1, 1947; New Hampshire, April 1, 1947; Delaware, April 2, 1947; Illinois, April 3, 1947; Oregon, April 3, 1947; Colorado, April 12, 1947; California, April 15, 1947; New Jersey, April 15, 1947; Vermont, April 15, 1947; Ohio, April 16, 1947; Wisconsin, April 16, 1947; Pennsylvania, April 29, 1947; Connecticut, May 21, 1947; Missouri, May 22, 1947; Nebraska, May 23, 1947; Virginia, January 28, 1948; Mississippi, February 12, 1948; New York, March 9, 1948; South Dakota, January 21, 1949; North Dakota, February 25, 1949.

Jefferson's views on the President's tenure of office and other matters, are told in the following excellent article by Columnist Guy Allison in the News-Press, of Glendale, Calif.:

BYPATHS OF HISTORY
(By Guy Allison)

What noted American changed his mind with reference to the length of time a President of the United States should serve?

When a man reaches the age of 62 years his judgment should be well seasoned, and particularly should his judgment be reasonably reliable if it concerns the type of work which he has pursued for 40 years of his adult life. If such a position is accepted, then the opinion of Thomas Jefferson is worthy of consideration, for it was when he had reached the above age and had been in political office for 40 years that he gave the following answer to the question, "How long shall a President of the United States be permitted to serve?" Said he, on January 6, 1805:

"My opinion originally was that the President of the United States should be elected for 7 years and be forever ineligible thereafter. I have since become sensible that 7 years is too long to be irremovable, and that there should be a peaceable way of withdrawing a man midway, who is doing wrong.

"The service of 8 years, with the power to remove at the end of the first four comes more nearly to my principles, as corrected by experience, and it is in adherence to that that I have determined to withdraw at the end of my second term. General Washington set the example of voluntary retirement after 8 years and I shall follow it."

In a letter to Gov. Mann Page, of Virginia, Jefferson also said:

"I have always found that rogues would be uppermost. Those who, rising above the multitude, always contrive to nestle themselves into the places of profit and power. These rogues set out with stealing the people's good opinion, and then steal from them the right of withdrawing it, by contriving laws and associations against the power of the people themselves.

"It is the practice of despots to use part of the people to keep the rest in order, and those who have once got the ascendency and possessed themselves of all the resources of the Nation, have immense means of retaining their advantage."

Is it not about time for Americans to do some serious thinking upon a subject against which such a man as Thomas Jefferson warned them?

Hawaii and Alaska

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to submit an editorial from the Washington Post of March 12, 1950, as follows:

HAWAII AND ALASKA

In voting to admit Hawaii and Alaska to statehood, the House recognized the overwhelming logic in the pleas of these two Territories. The situation of the whole free world argues for an extension of the principle of union, and the argument is particularly cogent as respect two American Territories prepared for statehood by tradition and long years of tutelage. In the case of Hawaii the approval repeats similar action by the House nearly 3 years ago. It serves to confirm the fact that full membership in the Union for Hawaii is justified by every criterion. In the case of less populous Alaska, legislators gave weight to her strategic national defense position. Statehood also would open the door to the full economic development that Alaska now lacks.

Although the prospect seems to be for harder going in the Senate, we hope Senators will have no truck with the many irrational and groundless objections to statehood. Communism in Hawaii, for example, is a perpetual red herring. The question has been explored at length, and there is no reason to believe that Hawaii is less competent to cope with it than any State. The contention that Alaska does not have enough population is countered by the fact that some 12 States had smaller populations when admitted to the Union, and that territorial status probably is holding down expansion.

The one argument that does have some merit is that a disproportionate representation in Congress. The argument is far less applicable in the case of Hawaii, which now has more population than half a dozen States, but it is true that Alaska would be on a par in the Senate with several States more than 100 times her size. It is precisely because of such differences, however, that the founding fathers devised the two-House system, with House membership apportioned on the basis of population. Alaska's total representation of three—two Members in the Senate and one in the House—would not give it undue influence. Moreover, the fact that Senators serve for 6 years tends to encourage thinking on a national level, at least after a period of service.

Although there have been no new admissions to the Union for 38 years, it was never intended that the Union should remain static. Indeed, this is a time when the United States ought to be giving an example—and an invitation—to the free world.

World Health Organization Battles Disease on Global Scale

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1950

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Michael Goldsmith:

WORLD HEALTH ORGANIZATION BATTLES DISEASE ON GLOBAL SCALE—MAIN ATTACK CONCENTRATED ON MALARIA, TUBERCULOSIS, AND SYPHILIS, WHICH TAKE 10,000,000 LIVES YEARLY

(By Michael Goldsmith)

GENEVA.—An aggressive world-wide battle against disease is being waged from Geneva headquarters by the World Health Organization—the United Nations' public-health department of the world.

Disease knows no frontiers. The creation of WHO is the most ambitious attempt thus far to pursue disease across national barriers.

Nearly 70 nations belong to the organization. Their major aim in setting up WHO within the United Nations framework in 1948 was to enable medically advanced countries jointly to aid the less advanced for the benefit of all.

WHO's main attack now is concentrated on three preventable diseases: Malaria, tuberculosis, and syphilis. WHO estimates that these three kill upward of 10,000,000 persons every year, but considers these figures extremely conservative. In many parts of the world health services are so inadequate no one knows how many more millions die without ever seeing a doctor.

Hundreds of thousands more are killed every year by cholera and plague, also high on WHO's priority list. In many areas of India and China these two diseases have claimed their dead every day for centuries. As long as these hard cores of infection remain, the danger of a catastrophic epidemic sweeping through the world continues a permanent menace.

MODERN PROBLEMS

Old-fashioned quarantine methods are no longer effective in the air age. "No country can depend solely on its own protective arrangements," says Maj. Gen. Brock Chisholm, WHO's director general. "Each must be assured of satisfactory controls in all other countries as well. The protection of one country depends on the effectiveness of health administrations in other countries and upon the success of their collective action."

Dr. Chisholm—he has dropped his military title—is a soft-spoken little man with twinkling eyes who is recognized as one of the world's outstanding psychiatrists. He has organized WHO into divisions and area commands on military lines, possibly on the basis of his experience as wartime head of the Canadian Army's medical services.

His organization is one of the most successful of the UN specialized agencies. With an annual budget of $7,500,000, WHO sends medical missions and specialists to a score of countries, maintains a permanent watch against the spread of pestilence, organizes full-scale campaigns in particularly disease-ridden areas, aids and records progress in medical research throughout the world, and assists any member nation in the development of its health services and the training of its doctors.

Dr. Chisholm's pet project is an ambitious malaria-control program to be spread over the next 5 years in test areas of the Middle East, Southeast Asia, and Latin America. The test was organized by WHO, and the United Nations Food and Agricultural Organization under President Truman's "point four" world-development and technical-assistance program.

Malaria, which strikes an estimated 300,000,000 persons every year, can be eliminated in any area by vigorous action against the anopheles mosquito. The three test projects will cost $10,000,000. WHO expects the immense increase in food production in the test areas will repay many times the original expenditure.

MOTHERS COOPERATE

New techniques in malaria control are being employed by a number of small WHO demonstration teams already operating in half a dozen Asiatic countries. Armed with DDT insecticide, these teams penetrate into the jungles of Central India and the mountains of Afghanistan to fight malaria and show medical students and sanitary engineers how to do the job themselves.

WHO has abandoned the old technique of spraying DDT from airplanes as wasteful and unnecessary. The system was widely employed in Greece and Sardinia, but experts now agree that individual indoor spraying of houses is preferable.

The malaria teams run into unexpected difficulties in isolated area. In the Terai district of India a team headed by Dr. Peter Issaris of Athens met with Buxas, a tribe where the head of the family is always a woman. The mothers thought the malaria blood tests were a cunning selection system for the Indian Army and spirited their sons into hiding. Bribed with packets of DDT to kill their lice and small bottles of benzoate against their scabies, the mothers were persuaded to cooperate.

In some areas the antimalaria teams wiped out even more deadly diseases. In Shimoga, India, Paul Bierstein, a WHO sanitary engineer from Shenandoah, Pa., found his DDT campaign also killed fleas carrying plague, eliminating the dreaded disease from that area. In East Bengal Dr. Gabriele Gramiccia from Rome, Italy, fought malaria in an area infested with kala-azar, a deadly tropical disease transmitted by sand flies. Dr. Gramiccia's DDT killed the sand flies, wiping out kala-azar in the district.

WHO'S antimalaria teams operate on an annual budget of $250,000. Teams fighting other diseases in many parts of the world are handicapped by an equally limited budget.

One team made a survey of venereal diseases in the isolated Gunde Valley of north India and found nearly half the population infected wtih syphilis. A handful of WHO specialists showed local volunteers how to diagnose syphilis and to inject penicillin. After 3 months' work, the team reported new infections had ceased.

Syphilis and its related diseases are usually estimated to cause 2,000,000 deaths per year but Dr. Thorstein Guthe of Oslo, Norway, chief venereal disease expert, believes the true death toll is much greater. Millions of babies are born with syphilis every year. Most of them die before they are a year old.

Throughout southeast Asia, the West Indies, Africa, and the Middle East, two forms of syphilis known as yaws and bejel cause untold death and suffering. They are easily transmitted through a handshake or an infected drinking cup. In Europe itself, tens of thousands of Yugoslav Moslems suffer from a local form of syphilis which is also passed from person to person without intercourse.

Fortunately, all the variations of syphilis can be cured with penicillin. WHO experts in many countries are teaching new techniques of treatment. A large-scale project is under way in Haiti and adjacent areas of the Dominican Republic to rid the population of syphilis and yaws.

In fighting venereal disease, WHO experts again found themselves up against ignorance and superstition in many areas. In Ethiopia, which probably has the world's highest venereal-disease rate, Dr. Guthe saw tribal witch doctors prescribing the blood of a black male goat as a cure for syphilis.

THE GREATEST KILLER

In the more highly developed countries, syphilis is concentrated mainly in the big cities and seaports. Important navigable rivers carry the infection far inland. For decades the River Rhine has been renowned as a black stream of venereal infection between Rotterdam and the inland ports all the way up to Switzerland.

A special international commission was set up under WHO auspices to coordinate and improve the treatment of syphilis in Rhine boatmen in all the countries bordering on the river.

The greatest killer of all among the infectious diseases is tuberculosis. More than 5,000,000 people die of it every year, although it has been preventable since Koch discovered the tuberculin bacillus in 1882. The reason, WHO says, is a total lack of doctors and medical equipment in large areas of the world.

Antitubercular BCG vaccine was introduced in 1921, but it was never extensively used until WHO opened a vast anti-TB campaign 2 years ago. In cooperation with the Danish Red Cross and the International Children's Emergency Fund, more than 18 million European children were tested for tuberculosis and half of them vaccinated with BCG. The program is to be extended all over the world this year.

"The intense tuberculosis problem is not in Europe at all," Dr. John B. McDougall, of Edinburgh, Scotland, explained. "The worst areas are in Asia, in the Pacific Islands, and in Latin America. In India alone tuberculosis kills more than one million persons every year."

Dr. McDougall, WHO chief tuberculosis expert, returned recently from a survey in India. "The surprising thing is not that the death and sickness rates are so high," he said, "but that many of these poor people are able to live at all."

Tuberculosis centers to be established by WHO in India, Pakistan, Burma, and Ceylon will combine prevention and treatment with training of personnel, Dr. McDougall said, "so that the whole project will grow snowball fashion." Centers eventually will be set up in areas where no doctor has been seen before.

SOVIET WALKED OUT

On all WHO health maps there is a large blank space—Soviet Russia. The Soviet Union and its satellites originally took an active part. Last year, however, the Russians walked out. Bulgaria followed suit and most of the other satellites have become lukewarm. But even while the Soviet Union was a full member, no information on disease in Russia ever reached the experts in Geneva.

WHO still regards Russia legally a member and regularly sends medical literature and periodicals to the Soviet Ministry of Health and to universities in Russia and the Ukraine. The books are never returned, but neither are they acknowledged.

At WHO's first annual assembly in 1948, Czechoslovakia pressed for the establishment of a regional office in Prague to give special assistance to "war-devastated nations" in eastern Europe. The proposal was turned down, mainly for financial reasons. Now with more funds available WHO would like to set up a European office, but the Czechs are no longer interested.

Although political dissension has stalled progress in Europe, WHO is setting up "health regions" elsewhere to decentralize its war on disease. Regional organizations are already functioning in southeast Asia and the Middle East, while the Pan-American Sanitary Bureau has become its regional organization for the Americas.

The various campaigns eventually will be controlled at regional levels, where cooperation of governments works more smoothly and WHO officials can remain in close touch with their workers in the field.

Creeping Socialism

EXTENSION OF REMARKS

OF

HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. TALLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following timely and pointed article from the February 22, 1950, issue of Human Events:

HOW DEFICITS ARE CAMOUFLAGED

In the political breathing spell, before the 1950 congressional campaigns get fully under way, it is helpful to reflect on the economic message sent to Congress by President Truman on January 6.

The immediate journalistic reaction was that this message signified a turn to the right, designed in advance to counter the "Liberty versus socialism" slogan of the GOP. That analysis is probably correct as far as it goes. But that analysis does not go far enough.

Superficially, the economic message reads like a collection of clichés. But every word was chosen with the utmost care to do the political work assigned to it. It was a significant part of the myth-making by which the greatest Nation in history is being transformed by a handful of men. And it should be studied as such.

According to the myth, our economy is in fine shape. With hardly a ripple we have surmounted the most devastating of all wars. We have solved the elusive problem of stabilizing capitalist production. The only difficulty is a lag in business investment, and the administration will take care of that by enlarging consumer markets. It follows that anyone who is against the administration's program is against progress, and has doubts about the ability of the American people.

To be sure the administration must spend $42,000,000,000 a year (or $50,000,000,000 according to the estimates of Congressman TABER). It will run a deficit of 5 to 10 billions even with onerous wartime tax rates. But this deficit is due to business, Congress, and the enemy.

Of course enlarging consumer markets for business brings us by a new route to very old spending programs—public housing, social security, everything that Hopkins or Wallace ever urged. But they are minor issues now. The major issue is the ever-growing advance of Government to the heartland of the free society, the productive system itself.

II

In the old days, when the New Deal was a militant minority, Tugwell and Corcoran delighted in attacking business, in outraging every accepted economic belief. Now business is not important enough to deserve official denunciation.

One sentence in the message tells why. The Government is to help little business take risks—as if the clipper ships of New England or the first Ford automobiles were built by big business.

Obviously it means that government is going to insure loans for small business. Government is now guaranteeing loans for public housing. The price-support program for farm products like potatoes is now much to the fore. There is a bill in Congress to insure risks in foreign investment. This method can be applied to every segment of private business. But if government is the risk bearer, where is free enterprise? Obviously only the State is either free or enterprising.

This is the end product of economic technology. Economists were once philosophers, men of learning and wisdom. Then we began to train economic experts who knew all the minutiae of their science but had little critical judgment or moral responsibility.

The technicians caused little damage at first, because we had an inherited social framework which held us together. But it was inevitable that the new political leaders would take over the rootless technicians as part of their cultural front and inflate their importance to impress the public. A few very able economists and lawyers were used for another purpose. Their work was to take apart the free capitalist society bit by bit and put it together again according to a totally different pattern, but camouflaged to look unchanged.

They are products of the wartime experience in disintegration by which men learned to look at a landscape, to ignore its true significance, and analyze it into fragments, to discover just which details give the illusion of a park, and then make a synthetic reproduction of these details to conceal a munitions plant.

The purpose of both kinds of camouflage is to deceive. Behind their verbal deceptions the little teams of technicians have advanced like commandos into our agriculture, our industries, our housing, our State and city governments. They have, with their financial tools, disconnected the ties which bound each community to the people who built it. They have put in wires that now connect every community with the master switch in Washington. They have combined all our independent activities into one tightly organized production line, where everyone's work is financially geared to government. They are careful to use the orthodox words and phrases, to give the illusion of familiar security to the whole. But the administration in Washington is now completely master of the economic process.

III

Economics is not a parade of wooden figures. It is a metabolic process, a form of life. The people of a nation take certain substances from their resources, transform them by their work and skill into what they need, and do it with such an economy of energy that there is a margin left for growth.

When this vital process of replenishment and growth breaks down the society, like an individual, is dying. The outer limbs may still be robust, but inwardly the turn is toward decay.

The New Deal mined our capital resources and wasted them in made work, in political strife, and and inflated war costs. It restrained our people to distrust their individual ability to plan, taught them to avoid work, and to trust political promises calculated to deceive.

President Truman could have reversed that trend. He has chosen to complete it, though perhaps his advisers really made the choice. The President's economic message of January 6 was a truly historic document. It sounded the death knell of American economic growth, not less so because Mr. Truman himself may not realize what is happening.

The key argument now is full employment of resources, money, machines and men. Both chattel slavery and feudalism succeeded in providing full employment. The free economy improved on these by seeking the most productive employment of all factors. It put every man and every dollar where it would do the most fruitful work. That is why it had rising income to pay them. No one was put on made work, which produced no income, and so no one worked without pay. That wasn't just dull economics. It was one of the greatest political achievements of all history: the abolition of unpaid work or serfdom. We have let abuses under capitalism blind us to the essential value of the system.

"Full employment of resources" is the deceptive phrase hiding the turn back to a system of employment for capital and labor without compensation. The state can give full employment to men or dollars only by putting them at superfluous work. Of course for a while they can be paid by the confiscation of existing capital, laboriously accumulated by our forebears. But soon payment is made by lowering the income of the majority, calling this process "fair shares," as they do in Socialist Britain. Instead of full-time slavery for part of the people we now have part-time slavery for all—involuntary labor to pay taxes.

The planners know this. But they also know that it is politically feasible to go on looting our national capital fund. They need only spend part of the take for gigantic projects to satisfy the people, like Gov. Willie Stark, or like the model villages built by Potemkin to fool the Empress Catherine. These economic Nuremberg festivals are the promotional cost of the welfare state. They are the phosphorescent glow that hides the decay beneath.

IV

In every country the first stage of the welfare state is political squandering of the nation's capital. The second stage is renewal of the exhausted capital fund by the only means at the disposal of the State—by making everyone work longer hours, at less pay, for the dictators who rule in the name of the people.

The second stage of the welfare state appears in its 5-year plans, meaning assignment of workers to jobs that officials choose for them. That is old stuff in Europe. Now we see that it can happen here.

The economic message introduces the note of austerity into American thinking. Workers must work harder. Businessmen must take more risks. Everyone must pay even heavier taxes. To make it all well-rounded the administration vaguely promises to be economical sometime, somewhere—time and place not specified.

So, in America, we move without reason or foresight into the degeneracy of the welfare state.

Why does no one stop this grim decay? This is not Czarist Russia slowly collapsing in corruption. It is not defeated Germany taken over by the band of Nazi plunderers. It is the United States of America, the last, best hope of earth.

The real trouble is not with the power-seekers or the technicians. It is some weakness in ourselves. Froude tells us of the Indian tribes which suffered so deep a trauma from the rush of Spanish violence, and the incomprehensible spread of slavery to a people who had been free, that they willed their collective death.

The cure is easy, if we have the will. We must take back from the administration its power over our money, which is our work.

Money is only a receipt for work done. Credit is an I O U for work not yet done. Any nation which lets its government operate on credit in peacetime is a nation of indentured servants. It is on its way to becoming a nation of serfs. If we let the state use deficit financing in peacetime, we are agreeing to let it conscript our labor in peacetime.

The point at which to attack the evil is in the budget of the Federal Government. For it is there that clever men are fighting to enslave a people who, by their own indifference, are already half enslaved.

Radio Address of Hon. R. Walter Riehlman, of New York

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include a radio broadcast delivered by our able colleague, Hon. R. WALTER RIEHLMAN, Representative of the Thirty-sixth Congressional District of New York, over Station WHAM, Rochester, N. Y., on March 6, 1950. He evidences the same sound common sense and devotion to the principles which have formed a bulwark of strength in the upbuilding of our country which have always characterized his service in Congress. I commend his views to my colleagues.

The address follows:

I want to talk to you about socialized medicine. In the past 14 years one or more bills have been pending before sessions of Congress proposing that the United States Government participate in the furnishing of compulsory medical care to its citizens. All the socialistic countries of Europe for some years now have had programs of this character. I have been invited to speak on this program to express my views on the subject. I am opposed to Government-furnished medicine in the same degree as I oppose Government-furnished food, goods, or services which by custom in our country have been heretofore reserved to free enterprise.

The bankrupt nations of Europe today which are either participating in or furnishing health services are at the same time depending heavily upon us to furnish them with goods and credit and it seems strange that we, one of the few solvent nations in the world, would be interested in borrowing concepts from those countries. In most European countries liberty and freedom are dying because their systems of government do not reward initiative but instead shackle their people and deprive them of their liberty. The free-enterprise system remains healthy in the United States. However, it is threatened by persons who are attempting

to import foreign ideologies, including socialized medicine, into the United States.

Let's analyze without emotion the administration's socialized-medicine proposal. This legislation would draft the services of doctors, dentists, nurses, and other professional personnel, including technicians, and place them on the Federal pay roll for the purpose of rendering medical services to everybody. Wherever tried this type of medical care has degenerated to a low quality of care. The administration's program would be supported by another pay-roll tax, plus contributions from the Federal Treasury to make up underestimates of the cost. The eventual cost of the program has not been definitely determined by the sponsors of this wholly un-American scheme, but estimates do range from the administration's "guesstimate" of $7,000,000,000 to estimates by reliable authorities of $18,000,000,000 annually.

It is inconceivable that our successful medical system should be substituted by a system which has been inaugurated elsewhere and failed to produce the same high quality of medical care already achieved in the United States. We have the lowest death rate, the highest ratio of physicians to population, and ours is the only system which guarantees a confidential doctor-patient relationship.

The latest administration's health-insurance bill contains 163 pages. Several pages are dedicated to the proposition that the patient will be guaranteed freedom to choose his own physician. However, if the doctor's panel were filled, there would be no opportunity for the patient to select him. This is the scheme which is used everywhere socialized medicine exists and is the only workable arrangement.

It is interesting to know who is seeking to sell socialized medicine to the United States. John T. Flynn, in his recent book, The Road Ahead, advises us that unprincipled politicians seeking perpetuation in office offer this social scheme in the hope of winning votes. Flynn warns that they are imitating the socializers of Great Britain, and we could become victims of a deadly parallel—copying Great Britain and starting down "austerity road" to socialism and an all-powerful state.

Mind you, I am not for a moment blind to the problem that many people have difficulty in obtaining medical care at a cost which they can afford, but I am not willing to accept socialism in any form in trade for hard-fought for and well-earned American freedom. We must not lose sight of the fact that socialism does not mix with free enterprise. We can't have a little socialism—it grows and chokes out free enterprise just as weeds, if not eradicated, take over a garden. There is no more reason to nationalize the medical profession than there is to nationalize farming, the steel industry, the mines, our transportation systems, the lawyers, the butchers, or the bakers. All our industries and professions present difficulties to the economy from time to time, but there have always been found American remedies for such problems—certainly we need not resort to socialism as a cure for American ills.

The biggest fallacy of those who would nationalize and socialize to bring about economic cures lies in the fact that socialism hasn't worked successfully in any country where it has been tried—this type of cure is worse than any of the ills with which we are confronted.

I don't wish to end this discussion in opposition to the administration's medical scheme without leaving with you a suggestion as to how better medical care might be assured for the American people at reasonable costs. Briefly I support recent legislation introduced by the Honorable KENNETH B. KEATING, of the Fortieth District of the State of New York. His bill, H. R. 6819, provides that persons who wish voluntarily to purchase health insurance policies, may deduct the cost of the premium from their Federal income taxes. This will certainly provide an incentive to persons within that bracket of taxes, roughly between $2,500 and $5,000, who today need the protection of insurance against the cost of serious illness. To my mind the words "voluntary and American" blend in a happier union than do the words "compulsion and American." Thank you.

Shipment of Arms to the Near East

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following letter that I have received from the Department of State in response to the protest that I received from the Jewish War Veterans of the United States, Boston, Mass., with respect to the shipment of arms to the Near East:

DEPARTMENT OF STATE,
Washington, March 13, 1950.

The Honorable THOMAS J. LANE,
House of Representatives.

MY DEAR MR. LANE: I have received your letter of February 21, 1950, and enclosed telegram from the Jewish War Veterans of the United States, Boston, Mass., concerning the shipment of arms to the Near East. Your courtesy in making the telegram available to the Department for consideration is greatly appreciated.

In view of the termination of hostilities in the Near East, it was determined by the Security Council last August that the embargo on arms shipments to the area was no longer necessary. During the discussions in the Council the representatives of the United States and the United Kingdom stated that their respective countries did not wish to see an arms race take place in the Near East. The United States subsequently established a policy for the exportation of military equipment from this country to the Near East under which it has permitted shipment to the Arab States and to Israel of equipment which has been determined to be necessary for the maintenance of internal order and for the reasonable requirements of self-defense.

A renewal of the Arab-Israeli conflict would be a tragic development which must not take place. This Government has been keeping a close watch on developments affecting Palestine and an analysis of available information does not lead to the conclusion that serious measures are being taken in preparation for a renewal of hostilities.

There have most certainly been inflammatory and bellicose statements made in both the Arab and Israeli press concerning a renewal of the fighting. While such an attitude on the part of journalists is deplorable and harmful to the eventual establishment of good relations between Israel and the Arab States, under the circumstances, with bitter fighting only so recently terminated, it would probably be too much to expect that highly aroused passions should quickly cool. Some of the warlike pronouncements of officials of near eastern governments may have been made for the purpose of domestic consumption. The Department does not believe that the remarks of individual radio and press commentators should be taken as a reliable indication of any serious or immediate intent on the part of the respective Governments to resume hostilities.

At the present time, the relations between the Arab states and Israel are governed by valid armistice agreements signed by those states in the early months of 1949. In these agreements, the parties committed themselves to refrain from further acts of hostility, and the execution of the provisions of the agreements is being actively supervised by United Nations personnel on the spot in Palestine. These representatives have reported that the area is tranquil. Should a threat to the peace arise in the Near East, it would be the duty of the United Nations representatives, and the state concerned, to report this development to the Security Council, which remains seized of the question of the maintenance of peace in Palestine.

In considering the export of arms to the Near East from the United States, and from other countries, the Department has constantly kept in mind the danger of enhancing the possibility of a renewal of the Palestine conflict. As stated above, our analysis of all information available to us does not indicate any serious preparations to this end. Should such information be received, the United States Government would be quick to use all of its influence in an attempt to prevent such an eventuality, both within the United Nations and outside.

The telegram enclosed with your letter is returned herewith.

Sincerely yours,

JACK K. MCFALL,
Assistant Secretary
(For the Secretary of State).

Excise Taxes on Communication Services

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. REED of New York. Mr. Speaker, under consent heretofore granted, I wish to insert in the RECORD my remarks as follows:

We in America are both proud and justly thankful that we still have a free communications system but we certainly cannot be proud of the fact that our great communication services which are a vital business and social necessity continue to be taxed at a rate deliberately designed to restrict and discourage their use. The present restrictive rates which are the results of successive increases by the Revenue Acts of 1941, 1942 and 1943 are as follows:

	Percent
Telephone toll messages of 25 cents and over	25
Local telephone service and toll messages of 24 cents and under	15
Domestic telegraph, cable, and radio messages	25
International telegraph, cable, and radio messages	10
Leased wire services	25
Wire and equipment service	6

These taxes are not a tax on the companies but are imposed directly on the users of the services. The taxes are collected by the communications companies from the people and remitted monthly to the Bureau of Internal Revenue.

The communications taxes are basically wartime taxes and they have no conceivable place in an economy which depends for its survival on continued growth and expansion. That these taxes are wartime taxes and that the present rates are designed to restrict the use of the services is manifest from their legislative history.

The first tax imposed on communications services was that contained in the Spanish War Act of 1898 at a rate of 1 cent for each telephone or telegraph message for which a charge of 15 cents or over was made. This tax was subsequently repealed but reimposed by the act of October 22, 1914—emergency revenue laws—at the same rate. This act was then repealed by the Revenue Act of 1916 but due to the heavy expenditures incurred in the prosecution of World War I the Revenue Act of 1917 reimposed the tax on the same class of communications services at a rate of 5 cents for each 15-cent message. When the war emergency was carried over into 1918, the rate was increased by the Revenue Act of 1918 to 5 cents on messages ranging from 15 cents to 49 cents and to 10 cents on messages of 50 cents and over. This act added a new tax on leased wire services between local service areas at the rate of 10 percent.

The Revenue Act of 1921, which repealed many of the other World War I excise taxes, merely made a slight change in the brackets subject to the 5-cent and 10-cent rates of tax.

The Revenue Act of 1924 repealed all of the then existing excise taxes on communications services.

In 1932 in order to meet rising Federal expenditures Congress reimposed excise taxes on communications services in the Revenue Act of 1932. Excise taxes on telephone messages were imposed at the rate of 10 cents on messages of 50 cents to 99 cents; 15 cents on messages of $1 to $1.99; and 20 cents on messages of $2 and over. Telegraph messages were taxed at 5 percent and there was a 10-cent tax on each cable or radio message. A tax at the rate of 5 percent was made applicable to amounts paid for leased wires between local service areas. These depression emergency taxes were still in effect in 1941 when the country embarked on its defense program.

In the Revenue Act of 1941 the rates on telephone messages of 25 cents and over were increased to 5 cents for each 50 cents or fraction thereof with telegraph, cable, and radio messages being taxed at 10 percent. The rate on leased wires was increased to 10 percent and made applicable to all leased wires and, for the first time, an excise tax was imposed on wire and equipment services at the rate of 5 percent, and on local service, including toll messages under 25 cents, at the rate of 6 percent.

As the war emergency continued, excise taxes on communications services were further increased, first in the Revenue Act of 1942 and further increased in the Revenue Act of 1943. The rate on telephone toll messages was increased to 20 percent of the charge and then to 25 percent. The rate on domestic telegraph, cable, and radio messages was increased to 15 percent of the charge and then to 25 percent. The rate on leased wire services was increased to 15 percent and then to 25 percent. And, the rate on local service, including toll messages under 25 cents, was increased to 10 percent and then to 15 percent.

A tax on our communication services cannot be justified on any sound principle of taxation. Such taxes do violence to the ability to pay principal because they fall with equal impact on all classes and actually discriminate against individuals who have to make frequent use of communication services. Moreover, such taxes are a particular hardship on our farmers and all persons in rural areas and also discriminate against certain sections of the country which are often far removed from the centers of population.

Even those who argue that these taxes should be continued because they are productive of revenue and easily administered cannot on any rational ground defend the present rates. By no stretch of the imagination can communication services be classified as a luxury and yet they are taxed not only at luxury rates, but in the case of telegrams and long-distance telephone calls at a 25-percent rate which is higher than the rate applied to such items as movies, radios, perfume, jewelry, night clubs, cosmetics, and other items.

Sixty-six percent of all our families and almost all of our businesses have telephones and of the approximately 38,205,000 telephones in the United States one out of six, or approximately 6,841,000 are owned and operated by an independent (non-Bell system) telephone company.

In my opinion there is an indispensable place in the Nation's business and social system for a privately operated telegraph system but the continuation of the present tax of 25 percent has already destroyed any competitive possibility and as a result the Western Union Co. has been and is now operating at a considerable deficit. In 1949 the telegraph users paid to the company for its services more than $216,000,000 including the tax, but $36,500,000 of the funds collected by Western Union from the public were remitted to the Internal Revenue Bureau. If the present tax restraint is lifted, it wil be possible for this industry to operate succesfully, and this fact together with the recognition of the wholly illogical and unsound continuation of the present comunication taxes makes this a matter requiring the immediate attention of Congress.

Veterans' Preference in Post Office Department

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1950

Mr. TEAGUE. Mr. Speaker, I have been extremely interested in postal legislation since coming to Congress in September 1946, as, prior to my service in World War II, I was a postal employee at College Station, Tex.

Early in the Eightieth Congress, I introduced the first legislation which had as its purpose the granting of military credit to our postal employees for pay purposes. Therefore, I am very glad to support H. R. 87, which was reported out of the Post Office and Civil Service Committee of the Eighty-first Congress, and I urge the Members of this House to favorably consider this bill which will allow World War II veterans in the postal service to be credited with the time spent in the military service.

Those of us who are familiar with postal legislation will know the justification for such a bill as H. R. 87 inasmuch as length of service determines the amount of pay our postal employees receive.

Take, for example, two young men who have finished high school in the early 1940's and both having expressed an interest in entering the postal service, we find that one of them had been drafted early in the war and did not have an opportunity to receive an appointment in the postal service. The other young man, however, was not called by the military until a later date and had already entered as a clerk in the postal service. When the latter is separated from the armed forces, there is legislation providing him with military credit to be applied for pay purposes. The other young man, whom we feel has been done an injustice, enters the postal service after completing his tour of duty in the armed forces, and he is not granted any credit at all for the time spent in the armed forces. This bill would grant him credit and would give him the pay grade that we feel he is entitled to.

I sincerely urge Congress to favorably consider this legislation.

Tolerance Is a Lie

EXTENSION OF REMARKS

OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. YATES. Mr. Speaker, stamping out intolerance so that every individual in the United States can fully enjoy the rights guaranteed to him under the Constitution is a challenging job facing all of us.

There recently was brought to my attention an example of the efforts being made by one of the Nation's oldest and most widely respected unions in the task of removing intolerance. That union is the Amalgamated Meat Cutters and Butcher Workmen of North America, chartered in 1897. The article was written by its president, Mr. Earl W. Jimerson, and its secretary-treasurer, Mr. Patrick E. Gorman, both of whom have spent the greater part of their life in the trade-union movement.

President Jimerson started working in a packing plant at East St. Louis, Illinois, when he was 16 years of age, earning 7½ cents an hour at the time. He became one of the leading organizers of the union during World War I, rose to the position of vice president in 1921, which he held until 1942, whereupon he became president of the union. He is one of the best known trade unionists in America.

Mr. Gorman has an equally impressive record of accomplishment. He started working in a packing plant at Louisville, Ky., at an early age. While so employed, he earned a law degree at the University of Louisville, and became a business representative of his local, and shortly thereafter was elected vice president of the international union. In 1923, at the age of 28, he became president of the Amalgamated Meat Cutters and Butcher Workmen of North America, the youngest person ever so honored. He remained president for 20 years, and became secretary-treasurer 8 years ago. In 1948, the American Federation of Labor chose him to be a delegate to the Trade Union Congress held at Margate, England.

For numerous years both of these men have been concerned with the problem of achieving for all Americans equality of opportunity in employment and through numerous speeches and written articles have been leaders in the fight to attain this goal.

Their latest effort in this direction is an article which appears in the March 1950 issue of the official publication of the union, the Butcher Workman. It is reprinted below:

TOLERANCE IS A LIE

If one cannot tolerate a person or a race of people and proclaims it to the world, he is considered on those particular subjects as being intolerant. There are thousands of well respected men and women in all walks of life who are, in their communities, considered to be the very essence of tolerance and who at heart are bigots to the core.

The word tolerance is the largest lie in the English language. It is our most weasel word. If we could only read the minds of so-called tolerant people, we would discover that hate still secretly predominates the true character of millions who for business, social, or political reasons tolerate things they actually hate.

Recently at a health resort in one of our Southern States we met a man who could find nothing wrong with our beautiful hotel except that the Jews have taken possession. When we protested the remark, the usual crawfish act was forthcoming—"Now please don't misunderstand me. I like the Jewish people." He was a pure and simple unadulterated liar. He hated the Jews but back home he secretly tolerated them because he wanted to be a regular guy or something.

It is needless to mention the secret terrific anti-Catholic feeling which predominates in so many sections of our Nation. Oh, yes, in the open the bigot praises the Catholics as being good people. On the surface these intolerant Dr. Jekyls and Mr. Hydes are very tolerant, but let a Catholic aspire for political office in these localities and he is buried beneath an avalanche of votes by those who mark their ballots with their genuine narrow character instead of with their supposedly tolerant reputation.

The Jews and Catholics are well able to take care of themselves but when we come to the Negroes of our Nation the picture is altogether different. The Negro is the personification of tolerance of those things that cut him to the heart. He is making tremendous headway under adverse conditions only because he is learning how to cast his ballot and many of the politicians who are posing as his friends are as secretly intolerant of him as was the man down South who liked our hotel except that the Jews have taken possession.

In Washington, our Nation's Capital, the Federal FEPC bill has been kicked and badgered around in a shameful way. Only a few, including President Truman, are willing to make it a clear-cut issue. Others have their eyes and ears back home to ascertain if the issue will cost or gain them votes. In this such politicians are proving the lie of the word "tolerance" and the Negro with admirable patience tolerates the thumb-twiddling of those who were elected to office with a substantial block of Negro votes.

It is ironical that in our same Nation's Capital the living conditions of the Negro as well as white tolerance of his well-being is little better than the plight of his brothers in the Negro slums of the capital of South Carolina. The most gifted sons of the Negro race are still denied half equal rights in dining rooms, hotels, and the like, when the human debris from skid row would be welcome.

So far as we know, not many of the white friends of the Negro holding senatorial or congressional togas have raised their official voices to bring about reform. It is about time to call a halt on such intolerant political hypocrisy. Let us admit that tolerance in matters of this kind is a contemptible lie. Let us, therefore, have the Federal FEPC law now. Its enactment is long overdue. The time has come when so-called friendly Congressmen and Senators must stand up and be counted. The Negro has been politically double-crossed long enough.

Rt. Rev. Walter S. Carroll

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. KEOGH. Mr. Speaker, on Friday, February 24, 1950, Msgr. Walter S. Carroll, of Pittsburgh, died at Georgetown University Hospital. With his passing his church suffered a most untimely loss. Monsignor Carroll at the time of his death was an official of the Vatican Secretariat of State which post he held since 1940. He was the third American to be honored with an assignment with the secretariat and as vicar delegate to the American armed forces during the past war he rendered countless services to American troops and was entrusted with numerous and important diplomatic missions. He was born in Pittsburgh on June 18, 1908; graduated from Duquesne University in 1930; received his doctorate of philosophy from the University of Fribourg in Switzerland in 1933; his degree of S. T. L. at the Gregorian University in 1936, and his doctorate of canon law from the Pontificate Institute of Canon Law, Rome, in 1939. He was ordained on December 8, 1935, and in a short span of 8 years rose to the rank of monsignor. He was assigned to the Vatican in 1940. His passing at the age of 41 came as a shock to his many friends and admirers in this country and abroad and terminated a career that undoubtedly would have led to many and greater honors. His passing was noted by the celebration of Masses by His Holiness, the Pope, and by the Most Reverend Amleto Giovanni Cicognani, apostolic delegate to the United States. To his mother, Mrs. B. Margaret Hogan Carroll, and his two brothers, the Reverend Colman F. Carroll and Msgr. Howard J. Carroll, general secretary of the National Catholic Welfare Conference, go our heartfelt sympathy on their loss. They will be consoled, I am sure, by the thought that their distinguished son and brother has been called to a higher service.

Organization of a Constitutional Government in Puerto Rico

EXTENSION OF REMARKS

OF

HON. A. FERNÓS-ISERN

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. FERNÓS-ISERN. Mr. Speaker, may I refer to H. R. 7674 which I introduced yesterday. It provides for the organization of a constitutional government in Puerto Rico.

Under the Constitution of the United States there are certain rights and privileges which may not be applicable in a given area. But there are certain rights which are fundamental. American citizens wherever they may live are endowed with them.

The people of Puerto Rico are an organized community of American citizens living in the land of their birth, the island of Puerto Rico. Puerto Rico is American territory although unincorporated territory.

The Congress of the United States, since 1900, has provided for the operation of Federal laws in Puerto Rico. It has determined the economic relationships to exist between Puerto Rico and the mainland. It has determined that the people of Puerto Rico are United States citizens. Such legal and economic provisions of our organic act the people of Puerto Rico are not aiming to disturb. Rather, they wish to reaffirm them and expressly register their consent to their application.

The Congress has also provided for the establishment of a local government in Puerto Rico and has progressively expanded the democratic nature of such government. Today, we have responsible government in Puerto Rico. It is served by officials which the people themselves elect or select.

However, the charter upon which this local governmental structure is based, has never been adopted by the people of Puerto Rico. That such charter be substituted by a constitution of the people's adoption is now a fitting and necessary

step in order to perfect the democratic nature of our system of government.

To this effect I have introduced H. R. 7674. In so doing, I am the interpreter and the voice of the people of Puerto Rico in this Congress. As a result of the elections of 1948 the wishes of the people of Puerto Rico on this score are unmistakable.

The bill is a simple one. It declares it to be its purpose to duly recognize the principle of government by consent. Under such principle, the people of Puerto Rico would accept this act. The present Federal provisions of our organic act would be continued. Within such framework the people of Puerto Rico would adopt a constitution, under which they would organize their local government.

The Constitution of the United States provides that the Congress shall have power to dispose of and make all needful rules and regulations with respect to the Territory or other property belonging to the United States. Under this provision of the Constitution, Congress has, in the course of time, adopted such rules and regulations for Puerto Rico as it has considered needful. Congress has been called upon to do so under the terms of cession of sovereignty under the Treaty of Paris of 1898. The Federal provisions of the present organic act would be reaffirmed under my bill. They are needful regulations for the establishment and maintenance of proper relations between the island and the mainland and the Federal Government. But for a community of American citizens at such stage of organization and democratic development as the people of Puerto Rico have attained, it is not needful to determine how their local government should be organized. They can do it themselves. The time has arrived when such community of citizens be recognized in this desire; in the wish to organize their local government as they see fit.

The bill, therefore, is both a recognition of a fact and the recognition of a principle. The fact is that the people of Puerto Rico wish and are able to provide themselves with a local constitution for the organization of their own local government. The principle is that American citizens are endowed with such privilege and exercise whenever circumstances permit.

The right to organize a local government, the right to live under a government of the people's choice is expressly recognized in the Constitution of the United States. Amendment IX of the Constitution reads:

> The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

There is no question that at the time the Constitution of the United States was adopted the people had and did not relinquish the right to organize their Government. They had already adopted their State constitutions. Later they adopted the Federal Constitution. It is such simple and elementary right the people of Puerto Rico wish now to exercise. They wish to adopt a local constitution and reaffirm their station within this Union.

What then would be the status of Puerto Rico should this bill be passed? Puerto Rico would be a Commonwealth of American citizens, living within the federation, in accordance with such provisions of the Constitution of the United States as are applicable in the case, living under a local government shaped and organized and functioning with the consent of the people of Puerto Rico, within this great federation. This would not make Puerto Rico a State, but it would make of Puerto Rico a community of American citizens living in the American way. We would not participate in national elections nor be represented in Congress any more than we now are, but we would have local government as democratically organized as in a State, and, with few exceptions, Federal laws would apply as in a State.

The point might be raised that never in the past has such procedure been followed. To such consideration I would reply with the following consideration:

Up until 1898 all territories added to the original territory of the original Union were incorporated at the time of acquisition. Such additional territories have been admitted or are in the process of being admitted to statehood as it should be. Since 1898 other areas have come under United States sovereignty. They have remained unincorporated, subject to further determination of Congress concerning their status. In one of these areas, in Puerto Rico, a new form of federative relations have been developing. The form is new, but it follows the fundamental principles of the Constitution. It has developed in a line parallel but not coincident with that followed by the incorporated territories attaining statehood.

Puerto Rico started in 1900 with a government comparable to that of an incorporated territory. By a series of enactments Congress has brought Puerto Rico to a status today which is way beyond a territorial pattern of government. It is much more comparable to that of a State. What my bill proposes to do is to perfect such status for Puerto Rico. Puerto Rico would have a position parallel to that of a State, although it would not have such participation in the Federal Government as the people of a state have. In other words, we are not asking for the right to vote for presidential electors, we are not asking for the right to elect two Senators, we are not asking for the right to elect Members of this House other than a voteless resident commissioner.

We are asking to continue to live under the Constitution of the United States as heretofore. We wish to continue to live under Federal laws as heretofore; but we are asking also that as far as our local governmental organization is concerned, we may proceed to shape it, in accordance with the same principles and in accordance with parallel procedures as the people of any of the States organize their State governments. The fact that there has been no precedent should not deter Congress; such fact did not deter the Eightieth Congress from authorizing Puerto Rico to elect its governor.

We are developing a new pattern of federation, applicable to our circumstances, which do not permit us at the present, nor in the forseeable future, to develop along the classical lines and the uniform pattern followed by former or present territories in their ascent to statehood.

The Constitution of the United States is not a static document. It is a dynamic instrument of Government. The wisdom of the founding fathers made it so, the wisdom of successive generations, past and present, has made it so. The United States are not composed of residents of the 48 States only. It is composed of all American citizens wherever they may be and wherever they might meet and gather and organize upon American soil. It is only natural, logical, it is inescapable, that they should strive to organize and live in an American way.

I plead with my colleagues in the House that such bill as I have introduced may receive their most considerate attention. I plead with my colleagues in the House that the people of Puerto Rico may be allowed to see their wishes fulfilled. In that region of the Caribbean where we live, we face the whole Spanish Main. Such enormous expanse of land is inhabited by people of an origin similar to ours in Puerto Rico. We are the advanced guard and the exponents of the American way of life in that area. All we want now is to maintain it and to perfect it. We want to show the world that democracy not only in practice, but also in principle, always follows the flag.

Wool Support Prices

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include therein a resolution adopted by the Iowa Sheep and Wool Growers Cooperative at their annual meeting in Des Moines, Iowa, on March 7, 1950. I want especially to emphasize, for the benefit of Members of Congress, the concern of this association that much of the value of the wool support price program likely will be lost because of the present plan to base the 1950 support prices, by grades, on the 1-year price relationship that existed during 1949 rather than to base the support prices, by grades, on the 10-year average price which is the basis for parity. Such action would be a severe blow to the wool producers in the fleece-wool States, such as Iowa, and would tend to further discourage sheep numbers, which are at an all-time low.

Whereas the February 23, 1950, release of the Bureau of Agricultural Economics indicates that the 1950 purchase price for the

various grades of wool may be based on grade differentials established by market prices during 1949; and

Whereas the 1949 prices on medium fleece wools were abnormally low, both because of slow demand and due to the sale of CCC wool of the medium grades at prices 4 to 5 cents below cost to the CCC, and also because of CCC disposal of medium grade stock piles for previous years; and

Whereas a large percentage of the wool produced in Iowa is medium wool: Now, therefore, be it

Resolved, That the Iowa Sheep and Wool Growers Cooperative in annual meeting assembled, representing about 8,000 wool producers, demand that the Production and Marketing Administration give a complete and impartial hearing to association representatives of the fleece-wool States and to the National Wool Marketing Corporation, before establishing any new method of determining wool support prices for 1950.

Letter of John J. Phillips, of Temple City, Calif.

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following letter from Mr. John J. Phillips, of Temple City, Calif.; also his outline of a sound labor law mentioned therein:

TEMPLE CITY, CALIF., *February 27, 1950.*
Hon. ROBERT F. RICH,
Representative of Pennsylvania,
Washington, D. C.

DEAR CONGRESSMAN RICH: I note by yesterday's press your remarks relative to the study and arguments of other Members of Congress for aiding the middle-income wage-earners, etc., and am writing to commend you for your common-sense remarks and contentions in this matter and offer the following suggestions concerning same:

Our Government is getting in deep water and trouble in capital letters by concerning itself with the private affairs of everyone and attempting to raise the standard of living and provide housing, etc., for people regardless of what efforts the individuals put forth to provide these things for themselves. Even Almighty God does not try to feed and care for people as He did for the pilgrims in the wilderness and lets them know that if they do not get out and hustle and do for themselves, they will suffer or starve.

And what of this dollar income? How can we tell what income anyone should receive when the value of the dollar is fluctuating and cost of labor of organized groups is changed and increased over night by the power-drunk labor leaders and the measuring stick, or value of the rule of measure is changed to suit to the selfish demands of large groups month after month and every year, until now with the cost of living coming down, these powerful groups still demand more than they received during the highest point of inflated prices and can tie up our greatest industries and hold them for ransom until they (these labor groups) are again appeased for a short time.

Our dollar is our most important measure of value, and no one should be permitted to tamper with its purchasing value by force, not even the Government after it is once fixed in value and the people work and sell their labor and save on the basis of such value. Much less to permit little selfish groups to devalue the dollars and savings of all because they want more.

Only acts of God; shortage of production, and the natural laws in their free operation should affect the purchasing value of the dollar. It is to the workers' interest to see that this value is maintained at all times, by giving as much in labor and production for the dollars he earns one day as the next, so that he can rightfully expect that those dollars if saved will purchase as much production and labor at any future time, barring some acts or conditions over which men have no control. Only in this manner can we ever have stability of prices, and a sound economy.

Most of those so concerned for these low-income families do not seem to realize that the high income of the better-paid groups is being paid from borrowed money and we are now and have been for years going deeper and deeper into debt, and everything is done on borrowed money. In the case of housing, the loans run for 20 years and the debt for such building is increasing 19 times faster than it is being repaid. Millions of people have their weekly pay checks mortgaged for as high as 3 years ahead for purchasing of cars and home appliances and even clothing is being sold on time payments and those making the cars and appliances, clothing, etc., will have spent the money they received for their work months and years before the installment debts are paid off and the debts of all kinds now stand at the astronomical figure of about $450,000,000,000 and are increasing by fully $20,000,000,000 to $25,000,000,000 annually and interest alone at around $16,000,000,000 annually. If this borrowing were stopped at once, or the payments increased to where we pay back as much as we borrow each year and the debt held at the present level, we would have a depression in 2 weeks, so how can anyone say what income any family is entitled to under such conditions?

Now our country is in a mess and when the President talks about "borrowing and deficit spending in bad times to prevent a depression" while we have so much of every kind of food and commodity that they are now destroying millions of bushels of potatoes, and have so much cotton, and grains, etc., that they cannot find storage space for it. It is difficult to understand what we would call good times or what we would do with more food, and raw materials, etc., if God in His beneficence were to give us more?

The only thing that ever drove the cave man from his underground habitat and sent him out to attack a wild animal of that day was hunger, his stomach getting flat and gnawing at him and human nature has not changed and unless people are told plainly that it is up to them to make their own jobs and sell their labor for what others are willing to pay for it or their production, etc., and then let them run their own race or fall behind, we may as well submit to stateism and socialism and let the Government take over, and with every Government aid and welfare, we will surrender a part of our freedom and finally will have to submit to complete regimentation and control just as the people of Britain were coming to before this recent election. Step by step, regimentation and control will finally rule the daily lives of everyone, and the people will be told where they will work and what standard of living they can have and their whole lives dictated and controlled, despite any denials of the President or anyone else. And we are already far on the road to such control.

The chief cause of our trouble is that our economy has been taken from the hands of trained and experienced businessmen and put into the hands and dictatorial control of the selfish labor groups, who know nothing of sound economics and care nothing for anyone else but their own little groups; dog eat dog, and the devil take the hindmost, and the whole country and economy at the mercy of these little warring gangs who have their agents roaming the country and levying tribute on the pay of every worker they can drive into their grasp.

Since passage of the income tax law, every strike and demand for more and more pay, shorter hours and this benefit and that has been against the public, the brothers and sisters of these workers, who serve and provide the strong organized groups with everything they eat, wear and use and it is getting worse every year. Out here the building trades workers have forced their wages up and up with connivance and collusion of the contractors who get a percentage or commission on every dollar they pay for cost of construction, and they give in year after year to these selfish groups and their wages are now from $18 to $25 per day and some such as plasterers have contracts setting 6 hours as a day at straight time, but call for a full 8 hours of work, the last 2 hours to be paid at double time (not time and a half) and this craft gets $2.50 per hour for 6 hours and $5 per hour for 2 hours or $25 per day to help provide homes for the homeless veterans and others. Now they are out to extend this holdup 6-hour basic day and overtime to all of the other groups and force the home builder to borrow more money and further increase the threat of inflation, as well as pile up more debt and increase the monthly payments of the home buyer and reduce his standard of living which will in turn result in further loss of jobs for those supplying the monthly living food and so forth for these families and so it goes.

I herewith attach an outline of a sound labor law that would stop this raiding of the pantries and food budgets of every family by these organized groups and also stop this criminal waste of time by strikes which are weakening our economy and government in this most serious war with the most deadly sinister force—communism—that the world has ever known and which "cold war," we are losing on all fronts and if these labor groups had any concern for their own freedom and the future of their country, they would stop this bickering and fighting and get down to honest work and build up our economic strength to meet the assault which will be loosed against us from all sides when Russia and the communists get firmly set in China and now have us surrounded on all sides.

This demand for pensions for groups is nothing but a holdup of the rest of the public and will lead to ruin, since there cannot be sound investments for any such amount of money and it will upset and destroy the value of the savings of millions who have been saving and investing for their old age. No average pension can provide a full living standard for anyone, but can only supplement the income from savings put aside by thrift and sober living during one's working years and no matter how little one earns they can save something if they try. Therefore it is wrong and even criminal to permit any organized group to devalue these savings by demanding more pay for the same work and production, and tell every other person that "their dollars are worth but 90 percent or 80 percent or on down to but 50 percent of what they were up to that date," which is plain insanity. Not even the government should devalue the dollar and savings of the people much less every little ignorant and selfish group.

This labor plan would stop all of this, and if the Government can put a floor under wages to stop chiseling by employers, then we can also put a ceiling over the wage that groups can demand of their fellow men, and leave the employers free to negotiate the actual wage within these brackets of the maximum and minimum.

No honest worker should ask or demand that his brothers digging his food from the ground for him should work for a fraction of the pay of these ordinary crafts and trades as has been done in the past. Just plain greed and the power to go out and take it from the rest. This should now be stopped. If the Government does take action to help the low-income families, it will not mean a thing if we still permit these land pirates to go on raiding against all of us, and take still more for the same, or less work. Now we are in a mess and it is now time to stand up and tell these power-drunk groups they will not be permitted to continue such raiding, and piling more and more debt on children unborn to try to keep our economy operating.

What could be more fair for all, Mr. Rich, if all the labor leaders sit down together and work out such a fair wage scale and then hold it firm from year to year, and reestablish a firm price ceiling and value of the dollars of all and the purchasing value of the savings of the workers when they retire as well as all living on pensions, anuities, and income from savings? All would be a thousand times better off than this continuous fighting and devaluing of the savings of all to where many are being forced to turn to the relief agencies for help to maintain a subsistance standard of living. It cannot possibly but end in bankruptcy and ruin for millions, and possibly the loss of our freedom and way of life, and it is much later than most people think.

Yours truly,

JOHN J. PHILLIPS.

NATIONAL LABOR COMMISSION FOR REGULATING LABOR RELATIONS

1. Enact a law repealing all present laws on labor relations and set up a National Labor Commission of five members.

2. Set up labor courts in all populous centers of the country with full power to settle all labor disputes peaceably with rights of appeal to the courts if either party to the dispute desires.

3. Adopt a National Labor Code, spelling out plainly all rights of workers, as to seniority and working conditions, etc., as well as obligations of workers to their employers and the public whose rights are paramount to those of any individual or group. And—

(a) Prohibit all strikes, lock-outs, slowdowns, sit-downs, or willful interference with full regular production, service, and transportation by either employers or employees, where demands of the public require. Only acts of God to be permitted to interrupt production, service, etc.

(b) Prohibit workers from quitting their jobs without first giving due notice of their intention to do so; 1 week, 2 weeks, or a month, according to how paid. Employer to give workers the same notice of dismissal, or an equal severance pay when discharged at once. This to prevent workers quitting in mass and disrupting service and supply to the public.

(c) Require every worker to carry a work book giving place of employment (or last and former employment) in which the employer will be required to state in writing over his stamp and signature, why the worker was discharged, and how he or she performed their work and if they complied with the law requiring notice of leaving the employer. These work books to be renewed each year, and carried at all times and give the Social Security number of the holder. Such books and evidence of former employment would be of great service to police in checking up on anyone arrested or picked up because of crime.

(d) Adopt a national system of apprenticeships setting forth the time a beginner must serve at a subsistence wage before being licensed as a journeyman. The number of apprentices admitted to any craft or trade to be regulated by the officials of the Labor Commission.

(e) Take the prevailing wage for farm labor as fixed by the laws of supply and demand, as the minimum and basis for figuring the wage for all other groups of workers in each district.

(f) Consider each craft and trade on its merits, as to skill required, hazards of the work, and time required in apprenticeship, and fix a maximum wage for each craft, beyond which organization groups will not be permitted to force their wage as long as the basic wage for farm labor remains relatively the same. A representative of the farm workers to sit in on these deliberations and be permitted to state what differential between his wage and that of the skilled crafts he feels is fair, and would not overly attract him or other farm hands to leave their jobs in the fields to try to get into the skilled jobs.

(g) Employer and employees to be left free to negotiate the actual wage, within the brackets of maximum and minimum wage as set forth. This to avoid price or wage fixing. It would be wage limitation for groups the same as we have a minimum wage fixed by law, but not wage fixing.

(h) Leave the employer free to reward good, trustworthy workers with whatever wage he feels such worker is worth to him above the maximum for the group. This to serve as an incentive for workers to give their best efforts and endeavor to improve their skill and production, and so forth.

(i) Wages for groups to be held firm from year to year and never permitted to rise for any whole group, unless all workers are given such increased wage. This to reestablish a firm value of the dollars of all.

(j) Every worker to be required to do an honest day's work, no featherbedding or standby work, and so forth. When production and profits in any business rises to where it is possible, the negotiators for the workers to negotiate a reduction in the price of the product or service which will benefit all workers and the public and retired and not upset this fair wage scale fixed by agreement between representatives of all groups.

(k) No one to be denied work because of his membership in a union or nonmembership. Employer to have full right of disciplining workers, and so forth.

Excise Tax on Theater Admissions

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1950

Mr. MILLER of California. Mr. Speaker, we hear a great deal about cutting the excise tax on theater tickets. One of the most forcible approaches to this subject is an editorial that appeared in the Richmond (Calif.) Independent, under date of February 17. I commend it to my colleagues:

INEQUITABLE

There has been considerable talk, but no action, in Congress on the pros and cons of cutting out or reducing the wartime excise taxes.

And one of those taxes that certainly should be removed or sharply reduced is the 20-percent tax on theater admissions. Here is a tax that hits the little people and their cheapest form of entertainment.

The tax is unfair to the masses who find in the movies an economical means of entertainment and enlightenment. Did you ever hear of a tax burden that increased as the family grew in numbers? The vice of the theater tax is that it increases as the family increases, regardless of any increase in the family income.

The tax is discriminatory. Every theater owner in the United States is already paying all the taxes levied on business enterprises generally, together with special taxes and assessments peculiar to the theater industry.

The workingman and his family, unable to afford high cost entertainments, must depend on the movies for satisfying relaxation.

The admission tax is not a Hollywood tax—it is a tax that is paid directly by the people who purchase admission tickets to the theater. The admission tax does not reach to the fabulous salaries which until recently were blazoned in the headlines. Those salaries not only are being adjusted to meet a changed economic condition, but are reached thorugh a different form of taxation—the income tax.

A good way to make your wishes felt in the matter is to write to your Congressman and ask for his consideration when the matter is brought up for debate on the floors of Congress.

Letter of DeWitt Garrison, of Middletown, N. Y.

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

MIDDLETOWN, N. Y., *March 7, 1950.*

Hon. KATHARINE ST. GEORGE,
House of Representatives,
Washington, D. C.

MY DEAR MRS. ST. GEORGE: I have never written a letter to either of my Representatives in Congress before, and why I should vent my feelings on you will have to be categorized as kismet.

It is not my intent that this letter shall depict wrath, because I have no feelings of ill will against you or any Member of the Congress. You, like your cohorts, were elected to office by your constituency which definitely placed upon your shoulders a responsibility to do your best for us at all times. That I expect.

Because I do not know the so-called inside, I cannot clearly express an opinion on any subject. There is always more than the eye can perceive.

But I do know that I am most weary of working to support my family and having the Government, to whom by the token of being born under the Stars and Stripes I owe an allegiance, fleece my hard-earned wages from my pockets when I would much rather see it spent on the welfare of my family. Each day the increase of prices alone makes my problem of living all the more difficult without the continual increasing of my taxes.

I work for a stipulated salary. I cannot go to my employer each time a new union contract is made, and which virtually always carries an increase, either financial, gratuitous, or token, and say to him, "Mr. Boss, this group and that group of workers have just received another increase which will mean

that everything that concerns me will increase my cost of living. Will you please compensate accordingly?" In our American way of living this isn't done, because there are more unorganized individuals than there are organized. I still like the philosophy of live and let live, because the man I am working for has the same costs applicable to himself and his family.

So, these organized minority groups continue to raise the cost of my household unrestricted and without apparent regard for me or my costs, or the hardship they cause me while fighting for that increase.

Then comes the Government. It buys potatoes, eggs, and other essential commodities that I need to feed my family with my taxes. So, I have to pay twice their cost over the counter. I don't think I would object quite so much if these products were put to essential use. What does my Government do? They burn them up, throw them away, or store them in some God-forsaken spot, which is an administrative cost, and 9 out of 10 chances will be constituted as worthless within a short period of time.

What else does my Government do? It taxes me to carry out the cost of the Marshall plan, which in some measure must carry food to feed the war-torn Continent. So we buy more food. We can't ship the potatoes that were destined at the time of planting to be burned or wasted. I had to eat dehydrated potatoes and dehydrated eggs when I was fighting nazism and fascism. I would think it little encugh for these people to do the same for me now.

I have bought eggs for 15 cents a dozen. Now I pay 45 and more, and so the story goes. Can't you realize that I must now resemble a punch-drunk fighter? I feel that way, yet there appears to be no referee to stop the fight.

I have no desire for my Government to maintain or support me or my family, and yet it will not give me the resources to do my wish. I want to point with pride at my home and know that I, through hard work, made it mine. I do not want my Government to interfere with my private life, and yet each day expensive bureaus are created to do this or that for my welfare. I have the right to demand that I look after my own welfare. I do not want my Government as a silent partner in the deal. I do not mind paying for the upkeep of the White House—that is mine, too—but the house at 206 Wisner Avenue, Middletown, N. Y., has DeWitt and Lenore Garrison on the deed, and Uncle Sam is not requested. I would like to see every other red-blooded American have the spirit and the guts to do the same thing, instead of having my taxes build his house for him. This puts me in the sucker class, when my Government talks about going in the contracting business.

If I never saw a democratic government making a bunch of human souls lacking in spirit and initiative, I am seeing it now. May God rest the souls of those who fought at Concord, Lexington, and Bunker Hill.

My son will be college material in another 8 years. Can't you visualize what a struggle this will be, provided we continue as we are now? I do not construe this for more Federal education. I do not want red tape attached to my son's education. I still would want him to write his father about his marks and not some civil service clerk in Washington in order to determine whether his education would or would not be furthered. However, I must admit that I will be fortunate if I can feed and clothe him in 3 years under our present rate of taxation and increasing prices, brought about mainly by ever-increasing wages, except mine and a few million others like me who do not have high-salaried potentates writing the contract.

I reserve the right to instill in my son initiative and responsibility. If anyone is to spoil him or make a bum out of him, it is my prerogative, not that of his Government. It would be bad to have him despise his father, but a far worse sin to despise his Government, and yet the Government is fast trying to do me out of that, too.

You are one. But I beseech you to flail with any instrument at your command to bring about a general reduction of living costs and Government spending. I do not have to tell you what they are, for they speak for themselves. Now I have spoken and, as I have said before, I expect you through your elective office and your position in the Congress to do your utmost.

All I ask from my country is the right to live as a free man, able to assume responsibility, and activate my initiative. I do not ask that my God-given rights be slowly snatched away from me, and to be humbled by high costs and taxes which take away every opportunity that my forefathers planned for me. This is being done, and I resent it beyond words of expression.

This United States of ours was made great by men with initiative. What they made they could hold, and an all-powerful Government didn't take it away from them.

Sincerely yours,

DEWITT GARRISON.

At Least It's Worth Trying

EXTENSION OF REMARKS

OF

HON. STEPHEN M. YOUNG

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. YOUNG. Mr. Speaker, under leave to extend my remarks, I include the following front-page editorial statement and a statement of mine published in an Ohio weekly newspaper, Public Opinion, Westerville, Ohio, a nonpartisan newspaper of considerable circulation, whose editor and publisher is A. M. Courtright.

The article is as follows:

IN THIS CORNER

AT LEAST IT'S WORTH TRYING

(EDITOR'S NOTE.—During these days of hate between nations; indulged in and fostered mostly by the leaders of the United States and Russia, it is hard to find a high Government official in Washington that does not advocate the chip-on-the-shoulder attitude of dealing with the U. S. S. R. We are convinced that the common man in Russia doesn't want a war with the United States any more than we want a war with him. We also are convinced that there can never be a world-wide peace until the leaders of all nations realize that ordinary people aren't interested in international intrigues and designs of conquest, either physical or financial. The only true world-wide peace will come when an honest effort is made by all sides to foster brotherhood and understanding among the peoples of the world, and we believe that such a policy would succeed for the simple reason that it is hard to hate a man you know. Unfortunately, our present leaders have so blinded themselves by the get-tough policy, that they believe no proposal, no matter what merit it may have, is even worthy of consideration unless it carries us further down the arms-race road to destruction. Therefore, it is good to see the action of our Congressman-at-large, STEPHEN M. YOUNG, who sent us the following article from his office in Washington. We'd like to emphasize Mr. YOUNG's question to President Truman and his advisers—really, what is wrong with trying to achieve peace between the Russians and ourselves by talking?—at least it couldn't be any more unsuccessful than our present policy. We wish more of our Senators and Congressmen would take up Mr. YOUNG's suggestion.)

Worth trying

Really, what would be wrong with sending Chief Justice Fred M. Vinson, of the United States Supreme Court to the Kremlin, to talk face to face with Joe Stalin and other representatives of the Russian dictatorship? Isn't anything worth trying to bring about permanent peace in this world? The Soviet Union is preparing to wage war against us. Otherwise, why its stupendous army and air force?

After all, Chief Justice Vinson served as a Member of Congress for 14 years, served as Justice of the United States Supreme Court, was Director of the Office of War Mobilization and Reconversion, Federal Loan Administrator and Secretary of the Treasury. He is a skilled and experienced negotiator. If necessary, he could probably drink his share of vodka and still look Stalin in the face with a coldly appraising eye. The tremendous costs of the armament race now being waged and the dread portent of A and H bombings justify all honorable steps to maintain peace. Bear in mind the onset of World War III, if such a war should come, would be so terrible, so devastating, that in retrospect Pearl Harbor in contrast might appear no more serious than Custer's defeat, Bull Run or even a traffic accident.

Veterans' Hospitals in California

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1950

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks, I should like to call attention to a distressing situation in California that is steadily growing worse—that of the lack of hospital beds for veterans.

We made a solemn promise to the GI's that they would have free hospitalization on their return to civilian life. We must fulfill that promise. Each and every GI that needs hospital care must get it—not after a year or two of waiting—but when he or she needs it.

Last fall my distinguished colleagues, CHET HOLIFIELD and CECIL KING, arranged a meeting between the southern California congressional delegation, and representatives of the Veterans' Administration, the American Legion, the Veterans of Foreign Wars, the Disabled American Veterans, and the Military Order of the Purple Heart. The purpose was to gather current information on the appalling situation in California, and to coordinate efforts.

The stories they brought back to Washington were no credit to our national honor. As a result of that inquiry, our California congressional delegation has recommended immediate action to permit the Veterans' Administration to take over those Army and Navy facilities that have been closed or are to be closed in southern California.

The reasons behind the recommendation are manyfold, any one of which

would be sufficient in itself to warrant a reconsideration of our policy with respect to veterans' hospital needs in California:

First. California's veterans' needs are based on old population figures. In the 1940 census, California was fifth in national rank, with a population of approximately 6,900,000. After the 1950 census, the Census Bureau estimates that California will be officially second, with a population of approximately 10,700,000.

Second. California's population, particularly southern California's, is being increased by upwards of 10,000 every month. The Disabled American Veterans estimate that over one-third of those who come to California are veterans. Many are in immediate need of hospital treatment—especially tubercular and neuropsychiatric. Many more will have to be cared for later as the need arises, and it most surely will.

Third. The State of California is in no position to cope with an additional burden of veterans in need of hospital care. California cannot cope with those who are already awaiting treatment that is theirs by right and not by largess on our part. According to the Veterans' Administration's own figure, as of December 8, 1949, there were approximately 900 mentally-ill patients and 250–300 TB veterans awaiting admission to hospitals in our State.

In recognition of California's needs, the Veterans' Administration some time ago approved new construction. Today the delays in the completion of approved VA facilities and the canceling of others is deeply disheartening.

Because of our acute needs the Veterans' Administration entered into contracts with the Army and Navy to set aside a certain number of beds in specified service hospitals until sufficient VA facilities were available. Recently two of those service hospitals were closed, and 325 of the beds contracted for by the VA for veterans' care were lost. Another 550 beds are scheduled to be lost to veterans when two more service hospitals are closed in the near future. Their closing has thus far been delayed because of protests and acute need, but the Secretary of Defense has stated that they will definitely be closed. If the armed services no longer have need of such facilities the veterans should be given those facilities, and immediately.

Fourth. California's present unemployment situation is such that any additional financial burden could be borne by the State only with great difficulty, and with injustice to our veterans. In 1948 unemployment in California averaged almost 300,000 persons, or 6.8 percent of the California labor force. This was twice the percentage of unemployment for the Nation as a whole. In 1949, the number of men and women out of work in California increased to an average of about 417,000, or close to 9.4 percent of the California labor force. If the number of unemployed in the United States had risen throughout the country to the same high level in 1949 as it did in California we would have had in 1949 an army of unemployed made up of more than 5,800,000 people. In southern California where the veterans' needs are greatest, the growing burden of unemployment relief is most acute.

The Veterans' Administration and the country must assure our GI's the hospital and medical care that is their due regardless of politics, local economic problems, or reorganization plans.

Hour of Sharing

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1950

Mr. RODINO. Mr. Speaker, the Protestant and Eastern Orthodox Churches of America, which through their interdenominational relief agency, Church World Service, are conducting the campaign called One Great Hour of Sharing, are to be saluted. This is a truly Christian project; it is in keeping with the spirit of democracy; it is in keeping with the spirit of America. No doubt every American, no matter what his faith, will be glad to share in this hour.

Under leave to extend my remarks in the RECORD, I wish to include the following editorial entitled "Hour of Sharing," which appeared in the Independent Press, Bloomfield, N. J., March 10, 1950:

HOUR OF SHARING

One of the greatest blessings given human beings is the opportunity to share with others what life has to offer. We share with our parents, our sisters and brothers, our schoolmates, our husband or wife, and then in turn, with our own children. True, this is a blessing, but also it is a grave responsibility. Sharing one's joy is a delight—sharing one's sorrow is a burden; but they must go hand in hand.

Today, our brothers in Europe and Asia are undergoing, and have been since the conclusion of the war, a period of deprivation of the bare necessities of life. Not only are they desperately in need of material things; above all, they need to know that somewhere in the world there is someone who cares what happens to them. They are seeking reassurance, and it is up to those of us who are in better circumstances to do what we can to give them this reassurance. When we do this we are not really sharing their burdens, for to do that we would have to know what it is to search for loved ones who have been lost since the war. It would mean going back to see the ruins of what was once a loved home. It means all the heartbreak that war brings in its wake. All we can do is lighten the burden.

It is written in the Scripture: "Bear ye one another's burdens and so fulfill the law of Christ." This is little enough to do for those who wander the face of the earth and cannot find one litle niche to call their own; this is little enough to do for one who does not have a loved one with whom to share his misery, for many are alone—the lone survivors of a family.

The Protestant and Eastern Orthodox Churches of America, through their interdenominational relief agency, Church World Service, are conducting a campaign called one great hour of sharing. On Sunday all these churches will unite in one great effort to do their share in alleviating the desperate need which still exists in Europe and Asia. We ask that you give, and give generously, through your own church. But, above all, we ask that you go to church on Sunday morning and join with your own brethren in prayer. This participation will be magnified a hundredfold, for on that Sunday morning all the churches cooperating in the one great hour of sharing campaign will join together in prayer. Yes; sharing can be a joy, but it is surely a responsibility. How can we, as true Christians, face ourselves if we do not do our share?

Address of Hon. James A. Farley

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

[From the Syracuse (N. Y.) Herald-Journal of February 11, 1950]

JIM FARLEY'S SYRACUSE SPEECH

Irrespective of politics, former Postmaster General James A. Farley is one of the country's big men, both in stature and mentality. Hence the people of Syracuse and central New York would be interested at any time in his comments and suggestions on government.

But Jim Farley's remarks before the New York State Press Association at the Hotel Syracuse last night have special interest just now, due to the fact that he is being widely boomed for the Democratic nomination for Governor this year.

What does he think of the present picture? He is disturbed by Government spending, deficit financing, and high taxes. Discussing the Hoover report, he says that the country is composed of two kinds of people—those who believe Government can support all the citizens and those who wonder whether all the citizens can support the Government.

He refers to President Truman's statement that on the basis of national growth over the last 50 years we shall have a national income of a trillion dollars 50 years hence. Yes, says Jim Farley. But if the cost of Government continues to increase at the rate of the last 50 years, the cost 50 years hence will be 6 trillion dollars or 6 times as much as the whole national income.

The lesson is obvious: we can't go on boosting the cost of Government at the 1900–50 rate without national bankruptcy. We've got to learn to control such costs, there's no alternative.

As could be expected, Jim Farley rules out partisan considerations in dealing with this issue. "It is an American issue and every true American, regardless of party, owes it to himself to study it, understand it and do something about it," he says. That is right.

And what does Jim Farley suggest good Americans do about it? He says that Congress is under so many demands for the expenditure of funds that it finds it almost impossible to resist them. What is needed, he asserts, is that Americans be organized to put just as much pressure on Congress to save as the various pressure groups have put on it to spend.

He recognizes the truth of President Truman's statement that a vast amount of the present $40,000,000,000 budget is required to pay the costs resulting from past wars and the expenses of the present cold war. But he believes that there can be savings in what

is expended over and above military and foreign aid. And he thinks that it is quite possible that something could be saved on military expenses without damaging national defense. He also believes that foreign aid can be reduced to a more reasonable figure.

It hardly seems necessary for this newspaper to comment that Jim Farley's position is sound. We have on numerous occasions emphasized the imperative necessity of a closer check on Government expenditures.

But Jim Farley's Syracuse speech certainly will add noteworthy emphasis to this pertinent subject—emphasis which we hope will serve the broad and timely purpose of directing the attention of the whole American people to one of the urgent necessities of the hour.

[From the Syracuse (N. Y.) Post-Standard of February 12, 1950]

WARNING BY JAMES A. FARLEY

James A. Farley is a leader in a great segment of the Democratic Party that did not accept the New Deal. His protest against reckless spending at Washington is, accordingly, of marked significance.

Speaking to members of the New York Press Association, at Hotel Syracuse Friday night, Mr. Farley said that Federal spending has grown to such vast proportions that it threatens our constitutional form of government.

"Unless we find some way of reducing the cost of Government," he said, "it will grow so great as to consume not only everything that we all earn, but also everything that we have saved and ultimately everything that we call property."

The statement would have excited little attention had it come from a Republican, but Mr. Farley still commands widespread respect in the ranks of the Democratic Party. If he feels so strongly on the subject of Federal spending, many other members of the party think the same way.

It is a warning that President Truman and his lieutenants would be wise in heeding. The defection of only a few hundred thousand voters would cost them an election.

[From the Bridgeport (Conn.) Telegram of March 14, 1950]

FARLEY URGES HOOVER REPORT

Speaking to the New York Press Association at Syracuse last week, James A. Farley made an urgent plea to the Empire State editors to get behind the Hoover report for the reorganization of the executive branch of the Government.

It is generally conceded by practically everyone in both major political parties that Mr. Farley's devotion to his country and its welfare supersedes his loyalty to the Democratic Party. The former Postmaster General and national chairman has proved that to the satisfaction and admiration of most people.

Mr. Farley thinks it is the duty of every citizen to become acquainted with at least the generalities of the Hoover report, which can be done by reading the numerous condensed reports which appear in the newspapers. The entire report contains 18 enormous volumes, written after nearly 2 years of exhaustive research into Government operations. The average man won't ever see it, but he can familiarize himself with the essential changes urged by the former President.

Mr. Farley says there are two kinds of people in this country. There are those who believe the Government can support all the citizens. The others, and Mr. Farley is in this group, wonder whether all the citizens can support the Government.

Some of his observations, based on experience and knowledge, are a little frightening. Mr. Truman in January said that on the basis of this country's growth in the last 50 years, we would have a national income of a trillion dollars, 50 years ahead. Mr. Farley has no doubt about the President's figures or expectations, but he looks ahead in another way. If we take the cost of Government in 1900 and compare it with costs in 1950, our Government will cost $6,000,000,000,000. And on that basis we would have 20,000,000 Government employees.

This is only one of numerous dangers ahead, unless we find a way to cut the costs so that the Government will not consume everything that we all earn, everything that we have saved, and ultimately everything that we call property, which is owned by all of us.

The Hoover report is not political. It seeks to solve an American problem, and Mr. Farley sees the report as the one constructive offering made toward that direction. "What is needed," he told the editors, "is that Americans be organized to put as much pressure on Congress to save as the various pressure groups have put on it to spend." In this, every American should lend a hand, to get all of the major recommendations of the Hoover Commission enacted into law.

[From the Buffalo (N. Y.) Evening News of February 11, 1950]

A REDUCING DIET FOR UNCLE SAM

James A. Farley, who knows a thing or two about the art of getting things done in politics, offered some practical counsel Friday night on both the necessity to reduce the fantastic cost of Government, and the ways and means to achieve it. The occasion was a meeting of the New York Press Association in Syracuse, and his treatment of the subject was nonpartisan: A Frank Review of the Hoover Report. But his advice concerned much more than the excellent recommendations for administrative reform detailed in that report. The gist of it is that if big government is not going to overwhelm us, Americans must be organized to put just as much pressure on Congress to save as the various pressure groups have put on it to spend.

The National Citizens' Committee for the Hoover Report, with its subcommittees in nearly every State and locality, represents a highly impressive beginning in that direction, Mr. Farley says. But the kind of economy crusade he has in mind can't stop with administrative reform, as does the Hoover report. It was not that Commission's function to pass on the wisdom or unwisdom of any Federal activity, but only to suggest improvements in administration.

If all the Hoover recommendations were adopted at once, as the former Democratic national chairman noted, the savings would come to more than $3,000,000,000. But it is well to remember that this would still have us with a $2,000,000,000 deficit. To check the constant upward trend of spending, something more than administrative reform is needed—specifically: a determination in Congress, based on an unmistakable public demand, to stand firm against nonessential appropriations.

This, Mr. Farley insisted, is a national necessity and there is nothing partisan in it. "I have had enough experience in the National Government," he remarked, "to know that in the scramble for congressional appropriations we cannot distinguish the energy of a Republican from that of a Democrat * * * We have got to have men in Congress who look to the need for a sound national economy * * * and a little less concern for what certain communities and particular departments are demanding." But to achieve that requires an organized, articulate voice of economy that speaks as loudly on all occasions as does the pressure-group voice for spending. "We must reduce our cost of Government," says Mr. Farley, "and we must reduce it even if some people get hurt in the process." Active support for the Hoover Commission's crusade for competence is a good place for responsible citizens to start showing that they mean business in that endeavor.

Natural Gas Bill

EXTENSION OF REMARKS

OF

HON. CHESTER C. GORSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. GORSKI. Mr. Speaker, Senators are carefully watching their mail these days for the little hint that will let them know how their constituents want them to vote on the natural gas bill S. 1498. This bill if passed will increase the gas bills in every major city to people using natural gas to heat their home and to those using this type of fuel for industries. It can mean an increase anywhere from 1 cent to 5 cents per 1,000 cubic feet.

I have voted against this bill H. R. 1758 when it was presented to the House. At that time I stated that the mayor and the Buffalo City Council were opposed to this type of bill.

Under this proposed bill, if Federal regulation were lifted, gas users would be forced to pay millions more for the privilege of using natural gas. This money would be paid by the household users and industries and all these millions would go to the coffers of a group of powerful companies, already recognized for their enormous profits of the past.

This is a struggle between the people and a handful of wealthy oil companies.

From statistics furnished by the Federal Power Commission, New York State consumers, at a 5 cents per 1,000-cubic-foot increase, would pay to these utilities approximately $1,500,000 a year more.

Natural-gas interests want to take from the Federal Power Commission the power to regulate the initial sale of gas from the producer to the pipe-line company. Then all rates could be determined by the prices the big concerns decide to charge in the field.

Twenty-four million consumers used natural gas last year. Thirty-eight companies produced 86 percent of gas over the pipe lines. In casting my vote against this bill I was voting for the interest of 24,000,000 Americans.

The United States Conference of Mayors is fighting this legislation. They know what it will mean to the gas bills of the people in the large cities.

This bill can still be defeated in the Senate and should be for the protection of the people who use gas for heating their homes.

The Mo Pac Moves Ahead

EXTENSION OF REMARKS
OF
HON. JOHN B. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1950

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herein an editorial from the St. Louis Star-Times of February 22, 1950, entitled "The Mo Pac Moves Ahead," which discusses the use of radio on the Nation's railroads as a safety measure.

We are proud to note that the Missouri Pacific Railroad, which is the worthy successor to the first railroad west of the Mississippi River, is availing itself of the many advantages of train radio. They have found it practicable and are moving for even greater use of this device

The editorial follows:

THE MO PAC MOVES AHEAD

Progress among the Nation's railroads in availing themselves of the many advantages of train radio comes distressingly slow. But it does come. Now Missouri Pacific Lines trustees reveal they are going in for expanded use of this device.

For 2 years the Mo Pac has been testing train radio on freights running between Alexandria, La., and McGehee, Ark. The experiments have been so successful that the road now proposes to spend more than $164,000 this year in putting the equipment on other freights.

Consistently this has proved to be the experience wherever the equipment has been tried. The benefits in both efficiency of operation and in heightened safety have shown the expense of installation to be well justified. It is difficult to understand why the railroads have been so slow in availing themselves of this aid to progress.

Only Monday, for instance, the Star-Times pointed out that train radio on the Long Island Railroad might have avoided Friday's tragic wreck. Now the road will have to pay much more in replacing equipment and settling damage claims than it would ever have had to pay for the radio.

Somehow, though, resistance to this obvious safety device looms big. Even on the Mo Pac now there are no plans to install radios on passenger trains at present, though the need is every bit as urgent there.

But at least the Missouri Pacific moves in the right direction. It's a direction in which all railroads will have to move if they want to show proper concern for safety. They'd do well to move early rather than late.

Look to Yourself, Dean

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1950

Mr. VAN ZANDT. Mr. Speaker, the editor of the Altoona (Pa.) Tribune on March 10, 1950, wrote the following interesting editorial on the activities of our Secretary of State, Dean Acheson. The editorial is as follows:

LOOK TO YOURSELF, DEAN

A call upon American men and women to join with their Government in a concerted effort to defeat Russia's plans for world domination was issued Thursday by Secretary of State Dean Acheson.

This, of course, amounts just to so many words. Perhaps Mr. Acheson means that this country should prepare to fight slavery abroad by instituting it here, through Government regulations. We cannot be sure, from his statement.

He speaks about the dangers of communism, and the threat of Russia. These things the American people know. They appear to be ready to fight communism in the American way.

We are not so sure the State Department and the administration are similarly prepared.

For example, Thursday, upon recommendation of the State Department and the Justice Department, a New York court which had convicted Judith Coplon and Soviet Diplomat Valentin A. Gubitchev, suspended the sentence imposed upon the Russian.

Miss Coplon was sent to prison for 15 years. Gubitchev got the same sentence. Then, because of the State Department's request, the court, with what seemed some reluctance, told Gubitchev he would be freed at once provided he left this country forever.

The State Department spokesman said this country doesn't want to risk prejudicing the situation of Americans now in eastern Europe.

That appears to be a strange situation to adopt, in view of Mr. Acheson's call upon the people for support.

Recently, an American, Mr. Robert Vogeler, was sentenced to 15 years in a Hungarian prison, by a Communist court, on charges of being an American spy. Our official envoys have been forced out of Bulgaria, and Americans have been imprisoned, tortured, and generally persecuted by Communist police and officials in Europe, and in Red China.

Now, for the only Red spy convicted in this country, the State Department asks freedom.

This is the kind of appeasement of which the Russians take full advantage. They have taken advantage of American appeasement ever since the days American armed forces were withheld from Berlin to permit the Russians to enter.

Despite our windy stand against communism at home, and our brainless charges issued by some Congressmen and Senators who toss accusations right and left, our Government has shown a consistent attitude of appeasement toward Russia.

And Russia has been steadily advancing because of it.

The most powerful, the most effective way to fight communism is being ignored by Mr. Acheson and Mr. Truman, and by the Congress, for that matter.

Every time Congress and the administration approve laws restricting freedom in America, every time they impose new tax burdens upon this free people they restrict liberty in America, they narrow the range of Americanism, and they weaken the greatest free country in the world.

How can we combat slavery abroad unless we guard our liberty at home?

It is ridiculous to suppose that the Government can tax and regulate Americans into a state of Federal servitude, and then expect effective support in the cold war against Soviet communism.

The greatest help the Communists can get is a short-sighted Government in Washington which drives America $15,000,000 deeper into debt every day, and which forces our people to work from 1 to 2 months a year to pay taxes, which seeks new methods of regulation, which plays favorites to groups which flout the law * * * as in the recent coal strike * * * and which generally ignores the basic strength of America * * * our freedom, our will to work, and to produce.

Mr. Acheson directs his appeal in the wrong direction.

His appeals should go not to the people, but to the White House, the State Department, and the Capitol.

Will Farley Go to Albany?

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Brooklyn Eagle of Tuesday, February 28, 1950:

HEFFERNAN SAYS

WILL FARLEY GO TO ALBANY?

One of the ablest political figures of Brooklyn and this commentator were discussing Jim Farley recently.

Is he a candidate for the Democratic nomination for the governorship, consciously seeking the nomination, or is his astonishing popularity carrying him along to that honor whether he wants it or not?

For there is small doubt that the man who backed the young country squire of Hyde Park and outplayed Al Smith at the game of which Al Smith was a master, has a greater grip on the rank-and-file of voters today than he had when he was the chief dispenser of patronage under the Presidency of Mr. Roosevelt. This has been evidenced at any public gathering of either party where he has been a guest or where his name is mentioned.

"Watch him," said the political leader with whom I was chatting. "He is coming along very rapidly."

"But," I said, "his Syracuse speech was neither an angling for Democratic votes nor a bid for the favor of the Democratic leaders of the Nation and State."

"That's Farley!" said my friend. "He can say with complete frankness what is in his mind and get away with it.

"It would not surprise me at all if the wave of affection and esteem that sweeps every gathering at which he appears would sweep the Democratic State Convention and drop the nomination in Jim Farley's lap, no matter what may be in the minds of Paul Fitzpatrick and other State and local leaders. You have not forgotten, have you, how ALBEN BARKLEY was nominated for the Vice Presidency at Philadelphia?"

That set me thinking. There are several reasons why James F. Byrnes might criticize the administration's fiscal policy and excite the irascibility of President Truman, and Jim Farley could touch on the same topic and leave the President undisturbed. One is the Dixiecrat movement in the South, of which Byrnes is now a leader. Another is that when the northeastern leaders were calling in panic for Eisenhower or Douglas, there were two noted Democratic leaders, and two only, in this neck of the woods,

who were for Truman, certain that he could be nominated and certain he could be elected. They were Jim Farley and John Cashmore.

Almost on the heels of his Syracuse address, at the recent Washington Jefferson-Jackson Day dinner, Jim Farley said to Mr. Truman, "It isn't wise to hold these in an armory. If you are in with the committee of arrangements, you can get a seat where you can hear and enjoy the speeches. But otherwise you are out in right, left, or center field, and you just have a lot of disorder."

And Mr. Truman replied, "You are perfectly right, Jim. And while I am President, we'll never have another affair like this."

It wouldn't be beyond the possibilities that, with Farley for Governor and LEHMAN for Senator, Mr. Truman, who wants a strong Democratic leadership in this State, would be in Jim Farley's corner.

Postage Requirements on Farmers' Checks

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. MURRAY of Wisconsin. Mr. Speaker, the ruling that dairy plants must pay postage on the returns to farmers has been an issue for many years. I include a letter from a constituent and the answer by the Post Office Department as to the rulings on this question. The request is as follows:

MAPLEWOOD HOTEL,
Green Lake, Wis., February 15, 1950.

The Honorable REID MURRAY,
House of Representatives,
Washington, D. C.

DEAR REID: You doubtless realize that it is these unimportant things, as a rule, that make people the maddest. A goodly number of your constituents, myself included, are thoroughly "het up" over the following situation.

We are sending our milk to the local creamery. The cream hauler is employed by the creamery and is paid a fixed price per hundred for hauling. I am not perfectly certain of the following but it is substantially correct. The price paid this hauler is 20 cents per 100 pounds. Of this 20 cents, 15 cents is deducted from our milk check and appears on our statement from the creamery as a deduction for hauling. The habit is, and has been for the past 40 years, that twice monthly when our check is due from the creamery, the hauler on the first and fifteenth of the month, when he picks up your milk leaves the creamery check and statement for the money due for previous deliveries. The postal department had an "agent" here, investigated the situation, and compelled the creamery company to put a 3-cent stamp on the letter containing the check and mark it canceled.

As I said in the beginning, this is not an extremely important matter but we can't understand why our employee—or the person whose salary we principally pay—cannot bring us our check from the creamery without paying tribute to the postal department for a service they have not rendered. Any information you can elucidate will be appreciated. So far, all we can get from the post office is, "Them are our orders."

With best wishes, I am,

Very truly yours,

V. S. KUTCHIN.

The answer is as follows:

OFFICE OF THE POSTMASTER GENERAL,
Washington, D. C., March 7, 1950.

Hon. REID F. MURRAY,
House of Representatives.

DEAR CONGRESSMAN MURRAY: This will reply to your letter of March 2, 1950, regarding an inquiry of one of your constituents relating to the payment of postage on checks delivered outside the mails.

Your constituent states that he sends milk to a local creamery and it is transported by a hauler employed by the creamery. He further states that the hauler delivers a check from the creamery twice each month and that a postal inspector now requires the creamery to put a 3-cent stamp on the letter containing the check and to mark it "canceled." You ask whether or not it is necessary for the creamery company to pay postage for the delivery of milk checks in this manner.

Your inquiry relates to the private express statutes (title 18, U. S. C. 1694–1697; 39 U. S. C. 500), which confer on the Post Office Department a monopoly in the transportation of letters for others over post roads. Bank checks in their ordinary form containing only the names of the drawer, payee, bank upon which drawn, amount of money and date of issue, are not letters within the meaning of the private express statutes, and may, therefore, be conveyed by contract carriers without violating the private express statutes. On the other hand, checks which show upon their face or by stubs attached to them such information as the weight of milk, quality, price, butterfat content, and test, deductions for hauling, and the like, are considered letters within the meaning of the private express statutes. As a general rule, such letters may not be conveyed by third persons such as contract haulers outside the mails unless the conditions of title 39, U. S. C., section 500, are complied with. That statute requires, as a condition to the transportation of letters outside the mails, among other things the payment of the same postage as would have been paid had the letters been sent through the mails.

Inasmuch as the postal monopoly does not extend to articles other than letters, there is no requirement that postage by paid on butter transported outside the mails.

Sincerely yours,

J. M. DONALDSON,
Postmaster General.

Mr. Speaker, just exactly how this ruling squares with the distribution of nonagricultural literature it may be difficult to fathom. It appears to me that the ruling is rather far fetched to say the least.

Address of Hon. P. H. McEachin

EXTENSION OF REMARKS

OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. McMILLAN of South Carolina. Mr. Speaker, I take great pleasure in presenting to the House a copy of a speech made by my fellow townsman and friend, Senator P. H. McEachin, of Florence, S. C.

Senator McEachin was selected to represent the State of South Carolina at the sesquicentennial exercises commemorating South Carolina's admittance to the Union. The sesquicentennial is honoring each of the Original Thirteen States as they were admitted to the Union. South Carolina was No. 8 of the Thirteen Original States to enter the Union, and we were delighted to hear Senator McEachin's presentation of some of South Carolina's rich and glorious history.

I sincerely hope that every Member of Congress will take a few minutes to read the brief remarks of Senator McEachin giving valuable information as to the leading part taken by South Carolina in the formation of the Union.

On behalf of the people of South Carolina, I want to express our deep appreciation for the honor bestowed upon us by the dedication of these sesquicentennial exercises to our State, of whose record we are so proud, and to which we are so ardently devoted.

South Carolina's importance in the making of the new Nation over which this Federal Capital was to preside can hardly be said to have been excelled by that of any other. For more than a hundred years before Washington was established South Carolina had borne the principal burdens of defending the southern frontier against the encroachments of Spain and France, thus holding a vast territory that later became part of the United States. In the movement leading to the separation of the Thirteen Colonies from England, South Carolina was the first to embody the new principles of self government in a thorough and complete constitution. In the long war that followed no other State was called upon to make greater sacrifices of life and property. The very mention of such names as Rutledge, Gadsden, Hayne, Laurens, Jasper, Moultrie, Sumter, and Marion bears witness to the extent and worth of these sacrifices.

South Carolina was no less interested in the new Federal system than she had been in the war that made the Union possible. To the Federal Convention of 1787 they sent John Rutledge, Pierce Butler, Charles Cotesworth Pinckney, and Charles Pinckney. Each contributed in some important way to the drafting of the Constitution. It is now admitted, after much controversy, that Charles Pinckney laid before that Convention a plan which anticipated a greater number of the provisions of the finished Constitution than did any other. I cannot resist calling attention to one of these provisions, which concerned the establishment of the Federal Capital. It was Charles Pinckney, I am proud to say, who first proposed article I, section 8, paragraph 17, of the Constitution, which is now the basic law of the District of Columbia and the city of Washington.

I think Pinckney was influenced in this by the fact that South Carolina, a few months before, had decided to transfer its capital from Charleston to a spot near the center of the State. In the procedure the State followed there are striking similarities to the procedure used in arrangements for the Federal Capital. In both cases the site selected was in open country, not in a populous town. In both cases the name of Washington was proposed for the new city. South Carolina did not choose that name, but it is interesting to note that the name it did choose, Columbia, was later given to the Federal District around Washington. Finally, I should also point out that the architect who designed the South Carolina State House, James Hoban, later drew plans for the White House and other buildings in Washington.

Such were the ties between the State of South Carolina and the early history of the Federal Capital. They were surface ties, it is true, but they were indicative of the deeper bonds of devotion to the great dream of a Federal republic in which men could be equal and free under a system of government the world had never known before.

Good Government

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1950

Mr. ANGELL. Mr. Speaker, the Oregon Daily Journal, of Portland, Oreg., in my congressional district, on March 7, 1950, published on its editorial page a guest editorial by the Governor of Oregon, the Honorable Douglas McKay, entitled "Good Government." This is a timely and excellent discussion of this most important subject and worthy of wide circulation. I am including the editorial as part of these remarks:

GOOD GOVERNMENT

(By Douglas McKay, Governor of Oregon)

The strength of any country lies not in its treasury statements but in the national character of its people.

It shall profit a man nothing to acquire possessions, knowledge, and power if the barter involves the loss of freedoms in which those gains are rooted. If freedom is to produce security as well as the bountiful life, then its sources must be continuously nourished by sacrifice, devotion, and service.

Democracy is a two-way street, and with its benefits comes the necessity of expending time and effort, intelligently and often unsparingly. Hence, it has been proved many times over that self-government is not a gift on which men may grow fat and indulgent.

Rather, self-government is an instrument by which men can—if they have the wisdom—safeguard their individual liberty and employ that liberty in their quest of happiness and fair regards for their labor, ingenuity, and intellect.

Since self-government is an instrument which demands unceasingly the services, the energies and the participation of those who benefit by it, it is weighted as heavily with obligations as it is with privileges.

Delegation of authority to subordinates is a custom of business, serving, as it does, to facilitate business growth and expansion. But the enthusiasm, alertness, and interest of the high company executive are not delegated along with these segments of authority.

In the matter of self-government, too many of us have, I fear, delegated too much of the responsibility and initiative that are directly our own. Instead of blaming ourselves for some governmental trend not to our liking, we complain to politicians and bureaucrats.

We find an increasing tendency to turn to the Government with our grievances—our economic troubles, especially. There is an alarming tendency to look for security rather than opportunity, and, by importuning the Government, we are encouraging both economic and poltical dangers.

Once we make a crutch of the Government, we are on our way to becoming political cripples. Overdependency on government moves us toward enslavement.

Too many of us are 100-percent Americans by creed but only 10-percent Americans by our daily life, with its neglect and indifference to our duties of citizenship.

There must be a rebirth in the hearts of our citizens—a rekindling of our appreciation of certain mandatory fundamentals. Our basis of free enterprise involves a priceless but really elemental formula which, in 175 years has made America the richest country in the world with the widest distribution of wealth.

This we must recognize. We must recognize, too, that conditions have changed us from a pioneering individualistic people to a highly organized industrial people. And, finally, we must appraise these changes and provide security along with opportunity.

The place to start a resurgence of our allegiance to the precepts that must not fail is right here at home. Oregon has always ranked high in patriotic endeavor. Oregon has become accustomed to good government over a long period of years. Its political climate would be conducive to a revival so sincerely conceived and comprehensively executed as to invite emulation everywhere.

Oregon's government—no government—is so good that it cannot be made better through the citizens' investment of their loyalty and energies in its operation. They should actively engage themselves in insuring the selection of sound individuals to the ranks of the precinct committeewomen and committeemen and to responsible positions with the county and State party organizations. They should see to it that only the very best aspirants become candidates for school-district offices, city councils, and county and State governmental capacities.

Good government obligates us to take an aggressive part in its workings and charges us incessantly to be mindful that freedom is not free.

Miss Ruth Cowan, Noted War Correspondent, Honored

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1950

Mr. VAN ZANDT. Mr. Speaker, on March 10, the Department of the Army awarded a certificate of appreciation to Miss Ruth Cowan, one of the distinguished members of the press and who covers both branches in Congress.

Miss Cowan, who is affiliated with the Washington Bureau of the Associated Press and a noted World War II correspondent, was among a group of three persons who were commended for their objective, factual, and patriotic reporting of matters pertainng to the Department of the Army.

A copy of the certificate of appreciation follows:

CITATION FOR CERTIFICATE OF APPRECIATION

Miss Ruth Cowan, for outstanding patriotic service to the Department of the Army. Through war years while serving as an accredited correspondent with our combat forces in overseas theaters of operations and in the critical postwar years as a news correspondent covering army news developments while assigned to the Military Establishment in the Pentagon Miss Cowan has demonstrated outstanding ability as a journalist and as an American citizen. Her work has been conspicuous by her objective, factual, and patriotic reporting of matters pertaining to the Department of the Army and national security. The American public along with the Army has benefited from her interest, her industry and her devotion to the best interests of our Nation. Her valuable services to the American public, the Associated Press, and to the Army have been in the best traditions of democracy and the inalienable rights of our free press and merits the recognition of her fellow citizens and the thanks and appreciation of the Department of the Army.

Status of Sale of Coal and Asphalt Lands of Choctaw and Chickasaw Indians

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1950

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks, for the information of the House, I include the following release issued by the Department of the Interior:

Persons now holding coal leases and permits on the 400,000 acres of Oklahoma lands, purchased recently by the Government from the Choctaw-Chickasaw Indian tribes, will be given preference rights in the leasing of deposits, Secretary of the Interior Oscar L. Chapman announced today. The tribes received $8,500,000 from the Federal Government for the lands.

Applications for a preference right lease with respect to leases or permits expiring by January 1, 1951, must be filed with the Director, Bureau of Land Management, Washington 25, D. C., before that date. In addition, the Secretary's order allows holders of leases expiring after January 1, 1951, to obtain a new lease on these Oklahoma lands noncompetitively if they file within 90 days prior to the expiration of the current leases. The leases will be issued under the Mineral Leasing Act of 1920.

The transfer of this large area to the Government has raised problems regarding rights and privileges of surface users which probably can be solved only by additional legislation. Persons who have been using the surface legitimately will be permitted to continue such use until some method is worked out to protect their interests. They may continue to occupy the lands on the terms of their present occupancy making payments as heretofore, until further notice, it was said.

Legislative history shows that the Government through this purchase of coal and asphalt-bearing lands in 14 Oklahoma counties is fulfilling a 50-year-ago promise made to the Indian tribes under the Atoka treaty signed in 1898, and providing for the management of these lands by the Federal Government in trust for the Indians. By an act of 1902, ratifying the Atoka agreement, the Government through a commission, agreed to sell certain described coal and asphalt lands, totaling over 400,000 acres. The act expressed the intent that these lands would be sold in 3 years. Apparently no sales were made prior to 1918, and a sale in that year resulted in few bids received. At various times, some 50,000 acres, approximately, were sold. In the meantime discussions were held relative to purchase of the lands by the Federal Government in an effort to settle the claim of the Indians for the Government to fulfill treaty stipulations with respect to selling the coal and asphalt deposits. Appraisals for such purpose were made which ranged from $5,000,000 to $34,000,000.

The Department Appropriation Act of June 28, 1944 contained the authorization for Federal purchase of these lands from the Indians. It provided for disposition of coal and asphalt under lease. Although it specifically mentioned "land," no provision was made for sale, lease, or other disposition of the surface rights to this land. Under this act, a contract was negotiated and signed October 8, 1947. It provided for purchase of "lands and mineral deposits" for a price of $8,500,000. This contract was ratified by members of the two Indian tribes and the

Congress. By the First Deficiency Appropriation Act of 1949, signed May 24, 1949, funds were appropriated to buy these lands. Actual transfer of title has not yet taken place but will be done so as soon as necessary deeds are prepared.

The coal lands are in LeFlore, Haskell, Latimer, Pittsburg, Atoka, Coal, Muskogee and Sequoyah counties. The asphalt lands lie in Johnson, Pontotoc, Carter, Jefferson, Pushmataha, and Murray counties. About 65,000 people reside in the area.

The lands are in the process of being reconveyed to the Government for administration by the Bureau of Land Management under public land laws.

They extend from the Arkansas line west for more than 100 miles and in a north-south direction for more than 60 miles. Although there are numerous towns located on the lands, there has in the past been no provision for public dedication of rights-of-way for telephone lines, sewer lines, or telegraph lines. Also, there are many town lots for which in the past only permission to use has been granted by the Indian Nations. The problem is further complicated, since leases or permits for occupancy have been given in the past for various types of surface uses including agricultural, grazing, industrial, and other purposer.

One of the first requirements for proper administration will be the examination and classification of the lands to determine their status with regard to outstanding leases, extent and appraisal of trespass damages and the highest use suitability and best management of their surface resources. This will be done as soon as possible after title to the lands has actually been transferred, Director Marion Clawson of the Bureau of Land Management said.

Purchasing Power Is Real Measure of Dollar Value

EXTENSION OF REMARKS

OF

HON. J. CALEB BOGGS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. BOGGS of Delaware. Mr. Speaker, time and again sincere efforts have been made to demonstrate the incontestable fact that purchasing power and not face value is the proper measure of the real value of our dollar, or any other monetary unit.

Seldom, however, have I seen this fact stated more clearly and in more understandable language than in an article by Mr. Herman A. Lowe captioned "Income of $10,000 by A. D. 2000 may turn out to be a mirage," which appeared in the March 11, 1950, issue of the Philadelphia Inquirer.

It is my hope that this article will be read and given your fullest consideration. Mr. Lowe has pointed out with clarity that the 1949 dollar would not purchase any more goods or services than 59 cents would have bought only 10 years earlier. I especially direct your attention to his statement, "And pity the poor guy trying to live on a fixed pension or an annuity for which he scraped and saved during many years."

All of us should most seriously ponder the question, What will our dollar be worth in purchasing power next year, or in 1960, or in the year 2000, if we permit inflation to go on unchecked?

As an extension of my remarks I include the full text of Mr. Lowe's article, which follows:

INCOME OF $10,000 BY A. D. 2000 MAY TURN OUT TO BE A MIRAGE

(By Herman A. Lowe)

WASHINGTON, March 11.—When President Truman sounded off sometime back about a brave new world in the year 2000, when the average American worker would earn $10,000 a year, the question naturally arose, "What will a dollar buy 50 years hence?"

Today, it is buying less than at any time in our history. Thus, while most people are earning more dollars than before, they often have less genuine purchasing power. The American dollar is the most stable currency in the world but, under the microscope of time, our buck assays part rubber.

A dollar of the year 2000, for example, may very easily be worth only 30 or 35 cents of even the inflation-depreciated 1950 dollar.

The purchasing value of our dollar expands and contracts from day to day, from month to month, and from year to year. It goes up and it comes down; but over the long haul, the trend is downward.

A table recently compiled, and based on Government statistics, shows the picture in black and white. It has set up the dollar of January 1939 as worth 100 percent, or 100 cents. Then it has figured out the consumer purchasing value of the dollar for every year from 1820 through 1949, against the yardstick of that January 1939 basic dollar.

Working from January 1939, when a dollar was worth a full 100 cents, up to the present, the picture is one of steady decline in purchasing value.

In 1940, the dollar could buy 99.4 percent as much. By 1942, despite the wartime freezes and stability program, a dollar could get you only as much as 85.4 cents of that 1939 dollar. In 1945, your dollar would purchase only as much as 78½ cents would have bought in January 1939.

Then the war ended. Controls began to go off. Labor struck for higher wages and industry began to pour out vast quantities of new goods to fill the demands which had been accumulating for 5 years.

But that did not correct anything. Inflation really moved in. The 1946 dollar bought only 73.5 percent as much as the 1939 dollar. The 1948 dollar bought only 61.1 percent as much as the 1939 dollar.

Last year, in 1949, our dollar hit rock bottom as a purchasing unit. You could not buy any more goods with it than you could buy with 59 cents in the year 1939. That, brother, is inflation. The fellow who can pressure his wages higher by strike or other means may be as well off as he was in 1939.

But millions of Americans have not been able to do that. Financially they are much worse off today than they were in 1939, even though they have obtained some increases in their income. And pity the poor guy trying to live on a fixed pension or an annuity for which he scraped and saved during many years.

Now, about that pot of gold at the end of the rainbow in the year 2000 when everybody, according to President Truman, may be taking down $10,000 a year. What has happened to the value of the dollar in the last 50 years?

In 1949, the dollar could buy only 59.1 percent as much as the 1939 dollar.

In 1899, the dollar could buy 186.6 percent as much as the 1939 dollar.

That means that, so far as real buying value is concerned, a 1949 dollar was worth less than one-third of an 1899 dollar.

That is what can happen to money in 50 years.

It is what did happen to our Rock-of-Gibraltar dollar in the past 50 years. Even Mr. Truman does not guarantee that nothing like that will happen in the next 50 years.

Suppose it should happen again, then the technicolor, vote-getting vision of $10,000 in every workman's pay envelope in the year 2000, actually boils down to a little less than $3,300 of even the depreciated 1949 dollars for the average worker.

This then is the bright future held out for the American worker if he will permit his Government to continue its inflationary policy of deficit financing and of gambling that things will get better by and by.

It seems like a pretty thin heritage to leave to one's children for the privilege of being tickled with a gaily colored feather.

Heart Trouble Needn't Get You Down

EXTENSION OF REMARKS

OF

HON. JOHN KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ted McDowell entitled "Heart Trouble Needn't Get You Down," which appeared in the Washington Evening Star of Monday, February 27, 1950:

HEART TROUBLE NEEDN'T GET YOU DOWN

(By Ted McDowell)

A program is under way to give heart disease sufferers something to do besides lie in bed and take digitalis.

Instead of remaining idle, a cardiac patient can make use of several programs designed, first, to keep his mind occupied and, later on, to train him for a nonstrenuous job.

These programs are what authorities call rehabilitation programs. They include occupational and physical therapy and vocational training. They are conducted by the district rehabilitation service, in cooperation with the Washington Heart Association.

Rehabilitation authorities are trying to let heart patients know about these programs. But they are having difficulties. They say the main trouble is that many doctors prescribe heart regulatory drugs and rest, but forget that inactivity, in itself, can be as harmful as heart trouble.

Officials of the rehabilitation service want doctors to tell patients about the programs. In this way, they say, all heart sufferers could be reached as soon as their ailment is diagnosed.

They are pushing for coordination between physicians and rehabilitation agencies, and have enlisted the aid of several prominent heart specialists and physical therapists here.

Suppose an active man is stricken with a heart attack. He is confined to bed for a number of weeks. Instead of lying idle and feeling sorry for himself, he can contact the Rehabilitation Service, a Federal Security Agency organization. This will set in motion a series of services ranging from massages to training in the making of dental plates.

All these services except physical therapy are automatically free. And if the patient cannot pay for the latter, the Rehabilitation Service will finance that treatment, too.

Throughout the process, the Service assigns a counselor to guide the patient, and the Heart Association provides him with an occupational therapist.

There is an old saying that "an egg gets rotten just sitting around." Activity is needed

for mental and physical well-being. The Rehabilitation Service can provide that necessary activity for a patient. For instance, take the case of the stricken truck driver who is used to heavy physical work.

While in bed, he can occupy his mind by tooling leather wallets, making jewelry and doing other craft work. This is occupational therapy. If physical therapy such as massage is indicated, it can be conducted concurrently.

Later, of course, he will want to get to work again. Truck driving is out. What next? He needs a job that will not tax his heart. This is where vocational training comes in.

The first step is to test him for aptitude. There are many jobs he could train for: X-ray work, perhaps. Tests may show the patient has great manual dexterity; maybe watch repair work is the answer. If the patient agrees, the rehabilitation service will contact a watch repair school, make arrangements for the man's training and pay for it.

After completion of training, the former truck driver has a job which will not tax his heart dangerously. Instead of being a burden on the community, he is gainfully employed. For the financially minded, it should be noted, he will be providing revenue through income taxes instead of living off relief funds.

"No better investment can be made than to put money in this program," Representative Kee, Democrat, of West Virginia, stated during recent congressional hearings on District appropriations.

The objectives of this program are summed up in a statement by David M. Amato, Director of the Bureau of Rehabilitation: "The majority of people suffering from heart ailments have many years of activity ahead of them. Our aim is to fit them for these years."

Labor Is Labor

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1950

Mr. MURRAY of Wisconsin. Mr. Speaker, in order to approach labor legislation and rulings on the basis of all labor, I have always tried to obtain the following facts. With this in mind, I wrote the following letter to Mr. Maurice Tobin, Secretary of Labor:

FEBRUARY 13, 1950.

Hon. MAURICE J. TOBIN,
Secretary of Labor, Department of Labor, Washington, D. C.

MY DEAR SECRETARY TOBIN: I noted in the press that under the Walsh-Healey Act you placed a 95-cents-per-hour wage for soap purchased by the United States.

Under the same legislative act, have you the authority to fix a wage rate in the field of agriculture on the same basis? Can you insist on a wage rate in the production and processing of agricultural products purchased by the Federal Government?

Under the Sugar Act a minimum wage has been placed on agricultural labor of as low as 25 cents to 32 cents per hour by the Secretary of Agriculture, although I do not believe by the present Secretary.

I believe you feel that labor is labor and that all labor is entitled to equal or comparable wage protection and would appreciate a letter from you on this important subject.

Sincerely yours,

REID F. MURRAY,
Member of Congress.

On March 2, 1950, I received the following reply:

[Walsh-Healey public contracts, Public, No. 846, 74th Cong. Rulings and Interpretations No. 3]

MARCH 2, 1950.

Hon. REID F. MURRAY,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN MURRAY: I have your letter of February 13, 1950, inquiring whether the Secretary of Labor has authority under the Walsh-Healey Act to fix minimum wage rates for the production and processing of agricultural products purchased by the Federal Government.

I am enclosing a copy of Rulings and Interpretations No. 3 issued pursuant to the Walsh-Healey Act, which is printed therein on pages 47–52. This act contains no authorization for the fixing of minimum wages; but section 1 (b) does authorize the Secretary of Labor to determine what actually are the prevailing minimum wages being paid in each industry receiving Government contracts, and this section prohibits payment of less than such wage rates on Government contract work. You will note that section 9 of the act on page 51 contains an exemption for perishables and for agricultural or farm products processed for first sale by the original producers, as well as an exemption for contracts made by the Secretary of Agriculture for the purchase of agricultural commodities or the products thereof. This language is interpreted in considerable detail in sections 9 through 12 of the Rulings and Interpretations on pages 5–9.

Although the growing and harvesting of agricultural products processed for first sale by the original producers are thus exempted by the act, some processing of agricultural commodities or the products thereof is not exempt. The wage determination for the evaporated-milk industry is the only one which has to date been issued for industries processing agricultural commodities or the products thereof. It is my intention to make determinations for all manufacturing industries which receive a considerable amount of Government contracts as soon as our facilities permit, including industries processing agricultural products.

Of course, you are aware that the proposals in H. R. 2033 and in H. R. 3190, as introduced in the first session of the Eighty-first Congress, to extend the minimum wage protection of the Fair Labor Standards Act to employees on large industrialized farms were not included in the bill H. R. 3190 as reported by the Committee on Education and Labor for the reasons stated on page 24 of House Report No. 267, Eighty-first Congress, first session.

Yours very truly,

MAURICE J. TOBIN,
Secretary of Labor.

This gives a satisfactory picture of the present situation. The agricultural support program provides some 50 to 60 cents hourly wage return on most agricultural products, though winter wheat has shown in the study a higher labor return. My contention is that the provisions of the Walsh-Healy Act should apply to labor involved in producing agricultural products purchased by the Government.

This position has already been taken in the Government purchase of evaporated milk, and as Mr. Tobin's letter states:

It is my intention to make determinations for all manufacturing industries which receive a considerable amount of Government contracts as soon as our facilities permit, including industries processing agricultural products.

If the Government buys soap on the basis of a minimum wage of 95 cents per hour, why should sugar be purchased by the Government on this basis of a minimum wage of 25 to 32 cents per hour?

New Jersey Scholar Solves Baffling Literary Mystery

EXTENSION OF REMARKS
OF
HON. EDWARD J. HART
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1950

Mr. HART. Mr. Speaker, the identification of the author of the famous Letters of Junius has been a question that has puzzled the most noted literary scholars of Great Britain and America for more than a century and a half. The authorship of these letters has from time to time been attributed to famous men in the English literary and political world.

Dr. Francesco Cordasco, of West New York, N. J., associate professor of English at Long Island University, is now reputed to have made convincing demonstration of the real author of the letters. And pertinent to this discovery is the appended newspaper article from the Jersey Journal:

PROFESSOR SOLVES IDENTITY OF JUNIUS, OF REVOLUTION

What is considered one of the most important literary discoveries in years and which will change impressions of the American Revolution has been made by Dr. Francesco Cordasco, of 6606 Jackson Street, West New York. Dr. Cordasco, associate professor of English at Long Island University, has solved a mystery that had baffled historians more than 150 years—the identity of the eighteenth-century firebrand, "Junius," whose letters did so much toward inciting the Revolution.

"Junius is now known to have been a Scotsman named Laughlin MacLeane, a one-time regimental surgeon with the British Army who fought here in the French and Indian Wars and who had lived in Philadelphia and New York. His letters on the Revolution, however, were written in Europe and published in the Public Advertiser, a London newspaper, during 1769–71. The letters were of incalculable importance to the American revolutionaries in the late 1760's, according to Dr. Cordasco. They influenced Thomas Payne so much that he signed himself once as "Junius Junior," Dr. Cordasco said, and there is no doubt the letters engendered the spirit of revolt among the American colonists.

FIVE-YEAR SEARCH

Found by Dr. Cordasco last June after a 5-year search, papers identifying the author of the Junius letters were traced to a home in Glasgow, Scotland, where those who had them in their possession were unaware of their significance and importance.

MacLeane also was the private secretary of the Earl of Shelburne, friend of William Pitt. It was this latter connection that led Dr. Cordasco to the discovery.

"The Earl said he would identify Junius before his death," the professor declared, "but he died 3 weeks after making the promise. It was assumed the secret had never

been committed to paper, but I felt sure the Earl had made a note of it somewhere."

The Earl's library was disbanded and sold after the owner's death in 1805, and for 5 years Dr. Cordasco traced it through the British Isles. In the Scottish home where the professor discovered the missing papers on which Shelburne had made his notations, the owners were completely unaware of their significance.

Nestled among a sheaf of the Earl's papers was a note which read "let it be known then, once and for all, that my secretary and associate MacLeane was 'Junius,' and that the secret now is secret no more."

The letters of Junius opposed the policies of the Dukes of Grafton and Bedford in North America which, historians say, led to the Revolution.

Probably the most famous Junius letter was the epistle which openly attacked King George III, warning that "while (the king) plumes himself upon the security of his title to the crown, he should remember that as it was acquired by one revolution, it may be lost by another."

A graduate of Columbia University, Dr. Cordasco is author of "A Junius Bibliography," and coauthor of a series of eighteenth century bibliographical pamphlets published by Long Island University.

A native of Manhattan Dr. Cordasco has lived in West New York 4 years. His wife is the former Miss Edna Vaughn, of South Carolina. The professor has taught at Columbia University and Pratt Institute and now teaches philology at Long Island University. He has 3 books in print and is the author of 35 articles that have appeared in scholarly journals.

1949 Annual Report of Benton County, Ark., Agricultural Conservation Association

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. TRIMBLE. Mr. Speaker, soil conservation is one of the important projects which confronts the people and the Congress. If we are to sustain our position in world leadership in our quest for peace, we must by all means sustain the productive capacity of our soil.

The people of Benton County in my district are interested in soil conservation. A day or two ago I received from Scott Evans, of Maysville, Ark., the 1949 annual report of the Benton County Agricultural Conservation Association. These people are doing a great work, and, under unanimous consent, I insert in the RECORD as part of my remarks this report which Mr. Evans has sent me:

COOPERATION

The 3,029 farmers who cooperated in the 1949 triple-A conservation program are the ones who made it a real success. Each of these farmers carried out one or more approved soil- and water-conservation practices during the year. Participation in 1949 represents a 21-percent increase over 1948.

THE LAND

Their farms include 150,758 acres of cropland, 69,689 acres of noncrop open pasture land, and 5,245 acres of commercial orchard. Seventy-four percent of all cropland and 62 percent of all farmland in the county was included in the 1949 conservation program.

GOOD, SOUND SOIL AND WATER-CONSERVATION PRACTICES

Through the application of 5,345 tons of ground limestone, 8,114,952 pounds of 20-percent superphosphate and 199,800 pounds of potash to pastures, meadows, and cover crops these farmers provided not only a protective but a productive cover for 56,000 acres of land in Benton County.

The hills and valleys of our county were covered with an increased acreage of green pastures as farmers established or improved 30,000 acres of pasture by seeding 512,724 pounds of adapted pasture grasses and legumes during the year.

Controlling the weeds on 42,880 acres of permanent pasture by mowing contributed to an increased production of nutritious pasture plants.

The application of phosphate and lime to 40,000 acres of pastures increased the growth of grasses and legumes and prevented the erosion of our precious top soil.

Eight thousand and five hundred acres of summer and winter cover provided organic matter and nitrogen and retained plant food, as well as protected the soil from the pelting rains.

The construction of 52 farm ponds for livestock water contributed to a better system of grazing and aided in the development of additional acres of permanent pastures.

Legume and grass seed harvested from 1,509 acres helped to provide home-grown seed for the seeding of additional acres of pastures and cover crops.

MATERIALS

The furnishing of conservation materials, in the form of phosphate and lime, played an important part in the 1949 triple-A conservation program. Six million pounds of 20-percent superphosphate and 3,000 tons of agricultural limestone were handled on purchase orders.

MONEY

To assist farmers in carrying out this job of conservation, the Government spent $112,072 in Benton County during 1949. For every dollar thus spent the farmer matched it with $2 of his own money in addition to the labor furnished.

Compared to the total farm income of our county, we are putting back into the soil through taxes, one-half of 1 percent of the value of all crops produced in the county.

PUBLICITY

Side by side with the farmers who have performed this job of conservation on the farm, stand those who have kept the problems of soil conservation ever before the public—editors of the county newspapers and manager of radio station KUOA, Siloam Springs.

To all newspaper editors in the county go our sincere thanks for the space given to this important farm program. To the management of radio station KUOA our greatest appreciation for 17 weeks of radio programs during the year.

FARMER COMMITTEEMEN

Farmers who were directly responsible for the formulation and administration of the 1949 AAA conservation program in Benton County were Scott Evans, C. R. Broadhurst, and Dan B. Blair.

EDUCATION

Working with the county committee in an advisory capacity was P. R. Corley, county extension agent, who kept the committee informed on latest experiment station results as they apply to soil conservation problems and assisted with the educational phase of the program.

COMMUNITY COMMITTEEMEN

Seventy farmer committeemen elected by their neighbors advised with the county committee on the conservation needs in their community and made suggestions for improvements in the program. This grassroots approach gave farmers assurance that money appropriated would be used in a way to get the most conservation.

The Little Sisters of the Assumption

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable James A. Farley at the fifteenth annual subscription bridge for the benefit of the Little Sisters of the Assumption at the Hotel Commodore, New York City, on Friday evening, March 10, 1950, on the occasion of his receiving the Humanitarian Scroll of 1950, presented by the Friends of the Little Sisters of the Assumption. The mammoth subscription bridge has been conducted for a number of years by the Friends, the moving spirit in which is Mrs. Martin J. Kennedy, whose distinguished husband ably represented New York in the House of Representatives for a number of years, and for many more has been active in all worth while civic and charitable ventures. Many New Yorkers, prominent in business, the professions, and politics, are patrons of the Friends.

The address is as follows:

ADDRESS OF HON. JAMES A. FARLEY, FIFTEENTH ANNUAL SUBSCRIPTION BRIDGE FOR THE BENEFIT OF THE LITTLE SISTERS OF THE ASSUMPTION, HOTEL COMMODORE, NEW YORK CITY, FRIDAY EVENING, MARCH 10, 1950

Madam Chairman (Mrs. Martin J. Kennedy), members of the Glee Club of the Friendly Sons of St. Patrick, and all the friends of the Little Sisters of the Assumption, I am greatly honored by your selecting me to be the recipient of the Humanitarian Scroll of 1950.

Since 1935, I have followed with close interest the fine work of the nursing Sisters and the nursing centers. This magnificent card party, one of your many activities, has become the annual meeting place of almost 2,000 men and women of good will anxious to advance the cause of humanity through the Christ-like work of the nursing Sisters.

Your attendance, on this occasion, gives moral support to this truly noble cause and your financial aid will make it possible for the nursing Sisters to extend their work, in your name, among the sick poor in New York City. Like the population of our city, the Sisters come from every part of the globe and speak many tongues. Therefore, they are able to minister to any person in need of help, regardless of his language.

Throughout the past 59 years, the professional services of the Sisters have been at the command of any poor sick person. As you know, the rule of this religious community imposes upon each Sister-member the obligation to nurse the poor patient re-

gardless of the nature of his illness, his origin, his race, or his creed. Because of this spirit of genuine sacrifice to the underprivileged, the work of the Little Sisters of the Assumption has a wide appeal to the generosity of our citizens—Jews, Protestants, and Catholics alike.

We find this Order of Sisters working in other cities of the United States and in many foreign countries. During my travels, I had the opportunity to observe, at first hand, the work of the Little Sisters of the Assumption in far-off lands. Their kind advice and hospitality given to our armed forces, to our prisoners of war, and to the men, women, and children, made homeless by the war, won a warm place in my heart and has made me a lifelong friend of the nursing Sisters.

My personal contribution to the subscription bridge is a small token of my appreciation for the maternal guidance that the Sisters gave to the women of America, serving our country, in other lands.

I believe tonight's gathering shall be our greatest success. In addition to the proceeds from the bridge party, attended by such a large number of supporters, the Sisters should gain many new friends to help them carry on their daily tasks. I am proud to be a member of the Friends of the Little Sisters of the Assumption and I cordially invite you to become an active worker and to assist in the every-day problems of the nursing centers.

Allow me to pay you my personal tribute for your cooperation in making this bridge party so attractive and enjoyable. I want you to know that the committee and the Sisters are most grateful to you. Our special thanks go to the young ladies and gentlemen who compose the junior committee. At all these parties, their work has been invaluable. Their youth, charm, and gaiety are vital to this festive evening. My friends of the glee club of the Friendly Sons of St. Patrick have been loyal to this worth while charity. Their splendid musical program has been the high light of each of our fifteen bridge parties and they have our heartfelt thanks and the prayers of the Sisters.

Participating in this gala bridge party gives assurance that we are desirous of extending the nursing facilities and child-guidance services of the Sisters and the nursing centers. Gathered as we are, representing all creeds, gives encouragement to the hope that the Brotherhood of Man and the Fatherhood of God, as exemplified by the Little Sisters of the Assumption, shall always prevail in New York City.

Each day we read in the newspapers of heroic rescues and breath-taking services performed by our valiant policemen, firemen, and hospital personnel. Do you realize that the day-in and day-out work of the Sisters, while less spectacular and devoid of publicity, is on that same high level of devotion and professional skill? Tending a mother in her severe illness, supervising and feeding her children, cleaning her home and having dinner ready for her breadwinner is a job that requires the ability of a trained nurse, the tact of a diplomat, and the patience of a saint.

Profoundly grateful, I accept with most sincere appreciation the Humanitarian Scroll of 1950, designed and hand painted by one of the Sisters and awarded, each year, by the friends of the Little Sisters of the Assumption. I am doubly grateful because my name is now the second name on the honor roll. Let me assure you that I shall always cherish the distinction you have conferred upon me and, in the future, I shall consider it a privilege to continue to play my part in the work of your organization and to sing the praises of the real humanitarians—the Little Sisters of the Assumption.

Thank you and good night.

Why New York?

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. KLEIN. Mr. Speaker, under leave I am inserting in the RECORD an editorial which appeared in the New York Herald Tribune of Monday, March 13, entitled "Of Course New York" concerning an article which appeared in the February 11 issue of the Saturday Evening Post, together with a rebuttal—in excerpted form—of the Post article, also carried in the Herald Tribune of the same date, over the signature of Walter Hoving, president, Commerce and Industry Association of New York.

Mr. Speaker, I am New York born and bred, and I am glad to join with Mr. Hoving in defense of a truly great home town, which despite its size, has always proved most hospitable toward both its own businessmen and visitors—even from Philadelphia.

[From the New York Herald Tribune of March 13, 1950]

OF COURSE, NEW YORK

Habitual readers of the Saturday Evening Post may recall a recent article, entitled "Why New York?" It was a curious hodgepodge by Mr. Wesley W. Stout, who used to be a New York newspaperman once upon a time, and conveyed the general notion that New York is a dreadfully expensive, inconvenient hole unsuitable to most business or normal human existence. This, of course, is a favorite thesis of Post editors which comes bobbing out of Philadelphia with seasonal regularity. We are used to it.

Now there is not much use arguing with people who are convinced that New York is composed of 8,000,000 neurotics, an evolutionary development of subways, night clubs and the struggle for South Pacific tickets. They like to believe it. Such subjective judgments are hard to dispute or disprove. The truth is that while New Yorkers are largely a devoted lot of homebodies, they do feel passionately that this is a pretty wonderful city. Our assets, virtues, and stimulations are so vast and complex that most of us are puzzled at dissenting reports. And as for asking "Why New York?" the question must be shrugged off as downright ridiculous.

But tolerance can be carried to excess. Misstatements about New York, repeated often enough, may gain just enough acceptance to cause trouble. Fortunately the Commerce and Industry Association of New York has spoken up against Mr. Stout's farrago. On this page appears a detailed rebuttal by Walter Hoving, president of the association, which deserves careful reading. It is a sober statement of facts against loose generality, a point-by-point exposition of what makes New York great in people and culture, business, and industry. Everybody knows that New York is the magnet to America, the center of management for the great corporations, a ferment of creative vigor. And it is excellent that the firm bases of New York's leadership, the reasons why our population and business are constantly growing, are painstakingly presented. Furthermore, if the silly question "Why New York?" is ever asked again, let us slap it down hard and promptly with the facts.

[From the New York Herald Tribune of March 13, 1950]

WHY NEW YORK?

WALTER HOVING, ANSWERING THE SATURDAY EVENING POST, STATES THE FACTS

(A month ago the Saturday Evening Post published an article entitled "Why New York?" The following letter of rebuttal by Walter Hoving, president of the Commerce and Industry Association of New York, in excerpted form, is self-explanatory.)

Mr. BEN HIBBS,
Editor, Saturday Evening Post,
Philadelphia, Pa.

DEAR SIR: The article by Wesley W. Stout in the February 11 issue of the Saturday Evening Post posed a question: "Why New York?" to which the author responded with a variety of answers based, for the most part, on myth and legend rather than fact.

Most of the answers critical of New York are ascribed by Mr. Stout in his article to a member of a firm which devotes itself to locating sites in other communities for business firms in New York and elsewhere. But before expressing his informant's viewpoint, Mr. Stout, on his own, unequivocally asserts that New York "is the most costly city in all ways in which to live and do business," etc. Let us analyze that one first:

The cost-of-living index for New York City, for December 1949, was 164.9. With the exception of Portland, Maine, and Boston, Mass., this represents the smallest percentage increase, over the base period (1935–39—100), of any of the country's 34 large cities. A projection of the data of the United States Department of Labor on The Annual Budget Required To Maintain an Average Family of Four shows that in December 1949, New York City was in eighth place of the 26 largest cities for which comparable data was available. This budget for a New York family of four would be approximately $3,517, compared with $3,684 for Washington, D. C., the highest, New York City being only 11 percent higher than New Orleans, the lowest city in the group.

The facts that New Yorkers maintain 5,769,065 individual savings accounts totaling $9,908,353,000, an average of $1,544 per account or $1,113 per capita, compared with a per capita average of $362 for the country as a whole, is evidence that New Yorkers do not have to spend all their earnings in order to keep body and soul together.

Mr. Stout continues with an attempt to soften his own most costly city blow by admitting that, despite the alleged disadvantages he outlines, more businesses are moving into the city than are moving out. He then quotes his aforementioned informant as follows:

"New York has one thing only to offer a normal manufacturing business. * * * This is the largest and most varied pool of labor skills. All else is against New York." There follows a list of liabilities.

Here are the facts about these liabilities and other projected by Mr. Stout:

"Wages are the highest." Latest available United States Department of Labor figures show that for November 1949, the average weekly earnings of production workers in manufacturing industries in New York City were $55.98, compared with the average for the States of Utah, $66.92, and Washington, $64.45; the cities of San Francisco, $61.68; Los Angeles, $61.53; Buffalo, $61.16; Chicago, $60.45; Milwaukee, $59.43, and St. Paul, $58.62; and a United States average of $54.53.

Nor are clerical salaries exorbitant. According to a recent survey by the National Industrial Conference Board, the average median salary for the principal clerical classifications showed New York no higher than the average median salary rates for

those in the 20 large cities covered in the survey. The average median for New York stenographers is $46. Seven of the 20 cities were higher, with San Francisco topping the list at $54. Similar comparisons occur in other job classifications such as file clerks, senior copy typists, comptometer operators, despite the better type of personnel available to employers in New York City.

"Labor turn-over is the highest." This is pure fiction and hopeful guesswork since the United States Department of Labor states no comparative figures for cities are available.

"Labor efficiency usually is lower for a variety of reasons." No comparative data are available but anyone with an elementary knowledge of labor markets recognizes, and even the article admits, that New York not only has the largest supply, but the best-trained labor force for many skills. That is one of many prime reasons impelling manufacturers to locate here.

"Building and rental costs are the highest." New York is the only major city in the country where commercial and business rents are controlled by law, restraining rates to 15 percent above the 1943–44 levels. According to United States Department of Labor's latest data (October 1949), with the exception of Washington, New York has had the smallest increase in residential rents of 34 large cities. The index, 108.9, shows less than a 9-percent increase above the 1935–39 levels. The average index for the 34 cities is 1215, with Birmingham, 142.7; Jacksonville, 140.7; and Chicago, 139.7.

"State taxes are exceeded per capita only by Rhode Island." According to the latest data (1948), published by the Taxation Foundation on per capita State collections, including unemployment compensation, State taxes per capita for New York were $64.91. Not only was Rhode Island ($66.63), higher, but also eight other States: Washington ($91.07), Arizona ($82.62), California ($84.06), New Mexico ($76.25), Colorado ($72.44), Nevada ($72.32), Michigan ($70.16), and Utah ($66.78).

As for the statement that the over-all tax burden is highest, a reading of the Report on Relative Tax Costs Within Seven Selected Cities for Three Groups of Manufacturing Industries, prepared by Prof. Harley L. Lutz, of Princeton University, will go far in dispelling this myth about heavy New York City business taxes.

"Electricity is the most costly, prohibitively so, for large users. A typical residential electric bill runs $14.22 for 500 kilowatts. The York, Pa., rate for 500 kilowatts is $7.71." The Consolidated Edison Co.'s research department could have furnished accurate, up-to-date data which show that the cost of electric current to New York industrial users is by no means the highest and that the rate quoted for uncontrolled service of 500 kilowatts for York, Pa., is antiquated. This was increased on January 17, 1948, to $11.65, while the New York rate on January 10, 1949, was reduced to $13.10.

New Yorkers relax in their apartments only as a last choice * * * they sleep fewer hours and less soundly. This sage observation might better be expected from a tourist taking notes on a corner at Times Square. New York City is made up of five boroughs, and a majority of the people working in Manhattan live in its four adjacent communities. Most of them, too, have their own homes and little gardens and live as normal a life as any other American city dweller.

Strikes are a more real and immediate peril. A check of the record will show that New York City has less difficulties from strikes than almost any other large industrial center.

Mr. Stout concedes that nearly half of the 100 largest United States corporations and hundreds of lesser national corporations have their headquarters in New York City. But he fails to point out that this city is the management center of the country. These headquarters offices of large concerns furnish a large part of the executive and clerical employment to the citizens of this city.

But let us look at New York business as a whole. According to the latest data, more than 234,540 business firms (including 41,343 manufacturers) are established and doing business in the city. These concerns give employment to more than 2,979,743 persons and have annual pay rolls totaling well over $9,000,000,000. New York City's manufacturing firms alone produced over $12,000,000,000 worth of wares in 1947, according to the census of manufacturers.

New York's retail sales in 1948 reached the staggering total of $7,902,859,000 and its people had an effective buying power (disposable income) in 1948 of $14,236,438,000; according to data supplied by Sales Management magazine.

Surely the heads of these 234,540 businesses wouldn't remain in any city unless they were convinced it offered them the best opportunity to prosper.

Businessmen come to New York and remain here because the city offers them many advantages. To enumerate a few:

1. An abundant supply of skilled labor.
2. Availability of raw materials.
3. Adequate power facilities.
4. Close proximity to a large consumer and industrial market for their products in the New York metropolitan area.

However, New York manufacturers do not have to depend upon the New York City market alone for their business, since the metropolis is the center of the wealthiest and most productive part of the country.

New York City is also the country's largest wholesale buying center. Most of the Nation's department and chain stores maintain their principal buying offices in the city, thus making it convenient for local manufacturers to market their products with a minimum amount of traveling. The markets and raw materials of the world are readily available to New York manufacturers through the thousands of foreign trade brokers who make their headquarters in lower Manhattan. Rapid and efficient transportation by rail, air, truck, and steamship is available to New York manufacturers.

The opportunity for success in New York acts as a magnet for the most aggressive and potentially successful people in the country. The influx of highly skilled, talented personnel continually replenishes and furnishes material for continual expansion of its business concerns.

The city offers the highest standard of living to its citizens of any city of comparable size. Its facilities for better health, education, and recreation are equaled nowhere else in the country.

New York has everything that one could desire, whether he be a business leader, a worker, a housewife, or a growing child. New York is a vigorously expanding city of opportunity for any man or woman who wants to make a place for himself and is willing to work for it.

These are the facts. The Commerce and Industry Association, as the largest service chamber of commerce in the East, can vouch for them. They comprise the real answer to the question, "Why New York?"

Very truly yours,

WALTER HOVING,
President, Commerce and Industry Association of New York.

Citation for Contribution Toward Preserving American Ideals of Education

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1950

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following excerpts from an address by Hon. M. Vashti Burr, deputy attorney general of Pennsylvania, and president of the All Pennsylvania College Alumni Association, of Washington, D. C., at the second annual dinner of the association February 20, 1950, at the Mayflower Hotel:

We came together for the first time at an All Pennsylvania College Alumni dinner in October of 1948, more or less as a spontaneous growth in connection with the observance of Pennsylvania Week.

What was the common cause that could draw together in Washington the alumni of Pennsylvania's colleges and universities? Something around 30 percent of the alumni in this area are not natives of Pennsylvania.

The common cause was—and is—our common concern in promoting and encouraging an educational system of which not only Pennsylvania but the Nation can be proud.

* * * * *

We are confident that the colleges themselves must benefit in fair measure from this increased activity by their alumni in and near the Nation's Capital.

* * * * *

In the constitution of the association we speak of the freedom, dignity, and integrity of the individual—of a government of laws and not of men—of an enlightened public opinion—of the principles and precepts underlying our American system and the social and economic bases of American life—and of the preservation and extension of the American ideals of education, to assure to the youth of America not only the opportunity to develop their special skills but also the opportunity to become better citizens.

The meaning of such phrases is and always has been quite clear to those who understand and believe in the system of self-government and the way of life which have made America preeminent among nations—a system and a way of life which Longfellow surely knew and loved when he wrote:

"Humanity with all its fears,
With all the hopes of future years,
Is hanging breathless on thy fate!"

It has become all too popular a pastime in these days of confused thinking to speak disparagingly of the precepts and philosophy which are the very essence of America's greatness.

We are well aware that there are all too many—among Americans as well as aliens—who miss no opportunity to beclaud the simple, self-evident truths and to ridicule all that is distinctly American, choosing rather to praise alien ideas which, like wolves in sheeps' clothing, purport to pay homage to the so-called common man when in truth they relegate man to the ignominious place of a ward or chattel if the State, isms, or ideologies which are, in truth, antihumanity, if not anti-God.

There are those who would like nothing better than to see our educational system in America refashioned to the pattern of those alien ideas. Let us not deceive ourselves.

They have been working long and hard toward that end.

Before the ceremonies this evening have been completed the association will have conferred upon an individual a citation for "outstanding contribution toward preserving and extending the American ideals of education."

We have in mind those ideals which, since the early years, even long before the Declaration of Independence, led to the establishment of an educational system adapted to the liberal concept of a government founded on the freedom and dignity of the individual, or, as expressed by George Washington, "the right of free-born men to govern themselves in their own way."

Those ideals have had their firm foundation upon the bedrock of certain principles which, if maintained, will serve as a bulwark and shield against destructive external influences.

The first of those principles is and must be this: The soul of man is our primary concern. A recognition of the spiritual, religious nature of man is the major premise on which the education of a civilized people must be founded.

Each of the State constitutions adopted immediately after the Declaration of Independence established certain principles as fundamental law. A decade later, when our Federal-State system was being charted, those principles were assured continued recognition by the inclusion in the famous Ordinance of 1787, adopted by the Continental Congress, of a declaration reading as follows:

"Religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and means for education shall be forever encouraged."

Even in our legislative bodies, in our town meetings; yes, even at a dinner meeting of alumni of Pennsylvania colleges and universities, our first act is to recognize the spiritual nature of man and our oneness with God—through prayer. That is symptomatic of the moral philosophy of our people, as much a part of our way of life as freedom of speech and freedom of the press.

The first principle, therefore, is the recognition of the soul of man as our primary concern.

As a corollary principle it is acknowledged that in our American system there are moral limitations on the civil power, the real function of government being perceived as an aid to individual initiative and enterprise and the safeguarding of the family as the keystone of the social structure.

It is the traditional American ideal of education to promote and develop an educational system that will ever make the people conscious of these basic principles.

Pennsylvania's 80 institutions of higher learning have adhered to the highest tenets and the noblest traditions of the American system.

As alumni of those institutions, we are proud (1) to promote a more widespread knowledge of their existence and excellence, and (2) to encourage them to continue the development of an educational system that has contributed immeasurably toward strengthening the moral fiber of the American people.

Do You Want Socialism?

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Banner, Knightstown, Ind., for March 10, 1950:

DO YOU WANT SOCIALISM?

It is unfortunate that everyone could not have heard Stephen Noland, former editor of the Indianapolis News, when he spoke last Wednesday before the Knightstown Kiwanis Club.

Mr. Noland described the British socialistic system as he saw it during the 2-month period which he spent in England.

No responsible, thinking American could possibly support the further socialization of this Nation if he had heard Mr. Noland.

The socialization of America is well under way, but the unfortunate part about it in this country is that those who desire to socialize the Nation are flying under false banners. Instead of running on the Socialist ticket, they are using one of the major parties as the tent under which they may hide.

Here are some of the facts which Mr. Noland cited, and which Americans may expect if and when the Socialists finally succeed in capturing everything:

1. British labor has lost most of its bargaining rights, since the large segment of labor is now working for the Government.

2. British businessmen are being closed out. Many industries have already been taken over by the Government.

3. A British workingman finds it almost impossible to move from one part of the country to another because of regulations on his working and also on his housing.

4. No real incentive, initiative and effort are evidenced in Great Britain.

5. British medicine has become a routine matter—with the little individual attention being given to patients.

6. The British mother and wife is the big loser. She doesn't know whether her children belong to her or the Government, and Government rationing has prevented her from preparing any kind of decent meals.

7. Under national housing, it's getting so that the Government tells everyone where to live and how to live.

Think over these facts, Americans. Ask yourself whether these are things you want in this country, and whether you are going to be misled by golden promises which can never be fulfilled. Ask yourself if the established American system, despite its shortcomings, isn't just about the best plan.

They Want Farley

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bridgeport Post:

THEY WANT FARLEY

Connecticut friends of James A. Farley—and we wouldn't attempt to count them because they're too numerous—must have been thrilled at recently published stories to the effect that spontaneous "Farley for Governor" booms are springing up in various parts of New York State. Contests for governorships cannot cross State lines, of course, but if they could and Jim Farley were the nominee he'd get a tremendous vote in Connecticut.

As for those Democrats in New York State who are hoping to draft the former Postmaster General and former State and national chairman of their party, they are showing good sense thereby. The present governor of New York is a Republican and the Democrats naturally covet the office. And what better start could they make toward that end than by nominating the man who is undoubtedly the most popular citizen in their commonwealth?

Not that personal popularity alone is a reason for making a man governor or President, but it certainly does help on election day. And in the case of James A. Farley he has already given more than sufficient proof of his ability to handle large affairs with skill and efficiency.

In public life he was a splendid Postmaster General and in private life he is an eminently successful businessman. As a Democrat he believes in party regularity and his record in that respect is without a blemish but at the same time he has never been a New Dealer, fair dealer, a miss dealer, or any other kind of dealer. Just a Democrat with a capital D.

In consequence he is admired and trusted on the other side of the political fence even by those who have no particular use for the Democratic Party as constituted today. He would command a great independent vote and no small amount of Republican support solely on the basis of character, personality, and ability.

As it is, the boom appears entirely spontaneous and it is not at all certain that he would consent to run. He declined the same nomination in 1938 when it was his for the taking, and stepped aside in favor of HERBERT H. LEHMAN, who was elected.

For our part, we hope that the present draft movement will be successful. After all, Connecticut and New York are neighboring States and even if the New York election isn't any of our Yankee business here in Connecticut, most of us would feel happy to know that that habitual good neighbor, Jim Farley, was in the executive office in Albany. We could not then imagine any problems arising between the two States which couldn't be settled in the fairest way and in the easiest and friendliest manner.

Let Americans Take Notice

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an article from the Detroit Times of March 8, 1950.

This article includes a statement made by one Emil Mazey, who is represented as secretary-treasurer of the UAW-CIO. If such a statement had been made by an irresponsible person, it could be ignored; but this declaration comes from an official of a labor organization.

I am constrained to believe that the philosophy expressed by this man does not represent the thinking of thousands of loyal Americans in that organization itself.

If confiscation is to be the rule in America, then freedom will soon be extinct.

REUTHER AND MAZEY REVEAL 10-YEAR GOAL OF AUTO UNIONS—"ALL WE PRODUCE," IS AIM OF EMIL

(By Jack Crellin)

Chrysler Corp. and the automobile industry were told today what they could expect in the way of demands from the UAW-CIO in the weeks and years ahead.

The double-barreled warning was given by Walter Reuther, UAW president, and Emil Mazey, secretary-treasurer.

Speaking at a mass meeting of 20,000 Chrysler workers held in the State Fair Coliseum yesterday, Reuther told the corporation that for every day and week the Chrysler strike, now in its seventh week, is prolonged it will cost Chrysler more for a settlement.

TWO-HUNDRED-DOLLAR PENSIONS

He also revealed that the ultimate goal of the union, perhaps 10 years from now, is a pension of at least $200 a month.

Mazey, an avowed Socialist, was even more explicit when he declared:

"We are only asking for a little of what we produce. One of these days when we are organized politically we are going to ask for everything we produce."

Reuther said he had given Chrysler this ultimatum:

"The longer you drag this strike out the more it is going to cost you."

GOAL IN 10 YEARS

Then referring to goals of the union he declared:

"We are going to build brick by brick up to $200 pensions, where they ought to be. Give us 10 years and by working at the Federal Government level and collective bargaining we will get the $200."

Directing his remarks to K. T. Keller, Chrysler president, and pointing out that the corporation is spending hundreds of thousands for advertisements. Reuther asserted:

"Nobody is being fooled by your propaganda. You had better save your money because you are going to have to pay it to us before this is over."

He said the union will not retreat one inch from its stand that any pension plan at Chrysler must be a funded one created through fixed hourly contributions for each employee by the corporation.

Mazey delivered a financial report which dealt in detail with the cost of the walkout to the international.

He estimated that the international would receive beween $600,000 and $700,000 a week from the assessment of $1 a week on all working members of the union.

He said the international has already paid out $372,258 for prosecution of the strike and is prepared to spend "its last dime if necessary to win."

ONE HUNDRED AND FIFTY THOUSAND DOLLARS FOR INSURANCE

Of this amount, $150,524 has gone to local unions to replenish strike funds, while another $150,000 has been paid in premiums on Blue Cross hospital insurance for Chrysler strikers.

At least 4,000 veterans on strike have received about $100,000 from the State's veterans' trust fund while 10,000 other strikers have obtained emergency community welfare aid amounting to at least $150,000.

Norman Matthews, UAW Chrysler director, described the Chrysler management as "the most vicious in the history of the United States."

He warned: "We are going to fight, and we are going to make sure all of our people get the equity they deserve. We'll stay out till hell freezes over."

Negotiations with Chrysler were resumed today at the Sheraton Hotel.

Establishment of Fees for Special Federal Services

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, March 15 (legislative day of Wednesday, March 8), 1950

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared, as chairman of the Senate Committee on Expenditures in the Executive Departments, on the establishment of fees for special Federal services.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ESTABLISHMENT OF FEES FOR SPECIAL FEDERAL SERVICES

Senator JOHN L. McCLELLAN, chairman of the Senate Committee on Expenditures in the Executive Departments, stated today that the study now under way by the committee staff, with respect to establishment of fees for special Federal services, is arousing widespread interest both within and without Government circles.

In a press release of March 6, the Senator said, there was made available preliminary findings of the staff based on discussions held with the Department of Agriculture, the Department of Commerce, and the Federal Communications Commission. In each instance the staff had found not only an active interest in the subject, but also discovered that detailed studies had already been undertaken in the past or were currently under way.

The Federal Communications Commission has been particularly active in the area and has now submitted to the committee a written report, quoted below. Senator McCLELLAN said that this report exemplifies the types of services in which the committee is interested and appears to point up the practicability of shifting to the recipients and beneficiaries a greater portion of the actual cost incurred by the Government in rendering special services which at the present time are a burden of the taxpayers at large. At the same time, the Senator repeated his assurance that the committee has no thought whatsoever of recommending that charges be made for services of which the beneficiaries are the general public; the study is aimed solely at determining the feasibility of charging for those services which benefit particular individuals, groups, or interests.

To illustrate more specifically the nature of the committee's study, Senator McCLELLAN directed particular attention to the following excerpt from the Federal Communications Commission's report:

"As to the activities of the Federal Communications Commission for which charges might be made, they may be grouped into the following classes:

"(1) Radio application filings.

"(2) Applications for authorizations under title II of the Communications Act and Cable Landing License Act.

"(3) Continuing regulatory or servicing activities.

"(4) Inspections.

"(5) Equipment tests and approvals.

"(6) Miscellaneous filings—which would cover such items as petitions, motions, appearances, and similar papers filed chiefly in connection with the conduct of hearings."

With respect to the first item in the above list, radio application filings, the FCC reports that "construction-permit applications constitute the Commission's most important work load" and suggests that "a filing fee could be required to accompany each such application." The Commission states further in regard to this category that "the processing of applications for new stations is the most costly function performed by the Commission."

In clarification of the second item in the above list of FCC activities, Senator McCLELLAN pointed out that proceedings under title II of the Communications Act and Cable Landing License Act involve, with respect to common-carrier communications, issuance of certificates of convenience and necessity for the construction of a new line, the extension of any line, or the acquisition or operation of any line. Further, and with certain exceptions, a carrier must obtain FCC approval before discontinuing, reducing, or impairing the service. Under this same legislation, FCC processes applications for the landing and operation of submarine cables. Senator McCLELLAN pointed out that while these activities clearly work to the benefit of the general public through the providing of essential communications facilities, it also seems obvious that clearance by FCC constitutes undeniable opportunity for financial profit to the licensees.

With regard to the third item of the Commission's functions, continuing regulatory activities, FCC suggests that regulation of rates, services, and accounting for communication common carriers might be equitably financed by turning "toward the plans of various State commissions of requiring reimbursements from the individual companies subject to the regulation for the time and expenses of Commission personnel actually engaged in projects directly connected with such companies." As to FCC radio regulatory functions, the Commission suggests that the "charges might be assessed on a yearly basis or might be required in connection with applications for licenses and renewals of licenses."

Senator McCLELLAN said that the committee is particularly interested in equipment approval by FCC. The Senator stated that performance characteristics of communications facilities are subjected to tests in the Commission's laboratory and, if specifications are met, an approval number is issued to the manufacturer. The advantage to a manufacturer in the acquisition of such FCC approval is obvious.

In emphasizing the above salient features of the report, Senator McCLELLAN commended it as complying with the needs of the committee in furthering its study. He stressed the fact that the committee itself has arrived at no conclusions whatsoever and will not do so pending receipt and evaluation of all pertinent data. The nature of agency submissions to the committee thus far would seem to indicate that public hearings would be desirable.

The full report from the Federal Communications Commission follows:

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D. C., March 8, 1950.

Hon. JOHN L. McCLELLAN,
Chairman, Senate Committee on Expenditures in the Executive Departments, United States Senate,
Washington, D. C.

DEAR SENATOR McCLELLAN: This will answer your inquiry of February 20, 1950, relative to the possibility of charging fees to the general public or to special interests for services performed by this Commission.

As to cases where fees are now charged for Commission services there are only two such instances. The first case is in connection with the inspection of the radio installations

aboard certain vessels for which charges are made pursuant to the provisions of section 4 (f) (2) of the Communications Act of 1934 (47 U. S. C., sec. 154 (f) (2)). The Commission is required by law to make periodic inspections of this equipment in order to determine whether or not it will perform its primary function which is to provide communication service for the protection of life and property at sea. Because of the nature of the shipping business, vessels are sometimes not accessible to our inspectors during the usual office hours and our people are required to work overtime to perform the inspection. In such a case the ship owner is required to reimburse the Government for the amount of this overtime. The money is not returned to the Commission, but is required by statute to be covered into the Treasury's miscellaneous receipts account.

In the second case, the Commission has authorized the Civil Aeronautics Administration's private pilot examiners to issue the radio telephone operator permit for a fee of not more than $1 per issuance. This fee is retained by the examiner. The same authorization may be obtained free of charge from any of the Commission's field offices if the applicant desires to make application there.

The matter of charging fees in other instances of issuance of licenses and in the rendition of other services by the Commission has been designed as one of the items to be investigated in connection with the President's management improvement program under Executive Order No. 10072. Work now in progress on reorganizing the Commission's staff will take so much time, however, that work upon the problem of charging fees may be delayed considerably.

A concrete proposal relative to the matter was advanced in Congress in 1932 in connection with amendment of the Radio Act of 1927. The proposed amendment would have added a new section 17 to that act setting out a definite schedule of charges to be made in connection with the activities of the (then) Federal Radio Commission. The amendment was withdrawn by its sponsor, Senator DILL, and resubmitted as a separate bill, S. 5201. The latter bill was never reported out of committee. (References: S. Res. 351 (70th Cong.), S. Rept. No. 564, 72d Cong., 1st sess.)

As to the activities of the Federal Communications Commission for which charges might be made, they may be grouped into the following classes:

1. Radio application filings.
2. Applications for authorizations under title II of the Communications Act and Cable Landing License Act.
3. Continuing regulatory or servicing activities.
4. Inspections.
5. Equipment tests and approvals.
6. Miscellaneous filings—which would cover such items as petitions, motions, appearances, and similar papers filed chiefly in connection with the conduct of hearings.

The considerations as to each of these items are given below:

1. Radio application filings: The major classes of applications filed are: Radio station construction permit; radio station license; renewal of license; authority for assignment of license; and authority for transfer of control over licensee.

Applications for construction permits are required in the case of all new broadcast stations and other stations with the exception of amateur, ship, aircraft, and railroad mobile stations. These construction permit applications constitute the Commission's most important work load. In the case of broadcast stations, many of them—and the number is constantly increasing—must go to a formal hearing, since the granting of one application very often means that one or more other applications must be denied. (The Communications Act requires that applicants be afforded the opportunity of a hearing if the Commission is unable to find, from the application, that it should be granted.) A filing fee could be required to accompany each such application.

After a construction permit has been granted and the station is in satisfactory operating condition, an application for license must be filed. (Where no construction permit is required, a license application is submitted originally.) If a license is granted, operation may be continued for the term thereof (a maximum of 3 years for a broadcast station and 5 years for other stations) without further filings. At the end of the license term an application for renewal of license is submitted. If a licensee desires to assign his license to another party, or if control over the licensee is transferred, prior approval of the Commission must be requested in the proper application The processing of applications for new stations is the most costly function performed by the Commission. After the granting of a construction permit or initial license the bulk of the Commission's work falls in the continuing regulatory field.

2. Applications for authorizations under title II of the Communications Act and Cable Landing License Act: There are many applications filed by common carriers under title II of the Communications Act, which title has to do with the regulation of common carrier communications. Thus with certain exceptions, a certificate of convenience and necessity must be obtained by a common carrier from the Commission under section 214 of the act for the construction of a new line, or of an extension of any line, or the acquisition or operation of any line. Also, with certain exceptions, a certificate is required under section 214 of the act before a carrier may discontinue, reduce, or impair service to a community or part of a community. Sections 221 and 222 of the act provide for applications to the Commission for authorizations with respect to telephone and telegraph mergers, respectively. In section 203 of the act, provision is made for application to the Commission for authority to make tariff schedules effective on less than 30 days' statutory notice. Section 212 of the act requires authorizations from the Commission for certain interlocking directorate and officer positions. In addition, under Executive Order No. 6779, the Commission processes applications seeking licenses under the Cable Landing License Act of 1921 (42 Stat. 8 and 9) for the landing and operation of submarine cables. In order to give you a partial indication of the volume of these various applications, in the year 1949 there was a total of 1,443 applications filed under sections 214 and 221 of the Communications Act; 178 applications were filed during that year for special permission under section 203 of the act to file tariff schedules on less than statutory notice.

3. Continuing regulatory activities: The major part of the Commission's work in the field of common-carrier regulation is related to continuing regulatory activities as distinguished from the processing of specific applications. In the common-carrier field, the Commission is principally concerned with the regulation of rates, services, and accounting of the communication common carriers furnishing interstate and international services, to the end that such rates, services, and accounting shall be just and reasonable in the public interest. If fees are to be collected with respect to such activities as these, it might be more practical to turn toward the plans of various State commissions of requiring reimbursements from the individual companies subject to the regulation for the time and expenses of Commission personnel actually engaged in projects directly connected with such companies.

As to the Commission's continuing regulatory activities with respect to radio stations, charges could be assessed against going radio stations and used to offset the cost of the Commission's continuing regulatory activities such as service developments, frequency measurements, developments and maintenance of rules and regulations, etc. The charges might be assessed on a yearly basis or might be required in connection with applications for licenses and renewals of licenses.

4. Inspections: The Commission inspects radio stations to determine whether or not equipment is in such condition that it will conform with the rules. In the case of certain classes of ship stations inspection is compulsory under the law and in the case of other stations it is optional. The extent to which it is carried out depends on the availability of personnel to do the work.

5. Equipment approval: Equipment is checked in certain cases to determine whether or not it meets performance specifications and if it does meet such specifications, a type approval number is issued to the manufacturer and is required to be affixed to all subsequently manufactured identical pieces of apparatus. Specifications are particularly rigid in the marine field where safety of life and property may depend upon the proper functioning of such equipment. Testing in the Commission's laboratory is frequently required.

6. Miscellaneous filings: These are chiefly papers of a legal nature such as petitions, motions, etc., which are filed in connection with hearings. They are numerous and constitute a sizable work load.

As statistical data which would indicate the numbers of items for which fees might be charged, there is attached the Commission's latest release on the number of radio authorizations valid and outstanding and it is suggested that you further refer to the Commission's fifteenth annual report, which has been made available to the staff of your committee. This report shows the number of applications handled by the Commission, the number of grants made, the number of hearings held, and also gives financial data which shows revenues, expenses, and other items with respect to radio broadcast stations and common carriers.

I hope that the foregoing will provide you with the data which will assist you in the conduct of your investigation as far as Federal Communications Commission is concerned. Please do not hesitate to call upon me for further information or for clarification of the data furnished you herewith.

Sincerely yours,

WAYNE COY, *Chairman.*

Compulsory Licensing of Motion-Picture Industry

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 15 (legislative day of Wednesday, March 8), 1950

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me in opposition to "police

state" legislation to establish compulsory licensing of motion-picture industry.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

OPPOSITION TO "POLICE STATE" LEGISLATION TO ESTABLISH COMPULSORY LICENSING OF MOTION-PICTURE INDUSTRY

Mr. President, I should like to make just a brief statement on the subject of the bill introduced by my distinguished colleague the senior Senator from Colorado [Mr. JOHNSON] yesterday, S. 3237, which would provide for the licensing of motion pictures in interstate commerce. I have a tremendous admiration for my colleague, whose long service in the Senate and whose devotion to his State and Nation are so well known as not to require repetition. It is with surprise and deep regret, therefore, that I read in the RECORD and noted in the newspapers his introduction of this stringent legislation. Let me set forth my views on this point.

I SHARE CONCERN OVER DISINTEGRATION OF MORALS

1. I share absolutely Senator JOHNSON'S fundamental concern over any factor which would disintegrate the morals of the American people. I believe, with him, that motion-picture actors and actresses have a heavy responsibility for righteous self-conduct, in view of the fact that they are held up as ideals by our American citizens, particularly by our young people. I believe that the individuals to whom Senator JOHNSON referred, connected with the picture Stromboli, are to be condemned as any other individuals must be condemned for breaking the moral law, for violating the principles of God and man, for transgressing the code of human decency.

Every American churchgoer, every minister, every righteous-thinking citizen in our land deplores this breaking of the moral code, particularly by individuals who have been held up as ideals. We deplore, too, any action by the motion picture or any other industry which might crudely seek to commercialize on the basis of publicity given to a breaking of the moral law.

WE SHOULD USE FLITGUN, NOT SHOTGUN

2. However, to generalize on the individual, isolated case of Stromboli misconduct and to ask that a whole system of Federal regimentation be set up to prevent such comparatively rare abuses is, I believe, to commit a grave mistake. Why use a 100-barrel shotgun where a flitgun would do? I, for one, therefore, would oppose, as I am sure practically every Member of the Senate would oppose, this bill with its tremendous implications of a European police state—a Soviet-type OGPU.

Senator JOHNSON'S bill would require the setting up of a tremendous bureaucracy which would license every motion-picture actor and actress, every producer, every script in this land. It would vest in the Department of Commerce dictatorial powers which could mean life and death over the entire motion-picture industry.

SUPREME COURT WOULD DECLARE THIS LAW UNCONSTITUTIONAL

3. Such powers would obviously be but the beginning of an entire dictatorial train of legislation which could end up by licensing every stage star, every radio and television actor, and the entire entertainment profession. Where it would end, no man could foresee.

The Department of Commerce does not want these dictatorial powers; the Congress would not want to confer such powers; and the American people would not want these powers conferred. Moreover, I believe the Supreme Court would throw this legislation out the window as unconstitutional even if it were passed.

The greatest means by which the American people can assure Hollywood's abiding by the moral law is by their refusal to (a) patronize objectionable pictures and (b) to support objectionable actors or actresses by box-office patronage. I emphasize, however, objectionable pictures, because I believe that Americans will differentiate between objectionable individuals who might participate in pictures and objectionable pictures, as such.

Whenever Hollywood learns that the American people will not patronize any pictures featuring a particular individual, that individual quickly leaves the Hollywood scene.

Right now there are many fine organizations such as the Legion of Decency and other groups which look into the question of the moral content of American motion pictures and which advise our people accordingly. I do not believe that we need any Federal gestapo to supplement their powers.

4. Let me point out, Mr. President, that this picture Stromboli, to which Senator JOHNSON referred, is a foreign-made picture. If there was anything morally objectionable in it, the reel could never have entered our country, because the United States Treasury Department through its Customs Offices possess powers to ban admission of morally objectionable items.

MR. JOHNSTON IS NOT A CZAR

5. I should like to point out, too, that while my colleague referred to Mr. Eric Johnston as a motion-picture czar that this is not an accurate description. Mr. Johnston is president of the Motion Picture Association of America. The MPA can approve or disapprove films, but it does not possess czaristic powers to, let us say, ban a particular individual appearing in a film.

LICENSING IDEA REPEATEDLY REJECTED

6. This is not the first time that licensing suggestions have been made. Through the years many individuals have suggested compulsory licensing in the motion-picture industry, but the Congress has always wisely rejected any such move.

WE DO INDEED NEED OVER-ALL MORAL CRUSADE

7. Let me reiterate that I share the fundamental moral convictions of Senator JOHNSON. Right now, there are many evidences of a great and necessary moral crusade on the part of the American people. More and more we are learning that the real answer to the problems of the atomic age is, today, as it was 2,000 years ago, by fulfilling the principles of the Great Teacher, the Master, whose Sermon on the Mount is the greatest single guide to human conduct.

As Senator JOHNSON himself said "Hollywood for the most part is made up of fine, wholesome, clean, respectable, God-fearing people." I am sure that the good people of Hollywood deplore the transgression of the moral law which occurred in the incident which Senator JOHNSON cited, but we in turn would be transgressing and violating the law of man's God-given freedom if we established a police state gestapo over the motion-picture industry or any other industry.

LET US NOT APE THE RUSSIAN GESTAPO TACTICS

The Soviet Union is the sort of country that believes in compulsory licensing of individuals before they may pursue a given profession. We in this country believe that so long as a profession itself is legal, any individual has the right to participate in it without asking anybody's permission, aside, of course, from such technical standards as are required in the medical profession, the engineering profession, etc.

Mr. President, I have previously brought to the Senate's attention the magnificent record of Hollywood's patriotic contributions in war and peace. But Hollywood needs no defense on my part or anyone else's part. This vast industry should not be judged and condemned on the basis of a few disgusting, isolated instances of moral misconduct or suggestive advertising or crude commercializing.

Let us not destroy the Constitution under the guise of protecting the Constitution. Let us not further the trend toward state socialism. Let S. 3237 be rejected by the Commerce Committee.

I ask unanimous consent that there be appended to this statement the text of a release which was released last night by the Motion Picture Association.

The Motion Picture Association of America, today, March 14, 1950, made the following statement:

"Senator JOHNSON of Colorado has not thought through the implications of the motion-picture licensing bill he introduced today in the Senate.

"This is a police-state bill, whether so intended or not. It would subject the American motion picture to the same sort of Government slave-control that exists in all police states.

"If it should ever happen that the motion picture should be made subservient to government, then freedom as we have known it in this country will have vanished. The newspapers, the press associations, magazines, books, radio, television—all mediums of expression—would be the inevitable next victims.

"Senator JOHNSON belittles all Hollywood when he says that 'out of her (Ingrid Bergman's) ashes may come a decent Hollywood.' Hollywood doesn't need a certificate of character from anyone. It has given the world too much in wholesome entertainment that all Americans can view with pride.

"Hollywood, like every other community, has its share—but no more than its share—of people who violate the moral code. The majority of people in Hollywood are the finest types of Americans, devoted and loyal to their families and their country.

"Senator JOHNSON is misinformed as to the way the motion-picture industry operates under its system of self-regulation. Motion-picture producers in 1930 voluntarily adopted a production code to assure decency and good taste in the content of motion pictures. The pictures produced under this code meet its high standards.

"The code applies only to the content of motion pictures themselves and not to the private lives of the actors and actresses.

"Senator JOHNSON'S references to money changers is reminiscent of a hateful ideology that millions of Americans fought to destroy.

"It is a disservice to America for a United States Senator to condemn an industry that has such a fine record of performance and patriotism in war and peace."

The Case of Max Perlow

EXTENSION OF REMARKS

OF

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1950

Mr. FALLON. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following letter, article, and statement:

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 12, 1950.

Hon. PAUL M. HERZOG,
Chairman, National Labor Relations Board, Washington, D. C.

DEAR MR. CHAIRMAN: It has been brought to my attention that there is pending, and has been pending for some time, a settlement in the case of Max Perlow, an alleged Communist, representing the United Furniture Workers of America.

Officials of the Comfort Spring Corp., of Baltimore, Md., indicate that they have no intention of dealing with a man of this caliber and, undoubtedly, every good American citizen will concur in their action.

I am writing this letter to supplement their request that an early decision be made in the case of Max Perlow and to call to your attention the fact that Mr. Perlow is the type of person the citizens of this country are not supporting. In the event that there is question of his attitude, I direct your attention to an article appearing in the New York Times, under date of June 6, 1949, wherein it states that though Mr. Perlow has resigned from the Communist Party in order to retain his post as an elected union officer, he did not intend to renounce his belief in Communist doctrines or to refrain from advocating them.

Attached, for your information, is Mr. Perlow's record as furnished me officially from the files of the Un-American Activities Committee, which speaks for itself.

It was the apparent intention of Congress when the Taft-Hartley Act was enacted that not only persons carrying membership cards of the Communist organization were to be affected but also those individuals who express themselves as believing in the principles of the Communist Party.

It is not my intention to influence the action of the Board in any way but I do feel that you should be thoroughly cognizant with the type of individual with whom you are dealing. Business at present is bedeviled by many regulations and restraints and it seems highly irregular that a man of Mr. Perlow's acknowledged beliefs and reputation should be given credence by your Board.

Your careful consideration and early report in this matter will be appreciated.

Sincerely yours,

GEORGE H. FALLON,
Member of Congress.

[From the New York Times of June 6, 1949]

UNION LEADER QUITS REDS TO KEEP POST—OFFICIAL OF FURNITURE WORKERS COMPLIES WITH TAFT LAW BUT HOLDS TO BELIEFS

(By A. H. Raskin)

Compelled to choose between continuance in union office and membership in the Communist Party, Max Perlow, secretary-treasurer of the United Furniture Workers of America, CIO, announced yesterday that he had quit the party.

The choice was made necessary by the decision of the union's international executive board to file non-Communist affidavits under the Taft-Hartley law. Mr. Perlow, who supported the decision to file the affidavits, was the first union officer in the 2 years since the law was passed to announce publicly that he had given up Communist Party membership to comply with the affidavit requirement.

He made it plain that his sole purpose in resigning was to retain his post as an elected union officer and that he did not intend to renounce his belief in Communist doctrines or to refrain from advocating them "through peaceful, constitutional processes."

Whether the qualifications put by Mr. Perlow on his resignation might make his affidavit unacceptable presented a problem last night to officials of the National Labor Relations Board and the Department of Justice.

Under the law a union officer must swear that "he is not a member of the Communist Party or affiliated with such party, and that he does not believe in, and is not a member or supports any organization that believes in or teaches the overthrow of the United States Government by force or by any illegal or unconstitutional methods."

NO GENERAL RULE LAID DOWN

Robert N. Denham, NLRB general counsel, said in Washington that the Board did not attempt to lay down any general lines of philosophy in accepting affidavits but that a person making reservations publicly might be embarrassed.

In normal course, Mr. Denham observed, the Board took the affidavits at face value but, when it received information indicating that the oath had been signed falsely, the matter was referred to the Justice Department for possible prosecution. Jail sentence and fines are specified as penalties for the filing of fraudulent affidavits.

In other left-wing unions that have filed non-Communist affidavits, officers reputed to have Communist ties have signed the affidavits without any public explanation or have withdrawn as officers and accepted immediate reappointment as paid organizers, administrators, or international representatives.

The only Congress of Industrial Organizations affiliate that has avowed Communists as top officers is the International Fur and Leather Workers Union. Irving Potash, 1 of the 11 members of the party's national board now on trial in Federal court, is an international vice president. Ben Gold, the union's president, is also a Communist leader. This union is not complying with the Taft-Hartley law and its officers have not filed affidavits.

In announcing that he had decided to leave the Communist Party, Mr. Perlow said it was no secret to the membership of the furniture union that he had belonged to the party for many years.

"It is because of the teachings of this party," Mr. Perlow said, "that I came to the conclusion that there can be no higher privilege, no greater principle, than to serve the working people in their struggle for a higher standard of living, for higher wages, for job security, for greater and greater guaranties for the workers to live decently and bring up their children as free people without fear to face the future."

He denied that the party advocated overthrow of the Government by force and violence and emphasized his own conviction that communism could be established within the framework of democratic processes under our Constitution.

As a union member for 26 years, he objected to being deprived of the opportunity to continue in union office if he refused to sign a non-Communist oath. He characterized this as a "yellow dog" provision inserted into the the law by "reactionary elements" bent on subjecting the Nation to thought control.

He said that he would stand on his constitutional right to believe that Marxism is the best expression of the hopes and aspirations of mankind to rid himself of the mounting evils which threaten the world today.

Three years ago Morris Muster, who had been president of the United Furniture Workers for 9 years, resigned, charging that the union's executive board was Communist-dominated. He directed particular criticism at Mr. Perlow. The union's secretary-treasurer joined with its other officers in accusing Mr. Muster of seeking to split and weaken the organization. Mr. Perlow did not announce at that time that he was a Communist.

Morris Pizer, who succeeded Mr. Muster as president, recommended in November 1947, that the union officers comply with the Taft-Hartley law, but this recommendation was rejected by the executive board. Last week the board decided to abandon its policy of noncompliance.

A joint statement by Mr. Pizer, Mr. Perlow and Ernest Marsh, director of organization, said the union's inability to take part in NLRB elections had caused it to lose 4,000 members to other unions that had qualified under the law. The statement blamed the Truman administration, the leadership of the CIO and the American Federation of Labor for Congress failure to repeal the law.

MARCH 10, 1950.

INFORMATION FROM THE FILES OF THE COMMITTEE ON UN-AMERICAN ACTIVITIES, UNITED STATES HOUSE OF REPRESENTATIVES

For: Hon. GEORGE H. FALLON.
Subject: Max Perlow.

The public records, files, and publications of this committee contain the following information concerning Max Perlow:

The Communist publication, the Daily Worker of July 18, 1933 (p. 4, ch. 4), identified Max Perlow as a member of the Communist Party. In sworn testimony before the Special Committee on Un-American Activities, August 13, 1938, John P. Frey, president of the Metal Trades Department of the American Federation of Labor, made the following statement:

"Another individual high in the ranks of this union (United Furniture Workers, CIO), is Max Perlow of New York City, who has been a member of the district committee, district No. 2, of the Communist Party in New York City. Both (Morris) Muster and Perlow were leaders of the Furniture Workers Industrial Union when it was one of the groups working under the jurisdiction of the Trade Union Unity League, which was formed by the Communist Party headed by William Z. Foster." (Vol. 1, p. 99, Public Hearings by the Special Committee on Un-American Activities, 1938.)

On May 20–23, 1944, the Communist Party assumed the name of the Communist Political Association for strategic reasons and resumed the name of the Communist Party of the United States on July 26–28, 1945. (Committee on Un-American Activities, Rept. 209, April 1, 1947, p. 29). In the printed proceedings of the Constitutional Convention of the Communist Political Association which was held May 20–22, 1944, the name of Max Perlow is shown as a convention delegate and speaker.

On June 7, 1949 (p. 5), the Daily Worker carried an article to the effect that Max Perlow, international secretary-treasurer of the CIO United Furniture Workers, this week end announced regretfully his resignation from the Communist Party in order to fulfill the requirements of the UFW's general executive board decision to sign Taft-Hartley affidavits. * * * In announcing his resignation, Perlow at the same time defended the party from its attackers, and reaffirmed his conviction that Marxism is the best expression of the hopes and aspirations of mankind to rid itself of the mounting evils which threaten the world today. In the same article Perlow was quoted as saying that "it is no secret to our membership, that I have been a member of the Communist Party for many years. It is because of the teachings of this party that I have decided to devote my entire life to the cause of the workers" and "I am forced to sign the affidavits or give up my work in the service

of the membership of our union, to which I have dedicated my life." The article revealed that Perlow said he was forced to submit his resignation from the Communist Party.

In the past, Max Perlow has sponsored numerous organizations which have been officially cited as Communist and/or Communist fronts. In 1947 and 1948 he was affiliated with the Civil Rights Congress, having been one of the sponsors of the national conference of that group, held in Chicago November 21-23, 1947 (see program Let Freedom Ring and also the Daily Worker of October 21, 1947, p. 5); he signed a statement of that organization, opposing Redbaiting and attacks on Communists as shown in the Daily Worker of May 25, 1947 (p. 9). In 1948, Max Perlow was one of the sponsors of the freedom crusade of the Civil Rights Congress (Daily Worker, December 15, 1948, p. 11); he signed an open letter of the organization, addressed to Congress and urging the defeat of the Mundt bill (H. R. 5852), as shown on a letterhead of the Civil Rights Congress dated May 7, 1948, and also a full-page advertisement which appeared in the Chicago Sun-Times of May 11, 1948 (p. 37).

The Civil Rights Congress has been cited as an organization formed in April 1946 as a merger of two other Communist-front organizations (International Labor Defense and the National Federation for Constitutional Liberties) dedicated not to the broader issues of civil liberties, but specifically to the defense of individual Communists and the Communist Party (Committee on Un-American Activities, Rept. No. 1115, September 2, 1947, pp. 2 and 19). Attorney General Tom Clark cited the group as subversive and Communist in reports to the Loyalty Review Board and released to the press December 4, 1947, and September 21, 1948.

Max Perlow was named in the fall term (1947) booklet of the School of Jewish Studies as one of the sponsors of that school. He was one of the sponsors of a bazaar held under the auspices of the American Jewish Labor Council (Daily Worker, November 18, 1948, p. 7). He endorsed a demonstration sponsored by the American Council for a Democratic Greece (Daily Worker, February 15, 1949, p. 11); and signed a telegram of the council on behalf of Communist seamen (Daily Worker, November 8, 1949, p. 11). Attorney General Tom Clark cited the School of Jewish Studies as an adjunct in New York City of the Communist Party (press release of December 4, 1947); he cited the American Jewish Labor Council as subversive (press release of April 21, 1949); and cited the American Council for a Democratic Greece as a subversive and Communist organization formerly known as the Greek-American Council (press releases of June 1 and September 21, 1948).

In a pamphlet entitled "The People Versus H. C. L." which was published by the Consumers National Federation (December 11-12, 1937), Max Perlow's name appears as one of the sponsors of the federation. He signed a declaration of the Reichstag Fire Trial Anniversary Committee honoring Georgi Dimitrov, former head of the Communist International. Both the Consumers National Federation and the Reichstag Fire Trial * * * were cited by the Special Committee on Un-American Activities in Report No. 1311 of March 29, 1944 (pp. 155 and 112, respectively).

The Daily Worker of January 17, 1938 (p. 5) reported that Max Perlow signed a "Call" to the Morning Freiheit Conference; he spoke before the Morning Freiheit Association in New York, as shown in the Daily Worker of September 30, 1944 (p. 2). He signed an open letter to President Truman on Franco Spain, prepared by the Spanish Refugee Appeal of the Joint Anti-Fascist Refugee Committee (see mimeographed letter attached to a letterhead of the Joint Anti-Fascist, dated April 28, 1949).

Attorney General Francis Biddle cited the Morning Freiheit as a Communist Yiddish daily (CONGRESSIONAL RECORD, September 24, 1942, p. 7686); the Special Committee on Un-American Activities, in its report of March 29, 1944, cited the publication as "the official Communist newspaper published in the Yiddish tongue." In the same report (p. 174), the special committee * * * cited the Joint Anti-Fascist Refugee Committee as a Communist-front organization. Attorney General Tom Clark cited the Joint Anti-Fascist Refugee Committee as subversive and Communist. (See press releases of December 4, 1947, and September 21, 1948).

In report 1311 of the Special Committee on Un-American Activities the United May Day Conference was cited as being "entirely engineered by the Communist Party for its 1937 May Day demonstrations, (and) numbered Frank R. McGrath as one of its members, along with such outstanding Communist Party leaders as Ben Gold and Max Perlow." Max Perlow signed the call to the United May Day Conference which was held in New York City in 1937 (Daily Worker, March 17, 1937, p. 4); he signed the call to the conference in 1938 (Daily Worker, March 19, 1938, p. 4); he was a member of the United May Day Provisional Committee in New York, as shown in a pamphlet, An American Holiday, May Day 1939 (p. 2); on the call for a United May Day Conference, March 30, 1940, he was listed as secretary-treasurer of the Provisional May Day Committee, New York; he spoke before the committee for May Day 1948, as shown in the official press release of that committee; he was one of the sponsors of the Provisional Committee for a United Labor and People's May Day, as shown in the Daily Worker of March 14, 1949 (p. 8); he spoke at a May Day demonstration in 1949 (Daily Worker, May 2, 1949, p. 9).

The Special Committee on Un-American Activities has cited the United May Day Conference and the United May Day Provisional Committee in Report No. 1311 of March 29, 1944. The report states that "the May Day parade in New York City is an annual mobilization of Communist strength" (Rept. 1311, p. 179; also pp. 124 and 139). Attorney General Tom Clark cited the United May Day Committee as "subversive and among the affiliates and committees of the Communist Party, United States of America" (see press release of December 4, 1947).

Records of this committee show that Max Perlow has openly defended Communists and their activities over a period of years, and as late as January 1950. He was a sponsor of the National Free Browder Congress and signed a petition of that group to free Earl Browder (Daily Worker, March 1, 1942, p. 2; Daily Worker, May 2, 1941, p. 2; Daily Worker, January 25, 1942, sec. 2, p. 5). He signed a statement of the Citizens' Committee to Free Earl Browder (Daily Worker, March 11, 1942, p. 5). He attended a meeting of the American Peace Mobilization and signed the organization's petition to free Earl Browder (Daily Worker, May 2, 1941, p. 2).

The National Free Browder Congress and the Citizen's Committee To Free Earl Browder were both cited by the Special Committee on Un-American Activities in Report 1311 of March 29, 1944; Attorney General Francis Biddle cited the Citizen's Committee To Free Earl Browder as a Communist organization. (CONGRESSIONAL RECORD, September 24, 1942, p. 7687.) Earl Browder was general secretary of the Communist Party, United States of America, who had been convicted and sentenced to Atlanta Federal Penitentiary for passport fraud. The American Peace Mobilization has been cited by Attorney General Tom Clark, Attorney General Francis Biddle, and on three occasions by the Special Committee on Un-American Activities. (Press releases dated December 4, 1947, and September 21, 1948; CONGRESSIONAL RECORD, September 24, 1942, p. 7684; reports of the Special Committee, dated January 2, 1943, June 25, 1942, and March 29, 1944; respectively).

Max Perlow was one of the sponsors of the Schappes Defense Committee and signed various petitions and pleas for the pardon of Mr. Schappes. (Pamphlet, In the Case of Morris U. Schappes, p. 9; undated letterhead of the organization; Daily Worker, February 4, 1942, p. 5). The Schappes Defense Committee has been cited as "a front organization with a strictly Communist objective, namely, the defense of a self-admitted Communist who was convicted of perjury in the courts of New York." Morris U. Schappes "was on the teaching staff of the College of the City of New York for a period of 13 years. In 1936 his superior on the college faculty refused to recommend him for reappointment. This action led to prolonged agitation by the Communist Party." (Special Committee on Un-American Activities, Report No. 1311 of March 29, 1944).

Israel Amter was one of the original American Communists and held many important positions in the Communist Party; he ran for Governor of New York in 1942 on the Communist Party ticket. Max Perlow supported Mr. Amter in the 1942 elections (Daily Worker, October 9, 1942, p. 4); he was a member of a committee which supported Amter (New Masses, November 8, 1948, p. 25); and one of the sponsors of a labor committee supporting Amter (as shown on a leaflet, Vote for Victory).

In 1940 Max Perlow signed a telegram of the Joint Committee for Trade Union Rights, directed to President Roosevelt on behalf of the International Fur and Leather Workers Union, defendants. (Daily Worker, November 11, 1940, p. 1). Both the Joint Committee for Trade Union Rights and the International Fur and Leather Workers Union were cited by the Special Committee on Un-American Activities in Report 1311 of March 29, 1944.

Max Perlow supported the French Communist-led strikes in 1947 (Daily Worker, December 4, 1948, p. 2); he issued an individual endorsement of the Civil Rights Congress and the American Committee for Protection of Foreign Born, in defense of 12 Communists who faced deportation (among whom were Irving Potash, Alexander Bittelman, Ferdinand C. Smith, Alex and David Balint, and others). In 1949 he protested (together with Benjamin J. Davis, Communist) against interference with a student strike held at City College, New York. (See Daily Worker, April 12, 1949, p. 3).

The citation of the Civil Rights Congress appears on page 2 of this memorandum. The American Committee for Protection of Foreign Born is "one of the oldest auxiliaries of the Communist Party in the United States" (Special Committee on Un-American Activities, reports of June 25, 1942, and March 29, 1944). Attorney General Tom Clark called the organization subversive and Communist on lists submitted to the Loyalty Review Board. (See press releases of June 1 and September 21, 1948.)

In announcing a "defense rally for the freedom of Alexander Bittelman, veteran Jewish leader and member of the national committee of the Communist Party," the Daily Worker of January 20, 1948 (p. 4) quoted a statement issued by Max Perlow, secretary of the CIO's United Furniture Union, as follows: "As a trade-unionist and as a Jew, I recognize this attack as a threat to the American people as a whole."

Max Perlow was one of those who signed a telegram, addressed to Attorney General Tom Clark, on behalf of John Williamson, a Communist (Daily Worker, February 16, 1948, p. 6).

Max Perlow led a picket line, sponsored by the Civil Rights Congress (New York State division), on behalf of the 12 indicted Communist leaders (Daily Worker, September 20, 1948, p. 3). He sponsored the Civil Rights Congress Freedom Crusade, protesting the indictment (Daily Worker, December 31, 1948, p. 3); was a member of a delegation on behalf of the leaders (Daily Worker, July 15, 1949, p. 2); and sponsored groups defending them (Daily Worker, July 18, 1949, p. 2; October 5, 1949, p. 2; and October 11, 1949, p. 3; and a letterhead dated September 9, 1949).

The Daily Worker of January 12, 1950 (p. 2) reported that Max Perlow, secretary-treasurer of the United Furniture Workers, would speak at a meeting of the union on behalf of those who opposed a split in the union if "the Communists aren't expelled."

Social Security and Old-Age Pensions

EXTENSION OF REMARKS
OF

HON. TOBY MORRIS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1950

Mr. MORRIS. Mr. Speaker, yesterday, March 14, 1950, I made a statement before the Committee on Finance of the United States Senate, concerning social security, and more especially as to old-age assistance and old-age pensions. I discussed the bill I have heretofore introduced, H. R. 2620.

I went into the matter pretty fully and gave some figures and facts which I believe are important and are worthy of our consideration. I particularly discussed certain features of H. R. 6000 which passed the House last session. My full statement is as follows:

SOCIAL SECURITY AND OLD-AGE PENSIONS

STATEMENT OF TOBY MORRIS, MEMBER OF CONGRESS, OF OKLAHOMA, TO THE UNITED STATES SENATE COMMITTEE ON FINANCE, WASHINGTON, D. C., MARCH 14, 1950

Mr. Chairman and gentlemen of the committee, I am deeply interested in the subject of social security and old-age pensions. It is, therefore, a great pleasure to me to know that your honorable committee is giving time for thorough consideration of this subject. It is also a pleasure to present to you some observations I have made to the House of Representatives and also publicly with regard to this matter generally, and to the matter of better security for our aged citizens particularly.

My interest in this subject goes back even much further than my tenure as a Member of Congress. For many years, the great need for an adequate and dependable income for aged people, and what it would mean to all citizens, has impressed my mind and heart. I am also of the opinion that an adequate, regular, dependable income to our retired elder citizens will constitute a well-distributed buying power in this segment of our population that will be a factor in maintaining our high level of national income which is so important to our national economy. If it is possible for our citizens to retire on a reasonable pension at retirement age, job opportunities will be open to younger people, the responsibility of supporting parents on the part of children will be obviated, and the entire population will benefit.

I am pleased that progress has been made in this field

While our present legislation, in effect, is not adequately meeting the great needs of our people, the provisions that have been made, are truly a great help. Much good has been accomplished. In many cases, dire suffering and want has been alleviated. Perhaps the dollars that the Congress has made available through old-age assistance have gone as far toward meeting dire needs of many helpless and deserving citizens, as any appropriations that have been made. I want to be understood as in no way attacking or decrying the good work that has been accomplished in this field.

There is much more to be done

Our present legislation falls far short of taking care of the great needs for adequate security for our elder citizens. Many who badly need regular incomes, and who are of retirement age, are not included. Neither is it possible for them to qualify under our present laws. Great inequities exist in the operation of our present system. Different and, in fact, greatly varying payments are being made to recipients in our States. Hardly do we find the same payments, month by month, in any two of our States. Moreover, we also find that the payments may vary in different parts of the same State. These inequalities should have our careful consideration. I wonder if Members of the Congress have stopped to consider the actual conditions with regard to the operations of our present system. Let me illustrate.

Under our present Federal laws, and under old-age assistance, as shown by the report of the Federal Security Agency for the month of October 1949, which is the last report that I have before me, I am taking figures for just two of our large States in population, and also two of our smaller States. I am comparing the payments on the following points:

1. Number of beneficiaries.
2. Amount of monthly payment to each beneficiary.
3. Total amount of payments for the month in each State. These comparisons show clearly what I mean by inequalities. Here they are:

State	Number of recipients	Monthly payment	Total amount paid for month
California	264,672	$70.74	$18,723,603
Pennsylvania	90,681	39.94	3,621,989

Does it not seem strange that the number of recipients should be so much greater in the one State than in the other, when the States are not far from equal in population? Again note the average payment to the individual. In one State, it is over $70 while in the other, it is less than $40. Then, look carefully at the total amount received during the month by the recipients. In one State, it is over $18,000,000 while in the other State, it is only over $3,000,000. Certainly these facts deserve careful consideration.

Now, let me look at the figures from two States of small population. Let us look at Virginia as compared with Colorado. Let us remember, also, that Virginia has a population of more than double that of Colorado. Please keep this fact in mind and then study the figures. Here they are:

State	Number of recipients	Average monthly payment	Total amount paid for month
Colorado	48,592	$75.01	$3,644,839
Virginia	18,568	20.77	385,650

When we look at these figures, certain very important facts are inescapable. Virginia, with more than twice the population, has less than half as many beneficiaries. The old folks in Colorado received over $75 per person for the month of October; while in Virginia, they received less than $21. The total benefits in dollars paid to recipients for the month, was almost ten times in Colorado what it was in Virginia, notwithstanding the fact that in population, Virginia is almost twice that of Colorado.

I believe these simple comparisons illustrate clearly what I mean by inequality of our present system among the various States. I shall, however, file with the committee, the entire report showing the figures from all the States, from which these figures are taken. I suggest also, that each Member of Congress might watch these monthly reports and study them carefully as they are issued month by month by the Federal Security Agency.

What should Congress do about it

A bipartisan group in the House of Representatives, led by my colleague, Representative VAN ZANDT, of Pennsylvania, representing the minority, and myself, for the majority, have been giving serious study to this problem. We have united with us, in this effort, now more than 130 Members of the House. We have our individual opinions as to many details concerning remedial legislation, and each Member is, of course, entitled to his own opinion. However, we do find that there is a definite field of agreement, and there are positive points of agreement, on which we seem to be united. Among these points, are the following:

1. We should enact a Federal pension to take the place of "old age assistance" under the Social Security Act.
2. The pension should be paid uniformly in all the States without regard to what the States pay.
3. Eligibility of recipients should be liberalized. A property owner should be considered as well as those who have no property.
4. Many of us believe the amount of the Federal pension should be $100 per month, but the figure on which we have agreed is at least $60 per month.

I introduced a bill in the House, H. R. 2620, embodying these features and will file a copy of it along with my remarks, with the committee. I hope it will have the careful and full consideration of the committee, and that when your report is made to the floor of the Senate, you will have seen fit to recommend a decided improvement in our provisions for those citizens who are now of retirement age.

It is well to legislate for the retirement of our workers

I am deeply interested in the future of America. It shall be my pleasure to give full and complete attention to the future problems of security for those who are now actively engaged in production. I am anxious, insofar as we can, that we shall anticipate the needs of all of our active workers, and plan for their security, once they are old enough to retire. However, as important as this appears, it is not an emergency that must be met at this moment. Young people, those who are the workers of today, will not need retirement until they retire. For this reason, I do trust that we will put first things

first, in this matter. I am thinking first of those who have served so well, in peacetime and in war, and have brought us to the proud place we now occupy as the leading Nation in many ways, in all the world. I am very deeply concerned about those who are now old to the point where there is no hope for them in labor, business, professions, or in industry. They are in need of old-age security now. Young people may be able to wait at least a little while. But, unless we do something for those who are now old, we are missing a vital opportunity.

Postponement or delay is serious

If we fail, Mr. Chairman, to meet our obligation to this important segment of our population—I am speaking of those who are now too old to earn—it will be disastrous. Many of them are in dire need. I certainly see no depression coming but the specter of unemployment is casting its menacing shadow across our land. We are looking for markets to keep our farms, mines, mills, and factories going. We are facing the problem of keeping money in circulation. Let us consider the matter of American old-age pensions, in this light. It will be a very efficient and equitable way to keep money circulating in every section of the land. Should we see that our elder citizens can have just a reasonable cash amount each month, giving the employment they now have to younger people, it should benefit business and strengthen our economy. It will aid in maintaining or increasing our national income. This is very important to our future growth and prosperity. In addition to that, it will perhaps accomplish more in genuine happiness and well being among those deserving security, than any other like amount of money which the Congress will appropriate. Should we fail—then I shall dread to contemplate the position in which we have left the deserving fathers and mothers of our country.

Of these facts, Mr. Chairman, I feel sure:

1. America can well afford a reasonable, uniform pension to all citizens of retirement age.

2. There is a great and crying need for such a pension.

3. The pension money being spent in our markets month by month would go a long way toward compensating our economy for the burden of any added tax.

4. While security for our young people, when they become old, is important, it can well wait until the present crying needs of our deserving elder citizens have been provided for.

I know of no action that this Congress can take short of that which deals with our national security that will yield as much in happiness and general good as to provide a genuine American pension for our deserving retired American citizens. I trust and I pray that this Congress will give the matter full and complete consideration, that we may have such a pension enacted as early as possible this year. Most certainly an old-age pension is better than old-age assistance.

In conclusion, may I say that the bill I introduced, H. R. 2620, provides in substance that every citizen of the United States who is 60 years of age or older, and who does not have an income sufficient to require him or her, as the case might be, to file a Federal income-tax return, and who applies for same, is entitled to a Federal pension at the rate of $60 per month. I think that this is a simple, moderate, and workable plan. It would do away with the present case-worker system and with much of the administrative cost. It would not be necessary to set up any new boards or bureaus, as the question of income tax could be determined under the present law and rules and regulations of the Bureau of Internal Revenue.

A number of groups in our society now have retirement benefits, such as coal miners, steel workers, Government officials and employees. Why should not all of our citizens enjoy retirement benefits when they reach the proper age? It is sometimes pointed out that the groups just mentioned pay into their retirement fund. The real truth of the matter is, as I see it, that society generally pays into these funds and not the individual beneficiaries, for the reason that salaries and wages are raised either by fiat of law or by employers so that said groups may have sufficient money to pay into their fund. When salaries and wages are raised, the increased tax and the increased cost of production, such as coal and steel, is passed to the public. So in truth and in fact the public pays the bill. If the public pays the bill for these groups, why shouldn't it pay it for all groups and treat them all alike? I certainly do not complain that the groups mentioned have retirement funds—I am glad that they do have them—but my desire is that all groups have the same or similar privileges to what they have.

If the Congress does not think it wise at this time to replace the old-age-assistance section of the Social Security Act with an old-age-pension program, then I respectfully request that it give consideration to the following formula in the old-age-assistance title of H. R. 6000, to wit: That the Federal Government pay five-sixths of the first $30 of the average payment per recipient, plus one-half the balance up to a maximum on individual monthly payments of $60. In substance, the net effect of this proposal is to provide an additional $10 in Federal funds per month.

I am truly grateful to the committee for having given me this opportunity to present my views in regard to this most important matter.

H. R. 2620

A bill providing a direct Federal old-age pension at the rate of $60 per month to certain citizens 60 years of age or over

Be it enacted, etc., That (a) the Federal Security Administrator (hereinafter called the "Administrator") shall pay, out of any funds hereafter appropriated for such purpose, an old-age pension to qualified individuals at the rate of $60 per month.

(b) For the purposes of this act an individual shall be deemed to be a qualified individual—

(1) if he is 60 years of age or over, is a citizen of the United States, and has been a citizen of the United States for not less than 10 years;

(2) if he resides in the United States and has been a resident of the United States for not less than 10 years;

(3) if his gross income is less than the minimum amount with respect to which a Federal income-tax return is required to be filed; and

(4) if he has made application for the benefits of this act.

(c) Payments to qualified individuals shall be made monthly.

SEC. 2. Any individual making application for the benefits of this act shall furnish such evidence of age, citizenship, and residence as the Administrator may by regulation prescribe. Whether a Federal income tax with respect to the income of any individual were payable for any taxable year shall, for the purposes of this act, be established from records and data in the possession of the Secretary of the Treasury. The Secretary of the Treasury shall upon request furnish to the Administrator any documents, records, or information which he may have relating to whether a Federal income tax were payable for any taxable year with respect to the income of any applicant for the benefits of this act.

SEC. 3. No payment to any State under title I of the Social Security Act, as amended, shall be made for any quarter beginning on or after the date of enactment of this act.

SEC. 4. The Administrator shall prescribe such rules and regulations as may be necessary to carry out the provisions of this act.

SEC. 5. As used in paragraph (2) of subsection (b) of the first section of this act, the term ""nited States" means the States, Alaska, Hawaii, and the District of Columbia.

The Marshall Plan

EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, March 15 (legislative day of Wednesday, March 8), 1950

Mr. GREEN. Mr. President, on last February 23 the junior Senator from Missouri [Mr. KEM] under extension of his remarks, inserted in the RECORD an article entitled "Nylons and Lipsticks Ruin Marshall Plan," as published in the Kansas City Star on February 17. This was part of an article originally printed in the Providence Journal on February 13, entitled "Greek Student at Bryant Charges Marshall Plan Is Choking Itself."

I have received from Paul Hoffman, Administrator of the ECA, a letter dated March 10, in answer to this newspaper article. Believing that it will be of interest to the Members of the Senate, I ask unanimous consent to have printed in the Appendix of the RECORD the complete original article and Mr. Hoffman's letter.

There being no objection, the article and letter were ordered to be printed in the RECORD, as follows:

GREEK STUDENT AT BRYANT CHARGES MARSHALL PLAN IS CHOKING ITSELF—SAYS GREECE GETS UNNECESSARY THINGS—TERMS ECONOMY STIFLED, PEOPLE MADE LAZY AND DEPENDENT

(By Philip C. Gunion)

The Marshall plan is choking itself to death on nylon stockings, lipsticks, plastic combs, and canned tuna fish, Nicholas Farmakis, a Greek who is a student at Bryant College, charges.

The insistence of the United States in shipping little but finished products—and then things that are unnecessary to life in Greece—is stifling Greek economy and making the people lazy and dependent, Farmakis said.

Raw materials which could be converted by native labor into articles really needed by the Greeks would start up industry in Greece and make it a strong bulwark against the Communists to the north.

But the American idea that what an American thinks is right and all that foreigners think is wrong is causing the Marshall plan to backfire into an agency of dissatisfaction among the people of Europe, Farmakis thinks.

AMERICAN TUNA DUMPED

Tuna is an ideal canned product for America with its vast inland territory, Farmakis admits, but it could help make idle thousands of Greeks who fish for a living, when shipped in large quantities to Greece—if only the Greeks would use it.

But they don't. They prefer the native fresh-caught fish. The American tuna is stored in warehouses until the space is

needed, then it is dumped. But it keeps coming, Farmakis said.

Lipsticks and nylons do a lot for the American girl, said Farmakis, who is a student of more than business administration, but their use among the economic level of persons supposed to be helped by the Marshall plan is slight in Greece.

The tall, 23-year-old student, who hopes to go into politics in Greece when his studies in America are completed, feels that all aid under the Marshall plan should be stopped immediately until the nations involved can meet with the United States and set up a program by which they can get the things they need—and the things that we think they need can be left in this country.

CONCRETE PILES TO GREEKS

Farmakis said that when the Greek Government told the United States that it wanted cement and other building materials to start a construction program, it got machines that went around laying concrete piles that were identified as houses by Americans. They remained piles of concrete to Greeks.

Farmakis' father is president of the Greek Rubber Co., and he wants to import raw rubber to Greece so that it can be manufactured by Greeks into things that Greeks need. But the Greek need for these products is met by Marshall plan administrators in shipments of finished rubber goods.

These fail to benefit the people because the Greek Government imposes import taxes on them to protect the native rubber companies, and other Greeks suffer.

Naturally, Farmakis explained, this creates resentment among the Greeks—instead of the fine feeling of fellowship against communism which is the hard-headed reason behind the Marshall plan.

IT IS VERY BAD

"It is very bad," Farmakis said, "because if Greece collapses to the Russians, the United States won't be far behind. Of course, if the United States went first, Greece would go at the same time."

Farmakis would like to stay in the United States forever, but when he finishes his education at Bryant, he will return to Greece.

"I am in a good position because of my father and I feel that perhaps some other Greek boy, less well situated, could come here in my place and get a chance to succeed," he said.

He lives with four American roommates in an apartment at 71 Hope Street and finds this beneficial to his understanding of this country.

His service in the Greek underground during World War II, he shrugs off—"Everybody was doing it."

He is also modest about his excellent English. "When I can understand a New York taxi driver, I will say that I possess the American language," he said.

ECONOMIC COOPERATION ADMINISTRATION,
Washington, D. C., March 10, 1950.

Hon. THEODORE FRANCIS GREEN,
United States Senate,
Washington, D. C.

DEAR SENATOR GREEN: This is a further reply to your letter of February 17, attaching a newspaper article entitled "Greek Student at Bryant Charges Marshall Plan Is Choking Itself," which we acknowledged in our letter of February 23.

The article contains a number of misleading and erroneous statements and we appreciate your giving us an opportunity to comment on it.

In the first place, it is the policy of ECA not to ship any unnecessary or undesirable commodities to a participating country.

We should like to correct the impression conveyed by the article that ECA financing is allowed for importing into Greece lipsticks, plastic combs, nylon hose, and canned tuna fish. Personal accessories such as lipstick, plastic combs, and nylon hose are included on the list of items which have always been ineligible for ECA financing. This list of prohibited articles was sent by ECA to all participating countries and to United States banks holding ECA letters of commitment some time ago, and in those cases where these items have been purchased, ECA has obtained reimbursement from the participating country. Import licensing procedures in Greece, controlled by the Foreign Trade Administration (a Greek Government agency), and the auditing procedures of the ECA controller assure proper restrictions on the use of ECA funds. Items such as those mentioned above could be brought into Greece through two legal methods. First, many of these items reach the people as gifts sent by relatives and friends, and eventually reach the market. Second, they might be obtained through use of non-ECA funds. However, such items are not eligible for financing by ECA.

Canned tuna fish is considered a luxury item and is not eligible for ECA financing. Tuna is prohibited from purchase by a price restriction incorporated in the procurement authorization, which establishes a maximum value that can be paid for canned fish. This controlled price makes it impossible for any country to procure tuna with ECA funds. In prewar years, even before her fishing fleet was depleted as a result of occupation and World War II, fish was among Greece's chief imports. The 1936–39 yearly average import was approximately 23,000 metric tons. Total imports authorized through use of ECA dollars amount to only about 4,600 tons, and these have been limited mainly to wet salted or dried fish.

The importance of building up the Greek fishing industry was taken into account by the Greek-Turkish aid program under the operation of the United States Department of State and subsequently by ECA. American aid under these two programs has contributed materially to improving the industry and making it more productive. New boats have been provided and marine Diesel engines and refrigeration equipment have been supplied to modernize the existing fleet. Tons of twine and other materials have been sent to Greece for repairing fish nets and making new ones. It is encouraging to note that fresh-fish production in 1949 was about 14 percent above the 1935–38 average.

Procurement of crude rubber has never been financed by ECA. Crude or raw rubber is obtainable from sterling areas and, therefore, is not eligible for dollar financing under ECA. The importation of crude rubber, therefore, is a Greek Government problem. The Greek import program for the current year provides for a limited amount of crude rubber, allied gums, and synthetic rubber. This applies also to raw materials for plastics, from which finished products such as combs are made.

Contrary to the newspaper article, ECA does not prescribe the goods to be shipped to Greece. The programing procedure under ECA requires the Greek Government to prepare its own estimates of import requirements. They alone determine what they wish ECA to finance. The import list is then studied by both the ECA mission in Athens and by ECA in Washington and procurement authorized, if approved. In view of Greece's fiscal situation, careful planning is required in allocating expenditures for essential foodstuffs, fuel, etc.; raw materials for those existing industries whose products contribute most to the Greek economy, and for reconstruction materials.

In the beginning of the ECA operation it was necessary for the Greek Government to bring in a larger portion of manufactured articles and equipment in lieu of raw materials. Many industries had been seriously crippled or destroyed as a result of occupation and World War II. Guerrilla warfare, which subsided recently, further destroyed or disrupted Greek industry. As the guerrillas were pushed northward and defeated, reconstruction began and manufacturing plants are being restored. There has been a proportionate increase in the flow of machinery and industrial equipment for the purpose of rehabilitating manufacturing plants. As a result, more raw materials are being shipped for further processing or fabrication in Greece. This is in line with established ECA policy of improving participating countries' production.

Greece has, accordingly, been increasing the importation of construction tools for the purpose of utilizing local building materials for housing. No materials necessary for housing are imported unless they are not available locally.

We should greatly appreciate having any information Mr. Farmakis might be able to furnish which formed the basis for his statements to the press. Upon receipt of such information, we would be in position to request our ECA mission in Athens to make a complete investigation.

Sincerely yours,

PAUL G. HOFFMAN,
Administrator.

The President's Reorganization Plans

EXTENSION OF REMARKS
OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, March 15 (legislative day of Wednesday, March 8), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an editorial entitled "Streamlined Boards," from the Washington Post of March 15, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STREAMLINED BOARDS

The President's Reorganization Plans Nos. 7 to 13 are an attempt to bring greater efficiency into seven Federal regulatory commissions without destroying their quasi-judicial character. Administrative boards are universally regarded as inefficient. Some reformers have urged that they be stripped of all functions, except the decision of cases. The Hoover Commission did not go that far. It recommended that the chairman of each commission be made primarily responsible for its administrative work and supervision of its staff. Reorganization Plans Nos. 7 to 13, which the President has sent up to Congress, would implement this idea.

Two months ago we pointed out the dangers in the strong-chairman plan. If the chairman is permitted to become a dictator, he can destroy the independence of a board or commission, despite the fact that the only reason for assigning regulatory tasks to boards is to get a well-rounded judgment. This danger has been minimized, if not eliminated, in the plan now devised for such agencies as the Interstate Commerce Commission, the Federal Trade Commission, the Securities and Exchange Commission, and the National Labor Relations Board. The chairman in each case has been given responsibility for the appointment and direction of personnel and for the conduct of the routine business of the agency. But he would be bound by the general policies adopted by the board. The chairman would prepare the budget, but the commission

could revise it and determine the general distribution of funds. Each commissioner would retain control over personnel in his immediate office, and the agency as a whole would have to approve the men chosen by the chairman to head the various administrative units. Chairmen might abuse this power in some instances, but we suspect that on the whole it would greatly improve the operations of the regulatory bodies.

The most controversial item in this segment of the reorganization program is the elimination of the general counsel of the NLRB. This action lends itself to criticism because Congress so recently gave the general counsel separate status in the Taft-Hartley Act. However, the independence of the general counsel has created more problems than it has solved. The judging and prosecuting functions were separated, but the prosecutor himself became also an administrator and policy maker. The task force of the Hoover Commission concluded that the position is an unstable one and recommended that it be reabsorbed into the Board or into one of the executive departments. The Senate, too, voted to abolish the separate general counsel in passing the Taft bill (S. 249) last year. Since then General Counsel Denham has publicly attacked the NLRB, and the Board has clipped his wings. To avoid a prolonged and costly feud, the office ought to be abolished in favor of a general counsel subordinate to the Board.

The Oleomargarine Law

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, March 15 (legislative day of Wednesday, March 8), 1950

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article relating to the oleomargarine law, from the Wall Street Journal of March 11, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BIRTH OF A LAW—MARGARINE MEASURE IS VIVID EXAMPLE OF HOW A BILL GETS ON THE BOOKS—WAS BOTTLED UP, DISCHARGED, PIGEONHOLED, FILIBUSTERED, ALLOWED TO DIE, REVIVED—IT'S NOT LIKE THE TEXTBOOK

(By Carl Thompson)

WASHINGTON.—President Truman is about to sign into law a bill repealing the 64-year-old Federal taxes and license fees on oleomargarine. Behind this bit of lawmaking is a little-understood story. It dramatizes what happens to most legislation from the day it's drafted until it winds up on the statute books.

The margarine tax-repeal measure isn't necessarily typical—it had more difficulties than most bills—but the way it got enacted will tell you more about how laws are passed in Congress than you can learn from most textbooks.

This particular legislation was bottled up, discharged, pigeonholed, filibustered, amended, substituted, allowed to die, revived, compromised, and saddled with riders. It split the votes of the usually solid farm bloc. It sent liberals like Democratic Senator HUBERT HUMPHREY, of Minnesota, scurrying to the side of cautious Republicans. It caused some conservative southern Democrats to line up with the CIO.

"DENY I AM THE AUTHOR"

So much happened to the bill that its original author repudiated its final form. The measure bears the number H. R. 2023. That bill was introduced January 31, 1949, by Democratic Representative GRANGER, of Utah. On March 7, 1950, as the House prepared to pass the agreed-on version of H. R. 2023, Mr. GRANGER felt it necessary to "deny that I am the author, or have any right, interest, or title in any word, comma, or period in this bill. I am just opposed to it."

In remaining months of the Eighty-first Congress, what happened to the margarine bill will be repeated, with variations. Your taxes, your social security, the spending of your tax dollars, and the farm programs affecting your grocery bill will all run the same legislative obstacle course.

Take a look at the sketchy textbook version of how laws are made at the United States Capital; then fill it in with what happened to the margarine measure:

A typical textbook starts off, "Any Member of the House or Senate may present a bill."

Actually, thousands of bills get introduced at every session of Congress. Few are passed. In the first 2 months of 1950, a total of 1,501 measures was introduced in the House and Senate. In the same period only 29 bills became law, and only 10 of these were public laws affecting most citizens. The others were private bills granting relief to some individual.

MARGARINE BILLS SINCE 1886

Public bills dealing with margarine have been before Congress since 1886, when the first taxes on the spread were approved. Since then hundreds of bills have been proposed. In the first 2 months of the Eighty-first Congress which convened in January 1949, more than 45 bills were introduced to repeal the margarine levies. For at least 4 years a majority of the House and Senate has favored wiping out the taxes and fees. But only this week did a bill get to the White House. Why the delay?

The repeal measure is a compromise. It isn't quite what the margarine makers wanted. Some Federal regulation over the butter substitute remains. In public places, margarine will either have to wear a special label or be served in what one lawmaker calls "diaper-shaped patties" and what another refers to as "triangular cubes."

The law also is far from what butter interests sought. They wanted to hinder margarine's use of the "golden color of yellow" which they claimed was somehow an exclusive attribute of butter. They hoped to prohibit the sale of yellow margarine in interstate commerce, even after they had become resigned to removal of the Federal taxes. (Many States retain local levies and restrictions on margarine, colored and white.)

THE RIDER: FTC FINES

In the final pulling and hauling, the Senate tacked on an amendment that could affect almost every industry. This provides $5,000-a-day fines for every day a final cease-and-desist order of the Federal Trade Commission is violated. Previously, the limit was $5,000 for each violation. Originally aimed at preventing margarine makers from making misleading claims for margarine, this proviso applies to every company under FTC scrutiny.

So it goes with most laws. A rare few are enacted in about the same form as they're introduced.

Says the textbook: "All the bills are * * * referred to committees. The committees will hear all who want to be heard for or against the bill."

Frequently such hearings turn into protracted battles between two opposing groups. In 1948, at least half a million dollars was poured into the margarine battle, a good chunk of it for lobbying. The National Milk Producers Federation led the fight against repeal; the National Association of Margarine Makers for it. In 1949, another $500,000 was admittedly spent. This time the American Butter Institute chipped in over $46,000 on the side of the dairy people; Best Foods, Inc., spent $36,000 for the margarine tax repeal.

"Information about the merits and defects of a measure is not the only thing that the average Congressman wants to obtain," says the textbook. "What his own voters think about it is important, too."

In an elaborate presentation by the Milk Producers' Federation, this point was bluntly hit. The legend on a booklet read: "The dairy farmers' vote is politically sensitive. Dairy farmers always vote to protect their interests."

A FARM PROBLEM

For decades, proposals to repeal margarine taxes were handled in the House of Representatives as a farm problem, not a revenue measure. The House Agriculture Committee was given the job of considering margarine tax bills. And for decades each new measure was "bottled up" in this committee, dominated by Congressmen whose own voters included large and small dairy farmers.

But House Members can thwart a committee that refuses to clear a bill for action. In March 1947 the Agriculture Committee tabled all bills dealing with margarine taxes. That meant no further action by the committee. Representative MENDEL RIVERS, a Democrat from South Carolina, promoted a discharge petition—a maneuver to force the bill out of committee—signed by a majority of House Members.

By April 1948 Mr. RIVERS' petition brought margarine tax repeal before the House and it passed by the decisive vote of 260 to 106. But the final version of the bill didn't get through Congress for almost 2 years. The measure died with the Eightieth Congress, was revived by the Eighty-first, finally passed both Houses and got to the President's desk this week.

TROUBLE IN THE SENATE

The textbook goes on: After the House acts, "all bills are signed by the Speaker and transmitted to the Senate. * * *."

For the average bill this means more trouble. When the Senate in 1948 got the House-passed margarine bill, the biggest fight centered on this question: Should it go to the Senate Finance Committee, whose members favored the measure, or to the Senate Agriculture Committee, ready to "bottle up" the bill as the House committee had done? The finance group got the bill, approved it, and sent it to the floor.

But 1948 was a hot election year. Opponents threatened a filibuster—a minority talk-fest designed to delay action until a weary majority agrees to postpone action. The threat succeeded.

The 1948 margarine bill died with the end of the Eightieth Congress. All bills not acted on when one Congress completes a 2-year session must start their journey back at the starting line.

In 1949, when the Eighty-first Congress convened, the House Agriculture Committee held long and bitter hearings on 44 oleomargarine bills and finally reported one to the House in March of last year.

The textbook says: "The committee may approve the bill just as it stands * * *."

But a committee often reports a bill favorably with amendment. The amendment may strike out everything after the opening clause, "be it enacted by the Senate and House * * *," and put in a completely new and often different bill.

The House Agriculture Committee did recommend the bill to repeal margarine taxes introduced by Utah's Representative GRANGER. But there was a "joker." It also would have prohibited shipment among States of colored margarine. The dairy-States men figured this would help stifle trade in margarine. Even under tax handicaps mar-

garine production had zoomed from about 300,000,000 pounds in 1939 to over 1,000,000,000 pounds in 1949. Postwar high prices for butter and improved flavoring and coloring techniques for the substitute had brought a switch from butter to margarine among many families.

On the House floor, however, Representative POAGE, of Texas, succeeded in substituting a pro-margarine measure for the committee-approved bill of Representative GRANGER. This passed the House 289 to 87. That was April 1, 1949.

The Senate in 1949 never did get around to acting on the bill. Senator WILEY, of Wisconsin led the opposition and threatened a filibuster. Senator FULBRIGHT, of Arkansas finally got the Democratic leadership to agree to let him bring up the bill the first thing this year. Opponents couldn't filibuster from January 3 to the very end of the session, he reasoned.

The Senate took up margarine tax repeal on January 4, 1950.

Then came a deluge of delaying amendments—to abolish the Southern poll tax, to enact an antilynching law, to set up a fair employment practices commission, to repeal wartime excise taxes. These were knocked down one by one. But before the bill passed the Senate, 56 to 16, the "rider" strengthening FTC penalty powers had been attached.

TRIANGULAR TRICK

Everything seemed fine for the bill's proponents—except for one little gimmick. The Senate had stuck in a change that required all margarine to be molded and packed "so as to be triangular in shape." That meant the one-pound packages and quarter-pound sticks of margarine all had to be triangles.

Representatives of the margarine industry did some scrambling. This would mean completely junking all existing packaging machines and cutting dies, they screamed. It would cost the industry up to $5,000,000 for new packaging machinery and would take up to 5 years to get the equipment, it was claimed.

When the House and Senate have each passed differing versions of the same bill, the textbook casually says: "The matter goes to a conference committee." The conference committee is made up of members of the committees in each house that originally dealt with the measure. They compromise the measure.

In the case of the margarine bill, the triangle packaging issue almost led to a stalemate. This was finally settled by making it mandatory for restaurants to serve the spread in triangles, or else label it plainly as margarine. Then the compromised bill went back to House and Senate and sailed through with little difficulty, and was sent to the White House for Presidential approval.

The textbook was never so right as when it concluded: "It is only the most robust bills that survive to the end."

Fair Employment Practices Board

EXTENSION OF REMARKS
OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1950

Mr. POWELL. Mr. Speaker, on February 23 this body voted to scuttle H. R. 4453, the Powell FEPC bill, and in its place substituted the McConnell bill, which is practically meaningless insofar as effective elimination of job discrimination is concerned. At that time I and a number of other Members of the House stated that this was a sell-out of FEPC and that the passage of the McConnell bill would serve as a signal for intensification of discrimination in employment against minority groups throughout the country, thus destroying one of the basic principles upon which our country was founded, namely, the right of all citizens to life, liberty, and the pursuit of happiness.

Only a few short weeks after the passage of the McConnell bill we see that the House Post Office and Civil Service Committee unanimously reported a bill, H. R. 7185, which has as its purpose the continued denial of skilled jobs to Negroes in the Bureau of Engraving and Printing of the Treasury Department.

When one reads this bill the impression is gained that the Post Office and Civil Service Committee is concerned with increased job opportunities for veterans, but an examination of the actual situation which the bill proposes to correct will reveal that this bill was introduced only after the Fair Employment Board of the Civil Service Commission had instructed the Treasury Department to cease discriminating against a group of its Negro employees and give a long-postponed examination for apprentice plate printers.

Further proof that the bill is aimed at continuing the discriminatory practices now in effect at the Bureau of Engraving and not for providing increased job opportunities for veterans is revealed by the fact that at the opening of the hearing on the bill the chairman of the committee requested the Treasury Department to postpone the examination scheduled for March 15, which will make possible for the first time in its history for the Bureau of Engraving to employ Negroes who are qualified as plate printers.

The Fair Employment Board stated in its formal decision:

The Board is gratified to learn that the Department of the Treasury has now rescheduled for March 15, 1950, the promotional examination, the indefinite postponement of which precipitated the appeal in this case. This is an encouraging step in the right direction but is of itself insufficient treatment of the basic problem. The civil-service laws and regulations, the financial resources of the Bureau of Engraving and Printing, the numerical strength of the plate printer force, and the pattern of work organization around the plate printing press provide ample management flexibility to permit the operation of a recruiting system free from any taint of racial discrimination.

It is the recommendation of this Board that the best corrective of the existing situation will be found in the early initiation and continuous operation in the Bureau of Engraving and Printing of an inservice-training program with respect to the plate printing craft, related numerically to the normal turn-over in that employee classification and to the total Government and private employment in this craft. This program should be open to all qualified employees of the Bureau within these numerical limits, thus effectuating the intent of Executive Order 9980 as implemented by the Department's promotional policy announced in Departmental Order No. 114 of June 1, 1949.

The Fair Employment Board of the Civil Service Commission is not an irresponsible body. It was appointed at the direction of the President to correct the problem of discrimination against minority groups in Government employment. It did not arrive at its decision on the Bureau of Engraving and Printing case without thorough and painstaking investigation of the problem. That Board found that the following conditions exist at the Bureau of Engraving:

The number of plate printers employed throughout the country is relatively small, and the Bureau is by far the largest employer. On January 1, 1950, it had on its employment rolls 492 plate printers, a number which is more than 50 percent of the total number of this craft now in employment. Over the past 20 years the Bureau force, with some fluctuations, has grown from about 400 to nearly 500, despite improvements in equipment and technology which have increased individual production capacity. No Negro is or ever has been employed by the Bureau as a plate printer.

Journeyman plate printer in the Bureau of Engraving and Printing must have had 4 years of apprenticeship, or its equivalent in practical experience. * * * No Negro has ever been recruited or employed as an apprentice plate printer in the Bureau.

For at least 20 years prior to 1933 the Bureau met its plate printer personnel recruitment needs through appointment, on certification by the Civil Service Commission, of journeymen who had served an apprenticeship in private industry. The Civil Service Commission requires the full apprenticeship experience of 4 years or, since 1942, its equivalent of practical experience, as a prerequisite to such certification, but the Commission in no way restricts the operating Bureau to this single channel for meeting its need for plate printers. The recruitment of journeymen plate printers solely from private industry had the effect of erecting a barrier against Negroes who might aspire to become plate printers in the Bureau, because in private industry up to this time, Negroes have not had equal opportunity to secure the requisite training.

Over the 13 fiscal years 1933 to 1950 inclusive, the Bureau recruited 75 apprentice plate printers, and it has carried on its rolls an average of 21 such apprentices for each of those years. None has been recruited since April 15, 1946.

Of these 75 apprentices, 61 were chosen from lists of eligibles certified by the Civil Service Commission from assembled written examinations, advertised and held throughout the United States, and 14 were recruited by such noncompetitive action as transfer, promotion, or reassignment. Negroes competed in the examinations and were certified as eligible, and at the same time qualified Negroes were available for noncompetitive assignment within the Bureau as apprentice plate printers. But none of the 75 apprentices were Negroes. In at least one case a Negro eligible failed of appointment while white eligibles of lower rating on the same certificate were appointed. This Negro eligible was subsequently certified to another Government agency where he served his apprenticeship, and is now employed as a journeyman in another craft.

The cessation of apprentice recruiting in 1946 recreated the recruitment situation which existed prior to 1933. Negroes in considerable numbers, presently employed in the Bureau, and veterans of World War II, aspire to become plate printers. The announcement of the promotional examination in July of 1948 opened the channel for a specified group of Negroes in the Bureau, including the appellants. Continued postponement of the examination restores the exact situation which existed prior to the announcement and closes the only channel by which the

Negro applicants can become plate printers in the Bureau.

Who are the Negro employees at the Bureau of Engraving who fought for and secured this decision on fair employment in their agency? They are all veterans of World War II, many with overseas and combat service, some with four and five battle stars and a few with citations for outstanding heroism in the face of enemy action.

H. R. 7185 is designed to destroy the opportunity of these men to enter into a skilled craft from which members of their race have been barred for the last half century both in government and private employment. I am familiar with the fight of these men, for they and their union came before my subcommittee when it was holding hearings on the recently scuttled FEPC bill, H. R. 4453. I heard their stories and I have had Negro employees by the scores come to me and say this is it.

When the Fair Employment Board decision on the Bureau of Engraving case was issued a new atmosphere of freedom and brotherhood was created in that Government agency. Many of the Negro veterans who were affected by that decision and saw for the first time in their lives an opportunity to enter a hitherto lily-white trade, came to me and said now we are beginning to realize some of the things for which they told us we were fighting in the last world war. They told me that not only did they feel that way but that a number of white veterans of World War II who had been caught in the agency's discriminatory squeeze play also had these feelings.

No; the issue behind H. R. 7185 is not the technical one of giving additional job advantages to veterans. It is just the contrary. The motivation is to take away from these Negro veterans their recently won opportunity to enjoy some of the democracy for which they fought and bled. The issued posed by H. R. 7185 is whether or not fair employment practices in our Government agencies will be maintained and upheld or whether a group of narrow-minded, bigoted racists will have complete control over skilled jobs in the Bureau of Engraving by virtue of the passage of this bill.

In effect, the very dignity of this Fair Employment Board which was appointed by the authority of the President is threatened by this bill. If Congress reverses this decision, the civil rights of Negroes and other minority groups in Government employment will have been done an irreparable harm. This is the stain which H. R. 7185 would place upon the conscience of the Members of this House.

I want to serve warning to all of those who propose to hide behind this bill and to give vent to their prejudice by support of this bill that they will be fought tooth and nail on the issue of civil rights. The fight for FEPC will go on.

To support H. R. 7185 will be to support the most vicious discriminatory legislation this House has seen. It will make a further lie of the Republican and Democratic platforms. It will be a direct insult to every Negro, veteran, and believer in democracy.

Only Tuesday, March 14, 1950, Judge Keech rejected a request for an injunction against this examination. The request for this injunction was made by a lily-white group which seeks to continue the racial exclusion policy in this agency. Judge Keech's refusal in district court yesterday to grant an injunction which would postpone this examination is an indication of the complete illegality of any action to overthrow the fair employment decision.

FAIR EMPLOYMENT BOARD,
CIVIL SERVICE COMMISSION,
Washington, D. C.

Name of appellants: Earl E. Ashton, Raymond F. Cooke, Paul F. Cooper, John E. Harris, Francis E. Janifer, Thomas M. Keys, Edward L. Mitchell, Edgar Sims, Frederick Wiggins.

Department: Bureau of Engraving and Printing, Treasury Department, Washington, D. C.

BASIS OF APPEAL

The above-named persons appealed individually to the Fair Employment Board under Executive Order 9980 from the decision of the Acting Secretary of the Treasury, dated December 29, 1949, that there was no racial discrimination in connection with the postponement of a promotional examination for apprentice plate printer in the Bureau of Engraving and Printing. All of the appellants had applied for, and were eligible to take the examination. The appeals were consolidated for hearing.

The appellants alleged, in substance, that in the recruitment of apprentice plate printers and plate printers by the Bureau of Engraving and Printing discrimination against Negroes has long prevailed; that the promotional examination for apprentice plate printers announced July 16, 1948 was a practical and very welcome step toward removing this discrimination; and that the indefinite postponement of the promotional examination on November 5, 1948 reerected a barrier which effectively deprives all Negroes of any opportunity to qualify for, or attain employment as, plate printers in that Bureau.

Admittance to the promotion examination was limited to seven classifications of Bureau employees having permanent civil-service status and, within these classifications, to veterans of World War II under 41 years of age. From 100 entrance applications originally accepted, 94 applicants remain. Of these, 47 are Negroes.

The announced reasons for the postponement were: (1) that 20 power plate printing presses of considerably greater potential output than the presses then in use had unexpectedly become available and had been purchased for immediate installation; (2) that a program for modernization of the presses then in use had been developed and adopted; and (3) that if those steps proved successful the plate printers requirements of the Bureau could easily be met with existing personnel, therefore making it unnecessary to appoint apprentice plate printers for an indefinite period of time.

The bulletin postponing the examination held out for the applicants only the prospect that, "If the program fails, obviously it will be necessary to revive consideration of the apprentice program."

HEARING AND INVESTIGATION

The Board held a hearing on January 30, 31, and February 1, 1950, at which the appellants, their representatives, and a representative of the Treasury Department were present. Testimony was adduced from witnesses presented by the appellants or called by the Board itself. In addition to the information secured at this hearing and from a review of the file of the Treasury Department, the Board has obtained supplemental data from the Treasury Department, the Civil Service Commission, and other sources, with particular reference to possible racial discrimination in the recruitment and employment of plate printers and apprentice plate printers in the Government service.

FINDINGS OF FACT

1. The position of plate printer has been clearly identifiable in the pattern of Federal employment for many decades. It is unqualifiedly subject to civil-service laws and regulations. All citizens, regardless of race, color, religion, or national origin, are, therefore, entitled to an open channel toward employment as plate printers in the Bureau of Engraving and Printing.

2. The promotion policy of the Treasury Department, which is the only agency of the Federal Government employing plate printers, provides, in its departmental order No. 114, dated June 1, 1949, that—

"It is the policy of the Treasury Department normally to fill vacant positions above the customary recruiting levels in each bureau, office, and division by the promotion from within of qualified employees whose abilities have been demonstrated and who have the capacity to undertake more advanced work. Promotions will be based solely on merit. There will be no discrimination because of race, color, creed, or for any other reason. Preference will be given to seniority only when other qualifications are equal."

3. The number of plate printers employed throughout the country is relatively small, and the Bureau is by far the largest employer. On January 1, 1950, it had on its employment rolls 492 plate printers, a number which is more than 50 percent of the total number of this craft now in employment. Over the past 20 years the Bureau force, with some fluctuations, has grown from about 400 to nearly 500, despite improvements in equipment and technology which have increased individual-production capacity. No Negro is or ever has been employed by the Bureau as a plate printer.

4. Journeyman plate printers in the Bureau of Engraving and Printing must have had 4 years of apprenticeship, or its equivalent in practical experience. At present there are no apprentice plate printers employed in the Bureau, as the last apprentice became a journeyman this year. No Negro has ever been recruited or employed as an apprentice plate printer in the Bureau.

5. For at least 20 years prior to 1938 the Bureau met its plate printer personnel recruitment needs through appointment, on certification by the Civil Service Commission, of journeymen who had served an apprenticeship in private industry. The Civil Service Commission requires the full apprenticeship experience of 4 years or, since 1942, its equivalent of practical experience, as a prerequisite to such certification, but the Commission in no way restricts the operating Bureau to this single channel for meeting its need for plate printers. The recruitment of journeyman plate printers solely from private industry had the effect of erecting a barrier against Negroes who might aspire to become plate printers in the Bureau, because in private industry up to this time, Negroes have not had equal opportunity to secure the requisite training.

6. Since 1938 the number of plate printers appointed in the Bureau has averaged 49, and the number of separations 46 per year. As of January 1, 1950 there were 492 plate printers on duty in the Bureau and 20 vacancies to be filled. The Director of the Bureau expects that, subject to possible fluctuation in demand for currency and stamps, the plate printer force will be stabilized at approximately 500 journeymen after the installa-

tion of new presses and the modernization of old presses have been completed.

7. For several years there has been a shortage of qualified journeyman plate printers. This shortage is reflected in the amount of overtime worked by the plate printers on duty in the Bureau. On November 29, 1949, the Civil Service Commission announced an open continuous examination for plate printer. To date, as a result of this examination, the Commission has not secured a sufficient number of eligibles to fill existing vacancies in the Bureau and to provide for the normal annual turn-over in plate printer personnel. According to the Bureau's own estimate, separations are anticipated as follows: 1950, 36; 1951, 36; 1952, 30; 1953, 34.

8. Over the 13 fiscal years, 1938 to 1950, inclusive, the Bureau has recruited 75 apprentice plate printers, and it has carried on its rolls an average of 21 such apprentices for each of those years. None has been recruited since April 15, 1946.

Of these 75 apprentices, 61 were chosen from lists of eligibles certified by the Civil Service Commission from assembled written examinations, advertised and held throughout the United States, and 14 were recruited by such noncompetitive action as transfer, promotion, or reassignment. Negroes competed in these examinations and were certified as eligibles, and at the same time qualified Negroes were available for noncompetitive assignment within the Bureau as apprentice plate printers. But none of the 75 apprentices were Negroes. In at least one case a Negro eligible failed of appointment while white eligibles of lower rating on the same certificate were appointed. This Negro eligible was subsequently certified to another Government agency where he served his apprenticeship, and is now employed as a journeyman in another craft.

9. The cessation of apprentice recruiting in 1946 recreated the recruitment situation which existed prior to 1938. Negroes in considerable numbers, presently employed in the Bureau, and veterans of World War II, aspire to become plate printers. The announcement of the promotional examination in July of 1948 opened the channel for a specified group of Negroes in the Bureau, including the appellants. Continued postponement of the examination restores the exact situation which existed prior to the announcement and closes the only channel by which the Negro applicants can become plate printers in the Bureau.

DECISION AND RECOMMENDATION

The method of recruiting plate printers is clearly the responsibility of the executive branch of the Government and, particularly, of the officers charged with general management of the employing bureau. Generally speaking, these officers must be allowed to determine whether such recruitment shall be accomplished exclusively by recruiting journeymen or in whole or in part through an apprentice program. Such discretionary authority should, however, be exercised within the framework and in the light of the spirit and intent, as well as the letter, of civil-service law and regulations and of Executive and departmental orders. If the exclusive recruitment of journeymen operates, for any reason, to deprive any group of American citizens by reason of race, color, religion, or national origin, of opportunity to qualify for the civil-service position of plate printer, the recruitment policy and program should be changed.

The Fair Employment Board recognizes that the postponement of the apprentice plate-printer examination in 1948 was, at the time, an exercise of reasonable business judgment. But it concludes that any continuation of past recruitment methods and procedures as applied to plate printers in the Bureau of Engraving and Printing will inevitably involve an element of racial discrimination against Negroes, in that it will perpetuate a system which has operated effectively to bar Negro citizens from the civil-service position of plate printer in the Bureau.

The Board is gratified to learn that the Department of the Treasury has now rescheduled for March 15, 1950, the promotional examination, the indefinite postponement of which precipitated the appeal in this case. This is an encouraging step in the right direction, but is of itself insufficient treatment of the basic problem. The civil-service laws and regulations, the financial resources of the Bureau of Engraving and Printing, the numerical strength of the plate-printer force, and the pattern of work organization around the plate-printing press provide ample management flexibility to permit the operation of a recruiting system free from any taint of racial discrimination.

It is the recommendation of this Board that the best corrective of the existing situation will be found in the early initiation and continuous operation in the Bureau of Engraving and Printing of an in-service training program with respect to the plate-printing craft, related numerically to the normal turn-over in that employee classification and to the total Government and private employment in this craft. This program should be open to all qualified employees of the Bureau within these numerical limits, thus effectuating the intent of Executive Order 9980 as implemented by the Department's promotional policy announced in Departmental Order No. 114 of June 1, 1949.

By direction of the Board:

JAMES L. HOUGHTELING,
Chairman, Fair Employment Board.

FEBRUARY 23, 1950.

A Congressman's Duty

REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, an editorial in the News-Palladium of Benton Harbor asks—

What is a Congressman's duty when he must vote on a measure which he dislikes but which is favored by so many of the people of his district that a vote against it might cost him his job? Should he abandon his own beliefs and vote for the measure, thus protecting his popularity at the polls? In doing so he might be the best representative of his district, which after all is what a Congressman is supposed to be. * * *

Or should he stand by his own convictions and attempt to justify himself to his constituents on the ground that he did what he thought was best for the Nation? This course, too, could be right in some cases, where the Congressman might be convinced that the proposed action * * * would be harmful to the Nation as a whole. If it would harm the Nation, it would eventually harm his district also; seeing this, it would be his clear duty to vote for the good of the Nation and try to show his voters that he had done so.

The editorial raises an issue which almost daily confronts every elected legislative officeholder. There is no "yes" or "no" answer. The answer is sometimes "yes"; sometimes "no."

For example, everyone wants more at less cost, but it would be disastrous to enact legislation which would give to everyone, regardless of his need—let us say, a pension of $300 per month. Funds to pay that kind of a pension could only be obtained through taxation which would be ruinous. Certainly, no sound-thinking Congressman with the good of his country at heart would vote for something which he knew would destroy the Nation's economy.

Again, how can a Congressman know what his people actually want? Frequently, minority groups put on the heat, write the most letters, use the most newspaper space, talk the loudest. There is no easy answer to the question, "What do the people of my district want?"

There was a time when the people elected a Congressman because they had confidence in his judgment, trusted him to act for the benefit of the district and the Nation.

More recently, pressure groups have become numerous, well organized, vociferous; threaten their Representative with defeat if he does not vote the way that particular group wants, or thinks it wants. If I actually knew what a majority of my people, after having given consideration to the facts, wanted, I would either vote for the measure as advocated, or at least make my opposition thereto clear, give my reasons for that opposition so that at the next election, they would have an opportunity to select someone whom they thought would more often vote for the measures in which they believed.

A Congressman, unlike an employee in business or industry, is out of a job every 2 years. He must go to the voters to get a job. All things considered, a Congressman who does not truly represent the prevailing sentiment in his District is not re-elected. Inasmuch as it is almost impossible to ascertain in advance of the vote upon any one particular measure whether a majority of the people of the district favor it, a Representative is forced, if he is worth his salt, to vote his honest convictions. If that elected legislative official remains in office one term after another, it is therefore safe to assume that he has not only voted as his judgment and convictions indicated, but that he has also voted as a majority of the people desired. The only exception would appear to be when some wave of hysteria for a particular unsound course of action sweeps the country and the officeholder has not been able to point out the unsoundness of the proposed course of action.

A rapid turn-over in officeholders is usually due either to the pressure of a militant, powerful group representing special interests, or to the failure of the officeholder to make his views clear, to think and to act for the good of the Nation as a whole.

Ordinarily, a Representative who survives more than two terms is one who not only votes his own convictions, but at the same time votes as the real majority of his constituents wish.

Usually a Congressman votes his convictions and his convictions are from a practical standpoint, those of his people.

Tax Reduction

REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. JENSEN. Mr. Speaker, I have a specific suggestion about how to bring about a large boost in the living standard of every American, create more employment and better the general welfare of every American. My suggestion is simple. Cut taxes.

Last year our country's total tax bill was $56,000,000,000. This is considerably higher than our total food bill. If we reduce taxes by, say 20 percent, all of us will be able to eat about 20 percent better. Everyone would be better off—the farmer, the food processor, the retailer, and the customer. Remember the total value of all the farms in America plus all the farm machinery and all the livestock on all the farms is only $44,000,000,000.

This same tax bill of $56,000,000,000 is almost as high as the combined annual cost of all food, housing, all household expense, medical care, and recreation for every person in this country. A 20-percent tax cut could mean about a 20-percent improvement in every one of these items. Think of it—20 percent better housing, 20 percent better furnishings, 20 percent better medical care, and 20 percent better recreation for every person in the country.

Taxes drag down our living standards. Let us reduce taxes and insure a better life for every American.

The Eightieth Republican Congress restored confidence to the people. The 1948 farm income, both gross and net, the laboring man's average annual income, and the businessman's income was the highest in the history of our Nation. Thanks to the good record of the Eightieth Congress.

Here are a few facts about the Republican Eightieth Congress:

Taxes: The people were saved $4,800,000,000 by a tax-cut bill passed over three Presidential vetoes. Low-income groups gained greatest benefit.

Labor relations: Passed Taft-Hartley Labor-Management Relations Act over veto. It liberated workers, cut strikes, stabilized jobs, increased income to workers.

Un-American activities: Revealed Communist spy rings and exposed infiltration of Communists into Government positions with high authority.

National defense: Passed Unification of Armed Forces Act and greatly expanded the Air Forces, thus strengthening the Nation's defenses.

Home building: Freed the people of red tape, rules, regulations, and directives, permitting private initiative to double home building in 2 years.

Aged and blind: Passed a bill over President's veto increasing payments for aged and blind and needy dependent children.

Agriculture: Extended full 90 percent parity-price supports on basic farm crops.

Soil conservation: Appropriated more than $500,000,000 for soil-conservation practices on farm lands.

REA: Approved $800,000,000 for REA loans to provide electricity for nearly twice as many farms as any previous Congress.

Roads: Authorized and provided funds for 1948–49 farm-to-market road-building program five times larger than any previous single year.

Veterans: Increased benefits for needy and disabled veterans, their widows and children, and dependents of deceased veterans.

Health: Provided Federal aid for research into causes and treatment of cancer, heart, and teeth diseases.

Bureaus: Reduced number of useless Government agencies, boards, bureaus, and commissions over strenuous Presidential objections.

Foreign affairs: Cooperated in every way to the fullest extent with our United Nations officials in their efforts to negotiate peace.

Foreign aid: Gave relief to numerous foreign nations to help them reestablish themselves and enable them to restrain Communist aggression.

Budget: Balanced the Federal budget for the first time in 16 years.

National debt: Paid $7,000,000,000 on the national debt.

Mr. Speaker, above all else, in two crowded years the Republican Eightieth Congress gave new life and new meaning to the fundamental principle of American government, which is that government is the servant and never the master of the people.

Tax Reduction

REMARKS
OF
HON. LOWELL STOCKMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. STOCKMAN. Mr. Speaker, during the recent war, Americans were footing the biggest tax bill in the Nation's history—shouldering the burden along with the other special wartime sacrifices which they were called upon to make. But today—nearly 5 years after the end of hostilities—our annual Federal tax bill is only slightly smaller than it was at its wartime peak in 1945. The astronomical tax figure may be more understandable when we realize that 18 cents of every national income dollar was paid to the Federal Government in some form of tax in the fiscal year 1949. Compare this to 8 cents per dollar of income which represents the tax bill only a decade ago. The farmer—the factory worker—the businessman—feels the heavy hand of Government in his pocket and he is voicing his complaints. The taxpayer is more than a harassed looking little man in a newspaper cartoon; he is a man with a voice who decries the extravagance of Government for which he must pay each time he receives his pay check, buys a train ticket or a package of cigarettes, or goes to a movie. If he is in a low-income group and would enjoy some of these so-called luxuries, he must bear an unfairly large portion of the excise taxes.

There seems to be rose-colored theory at present which says prosperity will last forever. Such a theory is dangerous if it blinds men to economic reality and keeps them from facing squarely the problems at hand. Economists and businessmen are finding warning signals in our economy which would be well to heed—signals which seem to indicate that continued prosperity is not inevitable without some incentives to maintain high levels of production and employment.

One danger signal became evident last year when businesses and individuals showed more reluctance to spend their money. Last year businesses were cutting back plans for expansion—putting less money into new plant and equipment for the first time since the end of the war. It might be interesting to note that the profits left to corporations in 1949, after paying what was owed to the Federal Government, were less than twice the amount of the tax payments themselves. Can this tax policy be called an incentive for business expansion? Industry must be able to offer the investors who make expansion possible a decent return on their money. If we are to have a growing economy, we must not shackle it with tax chains and repress its expansion.

The fuel that keeps the machines of business running is the consumer's dollar. A large and steady flow of dollars from consumers who are willing to buy is the basis for high levels of business activity. But in 1949 another danger signal was flashing for those who would look. For the first time since 1938, the volume of retail sales dipped below the level of the previous year—consumers were more reluctant to buy goods and services. A declining demand for goods necessarily affects the jobs of the people who produce them; in 1949 the number of unemployed persons rose to a monthly average of 3,500,000—the highest level since 1941.

As the postwar boom fed by accumulated wartime demand for goods slackens, any forces which tend to weaken purchasing power become more dangerous. The dollars which consumers have to spend are limited by the large slice of their income taken by the Federal, State, and local governments in the form of taxes. Some of these taxes are paid consciously, but many are hidden in the price which the consumer pays for the goods he buys.

Figures for 1948 show that about 23 cents out of each dollar spent by consumers was taken for taxes, assuming that all dollars spent in the United States share equally in the total tax load. Such excessive taxation only leads to economic deterioration, taking from the productive machine the consumer

dollars which it needs to keep it running smoothly at high levels.

The cry to cut taxes is not the whole answer. Unless Government can live within its income by making appropriate economies, we must face the possibility of being saddled with an even larger public debt.

In these days when it is so important to make our free-enterprise system work and keep our country's economy strong, we must not stand by and watch a repressive tax policy stifle the economic progress of the Nation.

Reorganization Plan No. 12

REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. CHURCH. Mr. Speaker, I am today introducing a resolution rejecting Reorganization Plan No. 12, which the President submitted to us last Monday, along with 20 other plans.

Reorganization Plan No. 12 abolishes the office of general counsel of the National Labor Relations Board and transfers all its functions to the Board and its Chairman.

Mr. Speaker, this plan is an illegal attempt, under the guise of being a Hoover Commission recommendation, to destroy the effectiveness of the Taft-Hartley Act. By this plan President Truman is brazenly attempting to repeal one of the most important features of the Taft-Hartley Act. He is attempting to do by indirection that which he has been unable to do directly.

Again he complies with the demands of certain union leaders, even to the extent of attempting to do that which is expressly prohibited by the Reorganization Act of 1949 and, at the same time, attempting to deceive the American people into believing that the proposal constitutes one of the recommendations of the Hoover Commission.

Mr. Speaker, I call your attention to section 5 of the Reorganization Act, which act gave the President the power to prepare reorganization plans. Section 5 of that act placed certain limitations on the powers. That section expressly states that "no reorganization under this act shall have the effect of—" and now I read from subsection (4)—"authorizing any agency to exercise any function which is not expressly authorized by law at the time the plan is transmitted to the Congress."

In the light of that definite prohibition in the Reorganization Act itself it would take a great deal of legerdemain reasoning to justify legally the proposal of the President by which the National Labor Relations Board is to be vested with the functions of the Office of General Counsel.

I remind you that the Office of General Counsel was established by Congress in order to separate the prosecuting and the judicial functions of the National Labor Relations Board. It was first embodied in the so-called Smith bill which passed the House by overwhelming votes on two occasions, only to die in the Senate Labor Committee. It was incorporated in the Taft-Hartley Act, in a modified form which, as you know, the Congress enacted into law over the President's veto, and which we have consistently refused to repeal.

It is almost too elementary to mention the needed separation of prosecuting and judicial functions, particularly in such an act as that involving labor relations. A man cannot act as an advocate of one side of a controversy and, at the same time, inspire public confidence in his impartiality to decide that very same case in fairness and justice to all sides.

I do not wish to take the time now to discuss the various functions of the Office of General Counsel. There are doubtless certain things that should be done to redefine the functions of that office. That is what the Hoover Commission recommended.

Mr. Speaker, contrary to what the President would have the American people believe, the Hoover Commission did not recommend that the office be entirely abolished and its functions transferred to the Board and its Chairman.

I call your attention to what the task force report of the Hoover Commission had to say on this specific Office. It recognized—page 139—that the Office of General Counsel of the National Labor Relations Board was somewhat unique, as it serves as a prosecutor, administrator, and a policy maker. To the suggestion that the office should again be placed under the Board, the Hoover Commission task force called attention to the objection to having the prosecuting functions and the hearing of complaints united. It then suggests the following as a solution, and I quote from page 141 of the task force report on regulatory commissions:

> It may be that the administrative and policy-making functions could be subordinated more clearly to the Board's control while still maintaining an adequate separation of the truly prosecuting activities.

Reorganization Plan No. 12 submitted to us by President Truman does not carry out any recommendation of that character. His plan is merely masquerading as a Hoover Commission recommendation. He is using the Hoover Commission, which the people support, as a vehicle to carry out the demands of certain union monopolists, who want no restraints whatever on their power. These union monopolists want the office abolished because the General Counsel has refused to succumb to pressure to ignore violations of the law by labor organizations.

Surely our memories are not so short that we do not recall how our people suffered as a result of the recent coal strike. While the President sat idly by and allowed the coal shortage crisis to grow worse and worse, the General Counsel happily had authority to take some independent action. He obtained from the court an injunction to prohibit the strikers from seeking to make the operators agree to contract provisions which are expressly prohibited by law. His action served to narrow the issues in the coal dispute and served to hasten the coal-strike settlement.

Mr. Speaker, on several occasions I have urged early action on the Hoover Commission recommendations in order to effectuate some economy. I have been very impatient with the delay on the part of the administration in putting this program into effect, and I have expressed that impatience on the floor of this House.

Last Monday, the day President Truman submitted these plans to us, I rose to express the hope that they would be in line with the Hoover Commission recommendations and that they would not just be some of the administration's pet schemes under the guise of the Commission's proposal.

Reorganization Plan No. 12 is not a Hoover Commission recommendation. It is not even legal. It is a plan expressly prohibited by the Reorganization Act itself. It is another one of the administration's pet schemes. It is another attempt to give the union monopolists whatever they want, the existing law, the Congress of the United States, and the American people to the contrary notwithstanding.

Senseless Taxation

REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. KEEFE. Mr. Speaker, the Eightieth Congress assembled January 3, 1947, and ended January 3, 1949. The 1948 tax law was enacted April 2, 1948 and made retroactive to January 1, 1948. The President and his spokesmen constantly claim that this tax law is responsible for his budget deficit difficulties. What are the facts?

In fiscal 1948, which includes 6 months of calendar 1948, during which the new law was effective, personal income tax collections amounted to $20,997,780,699.

In fiscal 1949, a period when business generally had begun to slump, total personal income tax collections showed a drop of $2,272,628,261.

In fiscal 1948, corporate tax receipts were $10,174,409,834. In 1949 they jumped to $11,553,669,234, or an increase of $1,379,259,400.

Business was stimulated by the tax reduction granted the people by the Eightieth Congress, so that corporate profits soared, resulting in a net loss of revenue from corporate and personal income taxes of only $893,368,861. In that same year, a deficit of $1,700,000,000 was incurred. Mr. President, how do you and your supporters still contend that the

tax-reduction law passed by the Eightieth Congress is solely responsible for your budget deficits?

The fact is, we spent only $36,300,000,000 in fiscal 1948 as against expenditures of $43,100,000,000 in fiscal 1949, under complete Democratic control. The reason you are facing deficits is because you are spending too much money. More detailed information will be presented later.

Mr. Speaker, under unanimous consent, I include as part of these remarks, an editorial appearing in the San Diego Union on Thursday, March 9, entitled "Senseless Taxation":

SENSELESS TAXATION

A lot of people at the seat of the United States Government should be given a course of required reading of the Constitution of the United States. If they read intelligently, they would find this primary provision relating to the taxing powers of Congress:

"The Congress shall have power—

"To lay and collect taxes, duties, imposts and excises to provide for the common defense and general welfare of the United States; but all duties, imposts and excises shall be uniform throughout the United States."

Thus the taxing power of the Congress is definitely and specifically limited.

There is no authority to levy taxes for the purpose of giving or "lending" money to any foreign nation.

There is no authority to make levies for punitive or political purposes.

There is no authority to levy discriminatory taxes which take up to some three-fourths of the incomes of certain classes.

There is no authority to reach a taxing hand into the pocket of one citizen and hand his taxes over to another citizen.

There is no authority to impose taxes to promote experiments in socialism.

The abuse of the taxing power in recent years has been through invocation of the "welfare" clause. This has been made the excuse for outrageous favoritism and deliberate misinterpretation. There has been a continued and persistent effort to pervert this clause for the benefit of special groups and for donations to foreign nations. The thing which these tax eaters overlook in connection with welfare is one word:

"General."

The "general welfare" means the welfare of all the people—not one favored element or group, but the population as a whole.

It is inconceivable that the authors of the Constitution ever could have sponsored any system of taxation designed to give special benefits to one portion of the people through penalizing other elements.

It is inconceivable that they intended to permit the abuse of the taxing power to levy on the common necessities of life and thus increase the burdens of citizens through higher living costs.

Tables, drawn on authentic information, lately have been published in this newspaper showing what taxes cost the rank and file of people.

Taxes on a 13-cent bottle of milk total 8 cents.

Taxes on a package of cigarettes are 11 cents.

Taxes on a 5-cent bar of soap are 2 cents.

Taxes on a 30-cent can of baby powder are 18 cents.

Taxes on a $1,400 automobile are $700.

Taxes on a gallon of gasoline average 11 cents.

Taxes on a railway, bus, or airplane ticket are 15 percent.

Taxes on a $5 purse are $1.

And so it goes.

These are not all Federal taxes, but Federal imposts that compose the heavier load.

It has long been an axiom of able economists that when taxes take 25 percent or more of the national income, national bankruptcy must be the inevitable sequel. Already we are at that stage.

In the midst of all the pretentious talk about increasing our income as a Nation, Government is doing its best to prevent the increase by tax levies which discourage production and consumer expenditures.

"Taxation without representation" was the slogan of the Revolution which gave us our liberty. We are suffering the same evil now, through levies upon us by nonelected bureaucrats and executive autocrats.

Unless somebody at Washington resurrects the outmoded Constitution and insists on following its precepts the United States of America soon may be on the way out.

Juvenile Delinquency, Comic Books and Strips

REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1950

Mr. ANGELL. Mr. Speaker, the wave of juvenile delinquency throughout the Nation in the postwar period has focused attention on what parents and grown-ups are doing to arrest this tendency in child conduct. Faced as we are in this advanced age with the moving picture, the radio, and now the television, supplementing the great advances in the printing art, has given rise to many problems not alone with juveniles but with adults as well. Many serious thinkers have come to believe that the modern programs on the screen, in the air, as well as in comic books and strips, are not only accentuating the child-delinquency problem but are one cause leading to crimes of sex and violence.

The comic book has particularly come under observation by many of our citizens who are seeking answers to these perplexing questions. In fact many States and cities have attempted by the enactment of legislation to solve the problem. The New York State Assembly enacted the Feinberg comic-book censorship. It is reported that 60,000,000 comic books are sold in America every month. Not only did the New York Legislature enact such a law but some 14 other States and many cities have taken similar action. Some of these have aroused opposition, resentment, and the contention that such legislation is a direct threat to the freedom of the press. The book committee of the Child Study Association suggests that comic strips which stimulate sex by showing amorous women or scantily clad maidens struggling in the grip of jungle monsters, aren't suitable for young readers. Who, I pray, would contend that they are?

The Association of Comic Magazine Publishers itself has appointed an advisory committee of distinguished membership to point out ways of so improving the comics that they will become, not a menace to morals and incentive to crime, but an educational force in the mass marketing areas. Too much commendation cannot be given to this association for its attempt to clean house.

Our neighbor to the north, Canada, has recently revised its criminal code which has to do with obscene written matter. This provision makes everyone guilty of an indictable offense and liable to 2 years' imprisonment who makes, prints, publishes, sells or has in possession for any such purpose, any crime comic. The Canadian law specifically provides that the motives of the accused shall in all cases be irrelevant and that ignorance of the nature and presence of the matter shall not be considered a defense.

The great freedom enjoyed by the youth and particularly the children of tender age here in America and the opportunity accorded to the boys and girls of America to see depicted on the screen and over the television circuits and to hear radio programs as well as to read in the daily newspapers and magazines and comic books a multitude of salacious and sexy stories and crime problems arouses an unnatural interest in the children and forms lasting impressions on adolescent minds. It follows that some protective supervision over these media of transmission of thought should be exercised by duly authorized officials in order to protect the morals and well being of modern youth who will be the citizens of the tomorrows. The old saying that the hand that rocks the cradle rules the world is still true but today the mother in too many cases has abandoned the safeguards which formerly protected growing youth and has permitted outside influences to have the upper hand which in many cases leads the young mind and heart into devious paths to the detriment of the child.

An inquiry of the legislative bureau of the Congressional Library brings the information that there is no pending legislation in the national Congress seeking to provide some controls over the comics which capitalize on crime and sex for reader interest. There is need for a comprehensive study and appraisal of this whole problem so vital to the welfare of our Nation's youth with the end in view of enacting necessary legislation to meet the problem.

Housing Facts

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1950

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

OKLAHOMA CITY, OKLA., *March 10, 1950.*

Congressman VICTOR WICKERSHAM,
New House Office Building.

DEAR VICK: I understand that at long last debate will be started on the House floor on the general housing bill. This is good news

to the building industry because, in the most part, this legislation is needed at this time in order that we may continue at our present high level of home production.

However, in my opinion, the amendment known as H. R. 7402 which has to do with cooperative housing carrying with it direct subsidy from the Federal Government would prove to be very dangerous legislation.

According to the testimony given before the Banking and Currency Committee, Mr. Foley admitted that H. R. 6618, now known as H. R. 7402, was designed to house people in the income brackets from $2,400 to $4,800 per year. For your information, this simply means that the Federal Government would be put in the position of subsidizing home purchasers who are today being approved by FHA on homes selling from $7,200 to $14,400. If a man's credit is good, FHA will approve a loan for him equal to three times his annual income; therefore, a man earning $4,800 per year could buy a home selling for $14,400.

I believe you will find that the official records will show that 68 percent of all the homes FHA insured during the first 6 months of 1949 were sold to people making $4,800 and less per year, and that 47 percent of the homes sold in the high-cost New York City area were sold to people earning less than $4,800 per year.

Little did we think only a few short months ago when the public-housing bill, designed to house the lower one-third of our population, that at this early date certain groups would be attempting to push a bill through Congress that would house the middle one-third of our population and also at the expense of the taxpayers.

I honestly believe that if this bill is passed the results will be (1) highly inflationary because certainly a great number of units would be built. We would have a further scarcity of materials (we have been forced to close our operations down for 2 weeks during the last 90 days because we have not been able to get sheetrock). (2) Discriminatory in that a man earning up to $4,800 can buy or rent shelter for approximately 25 percent less (at the taxpayers' expense) than his neighbor living across the street who bought on our present FHA and VA home-loan plans. (3) It will be one more long and I fear dangerous step for the Federal Government to take in the housing field.

I believe that this is the first time that I have attempted to make my feelings strongly felt to you with reference to any bill being considered on the House floor. I do hope that after you have analyzed this bill and heard the debate by the members of the Banking and Currency Committee that you will concur in my feelings in regard to the possible results of such a bill becoming a law.

With sincere personal regards,

W. P. ATKINSON.

Alaskan and Hawaiian Statehood

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1950

Mr. CRAWFORD. Mr. Speaker, last week the House approved statehood bills for Alaska and Hawaii. Alaska was acquired from Russia about 1867 and Congress approved an organic act making the people of the Territory citizens of the United States about 1912. When this Territory was thus incorporated into the Union, the people of the United States, acting through the Congress, in substance said to the people of Alaska that in due course when your economy has developed sufficiently and when you have demonstrated your ability to handle your affairs of government, you will then be entitled to become one of the States of the United States of America. This is the historical program which the United States has followed since the inception of its organization and the creation of the Northwest Territory. Many of our present States first became organized Territories and later were accepted into the Union as States. They, too, had a very small population when accepted as States.

The very interesting point about Alaska is that the present Russian Politburo under the leadership of Mr. Stalin takes the position that the Czarist Government had no authority to sell Alaska to the United States of America, and, therefore, the present Russian Government seriously questions the validity of the ownership of Alaska by the United States of America.

In view of Alaska's most important strategic position in connection with the defense of the United States as well as Canada, and in connection with our international program of today, the whole world, outside of Russia and her satellites, have taken the position that the sooner we extend statehood to Alaska the better it will be for all of the people of the United States of America.

HAWAII

We should bear in mind that Hawaii was a self-governing people under a representative form of government at the time they asked for permission to annex themselves to the United States of America. After necessary negotiations the people of the United States and Hawaii agreed to join their resources, their economy, and their forms of government, and Hawaii was likewise incorporated into the Union as an organized Territory. For approximately 52 years the good people of those islands have been preparing for statehood. The Hawaiian Islands are likewise a pivotal defense base in our approach to the Far East.

The Hawaiian people contribute vast sums to the United States Treasury; have a very sound and efficient economy; are extremely loyal to the United States of America. If any organized Territory has ever justified being recognized as a State, we must admit the Hawaiians have qualified.

How soon the Senate will approve statehood for these two Territories is questionable. Some of the more vociferous take the position, first, that the Hawaiian people are not loyal, and, secondly, that due to the small population of Alaska as well as Hawaii, these islands should not be permitted to place two Senators in the United States Senate. Such a protest is indefensible; it is contrary to every principle we have advocated in connection with the last two world wars, which have cost us in dollars alone approximately $700,000,000,000, to say nothing about the dislocation of our economy, the loss of lives, and the troublesome days which still lie ahead for our people.

AMERICAN SAMOA

American Samoa is a group of islands some 900 miles south of the Equator acquired by the United States of America during the period 1889–99 through agreement between Britain, the United States, and Germany. At that time the great Samoan race was split by this agreement without their consent and approval. These three great powers simply made a division of the territory which suited their convenience and ideas. During all of these years American Samoa has made great progress. These people are as magnificent in character and intelligence and loyal and as ambitious as any people you could find in colonial life. In all of the colonial possessions of the earth there could be found no finer people. In stature, in general appearance, cleanliness, and sincerity they are par excellence. In American Samoa you find no poor people, rich, or so-called middle-class people of consequence. The economy of the islands is operated under the "matai" or "chieftan" system, with "high talking chiefs, talking chiefs," and other chiefs. The "matai" and the "chiefs" see that all of their clansmen or tribesmen—the very young, the teen-agers, the middle-aged, and the old—are all properly fed, clothed, and housed. They are ambitious from the standpoint of education and of striving toward obtaining a full and complete life as sought by the American people. The American Samoans and other parts of their race which are now under the control primarily of New Zealand—Germany having lost this territory to New Zealand following World War I—look forward to the day when the machinery of the Trustee Council of the United Nations, together with the Congress of the United States of America, will bring the whole Samoan race back together under the protection of the United States of America. Shortly our Congress will be called upon to consider the approval of an organic act setting up a civilian form of government for American Samoa—they having been under our Navy rule for the past several decades—and this act, when approved, will unquestionably offer American citizenship to the Samoans, giving them a bill of rights and set them up as a possession, but not as an organized territory, subject to becoming a State at some future date. The impact of the collapse of Dutch, British, and French colonial power in the far Southwest Pacific, together with our granting to the Philippines their independence, and the collapse of the Japanese Empire and the sweep of the Communists across China, all impose on the United States an obligation to quickly join together our citizens, our resources, our total strength. Hawaii and Alaska should be made States without further delay.

Address in Honor of Hon. Harris S. Richardson

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I delivered in honor of Senator Harris S. Richardson, of the Massachusetts Senate, on March 11, 1950, at Winchester, Mass.:

My friends of Winchester, to all of you I extend warm greetings and I want you to know I am deeply pleased to be here on this occasion. You are very kind to ask me to say a few words this evening and I am delighted to have this opportunity. I am extremely delighted to have this opportunity for two reasons.

First of all, and most important, it gives me tremendous pleasure to participate with all of my friends of Winchester in this meeting to honor two very distinguished citizens of Winchester and Massachusetts. It has been my privilege to know Senator and Mrs. Richardson for many years. We have worked together on many matters beneficial to the Commonwealth of Massachusetts. Always, I have experienced nothing but complete and generous cooperation. For years, I have considered myself most fortunate to have the assistance of such an able and distinguished gentleman as Senator Richardson. His honesty and sincerity are outstanding. His loyalty to me and my efforts and the work of serving this district in Congress has been a constant inspiration to me. It is my hope that the citizens of Winchester and all of us in Massachusetts will have the benefit of his wise counsel and services for many years to come. I say to you again, I am extremely delighted to be here this evening and to have this opportunity to briefly express in your presence my thanks and appreciation to Senator Richardson for his loyalty and the many fine contributions he has made to the life of our community.

When I was invited to express a few remarks this evening, I was requested to speak on issues relating to the national level. I do not believe this is the moment or the occasion to enter into a detailed discussion of the many problems that confront our Nation today. I am delighted, however, to touch on one important matter, on which I believe there is some incorrect information. It relates to my position regarding the subject of economy in Government. This is the second reason why I am delighted to be here this evening.

Recently, I have received a few letters from members of the League of Women Voters in Winchester inferring I am opposed to economy in government. At this moment I desire to nip that inference before it buds and develops into a springtime bloom. I am completely opposed to the deficit-spending program of the present administration in Washington. I am completely opposed to the socialistic schemes proposed by the administration in Washington. I am completely opposed to the Government control policies of the present administration, which this deficit spending is financing. If my record in Congress is thoroughly examined I think the examiner would find I have consistently fought for lower taxes and for economy of operation of the Federal Government. It is my belief that if this Government proceeds on its present road of deficit spending this road will wind its way to only one end and that is socialism with its many hidden pathways leading to communism. Certainly I do not have to say to an audience of my friends in Winchester how vigorously I have fought against the rise of communism. I have fought for years and I am still fighting to stamp out communism in America. This must be done.

The inference regarding my position on the question of economy in government which I mentioned to you a moment ago, probably has been formed from the views and action I have taken in regard to the treatment of the Nation's disabled war veterans. There are thousands and thousands of disabled men in every State in the Union. Now that the last great war is a few years past it is so easy to forget the obligation and debt this Nation owes to them. If you happen to be so unfortunate as to be a disabled veteran or if one of them happens to be a member of your family, you do not forget. These men are in constant need of medical care and hospitalization. The need for hospital care is increasing rather than decreasing. When these men marched off to war—to defend America—our way of life and our freedom—the Great Government of the United States and the country as a Nation solemnly promised them that if their flesh and limb were torn by the enemy's steel they would be completely cared for at the moment and in the years to come. I know these men—I have talked to thousands of them—I have seen their wounds—I know of their suffering. So long as I am a Member of Congress, yes, as long as I am physically able I shall fight and strive to see to it that our Government and our country keeps that promise. As far as I am concerned, there is no economy involved in the elimination of hospitals, so seriously needed for the care of our disabled.

The Committee on Veterans' Affairs in the Congress, of which I am a member, is much closer to the constant and continuing needs of the disabled veteran than the Hoover Commission. The Veterans' Committee is a permanent committee of Congress shouldered with the responsibility of knowing the facts at all times. The Hoover Commission is not organized on a permanent basis and certainly was not and is not in a position to make recommendations based upon changing factual situations. Certainly no committee or commission has the moral right to make recommendations which might interfere with the duty and solemn promises of the Government of the Nation. Where honor is involved there is no compromise.

Often it has been said the public has a short memory. Sometimes I believe there is evidence of truth in this statement. Well do I remember, and so do you, that fateful morning of June 6, 1944, as the dawn broke the blackness of night, when the press and radio announced to the Nation that millions of our men were storming the enemy beaches of the Normandy coast. Many of them fell that morning on the cold, wet sand. About midday the editorial writers of our press, our clergy, and our national leadership called for a silent 5 minutes for the people of this Nation to pray for their safety and for their success. Writers and leaders throughout the Nation expressed in every newspaper and magazine and medium of publication that there was nothing too good now or in the future for these American boys, these American boys who at that moment were driving head-on into the rain of the enemy's fire. With them they carried the prayers and hopes of freemen throughout America and the world. My friends, that was just 6 years ago come this June. In just 6 years of ageless time we hear the hue and cry—eliminate these veterans' hospitals, cut down our military hospitals, these hospitals cost too much money, too much is being given to these disabled veterans. Oh, how easy it is to forget, to forget particularly if you and you and you who are doing the forgetting are safe and secure in your warm comfortable homes and are in no way involved.

Ladies and gentlemen, I repeat to you now, and again say to the American people with all of the sincerity and force at my command, I am opposed to the elimination of these already overcrowded veteran's hospitals, under the cloak and guise of economy. Economy, true economy, is always both an admirable and popular objective. There are some gentlemen in the Government today who would have you believe they are the great master minds, the super minds, sent to us just in the nick of time, to knock heads together and make a saving by putting two disabled veterans into one bed. Whenever such a person attempts to knock the heads together of able intelligent and sincere leaders thoroughly familiar with every detail of their responsibility all such a person reaps is headaches and more headaches. Based upon my knowledge of the facts, I know the elimination of these hospitals and doctors certainly is not economy and those who think about the matter for 1 minute can come to the same conclusion as I do, that it is not economy. When an individual in the community betrays his word or his promise he loses respect among his fellow men. When a nation breaks it's word or it's promise it no longer is worthy of honor and is unworthy of the respect, not only of its citizens but of the rest of the people of the world. This Nation, this America, must keep its promises. It must keep the faith.

In concluding my remarks this evening, I shall leave with you this important consideration. In view of recent developments in warfare, the atomic bomb, the hydrogen bomb, and other methods of population annihilation; the most important issue facing all of the people in this great and honorable land is survival. I do not propose to discuss with you all of the elements of this issue. I just want to say to you this: I believe in economy in government just as you do. I believe in the lowest possible tax rate, just as you do. I am in favor of the repeal of the nuisance taxes, and I am in favor of efficiency and common sense in the conduct of government, just as you are. But when our freedom, our free way of life, our very life itself is at stake; it is folly, utter folly, to think and believe that the saving of dollars can save America. If this great and wonderful country, all of us love so dearly, is to live out this twentieth century and the centuries to come; we must be strong, stronger than any potential enemy. Freedom is not cheap. Freedom cannot be maintained at bargain prices. If you want freedom, if you do not want your country ruined, if you still want the sweet life of these lovely, charming, and glorious old towns and villages of America—such as Winchester—you must pay the price.

James R. Tetler

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to enclose a fine eulogy on the life of the Honorable James R. Tetler, ex-postmaster of Law-

rence, Mass., which appeared in the editorial column of the Lawrence Eagle-Tribune, Lawrence, Mass., on March 14, 1950.

The kind and lovable Bob Tetler died as the result of an automobile accident while carrying on his humane work in assisting one of his neighbors, Mr. Smith, when he became suddenly ill while awaiting a bus.

Mr. Tetler will long be remembered by many of us in Essex County, as an able and capable legislator, an excellent public servant, and widely admired husband and father:

A GOOD CITIZEN PASSES

As a result of a characteristically gracious act of neighborliness, James R. Tetler is dead. Needless to say, his death has occasioned much grief in hearts of the many friends he made throughout a busy lifetime of public service.

One of the stalwarts of the Republican Party here for many years, Mr. Tetler was favorably regarded as a dependable man of quiet strength—a man whose resourcefulness and quick mind made him a desirable ally in a tough situation. His political acumen was widely respected. Many a fledgling in politics benefited by the wisdom he accumulated during long years devoted to the Republican cause. No fanciful theorist, he had a practical approach to the problems of the day. He believed that solid men of affairs, acting intelligently in concert, could deal with anything. Nothing could persuade him that it was necessary to depart from ordinary common sense to get good results at any level—city, county, State, or in Washington.

As a State senator, as postmaster here, as superintendent of Essex County training school, he exemplified what he believed. In the negative sense, he never abandoned the sane principles which repudiated radicalism of any sort. In the positive sense, he brought to every job he tackled a high degree of competence, abounding energy, and the quiet enthusiasm of a man healthily interested in his work, his community, and his fellow man.

Cooperative Housing

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. WICKERSHAM. Mr. Speaker, I wish to analyze the cooperative-housing bill.

THE PROPOSAL

A Government controlled and managed corporation would be set up within the Housing and Home Finance Agency for the purpose of making 50- to 60-year loans to housing cooperatives. The estimated interest rate of 3 percent and the amortization period of twice that obtainable from private sources would permit lower monthly payments.

This Federal-lending corporation would obtain its money by an initial United States Treasury stock purchase of $100,000,000 and by issuing debentures guaranteed by secondary 3-year debentures which are in return guaranteed by the Federal Government. This device is an amendment of the original form of Government-guaranteed debentures in a futile attempt to meet objections made by the Federal Reserve Board that this lending scheme is inflationary. One billion dollars—$2,000,000,000 in House version, H. R. 7402—would thus be obtained, plus twenty-five million United States Treasury dollars for preliminary planning loans. The cash down payment would be 2½ percent on application, 2½ percent on completion, and an additional 5 percent payable over 20 years. There are no limits on construction costs; the loan to the cooperative can be up to 100 percent of costs. The Government mortgage corporation would be tax exempt. The cooperative-housing organizations would enjoy the usual cooperative-tax exemptions under their State laws, and by reason of their nature would pay no Federal income taxes.

REASONS FOR REJECTION

First. It is not necessary. The private home-building industry is already adequately providing for the middle-income group. Proponents of this bill say they seek to shelter the $2,400 to $4,800 income group for a monthly shelter cost of $45 to $73, exclusive of utilities. In 1948, 65 percent of all new for-sale housing insured under FHA was purchased by those earning less than $4,800 per year. The equivalent shelter rent was between $36.21 and $74.45 per month. In the first 6 months of 1949, 68 percent of this new housing went to the under-$4,800-income group. According to Federal Reserve Board figures, 50 percent of nonfarm families with incomes of less than $4,000 now own their homes, of which 75 percent are mortgage-free. The persons for whom this bill is stated to be intended constitute the customers for private building.

Second. The Federal Government would become a mortgage lender. This device of a Government-controlled corporation using $100,000,000 of Government funds plus $1,000,000,000 in Government-guaranteed debentures is a thinly disguised form of direct Government lending. There is no distinction between this and the sale of Treasury bonds, the proceeds of which might be used for Government lending. Further, the tax-exempt status of such a Government agency gives it an uneconomic and unfair competitive advantage over private lending agencies.

Third. It will undermine the present savings and investment system. Its passage would threaten the security and incomes of millions of small depositors in insurance companies, banks, and building-and-loan companies. It will force such companies to reduce the return paid on savings nearly to the vanishing point and thus tend to destroy all incentive for thrift. It is the stated objective of the bill to make loans at 3 percent interest for a term of 50 years—extendible up to 63 years. No private lender can compete with this. The inevitable result will be to channel all lending into this pattern.

Fourth. It is highly discriminatory. The more favorable financing terms available to a selected class of individuals in cooperatives, which likewise enjoy State and Federal tax advantages, discriminate against veterans and nonveterans alike who are paying or who may undertake in the future to pay for their homes at higher rates of interest for shorter terms and paying full taxes. Those not desiring to join a cooperative, or whose incomes are too high or too low, would likewise be discriminated against.

Fifth. It will undermine the present FHA and VA programs in housing. If this scheme is adopted, few people would seek to purchase or to rent homes under the higher interest rate and shorter terms afforded by VA and FHA. This would adversely affect the volume as well as the long-term security of properties the financing of which is now guaranteed or insured by agencies of the Federal Government.

Sixth. It is inflationary. The stimulative effect of low interest, 50- to 60-year financing will serve to drive construction costs upward. An estimated 225,000 units would be constructed under the proposed law, but the authorization would be added from time to time in substantial amounts and numbers as political pressures for more and more easy Government credit would develop. The proposal has been amended from its original form by providing Government guaranty now one step removed from the debentures issued by the mortgage corporation, in an attempt to meet severe criticism by the Federal Reserve Board that the whole device is inflationary. The new form of guaranty does not in any way meet this objection. While an attempt is made by its advocates to compare the guaranty to FHA mortgage insurance, it is completely different in that FHA encourages the use of private financing by private lenders direct to the borrower whereas this scheme collects a pool of capital in the hands of a Government corporation through the sale of Government debentures, relying solely on the Government credit. It diverts and changes the flow of mortgage funds into Government hands rather than stimulating it through private lenders.

Seventh. There is no limit on construction costs. The bill contains no dollar limits on the construction cost of or the maximum mortgage amount which can be loaned to a project either on a room or a unit basis except for general language cautioning against elaborate or extravagant construction. This is in sharp contrast with the limits on mortgage amounts ordinarily contained in FHA insurance on privately built and privately financed rental housing. It should be noted that the same bill which permits 100 percent Government loans to cooperatives without any limit on construction cost, seeks to reduce the mortgage limit upon section 207 FHA insured privately financed operations from the present $8,100 a unit under section 608 to a maximum of $7,200, in the case of smaller apartments, and $8,000 in the case of apartments averaging 4½ rooms or over and valued at

$10,000. Thus, the bill accomplishes the effect of allowing the smallest and most unfavorable mortgage to privately financed rental construction; slightly higher mortgage to those cooperatives financed by FHA insured mortgages under section 213; and, a totally unlimited mortgage—at privately unattainable terms of interest and amortization—to cooperatives receiving financing through this direct lending scheme.

Eighth. Occupancy is not limited, even to middle-income families. There is nothing whatsoever that limits occupancy to the persons for whom it is stated by its proponents to be intended. The bill requires merely that the project be suitable for persons of middle income. Further, even if original occupants are, by voluntary action of the Administrator, limited to middle-income persons, there is no requirement that occupants whose incomes increase in excess of the $4,800 level shall move. (In testimony in favor of the bill, Administrator Foley stated that it was not intended to so require and that such a requirement would be impossible of administration.) It is therefore entirely possible that persons with incomes well over $5,000 could remain in the accommodations produced under this scheme, enjoying extraordinary low rents made possible by Government credit.

Ninth. It will establish a vast additional Federal bureaucracy. In addition to the considerable staff required to handle the issuance of $1,000,000,000 in debentures, to appraise projects and to handle details of loans to the cooperative associations, the bill calls for technical assistance and supervision of their operations. It may be expected that an additional Federal agency, equaling or exceeding in size any of the present housing agencies (FHA, PHA, and HLBB) will be required for administration.

Tenth. Cooperative participants in the scheme are doomed to eventual dissolution. A 50-year 3-percent loan on a level payment basis amortizes at the negligible rate of 72 cents per thousand for its first year. For the first 10 or 15 years of the loan, physical depreciation of the property is considerably more rapid than amortization of the debt. Over this period of time, the cooperator will be carrying a debt considerably in excess of the mortgage value of his unit. During the first 20 years, when the home purchaser would normally have his home almost completely paid for, a cooperator in one of these units will succeed in reducing his outstanding debt practically not at all.

Since his monthly charges must continue at the same level over a period of 50 years or longer (almost a normal lifetime), he will one day find the carrying charges on his unit in competition with lower charges on newly constructed projects. During the 50-year period, if past experience is any guide, construction costs may well drop below present levels. While proponents of this legislation cite an attainable $65 rental (in claimed contrast to present-day $90 rentals), it should be remembered that 10 years ago construction costs were such that rental housing could be profitably produced and rented for $50.

ELIMINATION OF VA SECTION 505 (A)

S. 2246 provides, at page 108, title IV, that on or after 180 days from its enactment into law, no further guaranty shall be granted under section 505 (a), combination FHA–VA loans.

REASONS FOR REJECTIONS

First. Elimination of this section would destroy one of the most prolific sources of private credit and would, by that much, diminish the financing opportunities available to veterans, consequently increase sales of mortgages to FNMA, and ultimately cause demand for direct Government lending; and

Second. Under section 505 (a) a veteran, who by reason of change of work or residence has to purchase another home, can use his GI rights again; under section 501 alone, he cannot.

When the House passed H. R. 6070 last year, unfortunately a similar provision striking this highly useful and desirable section was allowed to remain in the bill. VA reports that, as of the end of 1948, 155,983 such second mortgages had been guaranteed; 93,624 of these were in 1948 alone. Thus the need to continue section 505 (a) is clear.

DIRECT GOVERNMENT HOME MORTGAGE LENDING THROUGH VA

S. 2246, section 512 (a), page 108 title IV, provides for $150,000,000 of direct Federal loans to veterans up to $10,000 at 4-percent interest where it is shown that the veteran is qualified for a GI 501 loan but cannot obtain it.

REASON FOR REJECTION

Direct Government lending, except in the direst emergency, discourages private credit, progressively usurps fields of private activity and has dangerous possibilities of waste and political favoritism. This was rejected by the House last year when it passed H. R. 6070, containing general revisions of FHA and VA mortgage insurance and guaranties.

DISPOSITION OF WAR HOUSING

S. 2246, at page 31, title II, contains the proposal (stricken from H. R. 6070 by the House committee) which deals with authority to dispose of both permanent and temporary Lanham Act war housing. This title of the bill contains 39 pages and completely reverses previously expressed congressional policy with respect to war housing disposition which, under the Lanham Act, was to demolish the temporary housing as soon as possible and to sell the permanent housing to private investors.

REASON FOR REJECTION

Disposition of war housing is a separate subject which has no place in a bill dealing with mortgage financing. It should be considered separately so that it can receive the attention which its importance and detailed length warrant.

The provision in this bill would turn over 43,709 permanent units, plus any others requested within 60 days, to local public housing authorities to become tax-exempt public housing. In addition, 62,800 units of veterans reuse housing and 162,200 units of temporary war housing would similarly be given away to local agencies.

TWENTY-FIVE MILLION DOLLAR HHFA LENDING AUTHORIZATION

In the Senate bill, S. 2246 at page 123, title VI, the Housing and Home Finance Agency is given $25,000,000 under a new provision (paralleling that formerly existing in RFC under its section 102 but not including mass production of conventional houses) to make loans to finance the purchase and erection of prefabricated houses or site improvements for prefabricated houses.

REASONS FOR REJECTION

First. Previous authorization to RFC to make loans of this character went almost entirely to Lustron Corp. The experience was, to say the least, not too happy even under RFC's sound and comparatively conservative administration. Certainly experience does not warrant continuation of this device in the hands of HHFA which is completely unfamiliar with lending of this sort.

Second. Enactment of this proposal would carry still further the process of converting HHFA into an operating agency for direct Government lending; instead of preserving its original purpose of over-all policy making.

PRESIDENTIAL POWER TO REDUCE LOANS, AND SO FORTH

S. 2246—section 606, page 122, title VI—contains a provision, also contained in H. R. 7402 as section 301, which gives the President power to reduce the maximum amount, ratio of loan to value, of maximum maturities of any loan made, insured or guaranteed by any agency of the Government.

REASONS FOR REJECTION

First. This would provide an arbitrary summary power to reduce or completely eliminate effective governmental aids to private finance such as FHA or VA, without any opportunity for the private building industry to be heard. It cannot be doubted that this provision carries possibilities of drastically curtailing private construction, in view of experience to date, in which administration proposals have held private housing mortgage aids to considerably less favorable levels than advocated for cooperatives and granted to public housing.

Second. This device strongly suggests experience in England in which private builders have been permitted to construct only one house for every five built by public housing authorities.

Tons of Skim Milk Available to Agencies—Former Mayor Johnson's Friend Campaigns for Food Distribution

---

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1950

Mr. PLUMLEY. Mr. Speaker, under leave heretofore granted to extend my

remarks and include clippings from newspapers, I am inserting the following items from the Passaic (N. J.) Herald-News of date March 11 and March 9, 1950:

TONS OF SKIM MILK AVAILABLE TO AGENCIES—CATCH IN UNITED STATES PLAN IS FOR SEEKERS TO PAY HANDLING CHARGES

WASHINGTON.—The Department of Agriculture has 4,601,104 pounds of dried skim milk stored in a warehouse in Hoboken, and available to public welfare agencies which can show a need for it, guarantee its distribution and pay for handling charges.

In addition, there are 866,096 pounds of dried eggs similarly stored in another warehouse in Jersey City.

In the New England States there are millions of bushels of potatoes in Government storage, and throughout the Nation there are millions of tons of other foodstuffs, including butter, beans and even meat.

STORAGE RATE HIGH

It was all bought up as surplus by the Commodity Credit Corporation, and in addition to losing its high food value by the hour through decomposition, it is costing the taxpayers about $60,000 a day for storage.

The man who has supervision over the foods stored in New Jersey is James S. King, State supervisor of commodity distribution, whose office is at 520 East State Street, Trenton.

Representative JOHN W. HESELTON, a Massachusetts Republican, is currently receiving congratulatory letters from all over the country for the effort he has been making to get this food into the homes of those who need it, on a paid freight basis.

To date, he has had some success in his own area, because public and private welfare agencies have been alerted and have organized to do the job; but he hasn't been able to do so well in other sections.

The fly in the ointment is that the Department of Agriculture can't release this food to an agency which can't transport and distribute it, and can't pay for all other handling charges.

Private welfare agencies can only get potatoes, and since there are no Government spuds in storage in this State (although there are some in New York City) it wouldn't be practical for such agencies in New Jersey to get into the picture.

The Salvation Army, for instance, did it up in Representative HESELTON'S baliwick, however. The Army found out who needed potatoes, carted them from a warehouse, and saw that they were distributed to eligible families.

Public welfare agencies, city and county, can do with the skim milk and dried eggs stores in New Jersey, precisely what the Salvation Army did with the potatoes in Massachusetts.

They had better get a wiggle on, Representative HESELTON warns because much of the food is going bad, although most of it is still edible and wholesome.

FORMER MAYOR JOHNSON'S FRIEND CAMPAIGNS FOR FOOD DISTRIBUTION

WASHINGTON.—A Massachusetts friend of former Mayor John R. Johnson of Passaic is waging a one-man fight in Congress to force the Department of Agriculture to distribute millions of dollars worth of surplus food to needy persons, free of all charge.

Representative John W. HESELTON, Republican, of Deerfield, Mass., hopes President Truman will bring some pressure to bear in the matter "before the end of this week, when I understand he is going to leave for a vacation in Florida."

The Massachusetts Congressman and the former mayor of Passaic are friends of long standing, and on several occasions have been together in Florida, where Mr. Johnson has spent some winters in recent years.

Weeks ago Representative HESELTON called the attention of Congress to the fact that tremendous surplus stores of potatoes, dried eggs, and other commodities were available in Government warehouses, and demanded that they be distributed to agencies which could turn them over to needy persons.

A hitch in the program developed, however, when the Department of Agriculture declared that recipient agencies would have to pay all handling and transportation charges involved, and would have to foot all bills for whatever packaging might be necessary.

Eligible to receive the food under current regulations are schools which can use it in lunch programs, and State and local public-welfare organizations. Private welfare agencies are eligible to receive potatoes only.

In all cases the recipient groups must pay for transportation and handling from wherever the food is stored to areas in which it will be distributed.

New Jersey is included in the Department of Agriculture's northeast area, embracing Connecticut, the District of Columbia, Delaware, Maine, Massachusetts, Maryland, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont and West Virginia. The area office is at 641 Washington Street, New York City.

Waste of Surplus Foods and of Public Funds

REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. HESELTON. Mr. Speaker, I understand the President has landed safely at Key West, so I sent him another telegram. I should like to read it:

WASHINGTON, D. C., *March 15, 1950.*

The PRESIDENT,

Yacht "Williamsburg," en route to Florida:

Another $60,000 wasted. Total loss to American taxpayers, $2,460,000. Some 52,000,000 of these taxpayers will have paid their taxes to Federal Government by midnight. All the taxes of 45,555 taxpayers since February 2, the date when H. R. 7137 and 3 companion bills were filed in House, which are going to redeem this inexcusable waste. Regret to report that since your request to Secretary Brannan Saturday that he give my correspondence his careful and appropriate consideration I have heard nothing from him. This inexplicable silence and inexcusable lack of action will not be forgotten or forgiven by the American taxpayers when they finally realize the full facts. Nor will the thousands of needy men, women, and children, who could and would eat this food now, understand the failure to act promptly as I have repeatedly requested. I regret you had such a difficult trip to Key West, but assume you have fully recovered from the effects of it. I now repeat my urgent request that you order specific remedial action immediately.

I also wish to quote here copies of letters I have sent to the President and Secretary Brannan:

MARCH 15, 1950.

The PRESIDENT,

Key West, Fla.

DEAR MR. PRESIDENT: I am enclosing a copy of a page from the RECORD of yesterday for your files, together with confirmation of the day letter I sent you this morning.

Sincerely yours.

MARCH 15, 1950.

Hon. CHARLES F. BRANNAN,

Secretary of Agriculture, Department of Agriculture, Washington, D. C.

DEAR MR. SECRETARY: For your information I enclose a copy of a day letter I have sent to the President at Key West this morning, and a page of the RECORD of yesterday.

May I ask you also to take the promptest kind of remedial action and see that your approval is sent to the House Committee on Agriculture of H. R. 7135, 7136, 7137, and 7138.

Sincerely yours.

I telephoned the office of the gentleman from California [Mr. WHITE] to advise him that I intended to discuss his remarks of yesterday and his misunderstanding of the situation now prevailing. I am advised that he has left for an important out-of-the-city engagement, but will be here tomorrow. I shall try to clear this matter up then, but for his ready convenience I am listing the dates and pages of the RECORD when I have discussed this matter: February 2, resolutions introduced; 9th, page 1734; 13th, pages 1768, A1018; 14th, page 1803; 20th, page 1997; 21st, page 2017; 23d, page 2308; 25th, page A1365; March 4th, page 2819; 7th, page 2953; 8th, page 3038; 9th, page 3142; 13th, page 3257; and 14th, page 3311.

Special Favors for a Special Group

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. WICKERSHAM. Mr. Speaker, I wish to call your attention to an important editorial from the Washington Evening Star of March 14, 1950:

SPECIAL FAVORS FOR A SPECIAL GROUP

It goes without saying that legislation which purports to help the middle- ($2,700-$4,400) income group to get cheaper housing carries tremendous popular appeal. That is why the administration is backing it to the limit. That is why the chairman of the Democratic National Committee, Mr. Boyle, is calling all politicians to apply the heat to Senators when they vote tomorrow. But no matter how popular may be the appeal, the legislation is bad and ought to be defeated.

It ought to be defeated because it is discriminatory and unsound. Using tax money contributed by all Americans, it singles out a special group of Americans—those in the middle-income brackets who choose to join a housing cooperative—for special benefits. Under this bill, the American who joins a cooperative can obtain the benefit of low interest—3 percent or under—and pay off his housing loan in 50 or 60 years, a come-on proposition designed to mislead borrowers and perpetuate debt. But the American in the same income bracket who prefers not to join a cooperative housing scheme must pay 4 percent or more and pay off the loan in 25 years. The same Government, indirectly or directly, would be backing both types of loan.

In a system of society based on free enterprise, which we are spending a large part

of our substance to protect throughout the world, cooperative, nonprofit enterprises are as permissible as any others. But like other demonstrations of free enterprise, they should stand on their own feet. The pending bill goes much further, however. It offers hidden Government subsidies in a variety of forms as a mark of special favor to nonprofit cooperatives. If the principle behind this bill is carried to its logical conclusion, and supported with public funds and Government credit to make it work, there will be no room in America for one of the largest of all taxpaying, private-enterprise industries, the private housing industry. It would eventually become an industry supported by Government, with everybody joining a housing cooperative under the supervision of another huge Government bureaucracy.

The bill ought to be defeated on other grounds. It would place private housing, including FHA and veterans' housing, at a serious competitive disadvantage. It would in time weaken the stability of billions of private funds invested in such housing by insurance companies, building and loan companies, and millions of middle-income men and women whose savings have been put into the independent purchase of homes. For when the Government makes cheap money available nobody can beat the Government at offering cheaper money.

The financial aspects of the bill have been opposed by the Federal Reserve Board, and the Board's objections, in the opinion of distinguished members of the Senate's Committee on Banking and Currency, have not been removed by committee amendments. The bill violates rules of risk that private lenders must observe. Its effect on bringing down the cost of housing is challenged. For billions of cheap money would be poured into housing construction at a time when housing construction is already going at top speed. The effect would be more likely to inflate already inflated costs of construction than to bring the costs down. And while ostensibly singling out the middle-income group as the group in special need of help, this bill is singling out a group for which as much if not more housing now is being built than for any other.

Responsible Members of Congress will consider this bill on its merits, and not because the real-estate lobby opposes it or the Democratic National Committee favors it. If so considered, it ought to be defeated by a healthy margin.

Letter to a Constituent

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to a constituent:

DEAR FRIEND: For reasons best known to themselves, the Oneida Dispatch has started a crusade against your Congressman. Their chief complaint is that Edwin Arthur Hall is "all things to all men".

If that is so, I gladly accept the challenge.

Ever since I have served you in Congress, I have tried to look upon all men with a friendly understanding.

Perhaps I am wrong, but I feel that every American citizen has the right to expect his elected representatives to be for him rather than against him.

Whenever anyone comes to me with a problem, I try to help him, not scoff at him.

Why the Dispatch does not approve of this position, I do not know.

Are they carrying the ball for a handful of petty dictators who feel that I should serve them and not the Madison County people who elected me?

Your Congressman
EDWIN ARTHUR HALL.

Statement of D. C. Greer Before the Committee on Public Works

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. TEAGUE. Mr. Speaker, the Committee on Public Works in the House of Representatives is conducting hearings on a bill entitled "A Federal Aid Highway Act of 1950." Mr. D. C. Greer, State highway engineer of Texas, and also president of the American Association of State Highway Officials, appeared before this committee on March 13, 1950. I wish to include his statement in the RECORD, together with a statement of policy which had been adopted by the American Association of State Highway Officials in Chicago in November 1949.

Mr. Speaker, all of us are familiar with the accomplishments of previous aid highway acts, as this method has proven very successful in providing an integrated highway system for our Nation. However, with millions of additional automobiles on our highways today together with the fact that highway construction was greatly curtailed during the war, we must give serious consideration to an expanded highway program for the next few years.

Under leave to extend my remarks in the RECORD, I wish to include the statement made by Mr. D. C. Greer before the Committee on Public Works:

STATEMENT OF D. C. GREER, STATE HIGHWAY ENGINEER OF TEXAS, PRESIDENT, AMERICAN ASSOCIATION OF STATE HIGHWAY OFFICIALS, BEFORE THE HOUSE COMMITTEE ON PUBLIC WORKS

Mr. Chairman and gentlemen of the committee, the American Association of State Highway Officials is, as its name implies, an association composed of the highway officials of the 48 States, Hawaii, Puerto Rico and the District of Columbia, with the cooperation of the United States Bureau of Public Roads.

Approximately 34 years ago, the National Congress passed the basic Federal-aid Highway Act of 1916, which was destined to be the beginning of a policy on road transportation that has proven in the subsequent years to be one of the greatest, if not the greatest, contributions of the national government to the economic welfare of our people. Traditionally, since this original law, it has been the practice of the National Congress to re-enact from time to time the Federal-aid Highway Act, in order to provide continuity of the road improvement program of this country.

The Federal-aid highway program was suspended, of course, during the period of World War II and it was started again with the post-war program authorized by the Federal-aid Highway Act of 1944, which provided Federal-aid for roads for the fiscal years 1946, 1947, and 1948. This act was supplemented by the Federal-aid Highway Act of 1948 and furnished Federal aid funds for roads for the fiscal years 1950 and 1951.

The allocation of the last year's funds, as provided in the 1948 act, was made this past October. Therefore, in order for the Federal-aid highway program to continue without interruption, it is essential that the National Congress enact new Federal-aid highway legislation during this, the second session of the Eighty-first Congress. Additional allocations under such new legislation would become effective with the fiscal year 1952. It is essential that Federal aid authorizations for highways be enacted well in advance of the actual date of availability of funds, in order that both Federal and State Governments may make the necessary long-range plans well in advance of the actual initiation of the programs of work for which the funds are provided.

As I have previously pointed out, the Federal Government has, in the past, assumed the duty and responsibility of providing the leadership to the States in a well-conceived highway development program. We feel sure that it is your desire to continue this leadership which has proven so profitable in the past. Consequently, it is not our purpose to appear here in an attempt to sell you or to beg a specific road program. We do, however, consider it our duty and responsibility as highway officials, with long experience on the front line of the highway program, to report to you our studied and sincere judgment of the proper methods that might be utilized by you to accomplish the greatest good for this country in the realm of roads during the coming years.

We do not consider it necessary to point out to you that America is literally a Nation on wheels and the world's greatest automotive country, with 42,000,000 motor vehicles registered in the United States last year, which represents a 30 percent increase in the past 10 years. We know that you have a complete knowledge of the value of the present day dollar in buying such things as roads and bridges. We know that you are well acquainted with the fact that the Federal Government is now collecting in taxes approximately $1,300,000,000 per year from the motor vehicle users in this country and we further know that you gentlemen of the Congress are well acquainted with the day-by-day wear and tear on our highway system, in addition to the need of the further expansion of the road system in this country. Consequently, it will be my purpose to discuss briefly with you the possibilities of a program accomplishing the desired objectives on roads, so well known to you.

At this point, gentlemen, I would like to insert in the record an estimate of needs of the Federal-aid systems as of December 31, 1949, prepared under the direction of a special subcommittee of the American Association of State Highway Officials for a study of highway finance problems. In filing this estimate of needs, may I point out that it is based on the best information available to us as highway officials at the present time. Obviously, an estimate of such proportions as this must be varied with changing conditions of traffic and it should be construed as a gage of our needs at this time, based on the knowledge available to us at this time.

The highway officials of the United States and Territories met together last November and discussed for several days the highway problems of the Nation. After carefully analyzing the highway needs and the abilities of the States to carry out the details of a new and expanded highway program, almost unanimous decision was reached by the States and Territories concerning a new highway program and our presentation will be

based upon this agreed decision. I might add that our position is not considered perfect for any one State but, based upon a tolerant, give-and-take attitude, is considered the best balanced program for the entire United States and Territories that could be conceived under present conditions.

With your permission, I would like to insert in the record the complete statement of policy which I have previously referred to as adopted by this association, meeting in Chicago in November 1949. I should also like to insert in the record two tabulations of the apportionment of Federal-aid funds; one, based on the dollar amounts as proposed in the policy statement previously referred to, and one on the dollar amounts as set forth in H. R. 7398.

In our discussion, it will be our purpose to comment concerning the provisions as outlined in H. R. 7398, now pending before this committee.

It is our suggestion that the Federal-Aid Highway Act of 1950 contain authorizations for Federal-aid funds on four separate and distinct systems of roads; namely, the interstate, primary, urban, and secondary. This constitutes the addition of one more category of roads; that is, the interstate system, which has not heretofore been provided for in national legislation. These four systems are carefully and properly outlined in H. R. 7398. It is our suggestion that $210,000,000 be allocated annually to the interstate system improvement, $270,000,000 to the primary system improvement, $150,000,000 to the urban system improvement, and $180,000,000 to the secondary system improvement. These figures, as you will note, are somewhat higher than those included in H. R. 7398.

It is our suggestion that Federal-aid primary, secondary, and urban allocations be distributed among the States in accordance with the regular formula and matching basis, as provided in the Federal-Aid Highway Acts of 1944 and 1948. This is exactly as contemplated in H. R. 7398.

It is our suggestion that the interstate funds be apportioned on the basis of the population of the State; that no State receive less than three-quarters of 1 percent, and that the matching ratio be 75 percent Federal funds and 25 percent State funds. This is essentially provided in H. R. 7398.

It is our suggestion that these interstate funds may be utilized at the option of any given State to apply on the principal of bonds on toll-free facilities that may be used by such State for the purpose of improvement of the interstate system of roads. This provision is included in H. R. 7398.

It was our studied opinion that we would suggest to the National Congress several other minor corrections and modernizations of the Federal-Aid Highway Act and we have noted with a great deal of satisfaction that these corrections and modernizations are included in the text of H. R. 7398.

In summation, we desire to state that H. R. 7398, now being considered by your committee, embraces the principles and advancements that we believe to be essential to a modern highway program, but we are hopeful that the Congress may find itself in a financial position to make a more expanded investment in the road system of our country which is so badly needed at the present time.

It will be our purpose to present subsequently at this hearing, members of the executive committee of the American Association of State Highway Officials to discuss the four systems of roads, as outlined in this preliminary discussion, in more detail. We would also like the privilege of introducing several more highway officials to present experiences and needs of a few of the typical States of the Union, in order that you may have an over-all picture of the problem as represented by highly qualified State highway officials.

On behalf of the State highway officials throughout the country, I wish to thank the members of this committee for the consideration shown us on this and on all other occasions. We have noted with the greatest admiration your understanding of the Nation's highway problems and have marveled at your grasp of their details. Please be assured that we are at your service and that we have no other purpose than to serve faithfully the people we represent and to do a highway job in this country that will be a credit to you. We are confident that the present Congress will deal wisely and promptly with this problem.

STATEMENT OF POLICY

AMERICAN ASSOCIATION OF STATE HIGHWAY OFFICIALS,

Washington, D. C., November 28, 1949.

The American Association of State Highway Officials, in special meeting in Chicago, Ill., on November 21, adopted an important and far-reaching statement of national policy on new Federal aid for highways.

The postwar program of highway construction began with the enactment of the Federal-Aid Highway Act of 1944, which provided $500,000,000 per year of Federal aid for the fiscal years 1946, 1947, and 1948. This act was supplemented by another act known as the Federal-Aid Highway Act of 1948, which provided $450,000,000 per year for the fiscal years of 1950 and 1951.

The allocations of the last year's funds, as provided in the 1948 act, were made this past October. Therefore, in order for the Federal-aid program to continue without interruption, it is essential that the Congress enact new Federal-aid legislation during the second session of the Eighty-first Congress, beginning in January. New allocations would become effective for the fiscal year of 1952. It is essential that Federal-aid authorizations for highways be enacted well in advance of the actual date of availability of funds, in order that both Federal and State governments may make the necessary long-range plans well in advance of the actual initiation of the program for which the funds are provided. It is under these circumstances, therefore, that the association convened in special session in Chicago on November 21.

Membership of the association is made up of the officials of the 48 State highway departments, the highway departments of the Territories of Hawaii and Puerto Rico, the District of Columbia Highway Department and the Bureau of Public Roads of the Federal Government.

After long and earnest discussion, the association adopted a statement of national policy on the matter and therein advocated an annual program approximating $810,000,000 per year in Federal funds. The new recommendations, for the first time, would provision for work on the interstate system of highways, as such; setting up a special category in the amount of $210,000,000 per year Federal funds, to be matched on a 75–25 basis by State funds. This contrasts with the 50–50 matching basis on the primary, secondary, and urban programs. The interstate funds would also be available on a new formula of population. The complete statement of policy follows:

1. Four authorizations of Federal-aid funds on an annual basis:

System	Proposed	(1948 act)
Interstate	$210,000,000	($0,000,000,000,000)
Primary	270,000,000	(202,500,000)
Secondary	180,000,000	(135,000,000)
Urban	150,000,000	(112,500,000)
Total	810,000,000	(450,000,000)

2. That the Federal-aid primary, secondary and urban allocations be distributed among the States in accordance with the regular formulas and matching basis, as provided in the Federal-Aid Highway Acts of 1944 and 1948; that not more than 25 percent of the amount apportioned to each State for the primary and secondary systems may be switched from one system to the other, provided the State highway department makes such request and it is approved by the Commissioner of Public Roads as being in the public interest.

3. That the interstate funds be apportioned on the basis of population of the States and that no State receive less than three-quarters of 1 percent; that the matching ratio be 75 percent Federal funds and 25 percent State funds.

4. That these interstate funds may be utilized at the option of any given State, to apply on the principal of general obligation bonds on toll-free facilities that may be used by such State for the purpose of expediting the improvement of the interstate system of roads.

5. That the provision in the Federal-Aid Highway Act requiring the withholding of Federal aid from any State failing to properly maintain a Federal-aid project be amended so that in the case of secondary and urban projects where a county or city has accepted responsibility for maintenance, future Federal-aid funds will be withheld from the county or city failing to maintain rather than from the State as a whole.

6. That a section be added to the proposed Federal-Aid Highway Act authorizing an amount not to exceed $10,000,000 to be utilized by the Bureau of Public Roads, under specific emergency conditions, for the purpose of cooperating with the State highway departments in highway disaster relief on an area basis when an emergency has been declared by a governor of a State and concurred in by a Commissioner of Public Roads, without limitation as to systems, and on a 50–50 matching basis.

7. That a specific appropriation of $100,000,000 be authorized for the purpose of advancing funds to the State highway departments for the acquisition of rights-of-way to be repaid over an extended period of years.

8. That the present one-third limitation on Federal aid for right-of-way purposes be increased to 50 percent.

It should be understood that the above is a statement of policy of the American Association of State Highway Officials. The recommendations will be submitted to the Congress for its consideration by officials of the association at an early date.

D. C. GREER,
President, American Association of State Highway Officials.

Thirteen Korean Assemblymen Jailed for Red Contacts

EXTENSION OF REMARKS

OF

HON. OTTO E. PASSMAN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1950

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Associated Press dispatch:

THIRTEEN KOREAN ASSEMBLYMEN JAILED FOR RED CONTACTS

SEOUL, KOREA, March 14.—Thirteen members of the Korean National Assembly were sentenced to prison today for terms as long

as 10 years for violating national security by having contacts with Communists.

Assemblyman Ro Il Hwan and Lee Moon Wun were sentenced by presiding Judge Sa Kwang Ook to the longest terms—10 years.

At the long trial from November 17 to February 10 before a three-judge panel without a jury—Ro and Lee were declared to have admitted they had received money from alleged Communists.

Both men testified that purported confessions were taken from them under torture.

Prosecutor Oh Che Do, said before the trial all 13 assemblymen had made written confessions. He introduced no others after Ro and Lee testified they were tortured.

Address of Hon. D. Hiden Ramsey, of Asheville, N. C.

EXTENSION OF REMARKS
OF
HON. MONROE M. REDDEN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. REDDEN. Mr. Speaker, on March 11, Hon. D. Hiden Ramsey, of Asheville, N. C., delivered an address at the annual meeting of the North Carolina Democratic Club of Washington. Mr. Ramsey is general manager of the Asheville Citizen-Times Co., and is generally recognized as one of the ablest speakers and newspapermen of the South. I believe the Members of Congress will be inspired by his speech, which follows:

I am delighted this evening to join with the members of the North Carolina Democratic Club in doing richly deserved honor to the 14 eminent North Carolinians who represent our State in the National Congress. It is not presumptuous to assert that in what we say and do this evening, we speak and act for an overwhelming majority of the people of the Old North State.

No State of this Republic is more fortunate in the characters and capacities of the men who represent it in the Halls of Congress. Other States may be larger and richer. Some of them may attract more attention—not always flattering attention—by the legislative prima donnas whom they send to Washington. But none can surpass North Carolina in the high level of intelligent and industrious devotion to simple duty and of solid achievement which our delegation sets and maintains.

Viewed as individuals, our 2 Senators and 12 Congressmen are men, good and true, who do their work with competence, energy, and integrity. There isn't a scalawag, a mercenary, a sluggard, a buffoon in the whole 14. With their demeanor and their convictions, they contribute nothing to that disrespect in which so many American citizens—not altogether without excuse—view the National Legislature.

Measured as a group, our Senators and Congressmen are typical of North Carolina in all of its varied richness of resource, of geography, of economic outlook and activity. If we could take the 14 lawgivers and roll them into 1, we would have a perfect lawmaker from the viewpoint of North Carolina. He would be the great common denominator of that dynamic democracy which is the Old North State.

This 14-in-1 lawgiver would have the incredibly easy and captivating eloquence, the tranquil temperament, and the sagacious judgment of Senator HOEY.

This composite lawmaker would have the steadily glowing idealism, the utter selflessness, the richly furnished mind, and the irresistible charm of Senator GRAHAM.

This consolidated Member of the National Congress would possess in full measure the democratic simplicity, the vast experience, and the unfailing common sense of Representative DOUGHTON.

The North Carolina lawgiver would understand full well—and this is the beginning of wisdom for the lawmaker—that laws are necessary but very imperfect instruments for maintaining good order and promoting progress and justice in modern society. For the judicial experience of Representative KERR, once an able trial judge, would be an essential part of the stuff out of which he was compounded.

Our typical Tarheel Member of Congress would speak the language and know the thinking and the needs of those sturdy North Carolinians who live within the sound of the Atlantic Ocean. For Representative BONNER would provide that indispenable understanding. In this 14-ply solon would be much of the clear-eyed, unflinching individualism of those self-sufficient Tarheels who live their lives and do their work along the slopes and in the valleys of our mountain section. For Representative REDDEN, a highlander par excellence, would be their spokesman.

This multiple solon would comprehend both the rights and the duties of an enlightened industrialism for Representative CHATHAM, an able industrialist and a Tarheel to the very marrow of his being, would provide that comprehension.

Our typical lawmaker would recognize the Nation's inescapable obligation to foster and sustain a prosperous agriculture as the very bedrock of our national economy, for available to him and even pressing upon him would be the sound convictions and the vast information of Representative COOLEY.

Our North Carolina lawmaker would agree and insist that the Nation has a vital stake in equalizing and enriching the educational opportunities of its youth. But he would stand steadfastly against any Federal control, in whatever guise, of our public schools. For Representative BARDEN would speak forthrightly for him on this urgent question.

Our composite lawgiver would be plain-spoken and urbane at one and the same time, for with Representative DURHAM's furnishing no inconsiderable part of his official stature, he could not be otherwise.

The coastal regions of North Carolina melt gradually into the Piedmont, and the Piedmont marches slowly into the mountain section. Two congressional districts lie athwart the State from New Hanover to Wilkes. Their representatives, Representatives CARLYLE and DEAN—gentlemen both of light and leading—serve as the linchpins that tie the State together and emphasize and illustrate the essential oneness of our people.

North Carolina is no longer a State exclusively of small towns and rural sections. We are developing clotted centers of population with their peculiar problems and viewpoints. Representative JONES would bring to our composite lawmaker the experience of one who has seen Charlotte grow from a gangling town into a great metropolis.

One Congressman who has contributed much to the sturdy character, the energy and the sure grasp of national problems which have distinguished our North Carolina delegation is retiring at the end of his present term. But Representative BULWINKLE has written a record of substantial achievement of which all North Carolinians are proud.

This 14-in-1 lawgiver would be a simon pure Tarheel by birth and residence. His ancestral ties with North Carolina would reach back through several generations and across the whole history of our commonwealth.

His age would be about 59. But he would be as vigorous as the youngest and as sage as the oldest.

Virtually every college in the State would have had a hand in his educational upbringing and the mark of both the old field school and the modern public school would be indelibly upon him.

In matters denominational, he would be very representative and very tolerant for he would worship in the Methodist, the Baptist, the Presbyterian, the Episcopal and the Lutheran churches. It must be added, however, that being a typical North Carolinian he would show a slight preference for the Baptist persuasion.

He would have served his Nation in two mighty wars. He would know alike the hardships and the carefree life of the buck private and the authority of the commissioned officer. He would be at one and the same time an infantryman and an artilleryman. In his military experience, he would be at home in the air, on the sea and on land.

He would have pursued farming both as a stern livelihood and as the pleasant avocation of the city dweller.

In his professional life, he would be very much of the lawyer. His wits would have been sharpened in the lively give and take of hotly contested trials. He would have the fluency of speech of the well-trained attorney.

But his mind would not be exclusively the mind of the successful lawyer. He would know from personal experience both the austerities and the exhilarations of the school teacher. He would have operated that great town meeting of our local democracy—a small-town drug store where issues, great and small, are debated by busy men and loafers. He would be a progressive industrialist with a high sense of responsibility for the well-being of his employees. There would even be a faint tinge of printer's ink upon his fingers.

His election to the National Congress would have come after long public service to his State and community. He would have administered justice as a judge. He would have prosecuted criminal cases as a solicitor. He would have served on local school boards and on State commissions and boards. His legislative experience would have covered both houses of our general assembly. He would have been governor—a great governor—of North Carolina. He would have even been the chief keeper of that lighthouse which illumines the life of our State—the University of North Carolina in its triple glory. His apprenticeship in public service would have been long and faithful.

In his political views, this composite North Carolina Member of the National Congress would be both a liberal and a conservative. But what rational man can always be accurately defined as an unvarying liberal or an unvarying conservative? Only unthinking citizens, legislators, and States allow themselves to be taken captive by mere labels which have only the meaning which the individual reads into them. The truly great statesman has the conservative's regard for the past, the liberal's concern for the future, and the wise man's thought of the present. Being a discerning and contemplative person, he lets the very real present determine whether he shall lean to the unreal past or the unreal future on any particular issue.

Of this 14-in-1 Tarheel lawgiver, one thing can be said: He is a Democrat by inheritance and by conviction. He may hail from the East where Republicans are as rare as zero weather. He may come from the West where Republicans are embarrassingly and even infuriatingly numerous. Parenthetically, we have in the West some counties that, reckoned in percentage points, are more hopelessly joined to their Republican idols than even Vermont and Maine are in their more unregenerate moments. Speaking in Bos-

ton in 1889, Henry Woodfin Grady paid a very moving tribute to the steadfast loyalty of the Vermont Democrat who refused to be discouraged or dismayed by the Republican landslides which were his regular biennial visitations. Stancher still in his Democratic faith and voting is the Avery County Democrat. Every 2 years he goes bravely and confidently to the polls, seeking hopefully, even wistfully, the triumph which is never his. May the god of the politically helpless be kind to this stout-hearted follower of the forlorn hope.

Whether the typical North Carolina lawgiver comes from the East or from the West, from the level Piedmont or from the rolling hills of the upper Piedmont, he is a Democrat by profession of faith and by practice.

As an individual, of course, this composite legislator does not exist. It takes 14 North Carolinians with their differing talents to make him exist even in fancy.

But if he did live in the flesh as one individual, he would be the very paragon of lawmaking excellence.

Most important of all, he would be typical and representative of North Carolina—of all North Carolina. His experience would be an accurate cross-section of the experience of our people. His political views, I venture to believe, would be the composite views of North Carolina.

When we appraise our congressional delegation as a whole, when we view our lawmakers from the vantage point of a citizen of the State rather than of a voter of a specific district, we do command the incomparable services of such a composite lawmaker. Our exceedingly good fortune should make us grateful. North Carolina can truthfully say that it is competently and faithfully represented in the National Congress.

Of course, the members of our congressional delegation are not of one mind on every issue. On many legislative matters, they disagree—sometimes with positiveness but always with seemly appreciation of the sincerity of each other. It is well that it is so. We are not sending 14 slavish votes to Congress. In North Carolina we still believe that intellectual integrity and independence are among the hallmarks of good lawmakers.

But when the issue involves essentials of party faith, the members of the North Carolina delegation succeed in achieving unity. When they disagree, it is usually about the peace rather than the goal of progress.

In this regard, the Democratic Party of North Carolina and our Democratic delegation in Congress can point a moral and adorn a tale for the Democratic Party of the Nation.

In his road shows, Gene Autry gets a laugh from his audiences by saying drolly: "I don't belong to any organized political party. I am a Democrat."

There is a hard core of truth in this wisecrack. The Democratic Party has never been a severely disciplined, harshly regimented party. It has been more a way of political life than a case-bound political mechanism. Historically, it has extended the utmost hospitality to all private citizens who accepted its basic principles.

That was the spirit which Thomas Jefferson breathed into the Democratic Party at its birth. That was the spirit which enabled John Quincy Adams, the personal embodiment of New England culture and industrialism, and Andrew Jackson, the very personification of the turbulent frontier, to be Democratic rivals for the Presidency. That was the spirit that made it possible and even logical for Grover Cleveland and William Jennings Bryan, Oscar Underwood, and Woodrow Wilson to have a common party affiliation.

There are those who would drive from the Democratic fold the sincere conservatives. There are those others who would expel the honest radicals. They talk in terms of reprisals and purges.

It will be an ill day for the Democratic Party if it ever seeks to close the door on either its genuine conservatives or its genuine radicals. We need them both. With their clashing viewpoints, they provide that internal discipline which every healthy party requires.

Anything that moves—and the Democratic Party is a thing of movement—needs both a brake and an accelerator. We need the counsel and the correction of the conservative to make certain that we do not act without due regard to the lessons of experience. We need the agitations and the urgings of the honest radicals to keep our eyes from straying too frequently from the beckoning future. Woodrow Wilson once defined himself as "a radical with the brakes on."

The balance weight of the Democratic Party is the middle class which weighs the sober fears of the conservatives and the far-ranging visions of the radicals—and decides.

The Republican Party is all brakes. It has long since discarded its accelerator. It has no room for the La Follettes, the Teddy Roosevelts, the LaGuardias, as it had in its wiser and more spacious days. It has achieved solidarity of a sort but in the process of accomplishing this dreary unity, it has whittled its forces down to impotence.

In North Carolina, we have both conservative and radical fringes in the Democratic Party and we do not believe that either is necessarily traitorous to the party faith. In our North Carolina delegation, we have both conservatives and moderates and liberals and we respect all of them as honest representatives of the party.

About 400 years ago a great German theologian laid down this rule of guidance for the contending factions of the Protestant faith:

"In necessary things, unity; in doubtful things, liberty; in all things, charity."

The Democratic Party has followed that rule rather faithfully in North Carolina with results that are manifest in the membership of our congressional delegation and in the quality of progressive, honest government which the party has given to the State over the past half century. The Democratic Party of the Nation can do no better than to follow this example.

Truly, at this troubled, even anguished juncture in the life of civilization, the National Democratic Party, drawing its strength from its historic past, its challenge from the present and its vision from the future, can follow no wiser course than to embrace and practice the admonition of the preacher of that far-off day to the brawling Lutheran factions:

"In necessary things, unity; in doubtful things, liberty; in all things, charity."

Washington Home Rule

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article which appeared in the New York Times of March 15, 1950:

WASHINGTON HOME RULE

The Democratic platform of 1948: "We favor the extension of the right of suffrage to the people of the District of Columbia."

The Republican platform of 1948: "We favor self-government for the residents of the Nation's Capital."

Action of the Senate in 1949: Passage by voice vote on May 31 of the Kefauver bill, which would permit the people of the District of Columbia to vote for their own city council, would reorganize the District government and would relieve Congress of the ridiculous chore of acting as a board of aldermen for a city of 900,000 people.

Action of the House in 1949: Pigeon-holing of the home-rule bill in the District of Columbia Committee, from which it has not yet been budged. One of the reasons for committee inaction is undoubtedly the fact that one-third of Washington's population is Negro. The mere statement of this reason for denial of local franchise to Washingtonians is enough—or should be enough—to condemn it.

The one practical way of getting the home-rule bill out of committee at this time seems to be through a discharge petition, which now lacks only 49 of the requisite 218 signatures. Members of the House do not sign a discharge petition lightly—and they are right not to do so—but in view of platform pledges this is one piece of legislation that no committee is justified in withholding from floor consideration.

For obvious reasons, it is a matter of major importance to the citizens of Washington. And it should be a matter of genuine concern to all the other citizens of the United States that the inhabitants of one of the country's great cities are deprived of even the most elementary rights of self-government. Furthermore, the time Congress wastes in settling the minutiae of Washington's municipal affairs—from regulation of District of Columbia barbers to organization of a police force band—could doubtless be put to better use in matters of somewhat wider national interest. The home-rule bill should be brought out to the floor and passed.

A Baby Every Day—Triplets

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Catahoula News, of March 9, 1950:

DAY BY DAY THE HARDIE FAMILY GROWS AND GROWS AND GROWS—A BABY EVERY DAY—TRIPLETS

Jonesville citizens breathed a sigh of relief Thursday, not only because the flood waters surrounding the town were receding, but also because Mrs. Lester Hardie finally completed a 3-day period of having babies.

Triplets—each with a different birthday—were born to Mrs. Hardie one at a time, Tuesday, Wednesday, and Thursday at Nasif's clinic.

Dr. N. G. Nasif, attending physician, has been besieged with calls concerning the most unusual case in his career and, as far as Jonesville people are concerned, in the career of any doctor.

On Tuesday morning at 8 o'clock, Mrs. Hardie had her first baby, a 5-pound boy. On Wednesday morning at 9 o'clock, she had her second, a 6-pound girl, and then on Thursday morning, at 12:15 o'clock, she had her third and last, a 7-pound girl.

There was a total of more than 40 hours elapsed time between the first and third

births. Between the first and second births, 25 hours elapsed. Between the second and third births, 15 hours and 15 minutes elapsed.

Dr. Nasif said the babies were full time, and all were in good condition.

Thursday morning, as townspeople "ohed" and "ahed" about the "believe-it-or-not" births, Mrs. Hardie was asleep, with no visitors allowed. Dr. Nasif was tired, too, but proud of the achievement.

Lester Hardie, the father, was of course, proud, but somewhat worried. There are seven other children in the family besides the new triplets, making a dozen mouths to feed. Times are bad, and so is his health.

Hardie is a commercial fisherman, has been for many years, and since 1937 the family has been living on a houseboat about 3 miles up the Ouachita from Jonesville. Long years on the water in all kinds of weather have aggravated his sinus trouble, and chronic bronchitis. Often when fishing is right, Hardie's health prevents his working, he says. And as everyone knows, fishing isn't right now, during the high water.

"The fish are too scattered now," Hardie explained. "You can't get a very good catch." The Red Cross is now helping the Hardies, as it is many other families of flood-stricken Catahoula.

Mrs. Hardie will be 36 in May, and he will be 35 in June. They have been married since 1933. Five of the other children, Edna Lucille, Anise Clothilde, R. L., Myrtle Geraldine, and Wilburn, are in school. Two, Lester Paul and Shirley Ann, are pre-school age.

There are no names yet for the triplets. Hardie said that he had promised an aunt, Mrs. Lilly Ford Harris, of Quaid, that she could name the babies. She has helped Mrs. Hardie out in previous births, he said, and had asked to be allowed to name the babies.

"But," Hardie explained, "she went home or to Ferriday last night and didn't leave a list of names."

Because of their birthplace where three rivers meet, the names "Tensas," "Ouachita," and "Little" were suggested. Hardie agreed they would be good names but said he had promised Mrs. Harris the naming honor. "I want to let her have her 'rathers' about it," he said.

Mrs. Hardie was formerly Mabel Harris of Columbia. Her parents are dead. Hardie's mother is dead, but his father, Richard Hardie, is still living.

Wednesday night, waiting at Nasif's clinic, he said, "I have lots of grandchildren. So many, I don't get excited about them anymore".

"If you aren't excited about these," he was told, "you are about the only person in town who isn't." "Grandpa" Hardie grinned.

Trying to trace back the "twins" on either side—there were definitely no triplets—"Papa" Hardie said that his wife's mother had had twins, born dead, and that one of his cousins had twins.

Aside from the fact that the triplets have different birthdays, there are other circumstances of the birth that are unusual. Dr. Nasif modestly admits that the case is "probably unique in medical annals." He has never delivered triplets before, he said, and had never heard or read of them arriving one each for three consecutive days.

Twins with different birthdays are fairly common, with such births usually occurring around the midnight hours. Twins have also been born in different years, when one was born on December 31 and one on January 1.

Dr. Nasif said that the birth of the first baby was normal and by spontaneous labor. The second two were breech births by induced labor.

"After the first baby came," he said, "I thought the second would follow soon as a normal procedure. After I saw that it wasn't coming of its own accord, labor was induced. Then when the second came, I expected the third to follow, but it would not, so labor had to be induced again."

The first and third babies are identical twins, Dr. Nasif explained, in that they were contained in the same placenta. The second-born baby was in a separate placenta, and biologically is a "fraternal twin" of the others. But being three, they are triplets.

Hardie was planning to move his houseboat and the remainder of his family down to Jonesville Thursday afternoon, to be nearer his wife, and new babies, who will be hospitalized for a while longer.

How to Ruin a Farm Program

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Muncie (Ind.) Star:

HOW TO RUIN A FARM PROGRAM

Two congressional committees took action on Wednesday that threatens to dig the grave of any sensible and popularly supported farm program. The House Banking Committee and Senate Banking Committee approved an increase of $2,000,000,000 in the funds allowed for keeping farm prices high. That would make a total of $6,750,000,000 for the Commodity Credit Corporation could spend buying eggs and potatoes and grain and milk to be stored, allowed to rot or to be plowed under for fertilizer to grow more surpluses to be bought by taxpayers' money.

The total cost of administering the Federal Government 20 years ago was less than $6,750,000. How long does Congress think the big majority of the American people are going to stand for high farm prices in the market and higher taxes to pay these support payments? The people know that the Government has millions of eggs, potatoes, bushels of grain and pounds of dried milk; enough to feed thousands of people for a year. They also know it is now going to waste.

They know that their Government is sending billions of dollars to Europe so people there can buy food while we have food running out of our ears over here. They know that most of that $6,750,000,000 is going to come right out of their pockets in the income taxes they are paying this month. Does Congress think the people like paying these taxes so that they have to pay high food prices and at the same time make the Government the biggest food miser in history?

Secretary of Agriculture Brannan rightly thinks that the people will revolt against these high rigid price supports. But he believes he can sell his plan to pay the farmer a direct cash subsidy, control his production and his income, and at the same time allow market prices to drop way down. Yet his plan will cost at least $6,000,000,000 a year and probably more. The taxpayers will still have to foot the bill while the farmer becomes the hired hand of the Government.

What is more likely to happen, when next year's surplus potatoes and grain and eggs and milk are dumped in the rivers and plowed under for fertilizer and burned in pits, is that the people will decide they have had enough of the whole idea of Government support for farmers. They are quite likely to say to their Congressmen, "throw the whole program out." And that is what Congress might have to do next year or the year after, if the politicians keep bidding for the farm vote with the taxpayers' hard-earned cash.

The Political Issues of the 1950 Campaign

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of my colleague from Michigan, Hon. CHARLES E. POTTER, to be delivered over Station WJR:

Thank you, and good evening, friends.

In selecting the topic, The Political Issues of the 1950 Campaign, I am expressing my own views as an individual Member of Congress. To me all indications are that the 1950 campaign will be a most vigorous one. The Democrats will endeavor to hold the gains that they made in the 1948 election, and the Republicans, of course, will endeavor to pick up additional congressional and senatorial seats in order to gain control of the Congress.

It is my personal observation that this 1950 nonpresidential-election campaign will be one where no holds will be barred by either party. In my humble opinion, the 1950 elections are extremely important to every man, woman, and child in this country. There are many collateral issues, but the underlying issue the voters have to decide by November is whether they wish to go on supporting a party that will continue to take them down the road to complete state socialism or whether they wish to support a party which believes that true prosperity can only be had through our free-enterprise system.

I believe the issues of this coming campaign will be clearly defined. The Democratic leadership will have to accept the program of President Truman, and the following are some of the measures which the voters will be asked to either endorse or reject, come November:

National compulsory health insurance is one of the major planks of the Democrat platform. This program is commonly referred to as socialized medicine. The administration believes that this plan has considerable vote appeal. National compulsory health insurance, if enacted, would make it mandatory that every family in this country pay a pay-roll tax ranging from 6 to 8 percent. Then, in case of illness, a family could go to a doctor and receive free medical treatment. This is similar to the medical program in England.

We all realize that we do have certain national health problems. However, as Republicans we believe that these health problems can best be met by the training of more doctors and by providing more and better hospital facilities. We propose that our medical training centers be expanded, in order to double the number of medical students. Our way of life is based on competition, and competition in the medical profession is just as healthy as it is in any other line of endeavor. By the training of more doctors the competition itself will reduce the cost of medical treatment. The Federal Government is now cooperating in a hospital

construction program in conjunction with the States and local communities. This program in a very short time will solve our hospital problem. We encourage the use of voluntary health insurance. Voluntary insurance is much cheaper than paying a compulsory 6- or 8-percent pay-roll tax for national insurance.

Socialized medicine would reduce medical care to its lowest level. We know the experiences we have had in the past in the treatment of welfare cases, where the doctors are paid for their services by the State and other local agencies. In many cases this treatment has not been too satisfactory. National compulsory health insurance would place our medical profession under Government control and regulation and would destroy the initiative to render the most adequate and best possible service to a patient. The doctor would be swamped with Government red tape, which impairs his medical efficiency.

Another major issue of the 1950 campaign will be the so-called Brannan farm plan. The administration has come out wholeheartedly for this plan, sponsored by the Secretary of Agriculture, Charles F. Brannan. Of course, this plan is nothing new. It was first conceived when Henry Wallace was Secretary of Agriculture. Henry Wallace did not have the nerve to bring it to the light of day. The administration today, however, has no hesitancy in submitting this plan to the people. We have come quite a ways down the road since Henry Wallace was Secretary of Agriculture.

What does the Brannan plan do? First, it has a very appealing catch-on slogan of promising high prices to the farmer and low prices to the consumer. From the best information that we have to date—and, you know it is difficult to get positive information because the Secretary of Agriculture keeps revising his plans every other day—the Secretary would allot marketing quotas to every farmer; should the Department of Agriculture guess right and so control production, of course, food costs to the consumer would not decrease but rather would increase and the farmer would be assured 100-percent parity for his produce. If, however, the Department of Agriculture should guess wrong, and set marketing quotas for surplus foods, prices would drop from a normal to a subnormal level. This because there then would be no incentive for marketing. Then the difference between the market price and the 100-percent-parity price would be made up to the farmers by direct payments from the Federal Treasury. For example, if the Brannan plan had been in effect last year, it would have cost the taxpayers of this country over $5,000,000,000 in direct subsidy payments. Even with our present farm-support program—which we admit has many bugs in it—the net program loss on operation for the 1949 fiscal year stands at $254,762,000. Of course, the dangerous result of this proposed Brannan plan is that management of the farms of this country would be controlled by the Secretary of Agriculture. No farmer can stay in business unless he agrees to come under the Brannan plan. Once he is under the program, and even though his money is invested in a certain type of farming, the Secretary of Agriculture could tell him to do away with his dairy herd, for example, and raise potatoes.

Experience has taught us that depressions are always led by a decline in farm income. It is necessary to maintain adequate purchasing power in the hands of our farmers. This can be done without restorting to Government farming and by our doing two things. First, finding new markets for, and new means of utilizing, our farm produce. As an example take our present potato fiasco. We have a great surplus of potatoes. The Government has spent thousands of dollars to destroy our surplus potatoes. There is no reason why these potatoes could not be used for the manufacture of alcohol.

Second, we should improve our system of distribution. Of course, the price of farm produce increases 100 percent after reaching the city limits. The cost of the produce over the counter in the city has little relationship to the amount the farmer receives for raising the produce. There is no need in a country such as ours for destroying food of any kind. We all remember when Henry Wallace ordered the killing of little pigs. Soon thereafter we were in want of pork.

It is ironical that this past year when we had a period of farm surpluses the administration imported thousands of pounds of butter, cheese, eggs, wheat, corn—yes; and even potatoes. We must discontinue our policy of permitting the importation of farm produce from foreign nations, of which we have a surplus. This foreign competition is most unfair to our American farmers.

Another issue of the 1950 campaign will be that of our present fiscal policy. The Democrats sponsoring socialized medicine, the Brannan farm plan, and other costly measures, of course, have to accept the responsibility for maintaining a high national budget and high taxes and the continuation of deficit financing. As Republicans, we believe that a Nation is no different than we as individuals and should and must live within its income. I know that when I spend more money than I make and continue doing so, eventually there will come a day of reckoning. I think many in the radio audience have experienced the same thing. We cannot condone a Government which in peacetime spends five to eight billion dollars a year more than it takes in in taxes. We are convinced that we have reached the saturation point as far as taxes are concerned. We Republicans are convinced that our present high tax structure has been a definite deterrent to business.

I believe we can take a lesson from our good neighbor Canada. Since the end of World War II, Canada has materially decreased her income taxes; has repealed her wartime imposed excise taxes; reduced her excess profits tax and even with such tax decreases, Canada's national income has increased each year. Canada has made payments on her national debt and has balanced her budget each year. Certainly the experience Canada has had with her fiscal policy should be a lesson to us that true prosperity cannot be had under a high-tax administration.

Another issue in the coming campaign will be charges made by the Republicans that this Democratic administration has been lax in its efforts to weed subversive employees from the Government pay roll. We all realize that Alger Hiss and Judith Coplon were not alone in their activities. We feel the administration has been reluctant to make a concerted effort to remove disloyal employees from the Government pay roll. The Democrats, of course, will charge that this is political witch hunting and that there are no disloyal employees in Government. We must remember Alger Hiss was considered a good security risk until he was exposed by the House Un-American Activities Committee and finally indicted. It is my personal belief that the loyalty of a Federal employee—whose salary is paid by taxing the public—should be above reproach. I see no reason why the burden of proof to establish loyalty should not rest with the individual, whether he be now employed by the Government or whether he is seeking Federal employment, rather than with the Government.

We know our foreign policy is going to be a bigger issue in this 1950 campaign than it has been for some time. The so-called bipartisan foreign policy is breaking at the seams. For the past several years there has been little of a bipartisan approach to any of our international problems. Foreign policy has been dictated by the Department of State and thrown to Congress to accept. Certainly there is nothing bipartisan, for example, about our lack of policy in China.

During the 1950 campaign, I assume, the administration will charge that the Republicans are scrapping our bipartisan foreign policy and we Republicans will charge that such bipartisan foreign policy does not even exist.

These are but a few of the many issues that will be raised in this coming election campaign. The American people will have clear-cut issues. There will be no attempt to say we stand for the same things, but we would do it better. This is a fork-in-the-road election where the American people must decide which way they want to go—whether they want to continue to copy the British Social Labor Government—which has proven disastrous—or whether they wish to tackle our problems in the American way.

We are most appreciative to WJR for putting on this series of programs. WJR has been, and is, performing a great public service in allowing this time to various Members of Congress in order to inform the people of the important issues of the day.

Statement by R. B. Anderson Before House Ways and Means Committee

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. TEAGUE. Mr. Speaker, on February 14, 1950, Mr. R. B. Anderson, president of the Texas division of Mid-Continent Oil & Gas Association, appeared before the House Ways and Means Committee to present his testimony on the pending question of reduction of the depletion allowance for oil development. Mr. Anderson has supplemented his original statement by additional testimony in answer to the question as to whether the large producers are using the benefits of the percentage depletion provision in the manner intended by Congress.

I recommend to your reading the following statement by Mr. Anderson, which I wish to insert in the RECORD under leave to extend my remarks:

STATEMENT BY R. B. ANDERSON, SUPPLEMENTING HIS TESTIMONY OF FEBRUARY 14, 1950

In my testimony before the House Ways and Means Committee on Tuesday, February 14, 1950, on the question of percentage depletion as it applied to the oil and natural-gas industry, I urged the committee to retain the present depletion and intangible well-drilling cost provisions in the income-tax law without change.

A member of the committee raised a question as to whether the large producers were using the benefits of the percentage depletion provisions in the manner intended by Congress. In response to that question, a detailed survey has just been completed of a group of large oil companies, including all of the so-called major companies in the industry for a 12-year period from 1936 to 1947, inclusive, which is the longest period for which complete and accurate data could be assembled covering their operations. The survey shows that this group of companies spent more in their efforts to find new oil reserves than the total percentage depletion allowed for the same period, or $1,833,000,000 more in their effort to find new oil than the total additional taxes they would have paid

without the percentage depletion provisions in the law. The money spent in the finding effort does not include intangible development costs or the additional monies spent subsequent to discovery in drilling and equipping producing wells and leases.

The total sum expended by this group of companies during the period, including both exploration and development, was $5,541,829,000, or more than twice the total percentage depletion allowed.

The Congress, recognizing the hazards of the oil producing business, enacted the percentage depletion provision and has continued it in the law in order to enable an oil producer to recover his capital value. It is the necessary incentive to the oil and gas producer, whether large or small, to plow back his funds in the search for new and essential reserves. It is also the incentive for new and additional risk capital from outside sources to be expended in the search for new and additional oil reserves.

The facts shown by the survey are conclusive evidence that these provisions have done what they were intended to do and that the larger producers are as dependent upon the percentage depletion provisions as the smaller operator in their continuous search for oil.

The average cost per well for exploratory wells drilled in the United States in the search for new oil reserves has almost tripled in the period 1935 to 1948, having increased from $32,578 per well in 1935 to $87,337 per well in 1948. At the same time the number of such wells required to discover a million barrels of new reserves doubled during the same period. As a result, the average cost of finding a million barrels of new reserves increased during the period by 533 percent.

These sharp increases in the cost of finding oil obviously affect everyone who searches for oil irrespective of size. They seriously affect those of our producers who have sufficient capital to undertake the risk of exploring high cost areas. In many instances, the larger producer makes substantial contributions to the smaller producer in order to enable the latter to drill exploratory wells. Generally, it is only the larger producer who can afford the enormous costs involved in the search for oil in many portions of the Rocky Mountain region, or in the swamp areas along the Gulf of Mexico, or in the submerged lands underlying the open ocean off our shores, or in the many unproven areas of the United States where deep test wells are necessary.

I should like to emphasize that the continued search for oil by those comprising the industry, whether small, medium, or large or whatever degree of size, is dependent upon the continuation of the long established percentage depletion provisions of the law without any change.

House Select Committee on Lobbying Activities Prepares to Open Public Hearings

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. BUCHANAN. Mr. Speaker, the New York Times, on Sunday, March 12, carried an article entitled "Washington Lobbyists Again Under Scrutiny—House Group, After Long Preparation, Is Ready To Open Its Investigation." Written by Mr. John D. Morris of the Times' excellent Washington bureau, this article sets out fairly and objectively, I believe, the thinking among members of the House Select Committee on Lobbying Activities in seeking to make of this investigation into lobbying and pressure groups a constructive contribution both to public understanding of the place of lobbying in a democracy and to improved procedures and clearer lines of jurisdiction of the Federal regulation of Lobbying Act of 1946.

As Mr. Morris indicates in this article, an investigation of this sort could easily turn into nothing more constructive than a search for some new headline sensation each day. Or, on the other hand, it could develop the need for and the means of improving our relatively new statute on lobbyist registration and identification and thus do a most worthwhile job.

As chairman of the House Select Committee on Lobbying Activities, I have been impressed by the constructive spirit in which all members of this committee, including Representatives LANHAM, DOYLE, ALBERT, HALLECK, BROWN, and O'HARA of Minnesota, have approached this challenge of making of our investigation a real contribution to wider understanding of a complex subject which is so close to the legislative process.

The New York Times' article, Washington Lobbyists Again Under Scrutiny, follows:

WASHINGTON LOBBYISTS AGAIN UNDER SCRUTINY—HOUSE GROUP, AFTER LONG PREPARATION, IS READY TO OPEN ITS INVESTIGATION

WASHINGTON, March 11.—After a 5-month wind-up, the Select House Committee to Investigate Lobbying Activities is about ready to toss out the opening pitch in an investigation that could produce a sensation a day—or turn into a flop. Public hearings are to start March 27.

Chances are that the inquiry will steer a course somewhere between daily headline-hunting and steady digging into the complex subject of what makes the $8,000,000-a-year lobbying industry tick and how to improve the Federal law, enacted in 1946, that is supposed to regulate it.

A dozen or so investigators, lawyers, clerks, and researchers have been quietly at work since last December in laying the groundwork for public hearings.

The object of the preliminaries, according to Representative FRANK BUCHANAN, Democrat, of Pennsylvania, chairman of the special committee, is the compilation of what might be termed "a catalog of basic fact on the theory and practice of lobbying."

AREAS OF INQUIRY

The committee then plans to make a detailed inquiry into four so-called twilight zones where question has arisen as to whether activities constitute lobbying as defined by the registration act. These areas are listed by Mr. BUCHANAN as follows:

1. "The peculiar position of attorneys. For the most part, the lawyers involved contend that they merely represent their clients in the normal attorney-client relationship and are compensated for that service rather than for any incidental lobbying they might perform. The assumption is that many other possible lawyer-lobbyists, believing they are exempt, have failed to register.

2. "The peculiar position of officers of companies and associations." Many of these officials have registered under protest, asserting that their lobbying activities were only an incidental part of their regular duties.

3. "The peculiar position of public relations counselors." Similar arguments are advanced by some public relations units employed by organizations and business concerns. An additional consideration in their case is the extent that publicity prepared for dissemination to the public constitutes indirect lobbying covered by the act.

4. "The peculiar position of legislative reporters." Many organizations employ Washington representatives to keep them abreast of proposed legislation of special interest to them. The reports that these representatives make to their employing organizations, many of them in the form of bulletins and circulars, could be classified as indirect lobbying if they are designed to stir up sentiment for the purpose of influencing legislation.

In the course of examining these borderline areas, the committee expects to produce several examples that might be regarded as typical and explore them in detail. It thus hopes to develop exhaustive information on lobbying methods by questioning those in the business.

Among the lobbies selected for thorough investigation are those that operated in connection with the public housing fight last year. The campaign for repeal of war-time excise taxes, which reached new heights this session, may also be scrutinized. It is emphasized that the activities of lobbies on both sides of the various issues will be explored without bias or prejudice.

Great Danger in Cold War

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Mr. Thomas F. Downey, which appeared in the Boston Post, Boston, Mass., on Sunday, March 12, 1950:

PROPAGANDA AIMED AT UNITED STATES CANNOT BE TAKEN LIGHTLY—ARMED FORCES ALERTED TO EFFECTS

(By Thomas F. Downey)

Don't make the mistake of taking the cold war lightly. It is a dangerous situation and it is up to every citizen of this great democracy to be on guard against un-American propaganda.

With the hydrogen-bomb coming to the forefront of the cold front hostilities, psychological warfare has reached its peak in the throbbing and thrilling twentieth century.

Although the great battlewagons are riding at peaceful anchor in the mothball fleet and the cannons of war are muted, top leaders of the military forces of the Nation warn that propaganda can be a powerful force which can be deadlier than a gun, a bomb or any other weapon of war.

REALIZE RESULT

Leaders of the Nation realize that psychological warfare can be worse than a shooting war. They know that when the minds of men are constricted with a paralyzing fear, by intimidation and by persuasion, their bodies can be more easily captured.

Many Americans today give little thought to the cold war which is being waged at top speed throughout the world. The forces of blind obedience to sword rattling Communists are on one side and on the other the democratic nations which believe that all

men have a fair and unhampered chance at freedom, success, and happiness.

NOT TAKING CHANCES

High military officials of the United States are not taking any chances on the effects of the cold and deadly psychological war infiltrating to our stalwart men in uniform. The general public will do well to take a few pages from the warning pamphlets which the armed forces have issued on the cold war.

Members of the armed forces throughout the Nation and those on foreign duty are studying the methods of understanding and combatting psychological warfare. The Office of Secretary of Defense has prepared special information on the dangerous subject for ranking officers to disseminate to the men in their outfits.

This Nation's leaders feel that the informed serviceman is best equipped to guard himself and his Nation against dishonest propaganda. The serviceman of the various branches of the armed forces who has not followed the course of events, both in peace and during war, can become an easy prey to the sinister propagandist.

CAN EXPOSE THEMSELVES

If a man or woman is unable to distinguish between fact and falsehood, between accurate and inaccurate they are liable to expose themselves, their organization, community or Nation to serious dangers.

In a special message to the armed forces issued by the Office of the Secretary of Defense, military authorities stress that a serviceman unarmed against a vicious propaganda attack on the Nation is just as bad as a soldier or sailor who is without proper arms in battle.

MUST STUDY PROPAGANDA

Every American—civilian or member of the armed forces—must develop the ability to analyze propaganda. They must know how to detect subversive propaganda, for this is a personal responsibility of every person who wants to keep this Nation a great, peaceful democracy.

Americans must be able to evaluate each and every item of gossip or information that comes their way. This is not a query, to be easily thrown over one's shoulder. The activities of Red- and Soviet-front groups are more numerous and dexterous than a swarm of bees in a sugarcane field.

If you sit back and analyze the situation, modern warfare is made up of four basic types. These are military, which includes air, sea, and land operations; economic, political, and psychological. The world today is struggling under the latter type of deadly conflict.

WARFARE PSYCHOLOGICAL

Officials of the Office of the Secretary of Defense at Washington stress that in the final analysis all warfare is psychological in that it is waged to influence and swerve or intimidate the mind of the enemy.

Pure psychological warfare is distinct in itself. It has its own system. This is not a system or weapon of the last resort. Under honest and skilled leadership it can save lives on the battlefield and help prevent or shorten a war.

Actually, psychological warfare is the application of the principles of psychology (the study of the mind) to the conduct of war. It has many facets.

NOT MODERN DISCOVERY

Psychological warfare is not a modern discovery, officials of the Armed Forces Information and Education Division stress in a recent special message to the men in uniform.

"The pattern—employed 2,500 years ago by Xerxes, the Persian general, who used rumormongering as a means of waging propaganda war—was successfully imitated by the Nazi government in World War II, they point out.

"Xerxes scared the daylights out of the Greek warriors by circulating rumors that when the Persians shot their arrows they shut out the light of the sun.

"It was the same myth of invincibility which in World War II scared Europe out of its wits and enabled the Nazis to conquer Austria and Czechoslovakia with no more than a few random shots."

Hannibal, the Carthaginian king, was another who used rumors expertly. He planted tales about his Roman enemies, claiming that he had a "secret weapon which could not be stopped, and could not even be pierced." The Roman legions mulled about like frightened youngsters, asking what millions wondered about the Nazis, "How can we resist?" They discovered too late that Hannibal's secret weapon was only a herd of armored elephants.

Horrifying shrieks and war masks of ancient Japanese and the African and South Sea island tribes were psychological weapons. So were the blood-curdling cries of the warring American Indians.

American colonial forces at the famed Battle of Bunker Hill used one of the earliest types of front-line combat propaganda. They circulated leaflets pointing to sharp class distinctions then existing between British officers and enlisted men.

Hitler was the worst propagandist of World War II. His main purpose was "to sow mental confusion, contradiction, indecision, and panic" in the Allied countries and among the Allied governments.

RETURNED BY ALLIES

But Hitler and his lieutenants were not the only experts in the art of organized propaganda. The Axis propaganda swords were parried and the lunges returned by allied counter-propaganda.

In the struggle to influence men's minds, a fundamental difference existed between the propaganda of democracy and that of the Axis powers, our Nation's military leaders are quick to point out.

The Axis blindfolded their own people against the truth as the Russians are doing today. They used distortions and falsehoods. "The greater the lie, the more effective a weapon it is," Hitler wrote.

MET TRADITION

By contrast, Allied propaganda stressed the truth, concentrating on straight news and commentaries. Since the aims and ideals of the western democracies were predicated on international justice and the right of nations to self-government, they did not resort to deception to make a case for themselves.

The strategy of truth which characterized Allied propaganda was in full accord with their democratic traditions. They could not have resorted to organized distortion and suppression of truths without discrediting themselves in the eyes of their own people.

In the long run, honesty and truthful propaganda proved a far more realistic and profitable policy for dealing with their own people, the neutrals and also the enemy.

NOT ALL IS FALSE

Every American in this chaotic era must understand that not all propaganda is bad or untrue. Propaganda is used for good purposes. Worthy welfare agencies, for example, use it to promote their ideas and programs. In these instances propaganda is good publicity or promotional activity, free from selfish interests.

All persons should be on guard, however, against unscrupulous individuals and groups who utilize propaganda to advance their special brand of ideas. In plain language, propaganda can be based on truth or on falsehood; it can be useful or harmful, depending on the purposes for which it is used.

Thus the big question posed for every freedom-loving person is: "How can I do my own thinking and evaluating about national and world issues in order to avoid falling the victim of a dishonest propaganda artist or philosophy?"

PRETTY SUAVE OPERATOR

It must be remembered that the dispenser of dishonest propaganda is often a pretty suave operator—in other words, the proverbial wolf in sheep's clothing. Here are some tips from top military authorities on ways of sifting and analyzing propaganda:

The first thing to do is get the facts. Knowledge is the No. 1 enemy of false propaganda. If somebody tells you something wrong about which you have the correct facts, then it is your duty to set him right and halt the spread of false propaganda.

In the world today fear seems to be the aim of much propaganda. If you have the facts you won't be frightened by malicious or nerve-twitching rumors.

CONSULT AUTHORITY

When you go after information get the full and relevant facts. This means going to competent authority to prove the reliability of the information.

Cultivate a discriminating mind. This don't mean you have to become a 100 percent doubting Thomas. But you should refuse to accept uncritically any information or news that comes your way via an unreliable or doubtful source.

Consider all sides of an issue or bit of information. Don't forget to also consider your own personal leanings. Humans often believe what they want to believe on the basis of their emotions.

DISTINGUISH BRANDS

Be propaganda wise. One sure way to distinguish the honest propagandist from the dishonest is to compare the methods employed. While the honest propagandist bases his appeal on demonstrable facts, the dishonest propagandist spreads falsehood deliberately.

The honest propagandist is fair-minded, but the dishonest propagandist assumes the appearance of being fair-minded. The former appeals most to our intelligence. The latter persistently tries to arouse the emotions.

The honest propagandist does not dodge the pros and cons of an issue. He is willing to change his conclusions on the basis of new evidence and maintains an open-minded attitude. The dishonest propagandist is intolerant of open discussion and conflicting views. His mind is closed to everything but his own selfish goal.

Internal Security of the United States

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1950

Mr. WOLVERTON. Mr. Speaker, there is no matter confronting the Nation today of more importance than strengthening the laws relating to our internal security. Recent happenings both in and out of court have revealed a situation that cannot go unchallenged. The subversive activities of some in high policy-making departments of our Government, as well as by some who are

duly appointed representatives of foreign governments, calls for drastic action. There must be a tightening up of our laws and the adoption of criminal procedures that will make it impossible for traitorous offenders to escape punishment. The bill now before us is a step in the right direction. I am wholeheartedly in favor of the bill and it should have the support of this House. I am certain that it will have such support. While there may be at times divisions among the membership, yet, in a matter of this kind there has never been, and I am certain there never will be, any division, for this is a patriotic and not a partisan or political matter. Patriotism transcends party affiliation and no one political party has ever had a monopoly on love of country. Thus Democrats and Republicans stand together on matters of this kind with unity and single purpose. This is as it should be.

The bill was originally drafted by and has the support of the Interdepartmental Intelligence Committee, a joint group consisting of representatives of the Department of Justice, the Military Intelligence Division of the Department of the Army, the Office of Naval Intelligence of the Department of the Navy, and the Central Intelligence Agency.

The provisions of the bill not only increase the penalties that can be exacted of those found guilty, but, it also increases the scope of offenses. In this latter respect the bill has been drafted on the basis of the experience gained in recent investigations and trials that brought to light the insufficiency of existing laws. It will undoubtedly close loopholes and make criminal prosecutions far more effective than at any previous time.

It is imperative that legislation of this character be adopted. Serious gaps in our present laws permit people, both citizens and aliens alike, opportunities to acquire information vital to our national security and to use that information to the disadvantage and danger of the United States without fear of prosecution in our courts. Numerous cases have come to light in recent years pointing to the weakness of these laws when they are subjected to attack. There now exists in our midst a threat of our form of government and to the liberties guaranteed to all of us by our Constitution. The magnitude and strength of this threat is something new and strange to America. It is a threat which is most difficult to counteract, particularly when our law-enforcement agencies are hampered by lack of effective laws.

This bill may not solve all of the problems of security, but, if experience shows that it does not then amendments can be made that will meet any such contingency. But, it is certain that as now presented to the House it will be of inestimable assistance to the agencies of the Government charged with responsibility of maintaining our national security.

The bill should be passed and without delay.

The American Citizen and His Government

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. TEAGUE. Mr. Speaker, within the last few days I have received letters which indicate a great deal of thinking on the part of the American people about the type of Government that we have and enjoy and should endeavor to maintain. Two of these letters in particular are so very worthy of your consideration that I asked they be published in the CONGRESSIONAL RECORD.

The first letter is by Mr. J. Elmer Pate, of Bryan, Tex., and the second letter which conveyed the thoughts of Dr. John Ashton, of College Station, Tex., is entitled "A Checkrein on Government Spending." Under leave to extend my remarks in the RECORD, I wish to insert these two letters:

The Honorable OLIN E. TEAGUE,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN TEAGUE: The Declaration of Independence was the product of men who struggled against being in bonds; men who dared fight the usurper; men whose courage and vision opened the gate to the highest plane of achievement a nation has ever known. Again we need men: Our prosperity and lack of suffering hardships for liberty has dulled our senses to the stealthy, ominous creeping of other usurpers, with their silken thongs of bondage. What a time for a Washington or a Lincoln. It just doesn't make sense to go back down the hill.

Heretofore I've hesitated to write you about legislation because I feel that, in you, we of this district have a good Representative; one who will give all proposals a conscientious study. But if there ever was a time when good men needed the support, and sorry men the condemnation of their countrymen, it is now. That's why I'm writing you about the Hoover Commission report. It seems to me the theme of the whole report, from the General Management of the Executive Branch to Federal-State Relations, is efficiency. And efficiency in government is the forerunner of economy in government. We need this levee in the path of back-to-bondage spending. To be sure, what's a few billion in our day of squandermania? But our day isn't forever. We may not have many more chances to turn the tide.

And we have children. I have a fine athletic son and two beautiful daughters. A variation of that statement challenges the mind and heart of every parent, and of everyone who can understand the dignity and purpose that, in the beginning, God revealed to man.

It's too bad that man doesn't always live up to his possibilities. In our district we are typical men and American; rural and urban, deep-rooted in the soil. Two generations ago the land was virgin, rich, and covered with native growth. Now, as you know, much of it is barren and scarred with gullies. Why? Greed grabbed, and carelessness and ignorance indulged. It didn't matter. After their generation the kids could "go west." A few terraces would have saved a lot of moving—soil and people. The kids didn't mind it much though; the United States was boundless. For what good reason are we "going west" again; this time, to the land-of-no-return, dissipating our liberties via the hand-out route.

We realize you have grave responsibilities, Congressman TEAGUE. You are our leader; we are behind you, but you'll probably have to save us from ourselves. Don't yield every time we holler "milk." It's time we were weaned. And when you meet the force of power-drunk wastrels, whose chief purpose is to grab more power, and who, in the cloak of human welfare, hope to bury the human soul under a colossal state, don't yield. Throw up some road blocks; build some embankments; hold the fort. Or some day our children, groveling under an intolerable yoke, will curse our memory.

Respectfully yours,

J. ELMER PATE.

A CHECKREIN ON GOVERNMENT SPENDING

(By Dr. John Ashton)

It should be obvious to the average voter who has read the series of articles on the Recommendations of the Commission on Organization of the Executive Branch of the Government, by H. Mewhinney, reprinted from the Houston Post (copyright 1949), that waste and inefficiency are the two disturbing factors in the normal operation of our Government, as so clearly set forth in the Hoover Commission reports.

Firmly convinced that colossal sums of money could be saved the American taxpayer by the introduction of proper business-like methods and procedure in the various bureaus and departments of the Government, the writer of this letter advocates the creation of a new post, having high or perhaps Cabinet rank, endowed with adequate power to bring about a drastic reform throughout the executive branch of the Government, and to supervise, reorganize, streamline, and put into operation, such methods and plans as would tend to bring about great savings in money and more efficiency in operation.

Such an official should be selected with the utmost care, and he should, moreover, be a man of wide experience and knowledge of modern business methods, besides being possessed of ample resource as an administrative leader—in fact, the type of executive normally expected to bring order out of chaos.

He would be responsible to nobody but the President, and through him to Congress. He should be appointed for sufficient period of time as would permit him to bring about favorable results, and, if mutually agreeable, the office could be extended for a further period. In addition to his many admirable qualities for such a post, the incumbent should be totally free from political bias.

He should have—and his opinion should be considered in the choosing—an assistant of undoubted merits and high administrative capacity, besides several under secretaries or officials of like rank to superintend the staff work and general functioning of a large and important bureau.

He would be given the power to appoint in every important bureau or department of the executive branch of the Government an officer whose duties would be devoted exclusively to curbing waste and promoting efficiency, and such officers would confer frequently with their chiefs and write periodic reports as deemed necessary.

The chief himself would confer whenever convenient with the Chief Executive, and his recommendations and views would be placed before the President on such occasions—all in the interest of greater economy in the operation of the essential work of the Government.

With only the recommendations of the Hoover Commission report to guide him, such an officer, together with his trained aides and actively encouraged by a cooperative

President, could doubtless accomplish wonders in stopping leaks, sweeping aside duplications of effort, simplifying procedures, reducing red-tape, abolishing cumbersome laws and regulations of no use whatever, and in separating the chaff from the grain among the employees in Government offices and bureaus.

Then, and probably only then, will deficit spending be a thing of the past.

God save America!

Our Money Goes

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Detroit Free Press of March 13, 1950:

FAR FROM WOODWARD AVENUE—OUR MONEY GOES

Never mind the fine-spun economic theories which even the authors of them cannot understand.

Never mind the sweet dreams of heaven on earth that come from the satin pillows of the cloud kissers.

Never mind the cruelties of practical politics by which these vagaries of the lotus eaters are used to cinch the do-gooder votes.

As an idealist, President Truman reminds us of a gregarious and convivial Elk dressed up as Little Eva for a benefit performance of Uncle Tom's Cabin.

Never mind any of these things, because what we most desperately need is the truth. And, as Al Smith used to remark, the only place you can find that is in the record.

So here is a startling example of how Mr. Truman's politically motivated point 4 program will work out.

His plan—he says—is to save the world from communism when he is actually moving us into the lobby of its edifice with his socialistic program. By point 4 he plans to spend billions and billions of American taxpayers' money to make the backward people of the world happy and prosperous.

Now, let us look at what is going on in Indochina.

That's a long way from Detroit's collapsing city hall and our own bread lines, Mr. Taxpayer, but get the spot in focus, because that's where Mr. Truman wants to spend some billions of your money and that of your fellow citizens.

The French never won the friendship of the people of this lush and profitable Indochina colony. After the Japanese, who had moved into it with Vichy connivance, were ousted, the natives rebelled against France.

The most forceful of the Nationalist leaders was, and is, Ho Chi Minh, a Moscow-trained Communist.

As a counterweight to Ho, the French set up Bao Dai, a former Emperor of Annam, who had collaborated with the Japanese and then fled the country.

Viet Nam, as the puppet state he heads is known, was then admitted to the French Union but with strictly limited sovereignty. The French kept control of defense and foreign affairs. That isn't what the Viet Namese want. They want to be as free as India is.

A few weeks ago Mr. Acheson's State Department recognized Bao Dai and promised him economic and other aid.

A special mission is now studying the use of economic assistance to combat communism in Indochina and elsewhere in southeast Asia.

At this point the Governor of North Viet Nam declares that American aid must be given directly to the Bao Dai regime and not through France.

Otherwise it would have a bad effect politically.

"We want full, complete independence. We have had many promises in the past. We now want to see real transfer of power."

The Viet Namese fear that if the French have the disbursement of American aid they will use it to strengthen their hold on Indochina.

The French, for their part, fear that if our aid is given directly to Bao Dai he will use it further to loosen that hold.

We've got to choose in this Achesonian art of making enemies and influencing nobody.

The same choice will have to be made if and when Congress authorizes President Truman's bold new program for developing underdeveloped areas.

The French were frank enough to state that they did not want this aid if American notions of freedom for colonies were attached to it.

The Dutch sought our financial assistance in Indonesia. The Belgians have drawn up a 10-year development plan for the Congo in expectation of point 4 aid.

As our policy in Asia is reduced to trying to save the fringe of that vast continent, and its offshore islands, from communism, we can't afford to buck the national spirit of independence with which the entire area seethes.

So we are confronted today with the three-cornered struggle of European colonial imperialism, expertly trained Communist agitators from Moscow, and the nationalistic, patriotic love of submerged and exploited peoples for their own lands.

Mr. Truman has the mad concept that he can settle all this by spending your money—billions of it.

Pandora's box was a harmless cookie jar compared to what the practical politician, Mr. Truman, is prying loose for us in order to win the support of the panty-waist boys and the Helen Hokinson girls. He has already got the precincts of the political bosses, who think Indochina is a type of chicken favored by poultry breeders.

Reduction in Force of Veterans' Administration

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. RODINO. Mr. Speaker, within the last few days I have been in receipt of many pieces of correspondence from members of veterans organizations and other citizens who are interested in the welfare of veterans. They protest vehemently the recent reduction in force in the Veterans' Administration because, in their opinion, it will materially affect the services now being provided to veterans.

Under leave to extend my remarks in the RECORD, I wish to include herein a letter addressed to me from the department commander of the American Legion, Department of New Jersey, which merits serious consideration. It presents an intelligent approach to the serious implications of the reduction which has been effected:

THE AMERICAN LEGION,
DEPARTMENT OF NEW JERSEY,
Trenton, N. J., March 13, 1950.

The Honorable PETER W. RODINO, Jr.,
Member of Congress,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN RODINO: This letter is an analysis of the most recent reduction in the forces of the Newark regional office of the Veterans' Administration and the Veterans' Administration Hospital at Lyons, N. J., by direction of the Veterans' Administration general office at Washington, D. C.

It also contains our opinion as to the effect that these reductions will have upon veterans' activities in New Jersey.

In presenting this information to you, it is the official opinion of the American Legion, Department of New Jersey. This letter has been read to the meeting of the Department executive committee held on Saturday, March 11, in Trenton, N. J., and was approved by them.

NEWARK REGIONAL OFFICE

The total reduction of force in the Newark regional office is 156 employees. Of these, 62 are medical personnel, principally doctors and medical technicians and some associated clerical employees. This service is principally clinical and out-patient treatment of veterans.

In order to accomplish the reduction with minimum disruption of the service, the Regional Manager has decided to close the medical and dental clinic and out-patient services in the Camden suboffice. Some reduction will also be made in the Trenton, Newark, and Union City offices.

The effect of this will be to slow up materially the rate at which patients may be treated in the offices where medical personnel is retained. In the Camden office, the clinical and out-patient treatment will probably be placed on a fee basis.

As the increased load develops upon the reduced forces in the Trenton, Newark, and Union City offices to back-log proportions, the method of relief will be to place a portion of this load also on a fee basis.

In considering the economics of this reduction, there will be a direct pay-roll saving of employees who will be separated from the service. As an offset, however, there will be an increase in the fees paid to outside doctors for all types of clinical, dental, and out-patient treatment. It is not practicable at this time to estimate what this cost will be but, in our opinion, it will assume substantial proportions in due course.

Secondly, with regard to the physiotherapy and dental units, which are of the latest type of equipment, it will make idle a substantial capital investment. Furthermore, by reason of the reduced professional personnel, it will be necessary to eliminate certain services in these departments which have been available to veterans one or two nights a week. The point here is that the veteran entitled to this treatment will, of necessity, be required to come to the clinics during the day hours with probably loss in pay from his employment or, in fear of losing his job, will fail to receive the necessary treatment.

Of the afore-mentioned reduction of 156 employees, 36 are in the Adjudication Service. These are employees who consider and determine the disability ratings of claimants and fix the pensions to which they may be entitled. In full effect, this reduction means that a present total of 13 rating boards, the force will be reduced to 10 rating boards. On the face of this situation, this means that the remaining 10 boards will have to assimilate approximately a 25-percent increased

load upon them. As it is our present observation that all of these 13 boards are substantially occupied with the present load, elimination of 3 of the boards and the transfer of the case load to the remaining boards will mean a less deliberative and considerate rating of claims and will, in due course, cause a backlog in the number of cases awaiting determination.

As you know, veterans who are delayed in obtaining their ratings and consequent pensions, become rather vocal if the delay is protracted. Too hasty a determination on the part of rating boards in rating cases leads to errors of omission and commission which invariably become controversial and require rehearings and reviews. This means further increasing the load upon the remaining rating boards.

As a further consideration, it will be necessary for these rating boards, in order to expedite the handling of cases, to thoroughly screen and perhaps deny veterans the right of personal appearances before the rating boards. This always instills in the mind of the veteran the idea that his case is not receiving the personalized attention it deserves. It also means that all veteran organizations, the American Red Cross, and State agencies, having authorized right of appearance before rating boards, will have a material increase in complaints to them by veterans which will result in an increase in the rehearing and reratings of cases upon their representation.

There is a further consideration also to be borne in mind that veterans who are dissatisfied with conditions arising out of these circumstances invariably appeal to you for assistance in their dilemma.

It is our studied judgment that a reduction in the Adjudication Service, while effecting a pay-roll saving, in nowise reduces the case load and can only, in due course, cause an increase in expense should it be necessary to put the remaining rating boards on an overtime basis.

There are also some further reductions in personnel of miscellaneous character which we have not analyzed. Among these are rehabilitation and training personnel having to do with vocational rehabilitation and education benefits.

LYONS HOSPITAL

The Lyons Hospital is, as you know, a neuropsychiatric hospital which has a rated bed capacity of 2,234 beds. This has been supplemented by 288 beds of emergency character which were set up in certain buildings initially intended as administrative buildings. The total available beds therefore are 2,522. As of March 10, the patient population at the Lyons Hospital was 2,465.

This hospital has been continuously, for years, overpopulated and understaffed. The American Legion has registered innumerable complaints concerning the understaffing of this institution.

Under the reduction-in-force program, made effective this week, the total employee force of this institution is reduced from 1,371 employees to 1,302 employees, a payroll saving of 69 employees. Without attempting to analyze in detail the various categories of employees to be included in this reduction, the American Legion is most concerned with the reduction in the nursing staff, which is 6 registered nurses and 28 hospital attendants. In addition to this, there is a reduction of two doctors.

Considering the fact that a major portion of the patients at this hospital are of an unstable mind, any reduction in the personnel committed to the direct care of patients has serious implications. It should not be necessary for us to invite your attention to the shocking crimes of violence which have occurred in our own State and neighboring localities committed by persons of unsound mind. Without recourse to hysteria, the American Legion is most concerned with these dangers as they pertain to veterans who may be released from this hospital prematurely or without adequate determination as to their state of sanity, which will permit them to be safely returned to the civilian population.

We estimate that if this reduction in force in the Lyons Hospital prevails, it may be necessary to make at least 300 beds inactive because they cannot be properly staffed. There is danger here in the possibility that some demented veteran may be denied or unduly delayed admittance.

In conclusion, we present these facts to you upon their merits. We have endeavored not to make any exaggerated statements. We feel that our conclusions are tempered with our experience.

We sincerely solicit your personal consideration as to the situation in our State in connection with the Veterans' Administration services here. We fear that the current controversy inspired by discussions of the Hoover report, insofar as it concerns veterans' affairs, may have inspired these gestures of economy.

Very sincerely yours,

HARRY V. GROOME,
Department Commander.

The Command Is "Forward"

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include an editorial which appeared in the National Tribune Stars and Stripes, Washington, D. C., of this week:

THE COMMAND IS "FORWARD"

Thirty-one years ago this week there was born in Paris, France, one of the greatest nonpolitical organizations in our Nation's history. It had its predecessors in organized groups of veterans of previous wars, but none ever reached its size in numbers, in prestige, or in actual accomplishment. We are happy to dedicate this column to the American Legion in honor of its devotion to America and to the men and women who have preserved it against our enemies both at home and abroad, and as an added incentive to Legionnaires to a continuance of their purposes as outlined in the preamble to their constitution.

Some 20 servicemen of World War I conceived the idea of an association of veterans of that conflict on February 16, 1919, at a dinner which followed a staff meeting in Paris. Realizing they had no authority to more than start the ball rolling, these men, led by the son of the soldier President Theodore Roosevelt, issued invitations to a caucus, half enlisted men and half officers in composition, that met in the French capital on March 15 to 17 of that year. A thousand delegates there named an executive group which hit upon the name, the American Legion, and in April it drafted a plan of organization and designated a committee to begin operations at home. Another caucus was held at St. Louis in May. Delegates were present from every State, and plans were adopted for the first national convention in Minneapolis the following November.

It has been related on a multitude of occasions that the Legion was predicated upon selfish motives and that it is a pressure group designed to take care of its own at the expense of the average citizen. Nothing could be further removed from the truth. Democratic in all of its aspects, from the choice of its leadership to its program of mandates, its every action is dictated by convention delegates. Although acknowledging that it has its own political machinery as does every other society of any kind that is closely organized, one need only go back to the 1919 meeting in St. Louis to know about its nonpartisan principles which have been carried forward to the present hour and that have given to the Legion the sinews that have made of it a power with which all must reckon. There, as this country's fighting sons, it took its stand against coddling conscientious objectors. It condemned anarchists and international socialists. It demanded deportation of alien slackers, insisted upon a neutral attitude in industrial strife, endorsed land reclamation and initiated its course relative to securing the rights and privileges of ex-servicemen under the law.

The first national convention, in November 1919, approved these policies. It took a stand in foreign relations, spoke out for the first time against militarism in this land and asked for a system of universal military training in order to give our youth a chance for survival in any future war. There, and in its next convention the following year in Cleveland, it spoke out for adjusted compensation for those who fought in war while others, who remained at home, earned high wages in shipyards and elsewhere. Little by little, but ever with increasing force, the Legion has taken its place in the forefront in seeking solutions to the larger problems of national security, Americanism, child welfare, youth delinquency and foreign affairs. It is anything but selfish in principle even though it is fighting jealously to secure also the happiness of its disabled and aged.

At its thirty-first birthday, the American Legion enjoys a membership in excess of 3,000,000 and has associated with it a million auxiliary women. It boasts over 17,000 separate post units and owns or controls properties valued in the billions. As it has prospered, it has increased its activities and, in the normal course, it has aroused envy among the nonveteran class. Quite naturally, and almost entirely because enthusiasm and patriotism die as we become further removed from war years, it has found strong antagonists among those who are forgetful and whose interest in the almighty dollar supersedes thoughts of proper care for men and women who have borne the battle. The complexion of the Legion itself has undergone a change with the passing of a new world conflict. From a strength of a million members it has tripled in numbers. Young men from new generations compose two-thirds of its ranks, and their ideals, while paralleling closely those of their fathers, are differently expressed. In the normal course of events, leadership has gone over to the younger comrades in arms, and new methods of administration and differing means of approach are reflected in their thinking. It is principally of these things that we would concern ourselves as we compliment the Legion on its thirty-first anniversary.

One of the most heartening demonstrations of solidarity it has ever been our privilege to witness has been the patent desire this year, on the part of the first strictly World War II commander, to work in harmony with the national leaders of brother organizations. George Craig has performed a distinct service to all veterans and their dependents in following the course he has chosen. We know now that some old dyed-in-the-wool Legionnaires did not see eye-to-eye with him in his purpose to cooperate with others for the good of all, but it should be obvious to everybody by this time that Craig's vision was clear, and, unpopular as may have been the decision in the beginning, his judgment has been confirmed by events.

Enemies of the veteran class are on the warpath. There has never before in history

been such a propaganda flow against veterans and their hard-earned privileges, excepting possibly the campaign in 1932–33 which resulted in the loss of many veterans' rights and the repeal of their laws. Instead of fighting back with an impotence born of division within the ranks, Commander Craig had the wisdom to accept a place in a coalition of all of the major recognized veterans' organizations and, with no loss of prerogative or identity, he has the representatives of millions of other war veterans and their kin battling with him. He and they will win their struggle because the right is on their side and because they had the courage and foresight to work together in a common cause.

We of the Tribune would look ahead a little. It is one thing to fight a delaying action and to establish a strong line of defense. Given sufficient strength against a common and well-organized enemy, that might win a battle but it will never win a war. Fuzzy-brained idealists are engaged today in altering the entire course of this country's future conduct among nations. They do it in the name of the peace that all veterans so dearly desire, but they play into the hands of others whose ideals stand in absolute contradiction to the principles upon which America was founded and upon which it has grown to a position of leadership among world powers. The great American Legion and its allied veterans' societies are the hope of the civilized world in halting this trek toward ultimate destruction. Other strong movements, backed by millions of gullible citizens and by the coffers of rich supporters, would deny needed legislation to this country's fighting veterans and their loved ones and would destroy some privileges they already possess. Nobody more than the present Legion leadership knows this, but we fear a tendency to carry on a defensive action rather than an offense that will insure the winning of a cause for which all veterans have organized, the one nearest and dearest to them.

There are proposals in legislative form on Capitol Hill that must be written into law. Many of them carry Legion sponsorship. Some are opposed by the older among the Legion membership who happen to be motivated by that human failing which causes people to think in terms of self rather than to broaden their outlook in the realization that they owe a duty to their less fortunate fellow men. We are certain that if the Legion is to move ahead to greater accomplishment, if it is to do all for which it was created 31 years ago and if it would hold within its ranks many of those who gave it birth and who saw it safely through its formative years, the time has come for it to begin an offensive of as great proportions as the delaying action it has so far fought this year. A little soul searching is in order. The other organizations can be depended upon to carry their part of the load, so let us not forget the disabled and needy in this time of stress. While congratulating the American Legion on the splendor of its past, we look ahead to what can and must be done. The command is "forward."

A Veteran Explains the Hoover Reports

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1950

Mr. SHAFER. Mr. Speaker, must reading for Members of Congress and all citizens of the United States—especially veterans—is A Veteran Explains the Hoover Reports, written by Herman W. Steinkraus, president of the Chamber of Commerce of the United States. This article is particularly timely due to the misconceptions of the Hoover reports. Under leave to extend my remarks, I include this excellent statement:

A CALL TO VETERANS

(By Herman W. Steinkraus, veteran of World War I, past national commander of the Legion of Valor; president, Chamber of Commerce of the United States)

DEAR FELLOW VETERAN: I'm addressing this message to you because I feel sure you will want to help in a very worthy cause.

Our Nation is in trouble. Serious trouble. It needs your help again.

The job isn't military, but it takes courage, just the same. I'm asking you to look at some facts and to help clear up some misunderstandings which are spreading among your former buddies and mine.

The facts have to do with your veterans' benefits and the Hoover Commission. I believe if you know the facts you will help to see that others learn the truth, too.

You may have heard it said that the Hoover Commission would deprive veterans of benefits, involve them in lots of red tape, dismember the Veterans' Administration, and take hospital beds away from disabled veterans or even send them to prison hospitals. That is absolutely not true.

Those are some of the false statements which have been made by some careless or misinformed people.

In all fairness to yourself and to our country, I ask you to read through this pamphlet and see just exactly what the truth is.

First, let's recognize that the Government has an obligation to treat the veterans right. But it should also spend the taxpayers' money wisely and not waste it by inefficient methods which do no good for the veterans but weaken the financial strength of our country.

Right now our National Government is costing us citizens $120,000,000 a day.

It is spending $14,000,000 more than it takes in every single day.

The Federal debt already amounts to all the money that the Government can expect to collect in the next 7 years, at present tax rates; and you surely agree that taxes are high enough now.

WASTE HELPS NOBODY

Government waste and higher taxes can threaten your job, your savings, your freedom, and future security, just as surely as the Kaiser or Hitler and Tojo would have done if we had lost the wars.

All this huge Government spending is serious enough, but we have plenty of evidence that it is wasting several million dollars a day because of overlapping, duplication, and unbusinesslike procedures which benefit nobody.

This waste can be stopped, and that's where you come in. Your help is needed in stopping it.

Now let me say a word about the Hoover Commission. This Commission consisted of 12 prominent men picked by the President and the leaders of Congress. Six members were Democrats and six Republicans. See their names on pages 12–15. You will know most of them. Nobody claims that the Commission did a perfect job, but those who really know, including President Truman, have said that it did a good job and a very fair one.

The Hoover Commission's 18 reports to Congress ran about 2,000,000 words. That's a lot of words. Together they make a set of books over a foot thick. Very few people have found the time to read them all. It's not surprising then, is it, that misunderstandings have arisen?

The recommendations affecting veterans alone make up 4 of the 18 Hoover reports, and take a lot of reading before they can be understood. But a trained group of experts of the Chamber of Commerce of the United States has spent several months and made a careful study of every individual recommendation. These experts are mostly veterans themselves. They have worked hard to make an impartial report. Their answers are contained in this booklet. For your own good, for the future welfare of your children and our country, I urge you to read it.

The Hoover Commission made the most thorough study of Government operations that we have seen in our lifetimes. Government departments have grown so complicated, and are still growing so rapidly, that if this effort to increase their efficiency fails, there probably will not be another chance like this again. In a few more years government will be so big and so complicated that it will ruin our future. We must not let this happen.

The sections of the Hoover reports dealing with veterans are vitally important to this reorganization program. If they are rejected, the whole project will be severely crippled.

The Hoover reports do not recommend cutting out a single one of your veterans' benefits. Just read exactly what the Hoover Commission did propose and why. See for yourself that these proposals do not take anything away from you or any other veteran. Then give your support to the Hoover Commission proposal and help to put an end to any false statements about them you hear.

THERE ARE 19,000,000 VETERANS

When the Veterans' Administration was first established in 1921 under the name of the Veterans Bureau, there were only four and a half million veterans in the United States. Now there are 19,000,000. It makes sense, doesn't it, that the best and latest methods are needed to handle all those veterans' affairs? While it might have been possible to handle the problems of four and a half million veterans efficiently in 1 compact Federal bureau, it is over 4 times as big a job when we have 19,000,000 veterans to deal with.

Remember, there are only 50,000,000 income-tax payers in the United States, and nearly all the 19,000,000 veterans are taxpayers too. You have a real reason for wanting better, more economical, more efficient government. You, yourself, are a taxpayer as well as a veteran.

You don't want to be coddled, nor do you want to take unfair advantage. You just want what's rightly coming to you as a veteran and as a citizen, and a good chance to make your own way in this country for which you fought. The grateful American people want you to have that chance. They want you to have certain benefits. The people don't want them taken away from you. But they do need your help in furnishing these benefits without wasting money.

This booklet is prepared in the form of questions and answers. If any of your questions aren't answered here, please let me know and I'll get the answer for you. I'm asking you this favor as one veteran to another (and I have a son who is a veteran, too). Read this over carefully; discuss it with others.

Here's another chance for you to serve your country as a patriotic citizen. You fought for it in war and now you can help it in peace to adopt a more effective, speedier, and better plan of handling veterans' affairs.

Yours very sincerely,

HERMAN W. STEINKRAUS.

PART I. THE HOOVER COMMISSION

Question. Who served on the Hoover Commission?

Answer. There were 12 members, as follows:

The chairman was Herbert Hoover, the only living former President of the United States. Mr. Hoover has had a long and distinguished public and private career. During World War I he was United States food administrator. In 1946, at President Truman's request, he undertook the coordination of world food supplies in 38 countries. He headed a mission to study German food problems in 1947. Mr. Hoover's chief business interests have been in mining. He holds 48 honorary degrees and is author of several books on political and economical problems.

The vice chairman was Dean Acheson, now Secretary of State. Mr. Acheson is a World War I Navy veteran. A lawyer by profession, he was Under Secretary of the Treasury in 1933 and served as Assistant Secretary and later as Under Secretary of State from 1941 to 1947.

Other members were:

GEORGE D. AIKEN, United States Senator from Vermont since 1940. He formerly was Governor of Vermont, and before that was a local school director. Senator AIKEN is a member of the Senate Agriculture Committee and the Labor and Public Welfare Committee.

CLARENCE J. BROWN, Congressman from Ohio since 1939. Representative BROWN had a son in the war. Before going to Congress, he served as Ohio State Senator and later as Lieutenant Governor of Ohio. He is a newspaper publisher.

Arthur S. Flemming, president of Ohio Wesleyan University and former college instructor in government. Mr. Flemming was a member of the United States Civil Service Commission from 1939 to 1948. He also served with the labor division of the Office of Production Management in 1941–42, with the Manpower Survey Board of the Navy in 1943–44, with the Retraining and Reemployment Administration of the Labor Department from 1944 to 1947.

James Forrestal, who was a business executive from 1916 to 1940. His specialty was investment banking. A World War I veteran of the Naval Air Service, Mr. Forrestal was appointed Under Secretary of the Navy in 1940. He later became Secretary of the Navy, and then the first Secretary of Defense upon the unification of the armed forces.

Joseph P. Kennedy, business executive and statesman, who lost a son in World War II. Mr. Kennedy has engaged successfully in shipbuilding, investment banking, and the film businesses. He has served as Chairman of the United States Securities and Exchange Commission, Chairman of the United States Maritime Commission, and as Ambassador to Great Britain.

Carter Manasco, Congressman from Alabama from 1941 to 1948. A lawyer by profession, Mr. Manasco has had a long career of public service.

JOHN H. MCCLELLAN, United States Senator from Arkansas since 1942. Senator MCCLELLAN lost a son in World War II. He himself is a veteran of World War I. In the Senate he serves as chairman of the Expenditures Committee and member of the Appropriations and Public Works Committees. His experience in government dates back to 1926, when he was a prosecuting attorney in Arkansas.

George H. Mead, chairman of the board of directors of the Mead Corp., a pulp and paper firm. Mr. Mead lost a son in World War II. He held the following positions in Government: Member of the Commerce Department's Business Advisory Council, 1933–45; Chairman of the Industrial Advisory Board under the NRA in 1934; member of the President's Committee of Businessmen to advise on war mobilization and reconversion, 1941–44; also, member of the National Defense Mediation Board and of the Federal Price Control Board.

James J. Pollock, professor of political science, University of Michigan. A professor of history and politics since 1921, Mr. Pollock is author of several books on United States and European political problems. He has been a member of the United States Industry Committee of the United States Labor Department's Wage and Hour Division, and special adviser to the United States military government of Germany.

James H. Rowe, Jr., a World War I Navy veteran and assistant to President Roosevelt from 1939 to 1941. Mr. Rowe has had a distinguished career as lawyer and administrator since 1934, when he was secretary to Justice Oliver Wendell Holmes. He has served in the Reconstruction Finance Corporation, the Labor Department, the Public Works Administration, and the Justice Department. He was technical adviser at the Nuremberg trials, after which he returned to private law practice, although still acting as consultant to the United States Budget Bureau on public administration matters.

Question. Who appointed these men to the Hoover Commission?

Answer. Mr. Acheson, Mr. Flemming, Mr. Forrestal, and Mr. Mead were appointed by President Truman. Senator Aiken, Mr. Kennedy, Senator McClellan, and Mr. Pollock were appointed by Senator ARTHUR S. VANDENBERG, who was then President pro tempore of the Senate. Mr. Hoover, Representative Brown, Representative Manasco, and Mr. Rowe were appointed by Representative JOSEPH W. MARTIN, who was then Speaker of the House of Representatives. The law specified that in each group of four members picked by the President and the two leaders of Congress, not more than two could belong to the same political party.

PART II. FEDERAL MEDICAL SERVICES

Question. What did the Hoover Commission think should be done with veterans' hospitals?

Answer. Briefly, it said that hospitals operated in this country by the Veterans' Administration, the Army, Navy and the Public Health Service should all be combined into one Federal hospital system, named the United Medical Administration. This would be a partnership arrangement. The four agencies, VA, Army, Navy, and PHS would set up a board and would operate the hospitals jointly.

Question. Why?

Answer. Because each of those agencies now operates its own Nation-wide system of hospitals. In some large cities, there are hospitals operated by all four agencies. A VA hospital may be overcrowded, short of doctors and nurses, while half a mile away an Army hospital may have hundreds of empty beds and dozens of idle doctors, and yet, under the present system, a veteran could not be moved to an Army hospital bed. He would have to wait for a vacancy in the VA hospital or go to some VA hospital in another city, possibly far from home.

Hoover Commission investigators found these conditions:

In the San Francisco area, 13 Federal hospitals (not counting the VA's specialized tubercular and neuropsychiatric hospitals) had a capacity of 9,905 beds and had only 4,180 patients on hand. (This situation has improved somewhat since the Commission made its study in 1948.) If 7 of the smaller hospitals had been closed and all 4,180 patients moved into the remaining 6 hospitals, those 6 would still have been filled to only 54 percent of capacity. And yet 3 more Federal hospitals with a total capacity of 3,000 more beds, were being planned in the area at a cost of $70,000,000 of your tax money.

In New Orleans there were 5 Federal hospitals within a 6-mile radius, with a capacity of 1,620 beds and only 913 patients on hand. Two were general hospitals, one operated by the VA and the other by the Public Health Service. Each had a staff of about 100 full-time physicians representing various medical specialties. And while medical equipment and desperately needed medical talent were being duplicated and thus wasted in these two hospitals, the three military hospitals in the city were so poorly staffed and equipped that patients needing specialized treatment had to be sent to larger military hospitals in Texas and Florida.

Those are just two examples of what the Hoover Commission found. There were others.

Question. But the hospitals take care of different groups of people, under different conditions. Isn't it unwise to try to handle veterans, soldiers, sailors, military dependents, and Public Health Service patients all in the same hospital?

Answer. Why should it be? When a doctor looks at a mangled arm, he doesn't ask whether it happened in a shell burst or in a truck accident.

Question. What about the military personnel? They are subject to military regulations in hospitals. What about the morning reports, the sick book, the clothing reports, pay records, and other details that must be looked after? Who would take care of those things in a civilian hospital?

Answer. Military personnel could be assigned to a hospital to do that. It isn't necessary for the military to operate its own hospitals just for that reason.

Question. That's well enough but what about the veteran? Especially the one with service-connected disability? The Government has a special obligation to him. He doesn't want to have to compete with the military and with all the types of civilians the Government cares for when he needs a hospital bed.

Answer. The right of veterans to hospitalization is fixed by law and would in no way be interfered with by adoption of the Hoover reports. There would be plenty of beds to go around, if the hospitals were merged. In fact, there would be a lot more spare beds than there are now in many hospitals. The Hoover Commission's survey showed that as of June 1948, there were 225,000 beds in Government hospitals and only 155,000 were occupied. Of this total, VA hospitals had 127,000 beds and 105,000 patients. All the other agencies together had 128,000 beds and only 50,000 patients. Don't let anyone tell you that the Hoover Commission program would cause battlefield-disabled veterans or any other deserving veterans to be dumped out of beds to make room for sick nonveterans. VA would be required to see that veterans got preferential treatment. Actually, the Hoover recommendations would mean more beds for veterans right away, and closer to home, because veterans would have access to hospitals which are now barred to them.

Question. Well, put it this way: A veteran is used to taking his troubles to the VA. When he needs hospitalization, he doesn't want to have to put himself at the mercy of some big new civilian outfit called a United Medical Administration. What's fair about that?

Answer. The veteran would continue to deal with VA as always. If he required only clinical diagnosis or dispensary care, the VA would still be equipped to provide it. If he needed hospitalization, the VA would be fully responsible for seeing to it that he was placed in the Government hospital and provided with the type of care called for in VA regulations. All hospital certification

of veterans would remain entirely in the hands of VA. But just as in the case of military personnel, it seems hardly necessary for the VA to run its own hospitals just to see that its regulations are carried out, does it?

Question. The Government takes care of prisoners in hospitals, too. Are veterans supposed to be put into beds alongside criminals?

Answer. Most emphatically not. The Hoover Report on Federal Medical Services specifically says that hospitals run by the Bureau of Prisons and the Indian Affairs Bureau should be kept out of the United Medical Administration and continued as they are.

Question. It still doesn't seem logical for the Hoover Commission, which is trying to trim down big government, to come out for the creation of a gigantic new Federal hospital administration. Wouldn't a new outfit like that create thousands of new jobs and make it necessary to train numerous inexperienced new officials?

Answer. Let's think about that one for a minute. What new jobs would it create? It certainly would take fewer, not more, doctors and nurses if these four hospital systems were combined—if, for example, the 13 hospitals in the San Francisco area were reduced to 6. It surely wouldn't be necessary to train any doctors or nurses or hospital technicians. Those who had been treating veterans could treat the same ailments in military personnel without any further instruction, couldn't they? Hospital administration also is much the same, regardless of whose hospital it is. True, there would be more specialized paper work in a combined hospital than in one which admitted only a single category of patients. But the paper work is all being done in the various hospitals now. Some of the officials who are doing it now could move into a combined hospital and do it there. The fact is, under the Hoover Commission proposal more hospitals could specialize in different major ailments and the Government would have medical talent to overcome some of its shortages.

Question. But after all, the veteran would lose the exclusive hospital service which is provided for him now, wouldn't he?

Answer. No. He would have the same rights and the same care he is getting now and the VA would still be represented there, protecting his interests.

Question. Who made the hospital study for the Hoover Commission?

Answer. A task force of 17 members. Eleven were doctors. The others were hospital experts. Seven members were veterans. One of them, Gen. Paul R. Hawley, was formerly director of VA hospitals. The chairman of the task force was Col. Tracy S. Voorhees, a World War II veteran. Rear Admiral Joel T. Boone was secretary.

PART III. CONSTRUCTION

Question. Is it true that the Hoover Commission proposed to strip VA of its control over construction, including the building of VA hospitals?

Answer. What the Commission proposed was that all Government construction be done by the Interior Department, instead of by 12 different departments. Hospital construction would be directed by a medical board and VA would be represented on that board to assist in hospital planning.

Question. But isn't it true that through years of experience, the VA has demonstrated that it has the technical know-how for building and equipping such specialized institutions as it needs?

Answer. Since World War II, Army engineers have handled the construction of virtually all VA hospitals. As recently as January 24, 1950, Army engineers let the contract for a $15,000,000 VA hospital at West Haven, Conn. So except that the Interior Department, instead of the Army engineers, would be letting the contracts, the same situation would prevail under the Hoover Commission program as now.

Question. What purpose would be served by having Interior do the job?

Answer. By centralizing all construction, the Government could put an end to the waste caused by Federal agencies bidding against each other for scarce labor and materials. Money also could be saved by mass purchases.

Question. The Hoover Commission reported that the Interior Department's Reclamation Bureau was guilty of gross underestimation of the cost of some of its jobs. For instance, it estimated that the Hungry Horse project in Montana would cost $3,300,000 and the cost actually was $93,500,000. Wouldn't that argue against letting the Interior Department take over all Federal construction?

Answer. The Hoover Commission proposed many reforms in the Interior Department, too. Remember, this program is not confined to veterans' affairs. If the whole plan is adopted, such underestimation of costs will be stopped.

PART IV. INSURANCE

Question. Is it true that the Hoover Commission wanted to take the veterans' insurance program away from VA and give it to some new Government agency?

Answer. No. The Commission proposed that a corporation be set up within the VA to handle the insurance business. The Veterans Administrator would be president of the corporation and he would appoint all the directors.

Question. What would be the purpose of a corporation?

Answer. To make the service more efficient. At present, the Treasury Department handles VA insurance money and the General Accounting Office audits the insurance accounts. There is an enormous flow of insurance paper work among the three agencies. VA now must get approval from the Treasury and account to the GAO for every insurance expenditure it makes. By incorporating the insurance business, the flow of paper work would be greatly reduced and the veteran would get much quicker service, because Government corporations are allowed to disburse their own money. These corporations, such as the Reconstruction Finance Corporation, which makes loans to business, and the Commodity Credit Corporation, which lends to farmers, operate under special laws. They have certain privileges not enjoyed by other Government agencies, and they are subject to certain requirements. For instance, they must adopt certain business procedures. The veteran surely cannot object to that. His VA insurance is a business proposition. He wants the VA to be able to adopt some of the practices that are used successfully by private insurance companies. VA could do so if its insurance operations were incorporated.

Question. Wouldn't the setting up of a big VA insurance corporation be expensive?

Answer. No. It might create more jobs at VA, but by reducing the present paper work at the Treasury and at GAO, it would mean savings in personnel at those two agencies. Another thing, VA automatically would pick the employees of its own insurance corporation, subject to civil-service rules, and it is to be assumed that VA would give veterans the first chance at the new jobs.

Question. Under the present arrangement the cost of handling veterans' insurance is paid out of VA funds. Did the Hoover Commission want the veterans to assume this cost by having it added to their premiums?

Answer. Specifically not. The Commission proposed that the costs of operating the Veterans' Life Insurance Corporation be paid out of funds appropriated by Congress. The only difference would be that the Government would have a clearer picture of what the insurance program costs.

Question. What is the matter with the way veterans' insurance is handled now?

Answer. Here are some of the things the Hoover Commission found wrong: VA had 15,432 employees handling insurance. These persons were for the most part so poorly trained and supervised that they handled an average of 450 policies each, compared to an average of 1,762 policies handled by employees of private companies. VA was posting premium payments by hand when they could have done this by machine. Cases were found where payment of death benefits had been delayed as much as a year, due largely to VA's system of handling death claims separately from insurance operations. Half the VA insurance conversion cases studied had been delayed unnecessarily, and 25 percent appeared to have been mishandled. On converted policies the average time required to process death claims was 80 days, whereas private companies pay 70 percent to 82 percent of claims within 15 days.

Question. What reasons were found for such mishandling and delays?

Answer. The methods used at VA were responsible. The Hoover Commission reported that VA has failed to make adequate use of work measurement standards, or of private inspection services to corroborate claims. Some VA policies were found to have lapsed without the veterans' knowledge, because VA clerks failed to check records or to doublecheck one another's work, as is done in private companies. It is logical to assume that if the VA handled its insurance business the same way that private companies do, then it, too, could pay claims within 2 weeks, and a veteran's widow would not have to wait as much as 3 or 4 months for her money, as many widows are having to do now.

Question. Who made the actual study of veterans' insurance problems for the Hoover Commission?

Answer. This was done by a task force which looked into all VA matters. The task force was headed by Col. Franklin D'Olier, first national commander of the American Legion. Colonel D'Olier was director of the United States strategic bombing survey of Germany and Japan (1944–46) and at one time he was chairman of the board of directors of the Prudential Life Insurance Co. of America.

PART V. VETERANS' PREFERENCE

Question. Did the Hoover Commission recommend that veterans' preference in the Federal civil service be abolished?

Answer. No. The Commission proposed that disabled veterans continue to have absolute preference in Federal jobs, as they do now. Other veterans would be given additional credit for each 6 months of military service to help them retain their jobs whenever there are reductions in force from the Federal pay roll.

Question. But nondisabled veterans who now have absolute preference retention would lose that advantage, would they not?

Answer. Yes. That is just about the only advantage veterans would lose under the Hoover Commission program. And the Commission offset this by other recommendations which would bring more veterans into Government service.

Question. How would this be done?

Answer. The Commission said that selected Government agencies should establish a positive, comprehensive, Nation-wide program to recruit veterans only, in Federal positions. This program should be conducted for the next 3 or 4 years in principal communities, the Commission said. Since the purpose would be to get competent veterans into Federal service, it would be necessary to remove present incompetent employees so that

jobs would be available. Actually, competent veterans would replace incompetent workers who might or might not be veterans.

Question. What was the chief feature of the Commission's proposals for Government personnel?

Answer. The main recommendation was that the heads of Federal departments and agencies be permitted to do their own hiring, instead of relying on the slow, cumbersome Civil Service Commission procedure.

Question. Would this mean setting up thousands of independent hiring boards to replace the single Civil Service Commission?

Answer. Not at all. It would simply enable the executive of a Federal agency to hire the right man for the right job at the right time. The present system sets up all sorts of barriers against hiring the best man, against promoting the best man, and against firing the worst man. Veterans on the civil-service register for junior professional assistant have found out all too well how slow and uncertain the Civil Service Commission system works.

PART VI. HOME LOANS

Question. Is it true the Hoover Commission suggested that the home-loan program be taken away from VA?

Answer. No. It was proposed that the Federal Housing Authority act as VA's agent in this program, just as Interior would be VA's construction agent. VA would continue to certify veterans for home loans, to control the loan funds, to set the standards for loans. FHA would only make the appraisals and guarantee the loan. It should make no difference to a veteran who guarantees his loan. In fact, VA now guarantees only 50 percent of a loan, up to a $4,000 limit, while FHA guarantees 90 percent of a full loan.

Question. Why take this function away from VA?

Answer. Well, FHA already handles a large part of GI home loans under a joint arrangement with VA. The way the program operates now, VA and FHA make separate and often widely different appraisals of the same property and they charge different interest rates, thus involving the veteran in needless confusion and red tape. VA is not experienced in the lending field and as a result it will be compelled, by foreclosures, to go into real-estate management.

Question. What would be the advantage of letting FHA operate the program?

Answer. Duplication would be eliminated. There would be a saving in personnel. The veteran would not have to get two different kinds of loans on his home. FHA has had more experience than VA with home financing.

PART VII. VETERANS' ADMINISTRATION

Question. Aren't all these recommendations about veterans' hospitals, construction, insurance, and home loans designed, in a sense, to dismember the Veterans' Administration?

Answer. Not at all. The effect would be to leave VA fully responsible for the planning and control of its programs and to turn over actual operation in some cases to highly specialized Federal agencies which are now, or would be, performing the same services for nonveterans anyhow. The Hoover Commission made no recommendations for curtailing any of the services to veterans. It was concerned only with finding ways to get the job done faster and at less cost. The Commission said: "The basic question as to what the Government owes to its veterans and the dependents of members of the armed forces is a policy matter which must be determined by the Congress." The Commission took the view that as long as the service is properly performed, it should not matter to the veteran how that service is rendered.

Question. Assuming that the Hoover Commission suggestions were put into effect, wouldn't the result be that a veteran no longer could go to one agency and inquire about his disability claim, check up on his chances to get vocational training, make application for hospitalization, ask about a GI loan, or, if called in for a physical examination, do it all in one place?

Answer. That is a misconception. The veteran would go to the VA just as he does now in every one of those cases. He would get the answers directly from VA too, because VA would still be in charge of all benefits and would decide whether the veteran is eligible for them. His master record, the C-file, would remain at VA and if FHA, for instance, was guaranteeing his home loan, it could be supplied with carbon copies of whatever documents it needed from his file.

Question. Weren't there other recommendations for changing the whole structure of VA?

Answer. Yes. The Commission recommended a thorough overhauling job. Briefly it proposed that all pension, retirement benefit, disability compensation and guardianship matters be consolidated in a Veterans' Benefit Service, and that all vocational rehabilitation, education and readjustment programs, as well as the certification of veterans for loan guaranties, be combined in a Readjustment Service. But these transfers would be stricly internal. Nothing would be taken away from VA. All it means is that the two new services would be set up to take the place of several scattered operations, so that like functions could be grouped more logically within the VA.

Question. But why such a shake-up? Is VA as disorganized as all that?

Answer. Here are some of the Commission's findings: VA now finds it necessary to use 88 different manuals, 665 varieties of technical bulletins and more than 400 circulars of various kinds to explain all its procedures. In one instance, VA took 994 pages to explain two 8½ page laws on a veteran's eligibility for education and other benefits. Doesn't that look like too much red tape to be tolerated in an agency that spends $6,000,000,000 a year or 30 percent of all Federal nondefense funds? The Hoover Commission estimated that $70,000,000 a year could be saved by improving the internal operations of VA. It said that large reductions in the staff and supervisory personnel could be made if there were better office procedure. It pointed out that conditions are so bad that there is an annual turnover of 34.8 percent in VA employment. In other words, more than a third of the employees quit each year. The Commission found that 3,600 representatives of 24 veterans' organizations have space in VA offices, helping to prepare cases for individual veterans who do business with VA. So many mistakes had been made in VA offices that some veterans had been overpaid $179,000,000 and $50,000,000 of this still had not been received at the time the Hoover commission made its study.

Question. How could such conditions arise? What did the commission say was wrong, generally?

Answer. That VA is top-heavy with staff officers; too many people report to the Administrator; operations are scattered; there are too many supervisors; responsibility is divided; there is no clear line of authority between Washington and the field offices. Those are some of the general findings.

Question. How would these basic troubles be overcome?

Answer. The Commission recommended that the Administrator be given firmer control; that subordinates be stripped of independent authority; that the Administrator himself be responsible for drafting all central office directives; that lines of authority be clearly set out and the number of organizational units and their top personnel be reduced; that research, inspection, and investigation be placed under one head. Those and the establishment of the two main services mentioned earlier were the major recommendations.

Question. Getting back to those two services, wouldn't a reshuffling of the whole benefit program, for instance, lead to all kinds of confusion, at least while the changes were being made?

Answer. No, not necessarily. Pension, retirement, disability, and guardianship services, now costing $2,000,000,000 a year and due to rise to $2,700,000,000 in about 10 years, should never have been scattered in the first place. The Hoover Commission said that records of pension payments and compensation now kept by the Office of Contract and Administrative Services could be transferred at once to a new veterans' benefit service. It proposed that active records kept in branch offices be transferred, during the liquidation of those offices, to the regional offices and kept separately from the readjustment, education, and insurance accounts.

Question. About the proposed new readjustment service which includes education—isn't it true that the Hoover Commission made some critical comments about the education program and that the reorganization would interfere with schooling under the GI bill?

Answer. It is true that the Commission found much wrong with the way the education program has been handled. But it did not recommend that any of the education or training services be reduced. The education program, by the way, cost $2,743,000,000 in the fiscal year 1949. The Commission found that VA was paying the highest possible tuition and equipment charges to schools in cases which were hard to justify. It said that only after long delays did VA make any efforts to reduce recreational courses, or to enact standards for on-the-job training, or to discover that "institutional on-farm" training was unsatisfactory.

Question. Just what did the Commission think should be done about education?

Answer. It made several recommendations. One was that VA be given authority to establish a system for certifying schools which are not regularly accredited places of learning. In other words, VA should establish standards which would prevent veterans from wasting their time in so-called fly-by-night schools. About 90 percent of the schools attended by veterans are regularly accredited and would not be affected by this proposal. The other 10 percent are not accredited, and the Commission believed that some standards should be set on the kind of teaching they give veterans. Here are some more of the Commission's recommendations: That VA consider giving grants to States to provide better job and school training; that VA consider cooperating with the Labor Department's apprentice-training program to prevent the lowering of apprentice-training standards through the use of Federal funds; that VA study the justification for paying nonresident tuition fees for veterans living within the State; that a simpler system be worked out for handling subsistence allowances.

That's the real story. The Commission was not trying to reduce the chances for education. It was interested in cutting red tape, in seeing that the veteran got the most for the money, and in reducing the burden on the taxpayers by more economical methods. President Truman shares the view that the rules applying to GI training in irregular educational institutions need to be tightened. He sent a report to Congress February 13, 1950, saying that some of the present abuses are "costly to the veteran, to his family, and to the Nation."

Defeatism in Washington

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Lippmann, from the Washington Post of March 14, 1950:

TODAY AND TOMORROW
(By Walter Lippmann)
DEFEATISM IN WASHINGTON

Seen from the Arizona desert, and some points in between, the picture of Washington at the moment does not make much if any sense.

For each day there are two series of news stories which recur, as Chesterton once said, with all the monotony of roses in a wallpaper pattern. One series comes from Capitol Hill telling how some Republican Senator has warned the country not to trust the State Department and Mr. Acheson; the Senator is going to prove that they are the dupes of the Communists. The other series comes from the State Department warning the people that they would be the dupes of the Communists if they were so stupidly innocent as to feel "that somehow or other there was an answer to our problem if only we were smart enough to figure it out."

There must be a better way to run a Government, which is supposed to be leading the free peoples of the world, than to announce daily that the Senate does not trust the Secretary of State and that the Secretary of State is afraid the people cannot be trusted. The Republican Senators have got Mr. Acheson in a squeeze where he appears to be spending half his time denying that he is a friend of the Communists and the other half figuring out ways to show how much he dislikes and distrusts the Communists.

And although he has now talked himself into a position which makes Winston Churchill an appeaser and a misguided idealist by comparison, the Secretary of State is treated on Capitol Hill with less courtesy and with smaller regard for the rules of evidence than if he were a convicted horse thief.

In this atmosphere of total distrust it is idle to talk about total diplomacy. There can be nothing total about the actions of a Government which is a house so divided within itself. And of diplomacy there can be virtually none when the Secretary of State feels he must distrust the instinct of the people instead of clarifying, guiding, and rationalizing it.

"We clearly are not focusing" he said the other day, "our total resources on the winning of that struggle." Clearly we are not focusing our total resources, including our resources of brain power and of heart. Why not? Because we have not been given any objective on which to focus. The people and the Congress have supported every measure of any importance which the administration has recommended: the Truman Doctrine, the Marshall plan, the North Atlantic security pact, the military-aid program, the annual military appropriations, the unification bill, the United Nations, the World Bank, the Monetary Fund, and all the rest. They cannot be expected to focus more resources than their responsible leaders ask them to focus. If the administration thinks that more is needed, then it should say what it is that is needed, and why.

But in fact what we see is that Mr. Acheson has nothing new to propose to the Russians and that he has nothing new to propose to the American people and to our allies. Thus the diplomatic situation is frozen in Washington while the actual situation in Europe and Asia is deteriorating. The State Department has for the time being run out of ideas which evoke energy, offer hope, and create confidence.

This sterility and defeatism is understandable in view of the persecution—that is the right name for it—being carried on by the Republican Senators. But it is also true that the persecution goes on, and will go on and on, because the administration has not had for over a year a single new, interesting, and constructive idea to which the Nation could rally.

Yet, the events of the past year have been momentous. In China, in Japan, in south Asia, in Germany and central Europe, in the race of armaments the situation today is radically different from what it was believed to be a year ago. But except that we have announced our intention to make the hydrogen bomb, our official doctrines and our policies are just what they were.

We are still operating the Marshall plan on the assumption that western Europe can be integrated without a solution in respect to eastern Germany and eastern Europe and the sterling area. We are still operating the North Atlantic Pact and military aid without any public recognition of the new insecurity of Germany, Austria, and Scandinavia after the Soviet achievement of the atomic bomb. We have renounced Chiang and we are still thoroughly entangled with Chiang. No wonder that the American people, and even more poignantly the people abroad, feel that somebody ought to try to be smart enough to figure out some answers to their problems. They do not like to be told that it would be foolish to try.

And in fact they will try. If Washington won't try, then Paris, London, Bonn, Delhi, Tokyo, and the rest will try. For what is happening as a consequence of the freeze-up in Washington is that the leadership we had by virtue of our ideas and our power is rapidly disintegrating. We are losing touch with the peoples of the world—with their fears, their hopes, their needs, their purposes, and their will to survive—and we are talking not to them but to ourselves in a self-induced mood of defeatism and impotence about how much we must distrust one another and our own better instincts and our own capacity to think and to believe.

FEPC and the CIO Leadership

EXTENSION OF REMARKS
OF
HON. VITO MARCANTONIO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks, I include herein an article by Ralph Matthews which appeared in the Washington Afro-American, February 18, 1950:

THIS WEEK
LABOR BEING SOLD SHORT BY MURRAY?—"OPERATION DIXIE" OR HOW OUR RACE IS DOUBLE-CROSSED
(By Ralph Matthews)

Several weeks ago when I first pounced on Messrs. Roy Wilkins, Willard Townsend, and company for their audacity at screening the Americans who would and would not be allowed to attend the recent Civil Rights Mobilization here, I was merely indignant over what I thought was patriotic snobbishness.

At the moment I only abhorred the idea, which has grown too popular here of late, of one group of so-called Americans setting themselves up on a pedestal as the true patriots while denouncing others as traitors and skunks.

Bad medicine for all

This I believe to be very bad medicine, both for the prescribers and for the Nation as a whole, because being a good American means many different things to many different people.

I knew only that my idea of what constituted a good American and RANKIN's idea were incompatible.

Therefore, when the present leaders of the NAACP, with their CIO cohorts, accepted the Rankin formula and tried to force the rest of us to conform to that mold, I realized that somebody had gotten fouled up somewhere.

Believes he was duped

But now I know what I had only suspected then, that Roy Wilkins had allowed himself to be duped into a big game of power politics in which he was the victim of his own inability to see farther than his nose.

In permitting the mobilization to be used as a sounding board against the so-called leftist CIO unions, Mr. Wilkins turned his back on most of the things the NAACP stands for and made a marriage of convenience with an emaciated skeleton which is but a shadow of the once liberal CIO.

Their only crime

The reason most of the so-called Red-dominated unions have been given the boot and are now castigated by their former associates is not that they adhere to any Moscow line, but that they insist on following the line of interracial liberalism, which the CIO followed itself before it got fat and greedy.

The unions which are being purged and with which Mr. Wilkins refuses to associate are the same unions which refuse to fall in line with the new CIO policy which calls for conformity with America's traditional policy of segregation and Jim Crowism.

It is no strange coincidence that the so-called Red unions all maintain their original interracial composition from the top down, while the so-called loyal unions, the ones Mr. Wilkins prefers to associate with, are not only lily white but are making a desperate effort to break the membership of the purged unions up into Jim Crow segments.

Parent body to blame

This goes even for the parent body of Philip Murray himself, whose United Steelworkers' Union has not one colored member on its 41-man board, in spite of the fact that better than one-third of the membership is colored.

This also goes for the saintly Walter Reuther, whose 22-man board of the United Auto Workers is also lily white.

I wonder whether, when Mr. Wilkins decided to joins forces with the CIO purge, he knew that the new national policy of CIO calls for the organization of Jim Crow unions throughout the South.

I wonder whether he knew that the national CIO, during the last election, threw its support behind John J. Sparkman of Alabama, whose campaign cry was "Vote for me and your mother and sister will not have to work beside a colored person."

But the so-called leftist unions opposed him.

Again leftists disagree

I wonder whether he knew that in Birmingham CIO organizer Cary Haigler supported Bull Conner for police commissioner after he had introduced a bill in the city council setting up ghettos for colored citizens.

But the so-called leftist unions opposed him.

I wonder whether Mr. Wilkins knew that Fred Piper, director of the Louisiana CIO, now engaged in organizing workers in that State into Jim Crow unions, was a delegate to the Dixiecrat convention. He has since been promoted by the national organization.

I wonder whether Mr. Wilkins knows that the CIO union halls in South Carolina have Jim Crow toilet facilities, and that George Baldanzi, chief of "Operations Dixie," refuses to permit colored workers to use the same halls with whites.

Maritime situation critical

I wonder whether he knows that now that the CIO has dropped its liberal ideals that there are separate hiring halls for Maritime workers in Houston, Tex.

I wonder whether Mr. Wilkins knows that after Joe Curran, head of the National Maritime Union, staged a red purge, that he slipped through a resolution which practically freezes all colored seamen in grades below World War II level.

The rule provides that no seaman shall be employed at skills he did not posses prior to World War II. This nullifies all the progress and upgrading made by colored seamen on Liberty ships during the war.

The so-called leftists fought this rule and got purged for their pains.

They only follow orders

Both Willard Townsend and sidekick, George Weaver, who set themselves up as the high priests of the labor movement, are little more than glorified office boys carrying out the work of the real CIO brain trusters.

Proof of this is found in the fact that, right now, Townsend's henchmen are down in Dixie trying to raid the ousted and interracial tobacco union and corral them under the banner of his United Transport Workers.

Just where tobacco and transportation merge is a mystery, but the increased dues collected will be his pay-off for helping to smash the textile union.

All of these facts only prove that, under present conditions in America, one can get away with murder if he can only convince somebody that his victim was a Commie. That makes iniquity too cheap.

New Uses for Farm Crops

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. STEFAN. Mr. Speaker, a prosperous United States will buy all the American farmer produces for food. One hundred fifty-one million people demand even an increase in food crop production. What then shall be done about the vast amount of farm produce now in storage and the additional amount which we can anticipate will be in storage in the foreseeable future?

The answer is this: Encourage the manufacture of nonfood products which must utilize farm crops as the basic raw material of manufacture.

The farm products stored under the Commodity Credit Corporation could be sold to these nonfood product makers at a rate low enough to stimulate building and expansion. The regular food-consumer market could absorb the direct-sale products of the farm.

This plan is feasible. It is workable. The opinions of the serious scientists of the Department of Agriculture—not the big-city politician jobholders—bear me out in my thinking.

Let us look at corn.

The CCC has currently in storage 627,480,162 bushels of corn valued at $880,651,070.

Here is what could be done with that corn industrially in the manufacture of nonfood products.

By dry milling, we could get industrial alcohol and acetone. Through this same process "furfural"—an important industrial chemical—could be turned out.

By yeast fermentation, more useful industrial alcohol could be made plus carbon dioxide gas, which has its use in industry, and fusel oil—an increasingly important industrial solvent.

By bacterial fermentation of corn, butyl alcohol is developed as well as acetone. Byproducts of this process help in the production of lacquers, stains, varnish removers, smokeless powder, and other products. Ethyl alcohol is at present only a minor byproduct of this method of fermentation.

Wet milling of corn creates a variety of useful commodities. These include starch, dextrins, dextrose, mixed sugars, glucose sirups; corn oil, corn gluten, zein, and steep liquor. Some of the starch is used industrially for sizing cotton warp yarns and paper, for laundering, and for making nitro starch, an explosive. Dextrins are used in pastes and glues. Corn sugar is used in spinning rayon. Dextrose and glucose sirups are used in tobacco products and for filling sole leather. Steep liquor is used in the production of penicillin by mold fermentation. Zein is used to make an artificial textile fiber which, blended with wool and other fibers, can be made into suits and dresses.

The Bureau of the Census reports that there were more people unemployed in February 1950, than at any other time since August 1941—4,684,000, not including the 600,000 forced into idleness by the coal strike. The development and expansion of the nonfood products manufacture of corn alone would help to put a sizable part of that 4,684,000 Americans back on the job again.

Let us look at wheat.

The CCC has currently in storage 475,034,491 bushels of wheat valued at $1,011,791,572.

Here is what could be done with that wheat industrially in the manufacture of nonfood products. Wheat flour is used in the preparation of pastes for use in paper-hanging and bill-posting. Wheat bran is a "must" in the dressing of furs and the "mold bran" is a valuable substitute for malt in the fermentation industry.

Like those of corn, wheat starches and sirups have basic nonfood uses. One of the most striking instances of such use is the oil which is separated from the wheat germ. This oil is a source of vitamin E for medicines and is also used to keep other vegetable oils from getting rancid.

Wheat as a source for industrial alcohol is well known. During World War II more than 100,000,000 bushels of wheat were used for this single purpose.

For many years, that by-product of wheat—straw—has been used on a large scale for the manufacture of strawboard. It has also been used recently on a small scale for the manufacture of insulating board, and is now coming into use for the manufacture of bleachable pulp for blending with chemical wood pulps in the making of high-grade papers.

And what about rye?

The CCC has currently in storage 1,563,618 bushels of rye valued at $2,416,819.

Although the industrial uses of rye have barely been subjected to even a preliminary exploration, it has already been found that rye pastes can be used in industry even as corn and wheat pastes. A good quality of industrial alcohol is procured from rye. Rye straw is used with wheat straw in the making of strawboard. And rye straw provides an excellent straw braid for making straw hats.

And what about oats?

The CCC has currently in storage 41,698,990 bushels of oats valued at $30,019,468.

Oats present a challenge to the agricultural scientist. At present, they are used only for the manufacture of oatmeal or rolled oats. The oat hulls, the byproduct, can be converted into the valuable industrial chemical, furfural. However, recently, oats have been employed in the manufacture of nylon.

And then, there are the soybeans.

The CCC has currently in storage 13,102,695 bushels of soybeans valued at $28,770,499.

Soybean oil is being processed on a limited scale for use in paints and varnishes and in the making of synthetic resins. Processed soybean meal is gaining momentum in industrial plants designed to turn out molding powders and plywood adhesive.

And what about the potato—the lowly "spud," which Secretary Brannan pleases to cast on the waste heap complete with blue dye?

The CCC has currently in storage 10,172,827 pounds of potato starch, valued at $607,814; and the equivalent of 11,480,547 100-pound sacks of potatoes valued at $8,074,728.

Both Maine and Idaho have potato starch plants. The product of these plants is used, chiefly, in the cotton industry for sizing warp yarns and, to a lesser extent, for making dextrins for use as adhesives.

Less than 10 years ago scarcely any potato alcohol was made in this country. It is sufficient commentary on the change-over to point out that in fiscal 1949 more industrial alcohol was produced in the United States from potatoes than from grains.

I have spoken of only a few farm products. I have cited only a few of the nonfood uses of these products. I have mentioned only a score or so of the industrial uses to which these nonfood farm products are being put today. In other words, I have only scratched the surface of the tremendous possibilities involved in using the food now being menaced with destruction and rot in CCC warehouses for nonfood industrial purposes.

Americans are still a pioneer breed although one American may have landed on these shores only yesterday while his next-door neighbor's ancestors may have come over in the Mayflower. There are still frontiers in this Republic of ours.

Let us accept the challenge of the stored farm crops in the silos and elevators of the CCC. Let us not waste this taxpayer's property. Let us maintain fair farm prices for food crops, but let us also make the CCC accumulation more easily available for those who have the courage, the foresight and the know-how to start new industries in these troubled days.

About all, may we never forget that the farm—producing both food crops and industrial raw materials—is the salvation of America.

Wherever we are, we should take our hats off to the farm man, the farm woman—yes, and the farm children, too—who toil endlessly to make our soil produce. These people—and the land they work—together, form the key to a prosperous, free and happy future for the whole people of the United States.

A Meaningless FEPC

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1950

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks, I include herein an article which appeared in the Black Dispatch, Oklahoma City, Okla., written by Roscoe Dunjee, editor, on March 4, 1950, entitled "A Meaningless FEPC":

A MEANINGLESS FEPC

More and more those who think progressively are beginning to realize the need of a third party in this country. The downright surrender last week by both of the old parties to southern reaction is another positive exposure of this necessity if the Nation is to move forward in social thinking.

It will be recalled we said early in the Truman administration, "No chain is stronger than its weakest link," meaning that irrespective of the good intentions of the President, it would be impossible for him to pull Mississippi, Alabama, and Georgia up to his level of judgment. Last week we saw the Dixiecrats pull the liberal element of the Democratic party down into the gutter of shame. As the count stands of the moment, both the Republican and the Democratic parties have utterly repudiated and turned their backs upon the solemn promises made in Philadelphia 2 years ago.

Despite the disappointment suffered by millions at the disgraceful apostasy of a Democratic Congress we want to assess the proper value to the stubbornness of the President in his insistence on the passage of civil rights legislation. Despite the downright treasonable attitude of his associates we believe that continued insistence of the President upon Congress to pass this legislation is doing more to arouse the conscience of America to the hypocrisy sheltered in our institutions than any one single individual who has occupied the Presidency. It should in actuality reverse the thinking of those who have hitherto felt "no good can come out of Nazareth." Truman came from Missouri, a part of the slave South during antebellum days. The southeast tip of Missouri is just across the river from Mississippi, Arkansas, and Tennessee, and yet in the White House today we have a man from Missouri who offers a formula for human freedom what would warm the cockles of the heart of William Lloyd Garrison.

The Black Dispatch has always sought to be fair in its evaluation of men and parties, and we say here and now that President Truman, who in every public utterance continues to ding-dong on civil rights, is doing something to the thinking of America that is knifing reaction in an unseemly way. What he is doing will of course not affect the elderly group who are joined to reaction, but the impact of his new philosophy in the realm of social adjustment is bound to bear fruit in the next decade.

The bill as it was passed last week is practically meaningless. It is on the level of many of the efforts of our interracial movements which are always proposing a "survey of facts already the common knowledge of all. The present FEPC legislation sent to the Senate proposes that Congress will have the right to "investigate, educate and recommend." We believe Representative MARCANTONIO properly described the present situation when he said that reaction had cut off the legs and arms of FEPC and handed it back to President Truman. You can realize fully that FEPC as enacted by Congress is utterly helpless when Congressman RANKIN of Mississippi voted for the substitute submitted by Representative MCCONNELL. Negro Republicans should keep in mind that MCCONNELL is a Pennsylvania Republican who maneuvered GOP strategy in an effort to embarrass the President.

No one should falter in his approach to this type of legislation because of this temporary barrier erected in the House. The fight now goes to the Senate where there can be a continued fight to build up moral fiber in the masses of the people. That is what the Truman leadership is doing. Slowly but surely there is coming an open cleavage between right and evil in this Nation on the altar of civil rights. More and more of the dominant group are gathering courage and beginning to speak out. We feel as though the approach Representative HAYS of Arkansas has made to FEPC, while still reactionary, shows a tempering of spirit down in Dixie on the subject, which is noteworthy. While Representative HAYS is opposed to FEPC, he shows willingness to discuss the subject with candor and frankness. This is unquestionably progress, as compared to the rabid ranting of other Southerners who are die-hards on any question dealing with social, economic or political equality for black citizens.

Whites and blacks, minority groups, and all lovers of fair play and justice must resume the fight for FEPC in the Senate. It is perhaps unthinkable that the bill will pass in its present form in the Upper House for the filibuster will be used effectively by those opposed to this legislation, but the larger view proves that continued pressure for social decency will have its proper effect among the masses of the people.

After all, the fight for FEPC is an abbreviation of the broad principle which we feel should be spelled out clearly and imbedded in the Constitution of the United States, and there never will be pure democracy practiced in this Nation until this is done. Several years ago we proposed in an NAACP conference in Chicago that such an amendment be sought. Not only with respect to the economic self of minority groups should the laws be harsh and unrelenting, but embedded in the Constitution there should be provided guaranties for the social, political, and absolute equality of every citizen of this Republic.

The ancient Persians recorded the story of Haman, who was finally hanged on the gallows he had prepared for Mordecai. Somehow we cannot resist belief that reaction in America in this atomic age is making the same sacrifice on the international scene. We suspect that the action of Congress with respect to civil rights last week is today being grotesquely presented as we write these lines to millions of people in Asia who will gather suspicion and fear of western culture and attitude toward dark people.

Perhaps when later we in a crucial hour seek alliances in manpower in other sections of the earth we will feel the true reaction that stems from selfishness and hate. Sometimes in the life of men and nations there come realization "We gather in the harvest what we sow."

"Leave Behind" Wages

EXTENSION OF REMARKS

OF

HON. J. CALEB BOGGS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1950

Mr. BOGGS of Delaware. Mr. Speaker, as the number and amounts of withheld deductions from pay rolls have increased, we have heard more and more the term "take-home pay."

There is no question, Mr. Speaker, but that "take-home pay" is the important factor to the Nation's wage earners, for it is that amount only which they are able to spend at their own discretion.

However, the withholding of taxes by employers does have the effect of making wage earners much less conscious of the enormous sums which they earn but never actually receive. Therefore, I was much impressed by an editorial entitled "'Leave Behind' Wages," which appeared in the Friday, March 10, 1950, issue of the Wilmington (Del.) Morning News. I especially call attention to the thought expressed in the editorial that if everyone got paid what was coming to him and then paid back on his own what the Government demanded, wage earnears would be asking much more searching questions concerning what the Federal Government is doing with such large portions of their earnings.

As a part of my remarks, the editorial follows:

"LEAVE BEHIND" WAGES

A friend of ours who had just finished his annual go-around with form 1040 was saying what a relief it was to know that he had an ace in the hole. What he meant was that when the wheels had finished grinding out the figure he owed his Government he knew that withholdings would take care of a good share of it. We couldn't give him an argument because we had just gone through almost identical stages of frustration, worry, and relief ourselves.

But we got to thinking about a man who came into the office the other day. He sold these specially printed salary checks that most firms use and with which most of us are familiar. But his checks had a new pitch. The varying amounts of deductions, for Federal and State taxes, health insurance, and the like, were listed as they are in most checks nowadays. But they were arranged in such a way as to point up graphically how much of a swipe these withholdings

were taking out of one's earnings. On the perforated sheet attached to the check itself the gross amount of your pay jumped out at you. Various deductions were given equal prominence. The effect of the check was to make you say, "Good Lord, look what I would have taken home if—"

There are showier ways of getting the same story across. One Midwest firm we've heard about pays off in cash. The entire amount is paid over, then, in front of the employee, deductions are pulled back. Every employee—debt-ridden or otherwise—is bound to ask: "Is what I leave behind being put to good use? Am I getting my money's worth?"

We wonder. The biggest slice of an employee's "leave behind" wages goes into the Federal Treasury. In fact 19 cents of every dollar the taxpayer earns goes into it. Are we getting our money's worth? Well, we can't help thinking that if everyone got paid what was coming to him, and then paid back on his own what the Government demanded, relieving the employer of the job of tax collector, people would be asking more searching questions.

Chances are they would leap to support such recommendations for better Government as have been proposed by the Hoover Commission. They would be less apt to be drawn into joining groups planning mass Treasury raids.

Look Who's Spending Your Money

EXTENSION OF REMARKS
OF
HON. HUGH D. SCOTT, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. HUGH D. SCOTT, JR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper editorial:

LOOK WHO'S SPENDING YOUR MONEY

Income-tax day, next Wednesday, would be a good time for Americans who lay their money on the line for Uncle Sam to do some serious thinking about taxes and Government spending.

The President has presented a budget for the coming fiscal year which aims at spending more than $43,000,000,000. Twenty years ago Federal expenditures for all purposes ran to about $4,000,000,000.

While the war is a partial explanation, it is not the sole answer. The President calculates that 71 percent of the spending goes to pay for national defense, the costs of World War II, and other past wars, and for the promotion of world peace.

That makes spending for purposes other than for wars and defense amount to 29 percent of the total or $12,500,000,000. This is more than three times the total Federal expenditure of 1930 which also took account of the costs imposed by a World War and other past conflicts.

It is common for those who defend the vast range of Federal spending to point to the social-security system as a great public gain. But Federal spending for welfare, $1,282,000,000, amounts to only one-tenth of the nondefense budget.

The most discouraging feature of the budget is that it carries a deficit of five billions. This at a time of general prosperity and wide employment. The President fixes no date for balancing and he opposes attempts to cut spending as short-sighted.

Excessive taxation lowers the power and the motive of business to expand. If we left the money not needed to support the Government in the taxpayers' pocket what would be the result?

Business would feel the traditional impulse to take the initiative. The venturing of risk capital would again spur progress.

Americans who have grown rich in an unfettered economy would feel the old impulse to give generous support to educational cultural and artistic institutions, and to philanthropy. Such private beneficence was a characteristic of the traditional American system.

As for the ordinary citizen, he is perfectly willing to let Washington have all that a free American Government needs to perform its proper functions, but he doesn't want to finance restrictions on his own initiative, liberty and legitimate pursuit of happiness.

Government spending in the last analysis is political spending, and as Calvin Coolidge once said, the proper place for money not absolutely needed to carry on Government is in the taxpayers' pockets.

Wouldn't you rather spend your own money?

"This Is Not Fiction"

EXTENSION OF REMARKS
OF
HON. JOHN C. KUNKEL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. KUNKEL. Mr. Speaker, under permission to extend my remarks in the RECORD, I include an editorial from the Newtown Enterprise of March 2, 1950, as reprinted in the Bristol (Pa.) Courier of March 9.

The confused and ridiculous spending policies of our Federal Government are pictured in terms of ordinary day-to-day problems and actions. No one would plan either his family budget or his business budget along the lines which have been followed in Washington for many years past. When you stop talking in billions and bring the real point out in the understandable figures of everyday life, the faults and failures of the whole policy becomes clear.

"THIS IS NOT FICTION"

(Newtown Enterprise, March 2, 1950)

It is difficult to make facts and figures on Government financing interesting and understandable in a newspaper story. Particularly has the term "deficit financing" found the man in the street scratching his head in confusion.

But here is an editorial from the Cleveland Plain Dealer which is an outstanding contribution toward a better understanding of their Government by the average citizen. We print it in full.

Will the reader pretend that he has an obscure neighbor by the name of Harry Truman? And will he pretend that Neighbor Truman has decided he must borrow money, a decision which many of us ordinary folks have reached at times in the tempestuous course of life?

Neighbor Truman, we're going to pretend, steps into the bank to apply for the loan, and we're going to have the privilege of observing the transaction.

"I want to borrow $500," says our neighbor. (Now most will anticipate the next few questions, having been through it.)

"Do you have any debts at the present time?" the banker inquires.

"Yes," says our neighbor. "I owe the bank at this moment about $25,800."

"What is your annual income, Mr. Truman?"

"I have take-home pay amounting to $3,750 a year," says he.

"Hmmmmm," the banker hmms. He at once is suspicious of the client's ability to pay the old debt without $500 more added. And aren't his eavesdropping neighbors suspicious too?

But the banker gives allowances for unforeseen circumstances. So he asks Mr. Truman, "Do you think you will be able to save a large portion of your income this year and each succeeding year to reduce your indebtedness?"

"Oh, no," Neighbor Truman replies to the surprise of the banker, and the neighbors listening in. "My necessary living expenses this year will be $4,250. I'll be forced to spend more than I earn."

"Pardon me," the startled banker interjects. "Do you mean that, owing already an amount that constitutes seven times what you'll take in during a year, you're going to spend more than you earn?"

"That's right," says Neighbor Truman. "You see I must provide tuition at private schools for my children. I must help a poor relative set up a new business in which he's going to lose money for a long time to come."

"Just what kind of business is that relative going to sink your money in?" the incredulous banker asks.

"Why," says Mr. Truman, "He's got a wonderful humanitarian idea. He's going to sell milk to the Hottentots at a price they can afford to pay."

"But just those things won't eat up your whole income this year, will they?' '

"No, but that isn't all," says Mr. Truman. "I am building security for my children by putting price supports under them. My boys sell newspapers to the neighbors at a nickel apiece, but I give them an extra nickel. My daughters make lamp shades which they sell for $5, but I don't think that's a fair price, so I give an extra $2 for each one they sell. Besides, my wife wants a television set."

The banker now steps aside to get his breath. Here's a fellow who owes more than he can ever repay if he lives frugally below his income seeking to borrow still more, and at the same time boldly proclaiming his intention of carrying out fantastic money-spending schemes.

What will the banker do?

Will he lend the new money? It's silly even to ask the question.

This scene is not fiction. It constitutes a faithful reproduction of the program set forth in regal solemnity by President of the United States Harry S. Truman. Multiply all figures by 10,000,000 and you have the Truman budget, his plan of government, the Government's income, and the Government's debt.

In this case Congress is the banker. If it makes the loan, Borrower Truman's note will have to be signed by the taxpayers, which is to say by all the people. Who, in his right mind, would voluntarily sign the note of such a profligate spender?

Cooperative Housing Bill

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. WICKERSHAM. Mr. Speaker, the pending middle-income cooperative housing bill is grossly unfair because it

discriminates against 7,875,000 middle-income families. Fifty-nine out of 60 families could not benefit even if the bill authorized expenditures of $1,000,000,000.

At an estimated $8,000 cost per unit provided by the bill, $1,000,000,000 would build only 125,000 units.

The proposed bill contained provisions for a $25,000,000 propaganda fund. It is compared to the $250,000 fund that organized builders are attempting to raise nationally to spark a drive to sell home ownership and the accomplishments of the building industry.

The measure we have in mind is intended to supply housing to so-called middle-income groups, and by accepted welfare standards it is a bad piece of legislation.

In the old days the ideal criterion of a good law was that it should apply to everyone impartially, whether poor, rich, or of the middle condition. Under a changing conception of fairness, discrimination between classes has come to seem socially right when it is applied to such things as income-tax rates and aid to the needy. It has never been deemed right, however, to permit discrimination between people in identical categories: even the advanced state welfarist professes to believe that equals should be treated equally.

The proposed middle-income housing legislation actually promises to treat equals unequally. The bills now pending before the Banking and Currency Committees of the two Houses of Congress would make home-purchase money available at 3-percent interest to citizens in the middle-third income bracket—roughly $2,700–$4,400 a year. In addition to the low interest rate the bill would provide authorization of loans over a 50- or even a 60-year period. But to get this easy money the applicant must first elect to become a member of a Government-financed housing cooperative. This is where the discrimination between equals comes in. For, where a cooperatively minded householder would be getting his money at 3 percent with a lifetime to pay it off, middle-income people who prefer to obtain houses on their own would still have to pay 4 percent or more, even with FHA help. As for the 1,750,000 veterans who are now getting housing money at 4 percent with a 25-year amortization privilege, many of them are in the middle-income brackets. Would they take the sight of other middle-income people getting 60-year amortization money at 3 percent without screaming to high heaven about the very obvious injustice of it all?

If the new middle-income housing bill passes Congress it will, in effect, drive the general mortgage rate down toward 3 percent. Equals will insist on being treated equally. This would undoubtedly serve to stimulate the housing market, but what practical good would such stimulus do as long as the Nation is already in the ecstatic throes of a housing boom? One million new homes are in the works for 1950, and labor, lumber, contracting charges and architects' fees are already sky high. The net effect of cheaper money would not be more homes; it would be costlier labor and more expensive Douglas fir and white pine with resultant hardship on all home builders, rich or poor.

Government has entered the area of housing to stay. But in housing, as in other things, Government will do well to stick to the principle of treating equals equally. Otherwise, even by welfarist standards, Government will become an abhorrent monstrosity.

Distribution of Subversive Literature Through the Mails

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. LANHAM. Mr. Speaker, under leave to extend my own remarks in the RECORD, I am including with my entire approval, copy of a resolution adopted by the Gate City Council No. 5 of the Order of United American Mechanics of the United States concerning the distribution through the mails of subversive literature.

I call upon the Committee on Post Office and Civil Service to report legislation promptly that will control such distribution of literature.

Whereas the overburdened United States mails are today being flooded with literature, pictorial displays, and other propaganda material extolling the pretended advantages and virtues of present life in Soviet Russia; and

Whereas this is a link in a series of steps and part of a campaign aimed mainly toward infiltrating into our school libraries and classrooms certain tempting and poisonous appeals by which to corrupt and debauch the minds of American school children in their most impressionable and receptive ages which must eventuate in the destruction of our public-school system; and

Whereas this campaign represents a brazen effort to subvert, and ultimately to overthrow, the sanctity of our traditional institutions of the home, the church, and the school, by setting up revolutionary fallacies and evils to take their place; and

Whereas the distribution of this material, through the United States mails, under the ostensible protection of our Government, is helping to increase the rapidly growing deficit under which our postal establishment is operated, while, at the same time it threatens to weaken, and inevitably to destroy the very structure which makes this great postal facility possible; and

Whereas under the existing postal laws and regulations, there appear to be no means by which these nefarious falsehoods can be excluded from the mails, because of the fact that the same do not actually and distinctly advocate outright overthrow or counsel overt treason, insurrection, or forcible resistance to the laws of the United States, as now defined in the existing Criminal Code of the United States: Now, therefore, be it

Resolved by Gate City Council No. 5 of the Order of United American Mechanics of the United States, in regular meeting at Atlanta, Ga., on March 8, 1950, That we urgently recommend to our Senators and Representatives of Congress, that they vigorously press for the immediate adoption of such strengthening amendments to the existing laws and regulations governing our postal establishment, as will bar from the use of the mails any and all such insidious and dangerous propaganda, which has for its primary aim the weakening of the fabric of our institutions, the corruption of our youth and the erection of a hideous vision of intolerance, foreign doctrines and false ideals which will eventually bring about the overthrow of every hallowed and blessed privilege of freedom which form the bulwark of America's priceless heritage.

LOUIS A. BURTON,
BASIL STOCKBRIDGE,
VESTER M. OWNBY,
Special Committee on Resolutions.

Contracts Used To Be Sacred

EXTENSION OF REMARKS
OF
HON. CLINTON D. McKINNON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. McKINNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oceanside Daily-Blade-Tribune, Friday, February 24, 1950:

CONTRACTS USED TO BE SACRED

(By H. B.)

If you will look at the San Diego County tax statement, you will find on it a tax rate of 45 cents for the metropolitan water district and 10 cents for the San Diego County Water Authority per each $100 valuation on your property. That is what the taxpayers of Oceanside are paying to have Colorado River water brought to our water mains. A similar tax is shouldered by taxpayers in every one of the 27 agencies that comprise the great metropolitan water district.

The United States Senate this week ignored the people of southern California who had the vision to go to the Colorado River for a supplementary water supply to insure the growth of their respective communities, and voted for a minimum Federal expenditure of $738,000,000 to develop a few acres of land in Arizona.

The people of California do not have any quarrel with the people of the great State of Arizona, but they do resent the fact that a few powerful politicians in the United States Senate swayed a majority of their fellow Senators—Democrats and Republicans alike—to ignore the fact that the people of southern California have sweated and sacrificed to bring distant water to their own communities at their own expense while a few landowners in another State will have water brought to them at the expense of the taxpayers as a whole. That is double taxation.

Under the cloak of reclamation this incredible project now approved by the Senate and soon to be considered by the House of Representatives would:

1. Spend $738,000,000 of Federal funds to bring Colorado River water to the central portion of Arizona at a cost per acre of $1,858, a cost 1,100 percent greater than the average for all western reclamation projects to date.

2. Use public funds to enrich private landowners, of whom a favored 420 would receive average benefits of $550,000 each.

3. Enable private citizens to profit by this huge expenditure without requiring them to contribute 1 cent to the project's capital cost.

4. Deprive the people of California of water to which they are entitled under existing

Government contracts that are supposed to be sacred, valid contracts.

5. Saddle a new tax obligation upon the taxpayers of all the States, in order to benefit a limited number of people in one single State.

In brief, the Arizona project would provide Colorado River water for 25,000 persons in Arizona, but it would cost nearly a billion dollars in Federal funds to get the water to them. California has a long-standing contract with the Department of the Interior for that same water. It will serve 5,000,000 persons in California and require no Federal subsidies.

The point foremost in our minds is whether this country has reached the point where contracts, entered into by six Western States with the Federal Government, receive no recognition from our United States Senate. Such contracts always have been held a sacred trust between the Government and the States in the past. Some of our foreign dictators of old and of the present surreptitiously ignored agreements. Surely the people of the United States are not going to allow this to go unchallenged here.

California's Senators, SHERIDAN DOWNEY and WILLIAM KNOWLAND waged a gallant fight to protect California's interests. Arizona won its fight because Arizona's Senator HAYDEN is about the most powerful man in the upper Chamber. With 28 years in the Senate, he is chairman of the patronage committee, the Rules Committee, and a ranking member of the Appropriations Committee. His friendship and good will proved more valuable to supporting Senators than the best interests of the people of the Nation as a whole.

Surely the House of Representatives, whose membership is closer to the hearts of the people, will not desert the people of America by approving this terrific expenditure for the benefit of just a few.

Surely President Truman will not condone this action of the United States Senate. Many of us recall the pledge he made in 1948 in a speech in San Diego and from a railroad car platform in Oceanside that the future of California depended upon an adequate water supply.

Critical days face this county if this insidious piece of legislation is not decisively defeated.

Necessity for Construction of St. Lawrence Seaway To Meet Critical Iron Ore Situation

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, March 16 (legislative day of Wednesday, March 8), 1950

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix a statement prepared by me relative to the critical iron ore situation facing the country, and the necessity for the construction of the St. Lawrence seaway as a measure of relief.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. ALEXANDER WILEY, OF WISCONSIN

Mr. President, iron ore constitutes one of the most basic sinews of American military and industrial strength. Our Government has, however, virtually ignored this sinew and has allowed a situation to approach whereby this country would find itself behind an ore shortage "eight ball."

MY WARNINGS IN FEBRUARY 1948

Two years ago in February 1948 I brought to the attention of the Senate the very serious national crisis that was developing as a result of the gradual exhaustion of the iron-ore resources in the United States. I did so in connection with the debate then under way on Senate Joint Resolution 111, concerning the development of the St. Lawrence seaway project.

At that time those who for sectional reasons opposed the seaway project found it necessary to question and to doubt the facts then presented.

Mr. President, grim revelations in the past 2 years have fortified and proved the accuracy of the facts concerning the iron-ore situation. It is now admitted by all the steel companies in the United States that the iron-ore reserves of the Lake Superior region are being depleted and that this country, in the interest of its own stability and national security, must find new sources of iron ore. The only question that seems to be a matter of controversy at the present time is from what source we should get the additional iron-ore supplies and where the steel mills should be located to receive them.

WE MUST BRING ORE TO ESTABLISHED MILLS

Mr. President, it was my contention 2 years ago, and it is still my contention, that if we wish to preserve the steel industry of the great Middle West, that ways and means must be found to bring iron ore to the established mills in Pittsburgh, Youngstown, Cleveland, and other steel-making centers. And since the Mesabi range, which has supplied the major part of the requirements of these mills is being rapidly depleted, the only alternative way of bringing this ore to the Middle West is through the construction of the St. Lawrence seaway.

Mr. President, I predicted 2 years ago that if the St. Lawrence seaway is not authorized and constructed, the depletion of the Lake Superior iron ore resources would lead steel companies to consider seriously the establishment of steel mills on the Atlantic and Gulf coasts in order to receive low-cost, ocean-borne iron ore from offshore sources, and that gradually the steel industry would be weaned away from its present location in the Middle West. Since then we have learned of specific developments which confirm these predictions.

STEEL COMPANIES HAVE ALREADY STARTED ACTION

The United States Steel Corp. has recently announced the acquisition of 3,800 acres of land on the Delaware River between Philadelphia and Trenton for the establishment of an integrated steel mill. At the same time the Bethlehem Steel Corp. has announced the expansion of its Sparrows Point plant in Baltimore. Both of these firms will utilize, according to announcements, newly discovered iron ore reserves in Venezuela, in the Orinoco Basin, which are being extensively and expeditiously developed. It has also been brought to the attention of the Senate through the Joint Committee on the Economic Report that New England is ambitious to establish a steel mill, and there are, in addition, reports that Mobile, Ala., is being considered for a new mill.

MAJOR TRANSFORMATION OF UNITED STATES INDUSTRIAL PRODUCTION LOOMS

Mr. President, the excuse for all these activities in every instance is the fact that iron ore resources of the Lake Superior region are being exhausted and that substitute sources must be found. We are, therefore, confronted with a major reorganization of our industrial structure—a transformation of a system of industrial production that has been established over the past 75 years as a result of natural factors in the location of iron ore and cheap water transportation in the Great Lakes area. I shudder to think of the terrible consequences—the dislocation that would be caused in my own State of Wisconsin and in her neighbors.

Mr. President, these radical and momentous changes in our industrial set-up, it is my contention, are not in the interest of the United States and of its people. They are not economical and they are not necessary if the Congress of the United States will do its duty by the country and make the necessary authorization for the construction of the St. Lawrence seaway.

I say, Mr. President, that it is not in the interest of the people of the United States to transfer large segments of the steel industry from its present location in the Great Lakes area to new locations on the Atlantic coast. It may benefit some real-estate owners and other interests in the new locations at the expense of those who have adjusted their lives and their livelihood to the present industrial structure; but it is not in the interests of the Nation as a whole to see these transfers made against the advice of those concerned with security matters.

ATLANTIC COAST PLANTS COULD EASILY BE ATTACKED

Plants located on the Atlantic coast will be vulnerable to enemy attack in case of national emergency, not only by air, but also by water, and the supply lines of the raw materials being brought in oceangoing bottoms will be subject to submarine attack. It is a well-known fact that of the seven or eight deep-draught, ore-carrying boats that an eastern steel company had in operation between Chile and Baltimore during World War II, three-fourths were sunk during 1942, and the others had to be withdrawn from service. Ore had to be brou[illegible]t to Baltimore expensively and laboriously by rail for 1,500 miles from Minnesota. It is not to the advantage of the country to have a major share of its steel-producing capacity subject to the vicissitudes of enemy attack.

Neither is it to the advantage of the United States, through inaction, to permit the dislocation of economic values and community life that would be forced upon these Middle Western industrial centers when major segments of the steel industry shut down in their present locations and open up in new locations on the east coast.

WHY SENATOR WILEY HAS ADVOCATED SEAWAY

I have advocated the St. Lawrence seaway project because I feel strongly that the supply of raw materials to the existing industries of the Middle West is vital to the economic stability and national security of this country.

LABRADOR ORE OFFERS MAGNIFICENT SUPPLY WITH INTERNAL LINES OF COMMUNICATIONS

It is fortunate that a group of independent steel companies have discovered a new continental source of iron ore located in Labrador, north of the Gulf of St. Lawrence, which is accessible to the middle-western steel mills through internal lines of communication not subject to submarine attack. These iron-ore resources will also permit the maintenance of the present scale of operations in the Lake region and thereby encourage the development of low-grade taconite in Minnesota.

Mr. President, I am not opposed to the establishment of new mills in the East if thereby the economic and national-security interests of the United States would be served. There may be conditions under which expansion of the steel-producing capacity of the United States may be best achieved by the establishment of new plants in strategically located areas. I do object, however, to any scheme that will result in the displacement of middle western mills by coastal establishments, because I do not consider that an advantage to the people

of the country and to the security which we seek.

MIDWEST INDUSTRY CONFRONTED WITH STARVATION OF RAW MATERIALS

Our first interest, therefore, must be to consider ways and means of protecting the industry of the Middle West against a starvation of raw materials which is threatening at the present time. I cannot see how such an objective is detrimental to the interests of any section of the country. At a time when we are all concerned about the preservation and improvement of the productive capacity of far-away areas in Europe and Asia in defense of the democratic way of life, it ill behooves any American in or out of Congress to maneuver so as to upset the established productive capacity of this country, which has stood so well by the American way of life.

THIRTY-MILLION-TON SUPPLY FROM NEW SOURCES NECESSARY

Let me point out that we need, under ordinary circumstances, 80,000,000 tons of iron ore to maintain the current operations of the steel industry in the Middle West. We have been getting this supply from the Lake Superior area. To the extent that depletion of open-pit ores makes it impossible to secure this total supply from the same sources as heretofore, we have to find supplementary supplies. It is estimated that in the course of the next 10 to 20 years, even with the development of taconite ore in Minnesota, new supplementary sources in the amount of 30,000,000 tons a year would be required in order to supply the total of 80,000,000 tons needed in the Middle West.

It is imperative, therefore, Mr. President, that the St. Lawrence seaway be authorized to insure a means of transportation for this vitally needed raw material. If we do not construct this waterway, then we must confront the inevitable prospect of seeing one-half of the steel capacity of the Middle West transplanted to new locations with all of the depreciation and obsolescence of plant, community facilities, housing, and human beings that necessarily follow any such major industrial revolution.

CONCLUSION

I am confident, Mr. President, that if the full impact and the significance of this situation is appreciated the regional considerations that seem to befuddle the controversy on the St. Lawrence seaway will be dissolved and that we shall begin to think of the interests of the country as a whole and approve this vital channel of communication which is necessary to the stability and security of the two essential components of democratic strength—Canada and the United States.

It is still not too late in this second session of the Eighty-first Congress to pass St. Lawrence seaway legislation. Where there is a will, the proverb rightly says, there is a way. Where there is vision, determination on the part of leaders in the Congress, we can swiftly enact legislation on this urgent theme. Let us not allow our country to lose her vital sinews of national defense. Let us complete this great waterway.

Gas Barrage

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, March 16 (legislative day of Wednesday, March 8), 1950

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Gas Barrage," from the Washington Post of this morning.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GAS BARRAGE

Proponents of the Kerr natural gas bill scheduled to come up today in the Senate are trying to have their cake and eat it too. They contend that this bill, which would amend the Natural Gas Act specifically to exempt so-called independent gas producers from Federal Power Commission regulation, would not take away any of the jurisdiction that the FPC now possesses. If that were the case, why would there be any need for a bill of exemption?

Natural gas producers are of two kinds—the producers affiliated with pipe-line companies, clearly under FPC regulation, and the independents. Independent in this sense is something of a misnomer. Although there are many small producers, a few large companies do most of the business, and some of the largest operators are oil companies. The authority of the FPC to regulate sales by independent producers destined for interstate commerce was affirmed by the Supreme Court in the Interstate case in 1947. It is true that the FPC has not actively regulated such sales in the past—principally because prices were not unreasonable—but it has not relinquished jurisdiction. Indeed, it is now using this authority in price proceedings against the Phillips Petroleum Co.

Senator KERR, among others, has admitted that a prime purpose in his bill is to facilitate increased prices. Yet there is no reason to believe that present prices, or the fair rate of return contemplated by the FPC, are discouraging enterprise; far from it. It may be suspected that another purpose of the Kerr bill is to remove gas as an active competitor of oil, which is unregulated. Since 1947 there has been a tremendous increase in the use of natural gas in cities (Washington, for example), and conditions have changed from a buyers' to a sellers' market. The effect of the Kerr bill would be to let large producers set the price all along the line to consumers. Not only would this discriminate against regulated pipe-line companies and affiliated producers, it would render all gas regulations more or less futile.

Aside from price protection, one essential purpose of regulation is to prevent the growth of monopoly among producers. A case can be made that the really small producers should be exempted from regulation. Also, it is undeniable that a great deal of confusion exists over what Congress actually intended in the Natural Gas Act, and a more specific law would be desirable. But a time when natural-gas regulation is taking on increasing importance is no time to be removing a fundamental protection which, once lifted, could be restored only with the greatest difficulty. Senators ought to take a very close look at the very large special interest that is masquerading today in the guise of free enterprise.

Is Our Social Security Sound?

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1950

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the Senate Finance Committee today:

Mr. Chairman, I am opposed to our social security system. It is unsound. Furthermore, it does not meet the needs of today's aged.

My remarks will be directed primarily at the old-age and survivors insurance usually referred to as OASI. The bill before you is a $12,000,000,000 a year program. It will cost that much when it matures before the close of this century even if the benefits are never again increased. It is actuarily unsound and I know of no actuary who is not in the employ of the Social Security Administration who approves or endorses it. Improving it, is not the answer. We need a new system.

It isn't necessary to argue that our social security system is not taking care of this generation of old people. Although the program has been in force 13 years, we have 8,400,000 men and women over 65 who are ineligible for its benefits. Apologists for the program promptly assert this is because the program is new. This argument cannot stand when we consider the admission of the Social Security Administration's head actuary that under H. R. 6000, 10 years from now there will still be 7,200,000 men and women over 65 ineligible for its benefits. This results from certain basic defects in the program.

Our present social security law is not only unfair, it is harsh and cruel. The benefits that are now paid are not equitably distributed. Individuals who are already out of the labor market, widows, who were widows when the law went into effect, orphans, whose fathers were not in covered employment, as well as countless millions who make their contribution to society without earned income are not helped by mere extension of coverage to all the occupations. They are outside the so-called insurance part of the social security law. Yet, in a social program these are the groups that should have first claim on whatever the American taxpayers can pay out for these purposes.

The program is geared to give advantage to the high-salaried and to discriminate against the low-paid. For instance, the man retiring on an average wage of $250 a month draws $16 a month more in OASI benefits than the man whose average wage was $100. Yet, he has only paid for $2.47 more protection in his social security taxes.

The present program as well as H. R. 6000 fails most of our aged, but offers attractive windfalls to the privileged few. A banker or a corporation officer whose salary has been $3,000 or more, who retires at 65 this year can, with his wife draw about $100 a month. The man's life expectancy is 12 years; his wife's is 14 years. He has paid into the social-security system a total of $390, or less than 4 months' benefits. Across the street there may be an aged individual who has toiled and produced for years, but if he were taken out of the labor market before he became fully insured, he either gets nothing or is subject to a needs test for relief. This means that he has to declare himself a personal bankrupt and turn his life over to a case worker. Social security advocates attempt to point out that the corporation executive has paid for his retirement and the other man has not. Mr. Chairman, the people know more about social security than you realize. They know that the individuals drawing the benefits have not paid for them. They have made a very small token payment only.

Of the primary beneficiaries now on the rolls, virtually none has paid more than $400, in employee contributions; some have paid less than $10, and the average total employee contributions for these benefits have been less than $150. For this average contribution of $150, each beneficiary will receive retirement payments totaling $3,000.

If allowance were made for the value of a wife's and other benefits, the value would be much greater.

Further, Mr. Chairman, I believe that if the American taxpayers are to help orphans, they should treat all orphans alike. The survivor benefits under OASI are as discriminatory as the retirement benefits. A family of children of a deceased father who earned $50 a quarter in covered employment over a period of six quarters, is eligible for the minimum benefits. This deceased father had paid in taxes for these benefits the total sum of $3. How can you say to another widow and her fatherless children that they are not entitled to anything and that the first-mentioned family paid for their benefits. This program constitutes neither sound insurance nor a fair social program.

Our system of social security lacks flexibility. Who can say that 65 will be the proper retirement age toward the end of this century. Benefits cannot be tied to past wage records and still do the job in any particular year. H. R. 6000 is an admission of this. For 13 years our Government has been paying for the keeping of voluminous and detailed wage records allegedly because they were needed to figure benefits. Yet in the bill before you, benefits were revised to meet present-day need. Flexibility in a program is desirable. The wage-record system prohibits flexibility besides being a costly procedure.

Another objection to a program in which the number of beneficiaries is much smaller in early years than in later, is that, regardless of what financing method is adopted, there will be an uncontrollable tendency toward undue liberalization of individual benefit amounts. With only relatively few beneficiaries on the rolls now and in the immediate future, it is too easy to propose individual benefit rates be approximately doubled; that primary benefit amounts in excess of $100 a month be promised, as well as the combined husband-and-wife amounts of $150 a month. With a relatively small number of beneficiaries now and with present benefit disbursements far below contribution receipts, the ability to fulfill these promises over the next few years seems to be all that matters. The tremendous future cost that will result when there are many more to whom we have made these commitments is too easily ignored.

In our population over 65, only one out of five is now eligible for benefits. On this basis we are fixing benefits so high that when the time arrives that five out of five become eligible, the program will be an impossible financial burden.

I have repeatedly stated that H. R. 6000, 40 years from now, will cost $12,000,000,000 a year. This is a very conservative estimate. Compared with the life of our Republic that is not a long period of time. I have a son 10 years old. Adopting this program means that when he is 50, the taxpayers then must pay $12,00,000,000 a year for old-age and survivors insurance alone. The taxpayers of that day will have no voice in determining the amount of payment for it is in the nature of a contractual agreement. We have no right to force such a program upon our children. The workers today have no right to expect a retirement benefit for themselves that today they are unwilling to provide for their parents.

Someone may suggest that when these benefits are to be paid 40 or 50 years from now, they will be paid from an accumulated trust fund adequate to meet these benefits. This is a fantasy. It is a myth. In the first place, we have no assurance that the progressive tax rates will go into effect and that any such fund will be accumulated.

If the sum could be collected, how could it be managed? Should these many billions in the so-called trust fund be retained in cash by the Treasury? The effect of such a procedure on the economy is well known to you gentlemen. Should these funds be invested in securities other than Government securities? If this were done, the Social Security Administrator would soon control all the Nation's major business enterprises. That leaves only Government bonds as an investment. I maintain the Government cannot carry a trust fund in its own Government bonds.

When a recipient is to receive his benefits this year or 40 years from now, he wants them in dollars. There are only three ways to get dollars. These ways are (1) Current taxation; (2) issue of more bonds to borrow the people's money; (3) inflation through printing press money or devaluation. It matters not so far as our economy is concerned whether there are three warehouses of Government bonds in the trust fund or 40 warehouses of Government bonds. The people have to provide the money when the benefits must be paid.

What is the answer? We should adopt a pay-as-you-go program. We should make these benefits available now for all our aged, and all our widows and orphans. We should collect the money now. I submit that in any given year, those individuals who are so blessed as to have a job and good health should carry the load for those unable to provide for themselves in that particular year. The full cost should be paid each year and when that year closes, nothing is owed and nothing is promised.

If this basic change is impossible at this time, then I suggest that no legislation be passed or that a stop gap measure be approved providing additional money for the country's needy.

This should be followed by a thorough and objective study of the program. With due regard to the high caliber and public spirit of the individuals comprising the various advisory councils on social security, I regret these councils have not been able to make a more thorough reexamination of the fundamentals. Each council has been composed of experts in their own fields, and who, being extremely busy men in these outside fields, could not take the necessary time to make such reexamination; consequently, acceptance of the proposals developed by the Social Security Administration staff members became an almost inevitable course. I feel a study should be made by a group consisting largely of persons who can devote full time for several months to the work, who are largely technicians in this field, and who at the same time are fully independent of administration pressure. Only in this way can a wholly objective and thorough chart be laid for future development.

Civil Rights

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 16 (legislative day of Wednesday, March 8), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a statement addressed to the Eighty-first Congress by a group of citizens who were members of the Round the World Town Meeting of the Air Seminar. This group included Alfred A. Albert, of the American Civil Liberties Union; Irving Brown, European representative of the American Federation of Labor; Edith Sampson, of the National Council of Negro Women; George W. Welsh, of the United States Conference of Mayors; Sadja Stokowski, Dr. Clarence Decker, Robert S. Byfield, Robert Hansen, and Walter White. It is a statement which may be of particular interest to the Senate in its forthcoming consideration of civil-rights legislation.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

To the Eighty-first Congress.

GENTLEMEN: The undersigned American citizens traveled at their own expense around the world from June to September to talk on a people to people basis about the questions which concern us all. We sought everywhere to interpret our Nation's aspirations and aims to those whose friendship and support we need to survive. We sought also to answer the misinterpretations and deliberate falsification in some instances of American democracy, not by attacking other ideologies but by telling the truth about the United States.

We were members of the Round the World Town Meeting of the Air Seminar but we wish to make clear at the outset that what we say to you in this letter is our individual and collective opinion as individuals. Neither the Town Hall nor the organizations we represented are accountable nor responsible for our views. They are strictly our own. The names of the organizations we represented are affixed to our individual names for purposes of identification only.

You as Members of the Eighty-first Congress are embarking on the second session of that Congress at what may be the most crucial time in contemporary history. As makers of the laws and formulators of the national policies of the world's most powerful and envied Nation the eyes of the world will be upon everything you say and do. Particularly will this be true when you debate and vote upon civil-rights legislation.

Wherever we went on our journey—Europe, the Near East, the Middle East, the Far East, Africa, Asia, and the Pacific—we were invariably confronted with questions regarding mob violence, discrimination in employment and education, disfranchisement and segregation based on race, creed, color, or place of origin. Repeatedly we were asked to explain the signing with 47 other nations of an international declaration of human rights by the United States when those same rights are denied certain minorities in the United States. We found that not only is Soviet Russia industriously spreading the news in Asia, Africa, and other parts of the world about our shortcomings but that many countries and peoples friendly to us are puzzled and made suspicious of us by these acts.

As American citizens we were appalled at the extent of damage to American prestige which these anti-American practices have done. It is for this reason that we appeal to you to keep in mind the world as well as national implications of your every word and act on this most basic of issues. We appeal to each of you to debate fully and fairly each one of the civil-rights proposals but refrain from obstructionism and undignified discussion. We appeal to you to refrain from any tactics to prevent a fair discussion and vote. We appeal to you to think of this issue of human rights as an American and not a politically partisan one.

Our Nation's reputation and security hang in the balance. We are confident that each Member of the Senate and the House of Representatives will fully measure up to the grave responsibility which is his.

The Battle Against Fear

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. PATTERSON. Mr. Speaker, perhaps no more piercing appraisal of the national state of mind has been made than that entitled "The Battle Against Fear" by David Lawrence in a recent issue of United States News and World Report. I insert it in the RECORD for the edification of our citizenry:

THE BATTLE AGAINST FEAR
(By David Lawrence)

"The world may be destroyed by chain reaction from a hydrogen bomb. No time to lose. The clock is ticking toward disaster. There must be more armament. More bombs than Russia. Maybe they'll strike first. Maybe we should."

And so the whole world is enveloped in fears of its own making.

It is as if death-dealing weapons had never before destroyed men, women, and children—as if war had never taken a horrible toll—as if death by man-made bomb is any different from death by the sword or the bullet.

Many centuries ago the Commandment was given: "Thou shalt not kill." But man, while punishing individual murder, has condoned organized murder.

Has a sense of guilt finally overtaken the world? Is that the reason we are now weighed down by the awfulness of war itself?

It is easy to rationalize war. We proclaim with all sincerity that we never make war on others—we fight only when attacked and only in self-defense. And, it is asked, should there not be armament to protect against such aggression?

There must, of course, be armament and there must be defense forces—just as there must be fire houses and fire-fighting equipment. But there also must be fire prevention. Wars are not a matter of spontaneous combustion. Wars are man-made, and rarely is the guilt for a war wholly on one side.

Wars don't commence only when hostilities are begun. They begin years and years before in the hearts and minds of men. Communists with evil spirit were not born yesterday. Their exploitation of millions of helpless persons is the direct consequence of man's failure to deal with human problems—with the failure of man to take note of the plight of his brother.

We today are bringing on the next war. We may not yet see clearly our own tendency to become provocative. But it is there—a bland refusal to inform ourselves on the real issues, a willingness to accept superficiality, prejudice, hysteria, and mere arms as a complete substitute for any other approach to man-made dilemmas—as, for instance, the approach by faith and the spirit.

To many persons this is mawkishness, softness, and even insanity. They impatiently erect barriers in their own minds. They have been taught to fight with their fists. They know less about victories that come out of the head, out of genuine faith and out of honest self-examination.

We today are bringing on the next war—by our orthodoxy of method, our rigidity of formula in diplomatic intercourse, our pride, and our belief that vicious animals have never been tamed except by the whip.

Granting that in Moscow is a small band of evil men, how long will the few rule the many: forever? Are 210,000,000 minds really unreachable? Are they ready for extermination? Have they no fears like ours? Have the Russian people heard nothing about our B-36's and of the 70 target cities marked for destruction by our atomic bombs?

The whole world cannot continue to live this way, in an atmosphere of threat and counter threat, in abject fear.

The Scriptures speak of those "who through fear of death are all their lifetime subject to bondage."

We must have faith in man's genius, in man's capacity to find a way to improve living standards in a world of both poverty and abundance. Is materialism and selfishness our only doctrine? Do economic power and property afford the only enjoyment, the only compensations? Or are we ready at last to understand that spiritual compensations can bring greater happiness?

The battle against fear is a battle against guilt, against man's sins of omission in a world that has not yet learned true brotherhood.

We must begin to conquer our fears and face truth. Bombs themselves are harmless pieces of metal. Only man-directed weapons can destroy anything. It is fear of our fellow man and not of his contrivances that puts us in a panic.

When shall man learn how to control man? This is not a matter of physical weapons. It is a matter of justice, of fairness, of kindliness, of tolerance, of unselfishness, of sacrifice, of willingness to face evil with the strength that faith in God alone can give. "Though I walk through the valley of the shadow of death, I will fear no evil: for Thou art with me."

A Plea From Two Children

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. PATTERSON. Mr. Speaker, a friend and constituent, Mr. Charles Evanson, has forwarded to me an original plea from two children which contains much food for thought. It follows:

WE KIDS ARE DOING A LOT OF THINKING ABOUT YOU GROWN-UPS THESE DAYS

I

We are just a couple of kids—my sister and I.

Same kind of kids probably, that you have at home.

We haven't been around long and I guess we don't know much yet.

But we are watching you and we have to laugh.

It amuses us to see how you are thinking, the kind of things you grown-ups are doing and the stuff you swallow.

But at the same time we're a little scared.

II

We haven't been handed social-security numbers up to now but it won't be too many years before we get them.

All we ask of you is that you hold things in check for us so that we won't lose the kind of voting system that you have and so that our social-security number won't be a puppet string which will make us jump any way the Government wants us to jump.

If you do hold things then we'll stop laughing at you for acting like puppets yourselves.

III

You oldsters can't hold things in check just by cussing the people at Washington and the State capitol among yourselves.

You'll have to stop blaming the officeholders and politicians.

They will do what you say if you are right and if you convince enough of your friends and neighbors you are right.

No leader in this country can lead unless people follow him.

No officeholder can keep his job if the people don't want him.

IV

You can't be very happy when you think how this country is drifting.

You shouldn't think you are giving us a fair deal by preparing the socialist welfare state for us.

By 1980 most of you won't be here but we'll be in our thirties.

We would like to think then that you did as much to build this country and keep it on the right track as you think your father or your grandfathers did.

In 1980 we would like to be celebrating Washington's, Jackson's, Jefferson's, Lincoln's, and Lee's Birthday, instead of the birthday of some guy who got his ideas from Marx or Stalin or Fabian or some of the fellows who are trying to shape up things now in our country.

V

You say you'd "do anything in the world for you kids," and we know you mean it.

But no matter what you do it won't mean a thing to us in the end if you socialize us.

If by 1980 we are known only by our social-security numbers instead of our names and by what we have been able to do for ourselves, we'll say you gave us a raw deal instead of a fair deal.

When we go after our first job we want to pick it for ourselves and leave it when we like, without a permit from the Government.

We want to be able to make and save enough money to buy the things we need and want even after we are too old to work.

We will want our kids to go to public or parochial school where they can learn the things you learned and not what the Government planners say they should learn.

We will want to pick the doctor for them when they are sick and not have to take a Government doctor.

We don't want a government which says "we'll take enough out of your pay and load taxes on you to give you the things you need to live on and pay you a litle each month when you can't work any more.

We don't want that kind of government for ourselves and we don't want it for our children.

My sister and I want the same chance that your father and your grandfathers had and that you started out with but which you are now letting slip away.

VI

My sister and I are not so much afraid that you will let this country drift into a dictatorship like Germany or Italy were, or a Communist state like Russia is.

But we are afraid that you are going to hand down to us and to our children a government built on the new Socialist state idea as they call it in England or welfare state as they are calling it in Washington, D. C.

When we are told, as we were not long ago, that by the year A. D. 2000 the real income of my family and my sister's family will be $12,000 each a year even if we're only average, we get scared.

Today the dollar you earn isn't worth 100 cents by a long way.

It's worth only 43 cents.

If you let your Government go on with some of the things it's doing and some of the things it's planning to do, our dollar won't be worth anywhere near 43 cents.

Maybe it will take that whole $12,000 just to pay our grocery bill.

That's why we're scared.

You won't be here by A. D. 2000.

Neither will the President nor the governor.

Maybe there won't be any President.

Socialist welfare states don't have presidents.

VII

I am only in the first grade. My sister is in kindergarten so we can't read The Road Ahead by John T. Flynn.

But you better read it and do something about what's going on if you and other grown-ups mean what you say that you'd "do anything in the world for you kids."

VIII

We can't believe that you want us and our children to have any less of a chance than you and your father had.

I'll bet you want even better things for us.

You can give us better things if you will stop these planners and not let them lead you into a Socialist welfare state.

Yes, we'll be thinking of you in 1980 and in A. D. 2000.

Natural Gas Proposal

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. HARRIS. Mr. Speaker, I do not believe there has ever been more propaganda conveying erroneous impressions to the public through the medium of the press on any legislation than the attack constantly being made on the proposed amendment to the Natural Gas Act, clarifying the original intent of Congress as to the jurisdiction of the Federal Power Commission over the independent producers and gatherers of natural gas, sold at arm's length.

We had this barrage of newspaper publicity at the time the House passed this thoroughly justifiable proposal last year and now as it is being considered in the other body, the same type of unfounded propaganda through columns and editorials is being presented in complete disregard for the actual facts.

If those who are responsible for such misleading information would only take the time to become informed, if not already, of the actual facts and intention of this highly technical problem, I am fully confident that their comments and writings would be in an altogether different vein. I do not like to imply that any person, editorial writers or others, would deliberately try to mislead the public. I fear some, though, may be deliberately doing this. However, most of the outstanding newspapers who have been making such attacks are simply in my opinion, not informed of just what is involved. They are misled and persuaded by certain ones of an economic result which does not and would not exist.

It is a sad commentary when the Commission itself carrying out the full intention of the act for 12 years found themselves in a dilemma by certain language in the opinion of the court and recommended that this Congress do just what this proposed amendment is designed to do.

There are two extreme views responsible for this dilemma. One I can readily appreciate but the other that no doubt is responsible for the activity at this time in many large centers where gas is consumed, is very difficult to understand. When any groups take a position that their special interest must be bailed out even though it was not the original intent of Congress or else an entire industry must be completely and wholly relegated to Federal controls they are in my opinion inconsistent in their philosophy and advocacy of free and competitive enterprise. It is a strange philosophy or principle of Government to adopt only when personal gain is the final result, even though the business has long since been recognized as a regulated controlled monopoly.

Seldom have I seen in the newspapers a correct analysis of this problem. There appeared in the Washington Post today, however, a communication which I should like to call to the attention of the Members of this Congress. It was written by Emby Kaye, of Tulsa, Okla. I do not know this party but it is the most factual discussion that I have seen in the press on this matter. I am, therefore, including it with these remarks:

A COMMUNICATION

The press from Washington has carried several attacks against Senator KERR keyed to his espousal of certain amendments of the Natural Gas Act of 1938. The Kerr bill seeks only to preserve by law the right of an independent producer of gas—operating at arm's length from a pipe line or distributing company—to make a contract for the sale of gas from his own wells without regulation of any Federal agency.

The bill, if enacted into law, will not, per se, increase the price of gas, either in the field or at the consumer level. Under the present law, the Federal Power Commission has not claimed and never has exercised the right to control the price at which gas in the field is sold to the pipe line. The price has under the present law increased from 3 and 4 cents per thousand cubic feet to 6 cents in many fields and in some instances to as much as 10 cents a thousand cubic feet, with step-up provisions beyond these prices for future years. What the Kerr bill seeks is to confirm the present practice: the right of a producer to sell gas at arm's length at the best price the seller can obtain and which the buyer is willing to pay.

Oil and gas production are part of our free enterprise system. Unless there is nationalization or confiscation, or unless the business is by an irrational philosophy decided to be a public utility, there is no place for price fixing in that industry. Natural gas is not a monopoly. There are many fields producing gas which have no markets today. It is available to buyers.

City gas plants are not dependent upon natural gas. In the Eastern seaboard, practically every large city has contracted for and is clamoring for a larger share of available natural gas for one reason: it is cheaper than artificial or manufactured gas produced from coal or oil.

Gas companies taking on natural gas generally maintain their plants in working condition, against emergencies. Many continue to produce gas and blend their low B. t. u. gas with natural gas. If gas should unreasonably be advanced in price, the buyer could reduce his take and manufacture a larger proportion of his requirements. But that is not in the cards because purchase contracts are set up for long periods, generally 20 years. Certainly if fuel oil was to drop to the prices of a year ago or even lower, and gas could be manufactured at a lower cost than natural gas can be obtained, natural gas lines would get no new customers, and would be held to minimum deliveries by old ones.

Hitherto the producing end of the natural gas industry did not have to worry about the prospect of the Federal Power Commission fixing or limiting the price of gas at the well. Even today, with a tremendous market, gas in the field is generally underpriced, often brings 3 or 4 cents under "life of lease" contracts entered into many years ago. As a result, the regulatory authorities in the States of Oklahoma and Kansas have established by law or regulation a price of 7 and 8 cents, respectively, as the minima to be paid at the well. The courts are to test the validity of these steps. The writer does not applaud this means of obtaining an equitable price for gas.

The dispatches argue that a 6 percent profit set for utilities ought to be enough for a natural gas producer, that such a profit would content other industries. It is one thing to be content with 6 percent profit but quite another to have it fixed by the Government. As to the oil and gas industry, price fixing at the well is not sound. The critics apparently do not understand the hazards of drilling for oil and gas. Dry holes and poor wells must be paid out of income of those wells which produce. The law of supply and demand should determine the price.

I wonder whether the dispatches referring to "closing the loophole which permits oil and gas drillers and mining companies to charge off excessive depletion allowances" give the correct picture. The provisions in the present Federal income-tax laws governing "depletion and the charge of intangible development costs as expense have been worked out by Congress over a period of years as equitable and economical means of providing the necessary incentive for petroleum development that is indispensable to national welfare and security."

The Kerr bill seeks to give the approval of Congress to the historical practice in the industry so that a basically sound business philosophy might not be overturned at the whim of a commission, when chance changes the political or economic complexion of that commission. So basic a change, if ever made, should be in the purview of the Congress and not in the power of one of its creatures.

TULSA, OKLA.

Stuttgart Evicts Hitler Victims To House SS Men

EXTENSION OF REMARKS
OF
HON. EARL CHUDOFF
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. CHUDOFF. Mr. Speaker, under leave to extend my remarks, I wish to include an article that appeared in the Philadelphia Evening Bulletin on March 9, 1950. If conditions exist in Germany as set forth in this article, I feel that this Congress should do something about it.

The article follows:

STUTTGART EVICTS HITLER VICTIMS TO HOUSE SS MEN—COURT ACTION COMES AMID DENAZIFICATION SCANDAL IN GERMANY

STUTTGART, March 9.—The government of the state of Wuerttemberg-Baden apparently is punishing no one and is not even pressing for a full investigation of the local denazification scandal.

United States officials here appear to have washed their hands of the matter, feeling that it is the business of the Germans to punish any local official guilty of selling absolution to the Nazis, as has been charged.

Yet at the moment another scandal, also involving former Nazis, is developing.

The denazification problem came to a head on February 6, when United States High Commissioner John J. McCloy criticized the State government for not investigating the case fully and attacked Minister President Reinhold Maier for having told the Americans that the scandal was none of their business. Although McCloy's statements were a sensation here a month ago, it has since become apparent that the High Commission is not planning to insist on an investigation.

CALLED A GERMAN AFFAIR

Maj. Gen. Charles P. Gross, United States Commissioner for Wuerttemberg-Baden, now insists that the case is purely a German affair and the Germans are happily pointing out that this is exactly what they said at the start.

The new freedom of the state government to deal with the former Nazis is indicated by the case of the Rotweg housing development, where victims of Nazi persecution are being evicted to make room for former members of the SS, Hitler's Elite Guard.

The Rotweg project was constructed in 1939 when only high priority military construction was permitted. It is composed of 100 one-family houses with an average of five rooms each. The project was to house members of the SS and politically acceptable friends of the SS. These people moved in and lived there until the end of the war when a majority were arrested as Nazis.

The development was taken over at first by UNNRA and subsequently the refugee organizations to house Poles. In 1947 it was turned back to the city of Stuttgart and used to billet the victims of Nazi persecution and plain citizens in desperate need of shelter.

SS MEN DENAZIFIED

In the meantime the SS men were denazified by the Wuerttemberg-Baden Ministry of Justice. All the Rotweg families were ruled minor offenders. In the same class are a flat 80 percent of the personnel of the Ministry of Justice, including a majority of the former Nazi judges who sat in the denazification hearings. Purified of their sins, the Rotweg SS men promptly sued the city of Stuttgart to regain possession of their homes.

Ministry of Justice courts decided that they were entitled to them. They then sued for eviction of the present tenants and it was ruled that they should be evicted.

Feeling that they had at least a moral case, the evictees asked the United States officials for help. None has been forthcoming, although the Americans let it be known that they are following the case with interest. The evictions are continuing, however.

Gen. Omar N. Bradley States: "If It Is the Desire To Assemble Forces That Will Statistically Give the United States a Preponderance of Military Power Next Year, We Shall Have To Become an Armed Camp, Lower the American Standard of Living, and Permanently Adopt Large Peacetime Conscription"

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1950

Mr. PRICE. Mr. Speaker, I have been reading in the press for several days about a wonderfully clarifying statement with respect to national defense made by Gen. Omar N. Bradley in an address made before the Women's National Press Club.

Mr. Speaker, I do not believe I make an overstatement when in saying that there are but few men in the United States who more completely enjoy the confidence of the people in our country than does Gen. Omar Bradley.

Not alone is General Bradley a great soldier, he is a great scholar and philosopher and humanitarian whose every public utterance evidences his marked intellectual capacity to think a subject through to finality.

When General Bradley speaks, contemplative men listen.

Mr. Speaker, I know of no one thing which today concerns the people of this country more than the question as to the adequacy of national defense and the security of this Nation.

Second to that is the economic and efficient operations and administration of our armed services and the Defense Establisl ment.

I have heard a great deal for a long time, spoken and written, about unification, of the savings effected, as to the adequacy and the inadequacy of the armed services, individually as well as collectively, and about their ability as well as inability to fulfill their respective missions.

The news article which brought General Bradley's statement to my attention quoted some of the general's associates as having said that he had given a great deal of time and thought to the preparation of what he regarded as a major statement on military policy.

"These associates," said that article, "indicated that the general was deeply disturbed by public skepticism about American defenses and by demands for bigger military forces."

It was not, however, until I read the editorial published in the Washington Post of Friday morning commenting on the Bradley speech to the Women's National Press Club that I determined to obtain a copy for study.

Mr. Speaker, it is unnecessary to point out that some of the nationally known columnists and commentators have been hypercritical of administrative policies with respect to the economies effected by Secretary Johnson and which at times they contended "were made at the expense of national defense."

Mr. Speaker, I have read and reread General Bradley's talk, and certainly no man could do so without reaching conclusion that it constitutes a great public statement emanating from a great authority and a great man.

Briefly, clearly, logically, and rhetorically, he analyzed and exhibited every facet of the question of the adequacy of our national defense when examined in the light of national and financial economy * * * in the face of the cold war that exists and * * * the shooting war that is anticipated.

My reading of the General's statement causes me to say that I can see very little difference existing between what has been spoken by President Truman, Secretary of Defense Johnson, Secretary Symington of the Air Force, and other members of the great team that now makes up the United States Department of Defense.

I wish every Member of this House would read and note the candor with which Gen. Omar Bradley discusses the realities of the continuing program of economy that has been reported to the people by Secretary Louis Johnson as contrasted with the doubts expressed by some as to whether or not the great savings made by Secretary Johnson had not adversely affected our national security.

I wish you would read what this trusted soldier and statesman had to say about what he called the $13,000,000,000 budget cut to fit the pocketbook of our people, and contrast that with the thousands among us who wish, as the general points out, to assemble forces that will statistically give the United States a preponderance of military power next year and which he said will result in our becoming an armed camp.

Mr. Speaker, with those few observations, I call to the attention of the Members of the House the speech made by Gen. Omar N. Bradley, Chairman of the Joint Chiefs of Staff, before the Women's National Press Club, and which was inserted in the RECORD on Thursday, March 9, 1950, by the Honorable PAUL J. KILDAY, of Texas. It appears on page A1807 of the Appendix of the RECORD.

St. Patrick's Day

EXTENSION OF REMARKS

OF

HON. NEIL J. LINEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1950

Mr. LINEHAN. Mr. Speaker, St. Patrick's Day is the traditional occasion in America when everyone becomes Irish. Americans of every national background sing Irish songs and praise the illustrious deeds of the worthy sons of Erin. For it was St. Patrick, the patron saint of Ireland, who brought to that country, more than 1,500 years ago, a small band of Christian missionaries, and there began a struggle of ideas and ideals from which emerged the modern Ireland of the spirit. It is important to see what that spirit was, and is, because Irishmen have carried it to the uttermost corners of the earth. St. Patrick's Day celebrations, whether carried out in the full knowledge of St. Patrick's contribution or not, are a tribute to that spirit.

Most memorable among the poetic lines left by St. Patrick which exemplifies the spirit of freedom are these taken from the prayer known as the "Breastplate of Patrick":

I arise today
Through God's strength to pilot me,
God's might to uphold me,
God's wisdom to guide me,
God's eye to look before me,
God's ear to hear me,
God's word to speak for me,
God's hand to guard me,
God's way to be before me,
God's hosts to save me,

From the snares of the devil,
From the temptations of vices,
From everyone who desires me ill,
Afar or near,
Alone, or in a multitude.

In this lofty religious spirit St. Patrick carried on his missionary work and inspired the people of Ireland to codify the laws of their land and to purify the literature in their schools. St. Patrick loved the Irish character, and he struggled to save the ancient language and literature and to reconcile them with Christian character and literature. Not only did he accomplish this, but he also enabled the Irish people to throw off their ancient pagan beliefs and establish a national life and government according to Christian principles. Good government based upon a spirit of justice and enlightenment was the ideal of the Irish people, and this ideal spread throughout the western world, even as far as to America.

In the colonization of America the Irish were numerous, and they brought with them not only crafts and skills; through their societies they clamored for freedom of religion, freedom of speech, and freedom of assembly. They were among the pioneers of the spirit of American liberty. The most determined, most vigorous defenders of the rights and liberties of the common man, the Irish furnished more than their share of leaders, not only for their own people but their more numerous English neighbors as well.

This is why we find so many Irishmen among the signers of the Declaration of Independence and among the Members of the Continental Congress and the Constitutional Convention of 1787. Interestingly enough, it was the success of the American Revolution that raised the hopes of freedom in Ireland.

Among America's greatest patriots are found sons of St. Patrick. Every schoolboy knows the story of Andrew Jackson—how as a mere lad he fought against the British in the Revolution; how he led the revolt of the pioneer and democratic West against the rule of the dynasties of profit and greed; how he was elected President and established the leadership of the new Democratic Party in the affairs of the Nation until the Civil War. Jackson was a typical Irishman. Irishmen in American politics today are generally found on all sides of every great issue, except that of coldly planned graft for personal gain.

Irish patriots in America have not limited their deeds to early wars in America. Famous "firsts" of Irish in World War II are fresh in our minds:

First. The first American bombardier to sink a Jap ship was Colin Kelly.

Second. First American to kill a Jap was Michael Murphy.

Third. First American flyer to bag five planes was Edward O'Hare.

Fourth. First American to be eulogized for bravery by the President was John Patrick Powers.

Fifth. First American Coast Guard member to catch a spy was John Patrick Cullin.

Sixth. First American to make himself a human torpedo was Edward O'Rourke.

Although the War Department does not classify data on the basis of nationality, the Irish War Veterans, United States of America, have estimated that during World War II 3,500,000 persons of Irish or part-Irish descent served in the armed forces.

What exactly have the Irish contributed to the American way of life?

The first thing that we can say is that the Irishman has cooperated enthusiastically to make the American way of life what it is.

Second. He energized both the democratic struggle for liberty and equality, and the struggle for territorial expansion.

Third. Even when he did not introduce a higher spiritual insight into individual living, he did introduce a loyalty to ancient spiritual sanctions sadly needed in American life.

Fourth. He contributed to the drive for social welfare, particularly the welfare of labor.

Fifth. He introduced an element of flashing humor into every difficult situation.

Sixth. He introduced a strain of poetic tenderness into neighborliness in American life.

Seventh. In company with his Celtic cousins in America, the Pennsylvania Germans, he introduced a love for the land and a skill in farming and conservation of natural resources, which, after 300 years of reckless exploitation, bids fair to set the example for a universal program of conservation.

Yes the sons and grandsons of Ireland have done as much as the men of any other race or nation to energize, spiritualize, and humanize the American way of life.

Is This a Partial Reason for New England's Troubles?

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1950

Mr. PATTERSON. Mr. Speaker, a letter I received from Walter W. Cenerazzo, president of the American Watch Workers' Union, points out vividly some of the handicaps under which the New England area suffers. A pointed disregard by the Democratic administration of New England's problems is clearly demonstrated. Administration nonreciprocal trade policies; maintenance of excise taxes; political misuse of natural resources; and lack of representation on Federal agencies and boards all work to the disadvantage of this pioneer industrial area. Mr. Cenerazzo is an intelligent, broad-minded union leader, who realizes that what benefits America also benefits all of its citizens. I commend his communication to your perusal:

THE AMERICAN WATCH WORKERS' UNION,
Waltham, Mass., March 13, 1950.

Representative JAMES T. PATTERSON,
House Office Building,
Washington, D. C.

DEAR MR. PATTERSON: Believing that you, as an elected official representing a segment of the New England population, are interested in the well-being and prosperity of New England, I am taking this opportunity of presenting to you some serious observations which I have made during the past several months in my efforts to obtain Federal Government assistance to preserve the century-old Waltham Watch Co.

It is my strong belief that the principal reason New England's economy is declining, that we are unable to compete satisfactorily on domestic markets, and that we have such rising unemployment is that New England does not have representation in the Federal Government agencies having to do with business and commerce.

The 10 Northeast States of the Union, the 6 New England States, New York, New Jersey, Pennsylvania, and Ohio have 70 percent of the unemployment in the United States; and we, in New England, have a great percentage of this unemployment. These statistics make it apparent that New England could have a real depression while the rest of the United States would be fairly prosperous.

I would like to bring to your attention that there are only two New Englanders serving on the boards of all the independent agencies in our Federal Government: Paul Rowan on the Securities and Exchange Commission and Sumner Pike on the Atomic Energy Commission. Nowhere else will you find a resident of New England on the board of an independent agency.

When we realize the powerful impact independent agencies of Government have on our economy, it is cause for grave concern for the residents of New England. New England has no representation on the Federal Power Commission, the Federal Trade Commission, the Reconstruction Finance Corporation, the Interstate Commerce Commission, the Tariff Commission, the Federal Communications Commission, the Commodity Credit Corporation, and the many other important independent agencies of our Federal Government.

In addition to this, we have no representation at the top level in the administration of the economic recovery program or in the Commercial Division of the State Department, where many important economic decisions are being made that affect the commerce of New England.

As for the Cabinet of the President of the United States, two New Englanders serve on it. Neither one has accomplished anything for the economy of New England in his present position. Of course, Attorney General McGrath has to do only with the courts of justice and law enforcement.

But Secretary of Labor Tobin is an advocate of the Fair Deal program which includes increasing the minimum-wage structure supposedly to equalize competitive conditions between the North and the South. This program advocates collective bargaining which brings about, and rightly so, increased wages, paid holidays, paid vacations, pension plans, group insurance, and other increment benefits.

What this program does not take into consideration is that Secretary of Labor Tobin has never raised his voice to speak out against those in the present national Democratic administration who have brought about the entry of foreign goods into the American market produced by workmen who do not exercise collective bargaining, and obtain wages far less than do American workmen.

It is unfair to raise the domestic cost of production through such measures as Secretary of Labor Tobin advocates and then allow goods to compete with domestic production from foreign countries that have no such comparable unit costs. There is no equality at the border today between domestic goods and foreign imports.

Most of the tariff cuts put into effect by the national Democratic administration have been on goods that directly compete with

New England products, rather than with products manufactured in other parts of the country. There is a great inconsistency in the program of Secretary of Labor Tobin and the actions of the Democratic national administration.

Add to the entry of foreign goods into the United States, at far less than we can produce them for in the United States, the effect of the basing-point decision which requires steel companies to charge freight from the factory to point of delivery, is having on the machine-tool industry and fabricated products here in New England, and one must come to the conclusion that dire days are ahead for us in New England unless drastic action is taken to change the pattern of our National Government.

Excise taxes on manufactured goods and transportation have sharply curtailed retail sales on manufactured goods. Inventory has piled up on the retail, wholesale, and factory level, causing lay-offs. New England has been particularly hard hit because of these excise taxes, as we are particularly an economy of many small companies in the manufacturing business. The Fair Deal program does not take the effect excise taxes are having on the New England economy into consideration.

Another point of great importance to us here in New England is that the Federal Power Act does not take into consideration that New England was densely populated before electricity was put into commercial use. The distribution lines for electricity were established by private utilities, and there is little room for expansion of distribution lines in New England. Our problem is the generation of power, not the distribution of power. To date, the Federal Government, through the Federal Power Act, prohibits New England utilities from utilizing Government funds in the creation of hydroelectric projects and the use of water power. No other method or program can give to the people of New England cheaper electricity than the creation of hydroelectric power and allowing the present utility systems to distribute it. Yet, the Fair Deal program talks about cheap power for New England but refuses to pass the enabling legislation to the Federal Power Act which would bring about cheaper power. It would rather castigate the private utilities than adopt the program that would coordinate Federal Government assistance and private distribution through existing utilities.

When one takes into consideration the amount of money which New Englanders pay in Federal taxation, both direct and indirect, and the small percentage of this that returns to New England, it seems to me that regardless of party affiliation, you, as an elected official, should help organize an effective voice to protect New England by the appointment of New Englanders to every independent agency of the Federal Government dealing with our economy.

I hope that you will find this information of interest to you.

Very truly yours,

WALTER W. CENERAZZO,
National President.

Kerr Natural-Gas Proposal

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, March 16 (legislative day of Wednesday, March 8), 1950

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Emby Kaye, of Tulsa, Okla., published under the heading, "Kerr natural-gas proposal," in the Washington Post of today.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

KERR NATURAL GAS PROPOSAL—A COMMUNICATION

The press from Washington has carried several attacks against Senator KERR keyed to his espousal of certain amendments of the Natural Gas Act of 1938. The Kerr bill seeks only to preserve by law the right of an independent producer of gas—operating at arm's length from a pipe line or distributing company—to make a contract for the sale of gas from his own wells without regulation of any Federal agency.

The bill, if enacted into law, will not, per se, increase the price of gas, either in the field or at the consumer level. Under the present law, the Federal Power Commission has not claimed and never has exercised the right to control the price at which gas "in the field" is sold to the pipe line. The price has under the present law increased from 3 and 4 cents per thousand cubic feet to 6 cents in many fields and in some instances to as much as 10 cents a thousand cubic feet, with step-up provisions beyond these prices for future years. What the Kerr bill seeks is to confirm the present practice—the right of a producer to sell gas at arm's length at the best price the seller can obtain and which the buyer is willing to pay.

Oil and gas production are part of our free enterprise system. Unless there is nationalization or confiscation, or unless the business is by an irrational philosophy decided to be a public utility, there is no place for price fixing in that industry. Natural gas is not a monopoly. There are many fields producing gas which have no markets today. It is available to buyers.

City gas plants are not dependent upon natural gas. In the Eastern seaboard, practically every large city has contracted for and is clamoring for a larger share of available natural gas for one reason: It is cheaper than artificial or manufactured gas produced from coal or oil.

Gas companies taking on natural gas generally maintain their plants in working contion, against emergencies. Many continue to produce gas and blend their low B. t. u. gas with natural gas. If gas should unreasonably be advanced in price, the buyer could reduce his take and manufacture a larger proportion of his requirements. But that is not in the cards because purchase contracts are set up for long periods, generally 20 years. Certainly if fuel oil was to drop to the prices of a year ago or even lower, and gas could be manufactured at a lower cost than natural gas can be obtained, natural gas lines would get no new customers, and would be held to minimum deliveries by old ones.

Hitherto the producing end of the natural-gas industry did not have to worry about the prospect of the Federal Power Commission fixing or limiting the price of gas at the well. Even today, with a tremendous market, gas in the field is generally underpriced, often brings 3 or 4 cents under life-of-lease contracts entered into many years ago. As a result, the regulatory authorities in the States of Oklahoma and Kansas have established by law or regulation a price of 7 and 8 cents, respectively, as the minima to be paid at the well. The courts are to test the validity of these steps. The writer does not applaud this means of obtaining an equitable price for gas.

The dispatches argue that a 6-percent profit set for utilities ought to be enough for a natural-gas producer, that such a profit would content other industries. It is one thing to be content with 6-percent profit but quite another to have it fixed by the Government. As to the oil and gas industry, price fixing at the well is not sound. The critics apparently do not understand the hazards of drilling for oil and gas. Dry holes and poor wells must be paid for out of income of those wells which produce. The law of supply and demand should determine the price.

I wonder whether the dispatches referring to "closing the loophole which permits oil and gas drillers and mining companies to charge off excessive depletion allowances" give the correct picture. The provisions in the present Federal income-tax laws governing "depletion and the charge of intangible development costs as expense have been worked out by Congress over a period of years as equitable and economical means of providing the necessary incentive for petroleum development that is indispensable to national welfare and security."

The Kerr bill seeks to give the approval of Congress to the historical practice in the industry so that a basically sound business philosophy might not be overturned at the whim of a commission, when chance changes the political or economic complexion of that commission. So basic a change, if ever made, should be in the purview of the Congress and not in the power of one of its creatures.

EMBY KAYE.

TULSA, OKLA.

Red Herrings

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 16 (legislative day of Wednesday, March 8), 1950

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Daily Leader, the daily newspaper of my home town, Madison, S. Dak., on the intriguing subject of red herrings.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE CRAWL STROKE

No recent political event has given this column more of a charge than yesterday's statement by Dean Acheson that maybe Alger Hiss wasn't such a good boy, at that.

This whole story of Russian spy entanglements in the executive departments of the Government, dating back to the Roosevelt regime, is gradually unfolding, step by step, until some day we will get it all.

First, the Un-American Activities Committee, of which KARL MUNDT, then a Representative, was an active member, was regarded by the administration and certain left-wing commentators as just a bunch of blundering publicity seekers.

There was much writing about unfounded charges against sterling citizens, who didn't have a chance to defend themselves as their reputations were being smeared in public.

One by one, some of these gents wandered into jail, and some of us rustics out in the hinterlands began to wonder whether our KARL hadn't dug up something important.

MUNDT kept coming back to South Dakota and, in speeches and interviews, told the story of the committee's work more fully.

About that stage, Mr. Truman pulled his red-herring remark, which has been quoted against him so many, many times.

When the committee actually prodded the Department of Justice to act on some of the evidence it had cleared, people started jumping off rooftops, indictments began to

pop out of grand-jury rooms, and in general the red herring began to assume the proportions of a red whale.

Although Alger Hiss was at Yalta, and MUNDT and others declare he was Roosevelt's principal adviser there on far-eastern affairs, the State Department's version of the Yalta Conference, recently published in a national magazine, doesn't mention Hiss in any way. He was the little man who wasn't there when we gave away Asia to Stalin in return for his staying in the war which was already won.

Now Acheson begins to admit that the jury which convicted Hiss might possibly be right. We thought in our stupid way that when a man is convicted by a Federal jury, he is guilty.

Next thing, we may get an official statement from the White House that maybe Boss Pendergast, of Kansas City, was the leader of a corrupt political machine.

But we doubt that.

Disability Insurance

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Thursday, March 16 (legislative day of Wednesday, March 8), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a letter to the New York Times, by Mrs. Abraham Epstein, giving reasons why permanent total disability insurance should be included in the pending social-security bill, H. R. 6000.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DISABILITY INSURANCE—ITS INCORPORATION IN SOCIAL-SECURITY PROGRAM IS ADVOCATED

To the EDITOR OF THE NEW YORK TIMES:

The Senate Committee on Finance is now holding hearings on H. R. 6000, the House-approved social-security bill. From the standpoint of the welfare of the American people, this is one of the most significant bills before this Congress. Among the improvements which H. R. 6000 would make in our social-security program is the provision of insurance against permanent and total disability, one of the most important links in the social-security structure. The adoption of disability insurance is an essential step toward greater security for Americans.

A majority of the groups who have studied the problem within recent years have concluded that permanent and total disability insurance is desirable. Fifteen out of seventeen members of the advisory council on social security appointed by the Senate Finance Committee recommended permanent and total disability insurance; a majority of the House Ways and Means Committee recommended the adoption of this type of protection; and last fall the House of Representatives overwhelmingly voted for disability insurance along with other amendments.

A minority, however, has recommended that needy disabled persons be taken care of through public assistance, with no provision for disability insurance benefits. Adoption of this recommendation would make it impossible to attain the objectives which these very groups wish to achieve—the strengthening of our social-insurance system and reduction of our swelling assistance loads. Prolonged total disability is one of the chief causes of poverty in the United States. At the present time over three-quarters of a million persons are on the federally aided public-assistance rolls because of disability, and an additional one-third of a million receive State or locally financed general assistance because the person who would normally support them is disabled.

The only way to keep the assistance burden down to a reasonable level is to provide disability benefits on a social-insurance basis.

The bill under consideration by the Senate committee would tie in the disability insurance closely with State vocational rehabilitation programs. The conservation of human resources which will result from this fact alone will save the Nation untold millions of dollars. Disability insurance and rehabilitation work hand in hand; a small, steady income, which the worker has helped to pay for, through his social-insurance contributions, assists in maintaining his morale and his desire to return to productive work, as well as the financial resources of the family, especially if there are added provisions for dependents similar to those of the old-age and survivors insurance program. Such insurance benefits would give a basic feeling of security and independence, but would be low enough so that the disabled person's incentive to improve his condition would not be destroyed.

The Nation can no longer afford the tremendous waste attendant on the continued neglect of our disabled population; adoption of disability insurance is essential to prevent this waste.

HENRIETTE C. EPSTEIN.

NEW YORK, *February 16, 1950.*

A Reasonably Effective Defense Is Possible, if We Are Willing To Pay the Price, But We Cannot Rely on Defense Alone—The Enemy's Greatest Problem Is the Damage We Can Inflict Upon His Homeland and Source of Strength—For This Reason Our Strategic Striking Force Is the Greatest Deterrent to War Today

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1950

Mr. BOYKIN. Mr. Speaker, I notice that today's press carries a report that some of the members of the House Committee on Appropriations now wish to cut the defense budget for the coming fiscal year below the thirteen billion requested by Secretary of Defense Johnson as approved by the Bureau of the Budget and sent to the Hill by President Truman.

But a short time ago we were hearing a great deal spoken about the fact that in his administration of the Department of National Defense during the year he has been in office that Secretary Johnson had saved too much money; that his defense economy program had not alone "fried a lot of fat out of the armed services" and had saved hundreds of millions through the elimination of duplication of effort in defense activities but that he had made the savings at the expense of national security.

Mr. Speaker, there is no disputing the fact that Louis Johnson has affected a savings of nearly a billion and a half dollars in the last year and that he did so in the face of rising costs. At the same time, however, I am convinced that he improved the national defense as well as the security of the Nation.

When I think of Louis Johnson and his critics, I am ofttimes reminded of another great and good friend whom I shall always remember. He was possessed of one of the most intelligent, scholarly, and informed minds and was indisputably one of the most beloved men who ever served in the Senate of these United States.

Mr. Speaker, I refer to our good and mutual friend, the late Honorable Senator Ellison D. Smith, who for more than 35 years represented the State of South Carolina in the Senate of these United States.

Senator Smith, or "Cotton Ed," as he was affectionately called by his friends, not unlike Louis Johnson, frequently found himself the stormy center of heated debate while serving in capacity of chairman of the Senate Committee on Agriculture.

Senator Smith then had to contend with the cockeyed economic program of Henry Agard Wallace, the program for plowing up cotton, burning wheat, and drowning pigs—as practiced in the Wallace administration of our agricultural affairs.

I remember sitting one evening with Senator Smith, Senator Bankhead, our good friend Senator GEORGE, Congressman Kleberg, and several others engaged in a discussion apropos of the great surplus of agricultural products, which, then as now, were burdening our agricultural economy and had resulted in a marked decline in farm prices.

With a humorous twinkle in his eye, Senator Smith referred to the criticisms being leveled at him for the factually sound program he advanced with respect to the economic administration of our national farm problem.

He told of how he had certain senatorial colleagues who had condemned him for not supporting certain proposals they advanced and who were now condemning him for supporting those very proposals when made applicable to similar problems.

In fact he said he was reminded of a little jingle that goes something like this:

I can and I can't, I will and I won't
I'll be damned if I do, and I'll be damned if I don't.

Mr. Speaker, as it was with Senator Ed Smith, so it is with our great Secretary of Defense. He too has been criticized for having already affected a savings of nearly a billion and a half dollars and for having removed 151,542 from the civilian pay roll instead of the 135,000 promised.

He has been criticized for having reduced last year's expenditures, for having constituted himself as the watchdog of the Federal Treasury, and not spending all that the Congress appropriated

and—now comes critical proposal that he has not cut it enough—now it is proposed that the Congress itself should still cut expenditures by whittling another billion or two off the defense appropriations without regard to the security of the Nation.

That just does not make sense.

All of the foregoing is a sort of a prologue to the introduction of a talk delivered by Gen. Hoyt S. Vandenberg, Chief of Staff, United States Air Force, at San Bernardino, Calif., on Friday, March 10.

It is a notable fact that every statement that comes to our notice from our Air Force today closely exhibits the business administrative program laid down by the Honorable Stuart Symington with respect to the administration operations and maintenance of the Department of the Air Force the very day that he was named as the first Secretary of that newly created Department of President Truman 2 years ago.

The United States Air Force is now recognized on a Nation-wide basis—as a young, virile, direct-action department of government headed up by young, administratively as well as battle-trained and seasoned veteran officers. Every statement which emanates from them is factual, short, brief, concise, and to the point.

Gen. Hoyt S. Vandenberg on that occasion, after a few complimentary remarks, limited himself to a mere 1,000 words, which were spoken in but 5 or 6 minutes.

Every sentence in General Vandenberg's speech is replete with facts. There is neither evasion nor verbose embellishment.

Certainly no man can read that statement and not recognize that the United States Air Force is on its toes and stands as one with the Secretary of Defense when he stated:

> We do not propose to be penny pinchers with national security. Security must always come first and economy second.

That statement is so brief, so timely, that it is something which, in the light of the cold war that now exists, should be read by every Member of this House.

It reads as follows:

I wish many more Americans could come to California at this time of the year and see how bright the sun and the sky and scenery can be. The experience would do a great deal to dispel some of the gloom that afflicts so many citizens at this time of the year. The gloom seems to be particularly thick this year, and not entirely without reason. Our Nation, despite its internal prosperity and progress, is faced with problems of military security which are more serious than ever before. No honest man who knows the facts can pretend that there are any simple and easy solutions. And we must not try to delude ourselves that there are any cheap solutions.

A few years ago we were so concerned about American lives that we paid little attention to dollars. We did spend a great amount of money. Under the leadership of the Secretary of Defense, all the services are making every possible effort to minimize the cost of national security.

Of all the services, the Air Force requires the highest investment in operating equipment. More than 2 years ago the Secretary of the Air Force insisted upon the introduction of modern management and cost-control methods into Air Force administration. We are very proud of our accomplishments in this respect, and of our increased savings and efficiency.

Our principal problem in the atomic age, however, is not one of savings, but of adequate defense. As the Secretary of Defense has said, we "do not propose to be penny pinchers with national security. Security must always come first and economy second."

A few weeks ago Mr. Symington, speaking at Baylor University, enumerated three facts which every American should know:

"1. Behind the iron curtain there has been an atomic explosion.

"2. Behind that iron curtain is the air equipment capable of delivering a surprise atomic attack against any part of the United States.

"3. We have no sure defense against such an attack."

These statements are undeniably true and they are portentous.

The ability to conduct intercontinental warfare is no longer a future possibility. It is a present-day fact, with which we Americans must learn to live from now on. The employment of atomic energy in intercontinental warfare is no longer a matter for sole decision by the United States. It appears that Russia will soon have the ability to launch such an attack in considerable strength. The grave question now facing us is whether this ability is increasing more rapidly than our own ability to resist such an attack.

It is true that we can scarcely hope to achieve a defense that is 100-percent effective. But a reasonably effective defense is possible, if we are willing to pay the price.

The fact that no absolute defense is possible does not mean that we should neglect to provide such defense as is feasible. But it does mean that we cannot rely on defense alone. Our ability to strike back is of first importance. The best defense cannot win a war; it can only postpone defeat. The greatest problem facing a potential enemy is not the damage we might do to his attacking force. His greatest problem is the damage our retaliatory striking force could inflict upon his homeland and his source of strength. For this reason the continued existence of our strategic striking force is the greatest deterrent to war today.

If we should be attacked, this strategic striking force will be our primary reliance for the destruction of the remaining aircraft and bases of the long-range force directed against us. It will also be our primary means of reducing the enemy's capacity to continue his war effort, so that we may have time to mobilize for ultimate victory. Within the means available to us, the Air Force must continue as a matter of priority the modernizing, supporting, and training of this strategic striking force. It must be immediately effective when called upon. This strategic striking force includes only 18 of our 48 groups and only 16 percent of our total personnel, but it is our most essential element of strength.

Our ability to strike back is our best deterrent to attack and our best insurance against defeat, but our ability to resist the staggering blows that can now be directed against us must be rapidly increased. No other course of action is possible. We must get our air-defense system into full operation and in place on the alert 24 hours a day. We can no longer plan or depend upon a time-consuming mobilization period for our air-defense forces. An atomic offensive might suddenly be launched against us without warning in one concentrated effort designed to saturate our limited defenses. Unless effectively opposed, such a surprise attack would cripple our ability to strike back through the air, destroy our Capital, and devastate our great industrial centers.

The Air Force has other missions and responsibilities. We must be able to provide adequate support for our forces on land and sea. The extent to which we can carry out all our responsibilities is, of course, dependent upon the resources that can be made available for our employment. It is not within my province, as a military man, to determine the amount of the resources the American people can afford to invest in purely military security. My duty as Chief of Staff of the Air Force and as a member of the Joint Chiefs of Staff is to estimate and to state our military needs as I see them.

The ultimate decision concerning the extent to which these needs can be met rests with the Government and the people of the United States. Speaking for the Air Force, I can promise you the best possible employment of the means provided to carry out our full share of responsibility for the security of the Nation.

In this air atomic age we must build that type of air defense and air striking power which will serve as a deterrent to any aggressor.

Only if we are willing to face the facts can we have insurance against defeat and the slavery which would inevitably follow.

Surely we must develop as far as possible the strength we need to guarantee our security and our freedom.

British National Health Service

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 16 (legislative day of Wednesday, March 8), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Never Take This Road," published in the Washington (Pa.) Reporter of Thursday, March 9, 1950. I particularly call attention to the statement of Harold E. Stassen, president of the University of Pennsylvania, on the health and medical situation in Great Britain. He states that there were 72,125 more deaths in Britain after the national health program went into effect than in the preceding year.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"NEVER TAKE THIS ROAD"

Harold E. Stassen recently returned from England, where he made an intensive study of Britain's health program—a program which is similar in many particulars to the compulsory government health insurance scheme proposed for this country, Mr. Stassen's findings have been summed up in a series of articles in Reader's Digest.

According to Mr. Stassen, Britain's version of socialized medicine has been characterized by a lower quality of care, for more people, at a higher cost. Preventive medicine is being grossly neglected. Doctor's time and energies are largely consumed by malingerers and hypochondriacs.

Worst of all, to quote Mr. Stassen directly, "During the first year of the operation of the British National Health Service * * * the death rate in Britain went up rather sharply! * * * In infant mortality, the death rate has shown an improvement, and

this has been hailed by those administering the program. The fact is, however, that the slight improvement in infant mortality * * * has not been as great an improvement proportionately as that which occurred in the United States and throughout the western world. * * *

"It does seem that the additional tombstones in the British cemeteries—72,125 more than in the year before the national health program went into effect—are grim signposts on which we can read: 'Never take this road.'"

Will Americans be wise enough to profit from this sad example?

Veterans Honor Hon. James E. Van Zandt, of Pennsylvania, for Service to the Veteran and the Nation

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. SAYLOR. Mr. Speaker, our colleague, the Honorable JAMES E. VAN ZANDT, of Pennsylvania, was signally honored by the Veterans of Foreign Wars of the United States on February 15, 1950, at the Statler Hotel, Washington, D. C., when he was awarded a certificate of recognition for service to veterans and the Nation.

The National Tribune-Stars and Stripes issue of March 16 contains the following article which I feel will be of interest to my colleagues:

VAN ZANDT IS CITED BY VFW FOR SERVICE TO VETS AND NATION

In mid-February Representative JAMES E. VAN ZANDT, of Pennsylvania, three times commander in chief of the Veterans of Foreign Wars, was awarded a certificate of recognition by the VFW at a congressional dinner in the Presidential Room of the Hotel Statler in Washington.

Acting for Commander in Chief Clyde A. Lewis, the citation was conferred on VAN ZANDT by Junior Vice Commander in Chief Frank C. Hilton, of Wyomissing, Pa. Hilton read the following record of VAN ZANDT's organization services:

Representative JAMES E. (JIMMY) VAN ZANDT, of Pennsylvania, has the unique distinction of being the only member of the Veterans of Foreign Wars to be chosen three times as commander in chief of our organization.

Naturally, we of the VFW think of "JIMMY" in terms of his outstanding service to the veterans of this Nation. We recall his election to the highest office which the VFW can bestow on any American in 1933. The qualities of leadership which he displayed and his militant battle on behalf of disabled veterans and their dependents in the days of the famous Economy Act were widely recognized by the members of the Veterans of Foreign Wars, and were effectively expressed by his unanimous reelection as commander in chief in 1934 and again in 1935.

We realize, of course, that the Veterans of Foreign Wars has no exclusive claim to the leadership qualities, conscientious devotion to duty or dynamic ability of "JIMMY" VAN ZANDT. His entire life has been one continuous series of achievements, and for as many different groups or causes.

"JIMMY" VAN ZANDT was born in Altoona, Pa., December 18, 1898. He enlisted in the United States Navy a few days after the entry of the United States into World War I. After 2½ years of outstanding service he was discharged from the Navy with the rank of chief quartermaster. He immediately enlisted in the Naval Reserve and has been an active member to this date. In fact "JIMMY" almost failed to make the dinner tonight because he had a Naval Reserve inspection earlier this evening.

I know it is unnecessary for me to remind his colleagues in Congress of the contributions of Congressman VAN ZANDT to the security of our Nation in the Seventy-sixth, Seventy-seventh, and Seventy-eighth Congresses. And we World War II veterans gratefully remember his successful efforts to secure a $50 monthly base pay for service personnel and provisions for dependency allotments.

The World War II service record of "JIMMY" VAN ZANDT was one of the finest in the armed forces. He earned three promotions in recognition of his courage, leadership, skill, navigation, and gunnery prowess. He was in command of LST units that landed Navy, Marine, and Army combat units and serviced them at 26 beachheads. He was promoted to captain and awarded the Bronze Star and the Naval Reserve Medal with Oak Leaf for more than 20 years of meritorious service.

Elected to the Eightieth Congress in 1946 "JIMMY" has continued his courageous support of those programs, sponsored in a large measure by the VFW, designed to promote the security of our Nation and the welfare of our citizens.

It is with great pleasure, therefore, that I, as a fellow Pennsylvanian and a comrade of the Veterans of Foreign Wars, present to Past Commander in Chief JAMES E. VAN ZANDT this certificate of recognition of his outstanding service to the VFW and the veterans of our Nation.

The Chance Was There

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include an editorial from the Christian Science Monitor of Wednesday, March 15, 1950:

THE CHANCE WAS THERE

General Motors has just announced its 1949 profits—the biggest in United States history, 49 percent greater than GM's 1948 all-time high, 11.5 percent of its return from total sales.

We would be the last to begrudge General Motors this success. We only wish all the automobile manufacturers could approach such prosperity. It represents a triumph in sales enterprise and efficiency engineering. But, we are compelled to observe, GM has also scored something considerably less than a triumph in human engineering.

Just 2 weeks before announcing these record profits GM took full advantage of the cost-of-living clause in its contract with the United Auto Workers and cut employees' wages 2 cents an hour. It cut its car prices, too. But only $10 to $40.

The company acted fully within its rights. But, in the light of its extraordinary prosperity, and in the light of the rudiments of good human relations, did it have to? Might it not have invoked its contractual rights and then waived them?

The union lived up to its part of the contract and took the cut quietly. But when bargaining for a new contract opens in May, if the company is confronted with some extreme demands (and report now says it will be) and a militant union, GM's management should not be surprised.

Reply to Specious Arguments Opposing Reorganization Plan No. 12

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. HOLIFIELD. Mr. Speaker, a resolution—House Resolution 512—proposing a rejection of Reorganization Plan No. 12 which President Truman recently submitted to the Congress together with 20 other reorganization plans, has been introduced by the gentleman from Illinois [Mr. CHURCH]. To enter such resolutions of disapproval is the privilege of every Member, but I must caution the Members that the statement made by the gentleman from Illinois to support his resolution of disapproval contains, in my opinion, misleading, distorted, and specious arguments. His statement will be found in the Appendix to the CONGRESSIONAL RECORD at page A1927.

The gentleman from Illinois alleges first, that the plan is an illegal attempt, under the guise of being a Hoover Commission recommendation, to destroy the effectiveness of the Taft-Hartley Act. In behalf of his allegation, he cites section 5 of the Reorganization Act of 1949 which provides in subsection (4) that no reorganization plan shall have the effect of authorizing any agency to exercise any function which is not expressly authorized by law at the time the plan is transferred to Congress. He argues that this subsection prohibits the President from vesting the National Labor Relations Board with the functions of the office of general counsel.

The gentleman indulges himself in a plain misreading of the law. By Reorganization Plan No. 12 the President is not authorizing the National Labor Relations Board to exercise any new statutory function. The President is merely authorizing the Board or its Chairman to exercise the functions heretofore vested in the Office of General Counsel. This is a simple transfer of functions within an agency, and the authority for such reorganization is amply and clearly contained in the Reorganization Act of 1949. The President is specifically empowered by that act to prepare reorganization plans to, first, make transfers of one agency or function to the jurisdiction or control of another agency; second, abolish all or any part of the functions of any agency; third, consoli-

date or coordinate the whole or any part of an agency or function with the whole or any part of another agency or function; fourth, consolidate or coordinate any part of an agency or its functions with another part of the same agency or its functions; fifth, authorize any officer to delegate any of his functions; and sixth, abolish the whole or any part of an agency which loses its functions upon reorganization.

What can be more clear than the authority of the President, particularly under items 2, 4, and 6, to transfer the functions of the Office of the General Counsel to the National Labor Relations Board or its Chairman, and to abolish the office?

The gentleman alleges secondly that the Hoover Commission did not recommend that the Office of General Counsel be entirely abolished and its functions transferred to the Board and its Chairman. By using the word "entirely" the gentleman begins to give away his case, for he implies that the Hoover Commission favored abolishing the office at least in part. The fact is that the Hoover Commission did not address itself specifically to the Office of General Counsel in the National Labor Relations Board. However, in its report on regulatory commissions the Hoover Commission flatly and unequivocally states as its first recommendation: "We recommend that all administrative responsibility be vested in the Chairman of the Commission." The Hoover Commission listed nine regulatory commissions of the Federal Government, including the National Labor Relations Board. By Reorganization Plan No. 12 the President proposes to carry out this basic recommendation in the case of the National Labor Relations Board, thereby making its administrative relationship of Chairman to Board identical with that of the other regulatory agencies for which reorganization plans have been submitted.

Apparently the gentleman fails to understand that the fulfillment of this basic recommendation of the Hoover Commission in respect to the National Labor Relations Board requires that the present division of responsibility and the administrative confusion created by the independent statutory Office of General Counsel be eliminated. Anyone who has studied the Hoover Commission reports and accepted their basic principles of government organization knows that one principle was emphasized above all others; namely, that clear lines of authority and responsibility be established and maintained. This was indeed the very first of all the Commission's recommendations, and one which all of the Commission members regarded as basic and fundamental. Reorganization Plan No. 12 is in accord with this recommendation as well as with the one specifically relating to the vesting of administrative responsibility in the chairman of each regulatory agency.

The gentleman cites the Hoover Commission's task force report on regulatory commissions to support his stand against Reorganization Plan No. 12. The citation is to a sentence on page 141 of that report (appendix N) which reads: "It may be that the administrative and policy-making functions could be subordinated more clearly to the Board's control while still maintaining an adequate separation of the truly prosecuting activities." This is not a recommendation of the Hoover Commission; it is not even a recommendation of the task force; it is merely a tentative suggestion advanced in a discussion of various proposals for a better integration of the functions of the General Counsel in the Government structure. If anything, this suggestion supports the action of the President in Reorganization Plan No. 12 rather than the continuation of an administrative arrangement which is regarded as intolerable even by friends of the Taft-Hartley Act.

The task force plainly indicated its reluctance to make specific recommendations in a field so charged with controversial elements—appendix N, page 137. However, certain conclusions were drawn by the task force from its discussion, and the one relating to the matter at issue here, reads as follows:

> The Office of General Counsel should not be left independent of both the Board and the executive departments but should be integrated more closely into one or the other according to the functions to be performed. (Appendix N, p. 141.)

Nothing in this conclusion can lend comfort to the resolution of rejection introduced by the gentleman from Illinois.

The gentleman favors himself by citing the task-force report to the effect "that the Office of General Counsel of the National Labor Relations Board was somewhat unique." The words quoted are the gentleman's own construction of what the task-force report said. Its indictment of the Office of General Counsel was far stronger than "somewhat unique." The task-force report pointed out in chapter XIII dealing with the National Labor Relations Board that the Board had been changed from a "unified organization" under the Wagner Act to a "bifurcated agency" under the Taft-Hartley Act—appendix N, page 134. It stated with regard to the Office of General Counsel:

> The existence of such an office, independent both of the Federal departmental structure and of the Board, marks a departure from previous administrative practice. If permitted to set a pattern for future Government organization, it may lead to a diffusion of responsibility. (Appendix N, p. 139.)

The task-force report pointed out further that the General Counsel is "in a peculiarly exposed position," subjected to heavy pressures without agency protection and tending to seek unduly for congressional committee advice in self-defense, thus blurring the desirable separation of legislation and administration—appendix N, pages 139–140. The task force also described the administrative position of the General Counsel as "anomalous" and giving rise by virtue of this unusual position with its divided administrative authority to severe internal problems of administration.

Our conclusion—

Reported the task force—

> Is that the present position of the General Counsel is an unstable one. (Appendix N, p. 140.)

As demonstrated above, the task force left open the question of the final disposition of this office, seeing, as one of several possible alternatives, integration within the Board. This alternative was taken by the President in Reorganization Plan No. 12, particularly since the failure to do so would have rendered impossible the carrying out of the basic Hoover Commission recommendation to vest administrative responsibility in the Chairman of the Board. The Taft-Hartley Act had divided up administrative responsibility between the Board and its General Counsel.

The Senate Committee on Labor and Public Welfare, in its majority report relating to repeal of the Taft-Hartley Act and proposed new labor-management legislation, referred to "the evil of dual policy making" consequent upon the creation of the independent General Counsel under the Taft-Hartley Act and noted examples of internal agency friction and conflict which have plagued the Board since enactment of the 1947 law. The majority concluded on this point:

> The operation of the act to date fully vindicates the opposition to the establishment of the independent office of General Counsel. In the guise of separating the adjudicative and prosecutive functions, the act has transferred vast prosecutive, administrative, and injunctive powers to the General Counsel at the most critical stages of labor disputes. When to this concentration of power is added the internal disruption and the uncertainty and delay which the present system engenders, the conclusion is compelling that this experiment in two-headed administration has proved a costly mistake and should be scrapped (81st Cong., 1st sess., S. Rept. No. 99, p. 41).

The minority report agreed with this conclusion to the extent of eliminating completely from its own version of the labor-management bill section 3 (d) of the Taft-Hartley Act which had set up the office and authority of the General Counsel—Eighty-first Congress, first session, Senate Report No. 99, part 2, page 69.

Senator TAFT explained in the floor debate that the minority had agreed that the provision for the Office of General Counsel should be eliminated and "that we should return to the administrative procedure of the National Labor Relations Board"—CONGRESSIONAL RECORD, volume 95, part 7, page 8712.

The Taft-Donnell-Smith version of the bill, with the Office of General Counsel abolished, passed the Senate on June 30, 1949.

Thus it is plain that both leading proponents as well as opponents of the Taft-Hartley law see no value in continuing the anomalous administrative

position of the General Counsel. Certainly its continuation cannot be justified on grounds of administrative efficiency and orderly conduct of governmental affairs. The Washington Evening Star, in an editorial of March 15 on the President's reorganization plan, states:

As a purely administrative matter, the division of authority between the Board and its counsel has not worked at all well. It is, at best, a clumsy arrangement.

The Star, in defense of the Taft-Hartley Act, however, raises the question whether administrative efficiency should not be sacrificed to the continued existence of a "Taft-Hartley policeman" in the person of the General Counsel. If this is the position taken by the gentleman from Illinois in opposing Reorganization Plan No. 12, then he is guilty of the action he attributes in such heated accents to President Truman; namely, attempting to foist a particular labor-management policy on the Government at the expense of efficient Government administration.

The President is proceeding in accord with a basic recommendation of the Hoover Commission. Whoever opposes this reorganization plan must bear the burden of opposing the most widely accepted principle of organization recommended by the Hoover Commission. In the President's words, Reorganization Plan No. 12 "eliminates a basic defect in the present organization of the National Labor Relations Board and provides an organizational pattern consistent with that established for other regulatory agencies."

Many Questions Raised by Electoral Reforms

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include an article by Mr. Arthur Krock which appeared in the New York Times of March 12, 1950:

MANY QUESTIONS RAISED BY ELECTORAL REFORMS—HOUSE TAKES A CRITICAL VIEW OF LODGE AMENDMENT FOR THE PROPORTIONAL PLAN ACCEPTED BY THE SENATE—POLITICS IS A MAJOR FACTOR

(By Arthur Krock)

WASHINGTON, March 11.—The road to reform in the method of choosing Presidents and Vice Presidents of the United States is littered with the wrecks of previous attempts. Though the inequalities and other defects of the present system are generally conceded, it has been protected from change for more than a hundred years by a mixture of natural American conservatism where the letter of the Constitution is concerned and a bipartisan political combination effected by what some major party politicians believed to be self-interest.

This same combination, unless overwhelming public opinion favors a change and registers itself as it rarely does no such issues, may once more defeat the most promising movement in this respect since the old method of choosing electors by districts was replaced by that of awarding all of the electors of a State to the candidates for President and Vice President who get a plurality, however small, over all others.

The current effort is the result of spade work begun in the early thirties by the then Representative Clarence Lea, of California, in which he was later joined by Senator Henry Cabot Lodge, of Massachusetts, Senator Estes Kefauver, of Tennessee (then a Representative) Representative Ed Gossett, of Texas and a few more. At the last session of this Congress Mr. LODGE began the reform drive, of which he has become the spearhead and which owes its progress chiefly to him, that culminated when the Senate unexpectedly, on February 1, 1950, approved—64 to 27—the submission to the people of the Lodge-Gossett amendment to the Constitution. This would prorate a State's electors in proportion to the popular vote cast for the several national candidates.

BLOCKED IN 7-TO-4 VOTE

But now it has been blocked in the Rules Committee of the House where 7 of the 11 members have refused to give the amendment a privileged place on the docket. The fact that three southern Democrats and one Republican from Mr. LODGE'S State (Representative CHRISTIAN A. HERTER) voted to bring out the bill, and that four northern Democrats, and three northern Republicans voted not to, illustrates how the professional politicians think it would operate.

Together with Senator ROBERT A. TAFT, of Ohio, a number of northern Republicans view the amendment this way from the standpoint of purely party interest:

It would always give the Democratic national candidates some electors in the populous doubtful States outside the South which over the years have gone more often to the Republicans en bloc under the present system. These electors would far outnumber the few which the Republican ticket might hope to pick up in the South by the prorata method of the Lodge-Gossett amendment.

The southern Democrats generally favor the amendment on this same reasoning; also because they think the South would regain its old place in the Democratic Party councils through the obvious fact that henceforth movements like that of the 1948 Dixiecrats would carry a larger defeat potential for the national party ticket.

BIPARTISAN OPPOSITION

A roving bipartisan band opposes any electoral change, partly because of natural conservatism, partly because they fear the Lodge-Gossett plan would encourage the formation of splinter parties. (Curiously enough, its authors are confident it would end the power of shifting, usually radical, groups which now hold or assert a large enough foHowing to tilt an entire State bloc of electors.)

In agreement with this bipartisan band of rovers are many leaders of such groups.

Despite this mix-up of views, the Lodge-Gossett amendment has the support of President Truman and the spokesmen of Americans for Democratic Action—both very practical when it comes to politics.

Yet long experience with the present system has shown its operation can, and has, put Presidents in the White House with less than a majority of the popular vote and thrown national elections into the House of Representatives. If the Republican farm States from Ohio to Iowa had not given Mr. Truman the small pluralities he got there this would have happened again in 1948.

SUPPORT FOR ALTERNATIVE

However, since the Senate approved submission of the Lodge-Gossett amendment (it must pass both branches by two-thirds and be approved by three-fourths of the State legislatures before it can become a part of the Constitution), it has been subjected to less selfish and nonpartisan scrutiny on a merit test. This has produced some support for the alternative reform proposed by Representative F. R. COUDERT, JR., of New York City, which reverts to the original method and was described by Madison as the one "mostly, if not exclusively, in view when the Constitution was framed and adopted."

The Coudert amendment provides that each State be divided before a national election into electoral districts, which could have the same boundaries as the districts in which Members of the House are chosen. These districts would equal in number those which elect a Member of the House of Representatives. Each of these districts would then, by majority or plurality, choose a single Presidential and Vice Presidential elector, and the entire voting population of the State would select two others at large.

MANY SUPERIORITIES

The superiorities of this method over the Lodge-Gossett amendment are many. It dispels the factor of proportional representation which in practice, especially in Europe and the New York City Council, has given radical splinter groups disproportionate power to block and confuse. It maintains the geographical constituencies and gives an equal voice to equal units of the population rather than to equal aggregations of those who go to the polls. To make the district groupings wholly equitable, Lucius Wilmerding, Jr., of Princeton, who is a leading authority on electoral reform in this country, would require Congress to create, for national elections uses only, compact and contiguous districts containing, as nearly as practicable, an equal number of inhabitants.

Until, in Jackson's time, the system of submitting State-wide tickets which acquired all a State's electors by a mere plurality became general—it is now universal—the Coudert-Wilmerding proposal was the practice. One of its best effects is to prevent an entire State bloc of electors going to a candidate merely because of bad weather in the rural districts or because of the inequitable weight of an acute local issue in one district.

But the Coudert plan has found no favor with the political leaders of the House, one probable reason being that it is concerned entirely with sound reform and not with possible political consequences to the major parties and their internal factions as they now exist. The virtues of the proposal from the standpoint of the public interest, which Mr. Wilmerding has made plain, have thus far evoked no strong interest in the House.

Excise Taxes

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, March 16 (legislative day of Wednesday, March 8), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix a statement I made a few days

ago before the House Ways and Means Committee relating to a number of changes in excise taxes which I have proposed.

In my original statement I filed a num- of bills, reports, briefs, and so forth, I do not desire to have them placed in the RECORD today, but merely want to put in the remarks I actually made.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of the committee, I very much appreciate the opportunity of appearing before your distinguished committee today.

During the last few years I have introduced quite a number of bills and proposed quite a number of amendments relating to various excise taxes. To date, very few of them have been favorably acted upon since this is the first real study of the excise tax structure that has been undertaken by any congressional committee since the end of the war.

During the past few years a number of injustices and inequities have appeared, and I very much hope that Congress will do a thorough job of correcting these situations this year, since it may be some years before it will be possible to undertake another study of the excise tax structure.

There is no particular question of pride of authorship involved in these various proposals. I am not particular about who gets the credit for such changes as are made. I wanted to appear before this committee because, of course, all revenue measures must originate in the House. Also, I believe my proposals will have a better chance of ultimate passage if they are brought to the attention of this committee.

I shall not attempt to explain all of my proposed amendments in detail. Some of them have already been discussed in your hearings. I want to discuss just one or two. As to the others, I have prepared some written statements which I will file with the committee.

TAX ON "HOT TRACTOR FUEL"

I want to propose that section 3412 (c) (2) of the Internal Revenue Code be amended in the manner provided by my bill, S. 2129. This amendment would eliminate the tax on tractor fuel. I would like to file a copy of my bill at this point.

This amendment will get rid of a useless and wasteful procedure which does not bring in one cent of revenue to the Federal Treasury. Under present law the definition of gasoline is so written that the Federal tax is levied upon a fuel used widely in my State and several other States known as "hot tractor fuel." This fuel was especially developed for use in tractors, and it has a higher boiling point than gasoline. Its properties are somewhere between those of gasoline and kerosene. It is used exclusively in tractors. It is absurd to classify this fuel as gasoline in the Federal Code.

Here is the point. The Federal Government does not get any revenue from the tax on this fuel now. The tax is all refunded to the user—the farmer. Our Internal Revenue Code sets up a system whereby the so-called gasoline tax can be refunded to the taxpayer if the fuel that is taxed is not used for propelling a motor vehicle along the highway or road. Under this system the farmers in my State and other States every year make out thousands of certificates certifying that "hot tractor fuel" that they buy is not used in a car or truck on the highway, and they get their money back. There is no revenue to the Federal Treasury as a result of including "hot tractor fuel" within the definition for gasoline. It simply requires a costly and time-consuming procedure of collecting a tax and then refunding it. Instead of losing Federal revenue, we can save on Federal expense if this amendment is adopted. We can cut out a lot of useless paper work that does not bring in any revenue.

I have introduced this bill, or a similar bill, several times. The Treasury has generally reported unfavorably on my bills. The only objection that the Treasury Department has been able to present, however, has been that this amendment would make more difficulties in administration.

My own State, Nebraska, also has a tax on gasoline, as do all the other States. In Nebraska, our State taxing authorities do not attempt to collect a tax on this fuel. The definition of gasoline is much more realistic. Our State law simply defines gasoline as any fuel with an initial boiling point under 200° Fahrenheit. I am informed that my State has no difficulty at all with enforcement of this tax, although the tax rate is much higher. In Nebraska we do not have a passion for useless paper work. If the State of Nebraska can administer a gasoline tax without trying to tax and refund on "hot tractor fuel," I do not see why the Bureau of Internal Revenue cannot administer the same kind of tax.

The farmers and the distributors of petroleum products in my State have been complaining about this whole foolish system for years. It makes unnecessary paper work. It requires the dealer to tie up hundreds of dollars unnecessarily in inventory and freezes his capital to that extent. The dealer suffers some loss when he neglects or is unable to secure the signature of the purchaser to the tax-exemption affidavit. It is just a nuisance all around.

This fuel cannot be used in a car. If you put a tankful in your car, it will not run. As a matter of fact, you cannot even start a tractor with it. You have to start your tractor with gasoline and then switch over to the lower cost "hot tractor fuel." I am advised that the type of automobile and truck that could burn tractor fuel in a mixture with gasoline has not been manufactured since 1931. I believe our tax law is just about 19 years out of date. I hope very much this committee will see fit to bring it up to date by adopting my amendment.

APPLICATION OF CABARET TAX TO BALLROOMS

The attention of the committee is invited to another proposal of mine, incorporated in S. 730, which would provide a specific exemption of ballrooms and dance halls from the carbaret tax. I would like to place in the RECORD at this point a copy of my bill, with the suggestion that some such language be incorporated as an amendment to the legislation that the committee is considering.

As the committee probably knows, a cabaret is generally a place providing food, drinks, and amusement in the way of a floor show or something of that sort. There is customarily no admission charge, and the tax is levied on the total bill rendered for the food and drinks consumed by the patron.

A ballroom or a public dance hall on the other hand provides primarily music and dancing facilities, and an admission is charged upon which the tax is paid at the time the patron enters the establishment. Any refreshments served are generally on the order of soft drinks, light sandwiches, and so forth.

During the past year there has been an attempt by some collectors of internal revenue to collect the cabaret tax on any items that may be sold inside the ballroom including soft drinks, sandwiches, cigarettes, charges for hat checking services, etc. I do not believe it was intended to collect a cabaret tax on these small incidental services and refreshments.

My proposal would make it clear that ballrooms would not have to pay an extra nuisance tax under the cabaret provision of the bill. They would, of course, continue paying the admissions tax. Both the admissions and cabaret taxes are at the rate of 20 percent.

Without going into this proposal in any great detail, I would like to file with the committee a brief that has been prepared for me on this subject.

TAX ON LIMOUSINE SERVICE TO AND FROM AIRPORTS

I now invite the attention of the committee to my bill, S. 181, of which I would like to place a copy at this point in the hearings. This bill is designed to correct an injustice. Under present law, taxicab services to and from airports is not subject to the tax on transportation of persons. Limousine service, covering perhaps the same group, is subject to the tax, which is 15 percent. This places firms operating such limousine services at a severe competitive disadvantage.

I do not believe we should discriminate in our tax treatment between the two types of services, but should treat them both equally and allow them to compete on a fair basis. I believe many of the limousine service have had the greatest difficulty in competing. In at least one case that came to my attention in my own State, it seemed that this discriminatory tax was driving the limousine operator out of business.

OTHER PROPOSED TAX CHANGES

This committee is already familiar with the proposal to exempt from the cosmetic tax those preparations used in a barber shop or beauty parlor. In fact, the committee and the House of Representatives approved a bill to take care of this situation, H. R. 3825, introduced by Congressman CURTIS, of Nebraska, in the Eightieth Congress. I will not take time to discuss this proposal, since the committee has previously studied it but will ask permission to place in your record a copy of my bill, S. 516, of this Congress, and also a copy of this committee's report (House Rept. 1970) on H. R. 3825 of the last Congress.

I have previously introduced a bill, S. 517, to exempt agricultural fairs from the admissions tax, and I hope the committee will consider that bill also. A great many other Members of Congress have likewise introduced similar bills, of course. I imagine that this committee if it takes the matter up might want to restore the exemptions for admissions to nonprofit, educational, and charitable functions as a group as we had before the war. I would like to place my bill on this subject in the record also (S. 517).

With respect to the general subject of excise-tax reduction, I proposed an amendment in the Senate a few weeks ago to a piece of pending legislation. My amendment provided for a fairly broad reduction in present excise-tax rates. I hope this committee will go just as far as we possibly can afford to go in cutting down or eliminating these wartime excise taxes.

I want to mention just one which I believe is particularly important, and that is the tax on photographic apparatus. I would like to place in the record at this time my bill, S. 515, which would make sharp reduction in the photographic tax.

I would also like to place in the record a letter I have received regarding the effect of this tax on the photographic industry. The committee will note that the tax has very seriously damaged production and employment in the industry and that volume in 1949 for the items subject to the 25-percent tax actually dropped almost 50 percent from the preceding year.

Annual Report of Wayne County (Iowa) Conservation District

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. LECOMPTE. Mr. Speaker, the great State of Iowa, always forward looking, is taking no chances on losing its reputation for high productivity of its land, and in order to assure continued success in its great agricultural endeavors it is going all-out for soil conservation. An account of what is being done is contained in the annual report of the Wayne County, Iowa, soil conservation district, and for the benefit of other Members of Congress I desire to extend my remarks in the RECORD and include this fine report of progress in my home county:

WAYNE COUNTY SOIL CONSERVATION DISTRICT
ANNUAL REPORT, DECEMBER 31, 1949

We, the Commissioners of Wayne County, take great pride and pleasure in presenting to you, the cooperators, our annual report for the year 1949.

We shall try to take stock for you of our accomplishments for the year in bold print; but, needless to say, there are some shortcomings of which we are not proud, but which we shall try in the future to remedy.

It seems fitting and proper for all of us to be proud of our county these days as we drive down the road and see the new barns going up, the full bins of corn, oats, and hay in them and piled up outside—the fact that we are making great strides in road surfacing, schooling; but the one that makes us swell our chest a little is the abundance of feed—and with less acres than before in the depression years of the thirties. We have come a long way since then and we feel that soil conservation has played a great part in this, the prosperity of the forties. When we think back over the forties, we have fought a long and prolonged World War; we have fought the equally important resurrection of those foreign countries, bankrupt, homeless, foodless, and without hope for the future, so that there is now some resemblance of hope in the world for peace and welfare. We have fought scourge of mankind—inflation. That is, we have the land almost free of encumbrance of debt; but think of this, gentlemen, even with all of the above happening in the decade of 1940 to 1949, the land of Wayne County is in better shape for production than before.

In looking back through the years it has always worked the other way. When a calamity faced the Nation the farmers would work to relieve the calamity, but with a loss of soil. To us this factor of soil conservation is the pay-off.

In the thirties, contouring, terracing, diversions, buffers, and the establishment of waterways were almost unheard-of practices. This is a start of a new age in farming, and demand for conservation has just begun. We repeat, the demand has just begun, and the clamor for help in conservation is so large that now four men are working night and day to take care of this great cry for help from the farmers.

The event to which goes a lot of credit is the annual field day, held this year at the Leroy P. Ohrt farm, 4½ miles south of Humeston. The field day was sponsored by the Wayne County USDA Council and made possible by contributions from the chambers of commerce from Humeston, Seymour, Corydon, Clio, and Allerton, the county farm equipment dealers, and earth-moving contractors—the Davis Bros. and Deane Bevard from Wayne County—and Mr. Henthorne from Decatur County.

This event was of only 1 day's duration, but in that day things really happened. Howard Ballew and his boys were responsible for a lot of planning with local organizations and field lay-out. Terraces, contour lines, surface drains, a pond, windbreak, and waterways were all carefully staked and established.

Bigger and better was the comment heard on all sides concerning the third annual field day held this year on the 22d day of September. It was estimated by the highway patrol that there were approximately 5,000 people visiting the various activities. It would be rather difficult to point out the outstanding event that day due to the various interests of farmers and their own pet projects. However, there were enough different projects present to keep everyone on his toes to see them all during the day.

Among the many distinguished guests and lookers-on were Dean Andre, Iowa State College; Herbie Hazen, chairman, PMA; Horace Chaney, agronomist, Iowa State College; Howard Oak, former Wayne County Work Unit Conservationist; Karl LeCompte, Representative in Washington from the Fourth Congressional District; Pearl McMurry, State senator; Gene Poston, State representative, and many others. Dean Andre gave an interesting and inspiring talk on agriculture.

An added feature of this year's field day was the State wildlife conservation exhibit. This exhibit of animals native to the State of Iowa attracted all the school children throughout the day and lots of grown-ups, too—like taking the kids to the circus—only pop wanted to go worse than the kids. One teacher was heard to remark that she had taken her children through three times, and that each time even she had seen something new and different to remember about the animals.

The plowing contest, held in connection with the field day, was very well received by the crowd in that very few of the people watching the contest had even seen one before this one. The contest was won by Dwane Lewis, with Rex Baker taking second, Howard Carter third, and Harley Sponsler fourth. The prizes were donated by the district commissioners and later reimbursed by the State committee.

The Humeston GI classes assisted in parking cars, getting canary grass for the establishment of waterways and various other jobs.

The district commissioners have embarked on a new program this year with the financial assistance of the State. Under a new law passed during the last legislature, Wayne County is to receive in money for conservation: $500 to be used to help pay the commissioners' yearly expense—transportation, advertising, postage, and printing, and so forth; and $2,000 to apply on additional help for the Soil Conservation personnel in the office and in the field, buying machinery to assist the farmers in their conservation programs and to buy equipment for the district.

We, the district commissioners, felt the crying need of most farmers was terracing equipment and, therefore, plans are going forward to the purchase of a whirlwind terracer to be loaned out to the cooperators for their own use in making their own terraces. We feel that this is a big step forward in the right direction toward more soil conservation.

We feel greatly indebted to G. E. Hibbs and W. A. Tock for the fine movie they made of the Wayne County field day. This movie is in color and takes about 30 minutes to be shown. We know that when the chance comes to see it, you, too, will enjoy it as much as we do. Then, too, we appreciate the cooperation and help of PMA extension service, Farmers Home Administration, county newspapers, commercial and civic clubs, veteran training groups, church groups, vocational agriculture departments, 4–H Clubs, State conservation commission, county board of supervisors, local earth moving contractors, Soil Conservation Service, and last, but by no means least, the farmers cooperating with the district.

If you remember at the start of this report, we mentioned that we had some shortcomings. We will admit they are numerous and long; but the main one is simply—there is yet so much to be accomplished. We have scratched only the surface in soil conservation thus far. The ditches are still yawning big at us, flats need draining, pastures need renovating, corn still needs contouring and hills need terracing. We feel that with your help in the coming year, more great strides will be made to correct this situation; and we, the district commissioners in Wayne County, do hereby promise that we will do everything in our power to make this country a better place for good farming with the help of Soil Conservation.

Some of the important accomplishments for the year 1949 are as follows: Plans prepared and signed, 51; acres, 9,134. Applications for complete farm plans, 67; acres, 10,546. Regular commissioners meetings, 12. Newspaper articles printed, 25 in three papers. Contouring on cooperators' farms, 2,085 acres. Waterway construction, 5,950 lineal feet. Area of upland flat drainage, 193 acres. Diversions, 17,992 lineal feet. Terracing, 4 miles.

WAYNE COUNTY SOIL CONSERVATION DISTRICT GOVERNING BODY,
ARLO NOBLE, *Chairman.*
WALTER HICKMAN.
MAURICE GOODE.
ROBERT J. COULTER, *Secretary.*

World Health Organization

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. MADDEN. Mr. Speaker, Dr. L. E. Burney, health commissioner of the Indiana State Board of Health, in the following letter, sets out his views regarding H. R. 334, which raises the ceiling of the budget authorization for the World Health Organization.

Coming from a doctor whose experience and public-health service has been extensive, I believe his opinion should be of great value to the Members of Congress.

STATE OF INDIANA,
STATE BOARD OF HEALTH,
March 14, 1950.

Hon. RAY J. MADDEN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN MADDEN: I understand that House Resolution No. 334 which raises the ceiling of the authorization for the budget of the World Health Organization from approximately $1,900,000 to $3,000,000 has been reported favorably by the Foreign Affairs Committee and is now before the Rules Committee. As one who is familiar with the fine work of the World Health Organization, I hope very much that favorable consideration can be given to this resolution.

We are rapidly becoming one world; certainly, as far as health conditions are concerned. The health hazards in foreign countries are of interest and concern to those of us in the United States. A good example of this is the case of the man from Mexico who traveled across the country to New York by bus, developing smallpox on the way and dying at his destination. Eleven other people died from smallpox as a result of contact with him, and several million people in and around New York City had to be vaccinated because of this one imported case.

The World Health Organization has accomplished a great deal in getting some of the backward nations to develop improved public-health programs especially for the eradication of certain diseases which have an adverse effect upon the economy. The Organization also has a record of being one of the most efficient and well managed of the specialized agencies of the United Nations.

Another important factor is that the language of health and the discussions regarding health are ordinarily not controversial and hence this specialized agency has an opportunity of being effective in promoting better understanding between nations.

In view of the amount of money involved it seems rather small as compared with what is being contributed for the international program, but considering the value of the work of the World Health Organization it is a most important item.

Sincerely yours,

L. E. BURNEY, M. D.,
State Health Commissioner.

Sale of Coca-Cola in France

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Thursday, March 16 (legislative day of Wednesday, March 8), 1950

Mr. BUTLER. Mr. President, a few days ago I made a few comments regarding the lack of cooperation we are receiving from the French Government in the administration's program to open up trade channels throughout the world. I have particular reference to the legislation in the French National Assembly designed to bar Coca-Cola from France, and I said I thought the action showed clearly that the French are not very much interested in treating American business on a fair and reciprocal basis.

I now have a statement which I would like to insert in the RECORD, from Mr. James A. Farley of the Coca-Cola Export Corp., which bears out my comments completely. It is evident from Mr. Farley's statement that the press dispatches have not made the situation entirely clear. I believe most Americans gained the impression from the newspapers that the proposal to bar Coca-Cola from France was primarily sponsored by the Communists in the French legislative body and was defeated.

Mr. Farley's statement makes it very obvious that the proposal was not defeated at all, and that Coca-Cola is likely to be barred, within the very near future, under the Boulet bill, sponsored by the MRP. The Boulet bill does not mention Coca-Cola by name, but authorizes the Health Ministry to bar particular products. The author of the bill has indicated that he had Coca-Cola in mind.

Mr. President, I am not personally concerned about Coca-Cola in particular, but I object very strongly to any actions by the French Government to bar any particular American product. I believe the incident illustrates my point that our so-called reciprocal trade agreements program is not reciprocal at all.

I ask to have Mr. Farley's statement inserted in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ISSUED BY JAMES A. FARLEY, CHAIRMAN OF THE BOARD OF THE COCA-COLA EXPORT CORP., MARCH 9, 1950

On November 8, 1949, a Communist group in the French National Assembly proposed a resolution to prohibit the importation, the manufacture and the offer for sale of Coca-Cola in France, in Algeria, and in the countries and territories of the French Union. This is known as the Gros proposal.

On the same day and at the same session of the National Assembly, Mr. Boulet, a deputy of the MRP (Mouvement Republicain Populaire) Party, introduced a bill designed to bar Coca-Cola from France without specifically mentioning the product by name. Due to efforts of the French Government action on the Boulet bill was postponed.

On February 28, 1950, the Boulet bill, supported by an alliance of Communists and the MRP Party, passed the Chamber of Deputies by a show of hands. An effort was made by several Communist deputies to tack on amendments to the Boulet bill to specifically mention Coca-Cola by name, and these amendments were rejected by a recorded vote. After assurances from Mr. Boulet, the sponsor of the bill, that he personally approved of the intention of the amendments, the decision of the precise product to be banned, should be taken by the Health Ministry. It was suggested that the name of the beverage involved had been omitted because, otherwise, the bill would have violated existing trade agreements by discriminating against an established United States product.

The Boulet bill is now before the Upper Chamber, the Council of the Republic, and will become law unless further legislative action is taken.

On the following Saturday, March 4, the Communist deputies, dissatisfied with the Boulet bill, again introduced their own proposal to specifically and by name bar Coca-Cola, and this was again rejected.

It was the second attempt on the part of the Communists to revive the amendments rejected in the original bill that caused confusion in parts of the press.

The fact remains that the Boulet bill, specifically designed to bar Coca-Cola, will become law in France unless other legislative action is taken.

Meanwhile, the product Coca-Cola is still on sale in France, as no action can be taken under the Boulet legislation until it becomes law. However, French Government officials have resorted to tricks in delaying techniques and have placed an effective embargo on the importation of necessary raw materials from French Morocco, which will have the effect of closing down the business in several weeks when present supplies are exhausted.

The Road Ahead

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1950

Mr. GWINN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following sermon delivered on Lincoln's Birthday, February 12, 1950, by Dr. Walter R. Courtenay, pastor of the First Presbyterian Church, Nashville, Tenn.:

THE ROAD AHEAD

(II Chronicles 10: 1–16)

During the period when Hitler was making his bid for power, the German church talked of theology and heaven, ignoring the social dangers rising all about it, and thus, through indifference and carelessness, added to Hitler's strength, and the world's eventual ruin.

I make no apology for taking the position I shall hold this day. It is time that church leaders who believe in democracy and the free-enterprise system stand up and say so. Others are speaking for us; others are saying that the tide of socialization is too strong to be halted and that we must go with the tide. This I do not believe. Today I speak in defense of the traditional American system of government and economics, and I speak against all leaders in all fields who are doing all in their power to wreck our national structure and land us in socialism.

In times past I have spoken to you of the dangers of communism at home and abroad. Because many so spoke, our Government has taken proper action, with the result that Communists have been located and labeled. But today I do not aim my verbal blows at communism as such, but at the socialism that is rising all about us. True, it does not so label itself and it is not a party headed by Norman Thomas, but it does exist in high places and is influencing our national leaders toward the socialized state. There are too many clergymen, educators, writers, and commentators, Senators, and Congressmen who think pink and talk pink. They are not Communists and most are not vicious people, but they are against our American system and are for the socialized state.

One more thing I would make clear: I am speaking as a Christian minister. I am not a politician; neither am I a fly-by-night medicine man or a stooge for some pressure group. I am not paid to say what I am going to say; nor do I say it to gain favor with those who want it said. I am a free American speaking about a dangerous trend in American life which concerns the whole future of the Christian church and the entire safety of this country.

I speak this day in defense of America's free-enterprise system and the democratic state. I plead for the deluded millions of the world who have been tricked into the slavery of socialism. I plead for the church, which ought to defend the rights of men, and ought to be a watchman on the towers of this Nation. I plead for the world in which our economic and political system represents the last dim lights of civilization, and when I so speak and plead I am still preaching the Gospel. Let no man doubt it. I want America to remain free from foes within and foes without. I have no desire to help kill Uncle Sam and I have no intention of attending his funeral.

Solomon and Rehoboam have been on my mind for weeks. Solomon was the original

tax-and-spend leader. He came to the presidency of his country cultured, schooled, and wealthy. He felt he had a right to do as he pleased with the historic forces of his land. Under his program of tax and spend the appearances of prosperity were present but the heart of prosperity was missing. The burdens of the people increased and they were asked to accept them as blessings.

In due time Solomon died, and his son Rehoboam came to power. He spurned the advice of the elders of Israel. He listened to the young men who knew all the answers to all the social questions of that day. The successor to Solomon increased the taxes and continued the program of wasteful spending. The result was the death of the nation.

Well, America's Solomon is dead and Rehoboam is in the White House. Our modern Rehoboam has turned his back on the elders of America and has listened to the young men who know all the answers, and who are thoroughly sold on the program of tax and spend. If the present policies are continued another 5 years I see no hope for the continuance of the American way of life.

With these thoughts in mind I call your attention to John Flynn's startling book, The Road Ahead. An abridged copy of it appears in the Reader's Digest for February While I am not saying that Mr. Flynn is infallible, I do say that what he has to say is worth hearing, and his book ought to be read by every American, and certainly by every Christian.

The sickness of the twentieth century is socialism. Under the theory of offering something superior to our free enterprise system, this sickness rots away the structure of our Nation. Fortunately it is no longer just an exciting theory. We can see what it has done in Russia and the neighboring lands. We can see its results in Britain. It ought to be clear to all who read and think that socialism is a mirage that drives men mad.

Socialism is a dishonest movement. It does not permit itself to be labeled. Most Socialists talk about welfare, pensions, insurance, socialized medicine, aid to education, aid to the farmer, and all the time they are promoting socialism. The best of the Socialist welfare ideas could more profitably become a part of our traditional system, but the dreamers, the economic planners, begin with the assumption that our American system is useless: They must have a new one. They do all in their power to see to it that the old system does not work; they impede its progress at every turn, substituting socialistic ideas which they consider more modern and progressive.

THE BRITISH SOCIALIST EXPERIMENT

Let us examine the rise of the Socialist power in England and thereby be warned. It began in 1883 when a group of intellectual visionaries, attracted by the theories of Karl Marx, formed what they called the Fabian Society, naming their group after Quintus Fabius, the Roman general who defeated Hannibal by biting off a segment of his army at a time, thus destroying it piece by piece.

Here is the program they proposed to follow:

1. Establish a school for the training of Socialist leaders, writers, speakers, and so forth.

2. Never call an idea or program socialistic. Talk about pensions, compensations, health insurance, welfare, but not socialism.

3. Launch the program a bit at a time. Do not frighten people by showing them the whole program at once.

4. Assure the common people that their rights will be protected. Tell them that whatever is done will be done for the further well-being of the average man, "the little fellow."

5. Capture the labor unions, and through them destroy the Liberal Party.

6. Use the Liberal Party to get things going, and then cast it aside.

7. Work through schools, churches, and clubs. Never miss a chance to implant the seeds of dissatisfaction with the old system and a love for the new.

By 1905 the Fabian Society had grown in unity and power. The labor unions were duly at heel. These workingmen's organizations which were created for bargaining purposes now became political forces. In 1905 they made a deal with the Liberal Party, headed by Asquith and Lloyd George, whereby labor would support the Liberal Party in exchange for a number of things labor wanted enacted into law, one of these being the invalidation of the Taff-Vale Act making unions liable for damages incurred during strikes.

That is when the New Deal struck England. Out of Parliament came the 8-hour day, workmen's compensation, pensions, government-housing projects, public payment of election expenses. Labor was delighted. The deal had paid off.

The Fabians were more than delighted. The camel's head was now inside the free enterprise, democratic tent. Their final victory was merely a matter of time.

By 1914 the Labor Party had representatives in Parliament. By 1923 they placed Ramsay MacDonald, the Fabian fair-haired boy, in office as Prime Minister. In 1945 they took over completely and have socialized in a most unsocial manner. The only thing they lack is the British version of the iron curtain.

Think of it. In 1905, when the Fabians got their program under way in earnest, Britain was the strongest nation in the world. She had everything. In 40 years, the Fabian Society, which never listed more than 4,000 members, became the master of England. The two great wars, plus the Fabian weakening processes within, have made mighty England a land of tears and fears.

The Liberal Party died in 1923 when its leaders threw their votes on the side of the Labor Party. Since that time the Liberals have had neither strength nor standing in British politics. They were liquidated by the Socialists.

In 1924–25 when the Labor Party was first in power they spent nearly £800,000,000 spending more on so-called welfare than they spent on government. They boasted of their successes, and promised Englishmen higher wages, less work, and state control of all basic industries. They were taking over. They talked too much, and the Conservatives were returned to office, and remained in until 1929. World and national events were on the side of the Fabian dreams—the depression struck. The people, sickened by conditions, returned the Labor Party to power. Then began the full-scaled program to weaken the older order. They soaked the rich, and promised the poor a golden future on the rich man's gold. Yet they talked little of socialism. Always their programs were phrased in terms that would hide socialism and praise welfare. They let the glitter of gain blind the eyes of the masses to the fact that enslavement was the logical end of socialism. The end results were kept hidden.

This was the situation when Hitler began his rise to power. Pacifism gripped the British people. Little was done to meet the rising tide of dictatorships on the Continent. The Socialist government was loathe to tell the people the truth and curtail social expenditures in order to meet national preparedness needs. The leadership vacillated. They lacked the patriotic spirit necessary to the times. They lived so much in dreams that they feared realism. The result: England entered World War II as unprepared as Ethiopia. When the dark days came and Britishers needed a man with a voice and something to say, a man with courage and determination, a man big enough to match the hour, they called on Churchill—a Conservative, a reactionary, a man of the "old regime." The story of valiant Britannia under his leadership you know. But when the war was over the people, tired of austerity, listened again to the glib generalities and rainbow promises of the Fabians, and returned the Labor Party to office. Under them England has become a truly socialized country.

Has socialism blessed the British? The ordinary citizen now knows the full misery of heavy taxation. There are no rich people any more, and the Government owns most of the basic industries. Taxes are higher. Food is scarcer. Wages are higher. Production is lower. Cost of production is higher, and the cost prohibits the British from being strong competitors in the markets of the world. Not a single nationalized industry in England functions with efficiency. The workers mine less coal and produce less in the factories. Socialized men work less efficiently than they do for private owners under a free-enterprise democratic system.

Many defenders of the Socialist experiment will say that only 25 percent of the economic system has been nationalized. The fact is that all basic industries, except steel, have been nationalized and everything else in England socialized. The working people are frozen to their jobs. By law houses and businesses may be entered without legal warrants. Workers can be made to work wherever the Government decrees they must. Farmers who do not meet the Government quotas can have their land sold out from under them and Government managers installed. No wonder that many British firms are moving to Africa and Australia carrying with them their full personnel.

Prime Minister Attlee, after making an erroneous claim for his socialization program, now admits that it has helped only the lower third of the Nation. Think of it. They have wrecked the Nation in order to help the lower third. Yet, even so, under socialism the lower third now lives below the poverty line, and the upper two-thirds live closer to it.

I say to you in all sincerity that there is a diseased sympathy in the world as well as a healthy one. Socialism is diseased sympathy. It is short-sighted, and constantly mistakes mirages for the real thing. The fertile oases they envision do not exist.

Are the British people better off under socialism? If you were a Britisher today you would be allowed 1½ eggs per week, 3 ounces of butter, 6 ounces of margarine, 1 of lard, 1 of cheese, 1 of bacon, 8 of sugar, 6 of meat, and 2 of corned beef.

If you were a Britisher this morning with an income of $2,800 a year, and had a wife and two children, you would be allowed deductions of about $1,760, and would pay a tax of $288 on the balance. A workman in America would pay $26.

If you were a Britisher this morning you could be assured of Government care from the cradle to the grave. Every baby receives $16 at birth, and the Government will contribute $80 to his funeral expenses when he dies. The Government will also give him a few dollars a week for groceries. It will take care of all his medical expenses, and grant him a pension when he is too old to work. But the man gets nothing for nothing. He pays in taxes for every service rendered. No longer do the rich people help pay the poor man's bills. There are no rich. No longer does industry pay its millions. They pay no taxes because the Government owns them.

Britain today under the Labor Government is a restless, confused, unhappy land. The people are worse off now than they were during the war. Their leaders know the bottom is in sight. Spirituality is low, and distrust is rampant. Never has England

known such depths. Yet, in the present general election campaign, the Fabians find excuses for the blunders and waste, and offer more golden promises.

Slowly but surely Englishmen are learning that the socialistic state is inefficient and expensive. It robs men of liberties, and imposes on men burdens too grievous to be borne. They are also realizing that the socialistic state cannot operate without penalties and compulsions. Where socialism reigns, liberty dies.

If this is the situation in England today with our Marshall plan aid, what would the situation be without it? What will it be without it? We must call a halt. Not only has the local Britisher been taxed to support the socialization of Great Britain, but I, here in Nashville, Tenn., have had to pay my tax for the same support. I have helped enslave my brothers in Britain. What a mess.

THE SITUATION IN THE UNITED STATES

Let us now turn to America. What is happening here? Are we in any danger from this Fabian movement to overthrow our traditional Government and socialize America?

I say to you that the program is already well advanced and is walking in 7-league boots. There are a million signs aloft saying that we are being sold down the river.

In 1932 we were in a depression, but we still had our American system. Then Solomon became king, and Solomon soon decided to change the American system, to tax and spend, to browbeat and bludgeon men into doing the will of the Government; to make the Government the master of the people. By 1938 a new group came to power in Washington. These were not elected by the people. These were young men fresh from law offices, teaching positions, and businesses. They had no love for America's traditional system of government and economics. To them there was only one "good" system—socialism. Of course they did not call their ideas socialistic. They labeled them welfare, help for the average man, aid to the poor, and what not, just as they had in England. Remember Wallace? What a field day he and the unelected had.

In 1944 the Democratic Party made a deal with labor, the same deal the British Liberal Party made in 1905. For $500,000 on the barrel head labor was promised legislation that would grant labor an inside position in the life of the Nation. The labor leaders henceforth would be in the saddle and could spur the industrial horse to exhaustion if they wanted to do so. Remember Hillman?

In 1947 a new movement was created, called Americans for Democratic Action. It is about as democratic as Stalin. Look at its main figures: David Dubinsky from the AFL, Walter Reuther and James B. Carey from the CIO, John L. Lewis from you know where, A. F. Whitney from the Railroad Brotherhoods, Mr. Elmer Davis, Leon Henderson, Keyserling, Wyatt, Ewing, Douglas, Frankfurter, Senator Graham, and others, all of them leaning far to the left of the American system. Here is the source of all the programs, welfare, and otherwise, that are crippling this Nation. The Democratic Party has lost its soul to the Socialists just as surely as the Liberal Party in England did, and we are now in the control of the Washington economics planners, the young men who know all the answers. Big government is determined to destroy free enterprise and democracy.

I have a feeling that if Jackson and Jefferson should visit the Democrats in Washington today, they would challenge about 85 percent of them to duels in the cherry orchards within the next 24 hours. I cannot imagine these true Americans feeling at home with the present administration or feeling that the wise men who are leading us to statism and a "planned" (Socialist) economy are Americans save by birth.

What is happening to us? Well, look at the facts:

1. Government no longer is our servant. It is our master.

2. Government is no longer the legislative part of America.

It has invaded the realm of banking.

It has invaded the realm of electric power.

It has invaded the realm of agriculture.

It now proposes to invade the realm of medicine, education, and anywhere else where it can interfere with free enterprise and democratic liberties.

If we pass the Spence Act the President will have complete power over the entire industrial life of this Nation, empowered to do as he personally pleases and all under the pretense of helping to keep the free enterprise system alive. Imagine Rehoboam with that kind of power.

Then there is the Brannan plan. You know, the plan that buys up some 50,000,000 bushels of potatoes and then dumps them because it would cost the Government something to ship them where they can be used? This is the plan that paid a farmer in Minnesota some $2,500 for his potato crop, and then the farmer bought the whole lot back for about $16, and the potatoes never left his farm. What a system. And they call it "planned economy."

Well, what can be done? Mr. Flynn has several ideas, and so do I.

1. Let us find out what the free-enterprise system really is instead of letting the social planners tell us what it is.

2. Let us stand up to the economic planners. Let us defend our American system. Let us have an end to letting them have the field all to themselves.

3. Let individuals, groups, and communities stop looking to Washington for handouts. Remember that what the Government gives and spends is taken from our own pockets. The only money it has comes to it in taxes.

4. Remember that human freedom is the scarcest and most precious commodity in the world today.

5. Let us rid ourselves of the planners when the opportunity comes, as it will come.

6. Let us put an end to this wasteful spending on the part of our Government.

It is startling to realize that we spent only $147,000,000,000 to run the American Government in all the years from Washington through Mr. Roosevelt's first term in office. Mr. Truman has spent $184,000,000,000 in 3 years.

7. Let us look at Russia and Britain, and then fall in love with the United States of America.

I dare not close this address without saying a word about Mr. Flynn's condemnation of many of the leaders in the Federal Council of Churches. I must confess that I share Mr. Flynn's conclusions concerning the social and political views of Bishop Oxnam, E. Stanley Jones, and John C. Bennet. I do not think that these men are Communists or wicked. I do feel that they are opposed to our traditional American view of government and economics, and are Socialists at heart, though Christian Socialists. They, too, easily mistake human weaknesses for weaknesses of free enterprise.

Having said that, let me hasten to say that while this phase of the Federal Council's work is to be regretted and condemned, there is much in it to be raised. I feel that they have done much in the way of interdenominational cooperation, evangelism, Christian education, and the enrichment of worship. I feel that they have been of great help in speaking for Protestantism in Washington, where Protestantism does not always wield sufficient force. I do not feel that the answer to the shortcomings of the Federal Council is to be found in our withdrawal and self-righteous condemnation. It is not in retreat that victory lies, but in advance. Why don't we send stronger men to the meetings of the council, men who know where we stand on these matters as a denomination, men who will fight for our view? Why do we southern Presbyterians always think in terms of defense rather than in offense? Why do we always talk in terms of negatives rather than in terms of positives? Why not change the council so that it says what we and others like us to believe? I would regret our withdrawal from it, even as I regret their misrepresentation of us in matters of political and economic import. The Southern Presbyterian Church cannot honorably withdraw from the Federal Council until we have done more than we have done to improve it.

I have spoken unto you this day as a Christian clergyman. I want the free-enterprise system continued in a democratic environment. I see no reason why we cannot solve our various economic and social problems within the historic framework of our land. I see no cause for our becoming a socialistic land at a time when socialism is rotting away the liberties of all mankind. Under free enterprise and our republican form of government I see every reason why we can rise to still higher levels of greatness, and render to the world a service it sorely needs. Under the further socialization of America I see the death of the last sweet fruits of the struggles of valiant men throughout the Christian centuries. I would personally rather see my Nation die cleanly under the H-bomb than rot away under socialism.

Let us get clear in our thinking one thing: a social planner in Washington differs not at all from one in Moscow or London. They are all Socialists and therefore enemies of the basic liberties of men.

Can things be changed? As I survey the American scene it seems clear that the hope of America is to be found in the South. We are guilty of many sins, and we pet fondly many prejudices we should throw away, but we still believe in State rights and liberties. We are not purists to be sure, for we have been riding the Federal "gravy train" too often in recent years to call ourselves true champions of free enterprise.

Here in the South, where the war of brothers left us in poverty, surrounded by citizens, some white and some black, who were ill prepared to weigh the vital issues of our States and Nation, we have been compelled by circumstances to seek aid from beyond our southern borders. Much of this aid has been Federal money, granted by the economic planners. We are in a precarious political situation: on the one hand we condemn socialism, and yet at every turn we ask that a fair portion of the Federal socialistic "gravy" be channeled in our direction.

If the South is to serve its purpose of preserving the Union in the twentieth century by championing free enterprise and human freedom, then let us go all out, guarding ourselves against the human weakness of getting something for almost nothing.

The economic planners in the Democratic Party know our weaknesses and dire needs. They will play ball with us when it is to their advantage and spurn us when it is not. That is why the FEPC bill is so important to the economic planners who concocted it and are pushing it. That bill was not created from the moral fabric of a tender conscience which weeps for the downtrodden and the dispossessed. Oh, no. It is merely the political means of grabbing a bloc of votes which are of paramount importance to the social planners. With it they could hasten their rule over us all.

It is my personal conviction that the Democratic Party has lost its soul to these men who seek the death of our American way of life. I do not see how any serious-minded citizen who wants the free-enterprise system and democracy continued can again vote for this party. To keep these men

in office and give them further opportunities to kill America seems to me the epitome of stupidity.

Will the South measure up to the demands of this hour? Will we be willing to change our thinking sufficiently to enable us to rid America of this cancer that kills? The American Fabians are using the Democratic Party to bring about the death of Uncle Sam. What are you doing about it?

I am not pleading with you to go Republican. I am asking you not to be so traditional that you fail to protect this Nation against the sickness of the twentieth century which is now upon us. You can be either its victims or its victors. There is yet time to decide.

King Solomon is dead, and Rehoboam is in the White House. The wise young men in Washington who know all the answers are guiding Rehoboam and America down the path of socialism. Surely the Christian church has a better answer than the one they offer.

Recently the Memphis Commercial-Appeal carried the following parody on the Twenty-third Psalm:

"The state is my shepherd, I shall not work; it maketh me to die down on good jobs; it leadeth me by the still factories. It deadens my soul; it leadeth me in the paths of idleness for politics' sake. Yea, though I walk through the valley of slothfulness and economic disaster, I will fear no evil, for it will be with me; its dole and paternalism, they comfort me. It prepareth a Utopia for me by appropriating the earnings of the frugal; it filleth my head with fool expectations; my mounting inefficiency runneth over. Surely goodness and mercy shall follow me all the days of my life; I shall live on the bounty of the state forever."

God save America. God save the world through America. God save America through us.

Rural Electric Cooperatives

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, March 16 (legislative day of Wednesday, March 8), 1950

Mr. BUTLER. Mr. President, I should like to insert in the RECORD a very short editorial regarding the REA cooperatives, from the Omaha Daily Journal-Stockman for March 14, 1950. This is a newspaper published in Omaha primarily for the farmers, the livestock dealers, and others active in the business life of the Omaha area. It is always heartening to me to see that the REA movement is supported by practically all groups and classes in my part of the country. I think that very fact is an exceptionally fine tribute to the way in which the program has been conducted.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SUPPORTING ELECTRIC COOPERATIVES

Farmers take electricity seriously. Proof of that is the fact that some 4,000 of them, representing nearly 2,500,000 families now served by REA, journeyed to Chicago this year for the annual convention of the National Rural Electric Cooperatives Association.

At the convention, the extent to which the farmer has embraced electricity was readily obvious. The seriousness of his talk, and the interest he showed in exhibits revealed that.

The farmer who has electricity is a big user of it. He averages using around 50 percent more than the average urban consumer. And that is not surprising when it is considered there are some 400 uses of electric power possible on a farm fully equipped to utilize it.

Refrigerators are in particularly big demand on farms, and in all probability, this item is first on the list for most farmers when electricity is made available to them. Washing machines, electric ranges, irons and home freezers are popular items. And there are countless extras, such as milking machines, electric brooders for pigs and chickens, milk coolers, water heaters and others which the farmer figures he can hardly afford to be without, once he has power.

Only recently the three millionth consumer received REA service. It is claimed 83 percent of farms in the Nation now receive electric power from a central station, as compared to 10 percent before REA. It is little wonder, considering this and the benefits which electricity brings to the farm, that farmers are staunch participants in electric cooperative matters.

The Byrd Committee

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, March 16 (legislative day of Wednesday, March 8), 1950

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by the Senator from Pennsylvania [Mr. MARTIN] last Sunday, March 12, in which he outlined the work of the Joint Committee on Reduction of Nonessential Federal Expenditures, headed by the Senator from Virginia [Mr. BYRD].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON

(Program No. 20)

This is ED MARTIN, speaking to you from the Nation's Capital, and bringing you another discussion of happenings in Washington.

In this talk I want to direct your attention to what has been offered as an economy move by a spokesman for the administration now in power in Washington.

I want to discuss a proposal set forth in a bill introduced in the Senate by HUBERT H. HUMPHREY, of Minnesota.

Senator HUMPHREY's bill, if enacted, would make a saving in the cost of government of $12,000 to $14,000 a year. It would do this by abolishing the Joint Committee on the Reduction of Non-Essential Federal Expenditures.

This committee is popularly known as the Byrd Committee. Its chairman is Senator HARRY F. BYRD, of Virginia, undoubtedly the outstanding leader in the fight to eliminate waste, extravagance and duplication in Federal Government.

Let me tell you who else serves on the Byrd Committee. Its membership includes the chairmen of the House and Senate Appropriations Committees, the chairmen of the House Ways and Means Committee and of the Senate Finance Committee. It includes other ranking members of those committees. In addition, the Secretary of the Treasury and the Director of the Budget are members of this committee.

Yet, an administration spokesman has introduced legislation to abolish this committee which under the able and vigorous leadership of Senator BYRD has fought for 9 years against unnecessary spending and overloading of Federal pay rolls. It has saved the Nation and its taxpayers millions upon millions of dollars.

An administration which spends over $42,000,000,000 a year wants to abolish this committee. Despite the spending of over forty-two billions a year and a deficit of more than $5,000,000,000 for this year alone, it is suggested that savings can be achieved through abolishing a committee which spends less than $14,000 a year.

That may seem funny to some people. Perhaps it is. But more than that, it is a great tragedy. It reflects the thinking of an administration which believes in high taxes and big spending.

I am proud to say that I immediately associated myself with Senator BYRD and many other Senators—both Democrats and Republicans—liberal, middle-of-the-road, and conservative—to serve notice that we would fight the bill to the last ditch.

Among the leading Members of the Senate who have joined in this fight against abolishing one of the most important forces for economy in Congress are Senator WALTER GEORGE, of Georgia, chairman of the Finance Committee; Senator KENNETH S. WHERRY, of Nebraska; Senator CHARLES W. TOBEY, of New Hampshire; Senator JOHN J. WILLIAMS, of Delaware; Senator KARL MUNDT, of South Dakota; Senator HOMER FERGUSON, of Michigan, and many others.

In the course of the debate I said:

"I know of no one in public life whose utterances are followed more carefully in my own State than those of the distinguished senior Senator from Virginia.

"I should like to ask him a question. From the Senator's experience as a public official, not only as a Senator of the United States, but also as the chief executive of one of our leading States, is he of the opinion that one of the best methods of national defense is a sound fiscal policy and a balanced budget?"

Senator BYRD replied: "I agree with the Senator that it is the greatest security we have."

Then I asked Senator BYRD this question:

"From the Senator's experience, does he believe that it is possible for us to fight a third world war, using the free-enterprise system, unless we do balance our budget and begin to reduce our public debt?"

Senator BYRD replied:

"I agree with the Senator that our greatest security lies in a balanced budget, sound government, and preservation of the free-enterprise system."

My fellow Pennsylvanians, it behooves us all to make it known in Washington that we too believe in a balanced budget, sound government, and the free-enterprise system.

During the course of debate one Senator arose to recall that last year he sat on a Senate Appropriations Subcommittee which heard 453 Government witnesses testify regarding their budget requests. Four hundred and fifty-two of them asked the committee for more money than their agencies had spent the previous year.

Only one of them expressed himself as agreeable to taking a cut.

In the course of the debate also, Senator WILLIAMS, of Delaware, quoted from a statement made by Senator HUMPHREY at the end of last September. Senator HUMPHREY declared at that time, and I quote:

"The Senator from Minnesota does not believe in a balanced budget at this hour, nor is he afraid to say so."

I regret that the Senator from Minnesota apparently doesn't believe in a balanced budget at this hour, either, nor in efforts to reduce spending toward the goal of a balanced budget.

This is the Truman viewpoint, unfortunately. The President himself has declared there will be no budget balancing this year or next year, and probably not for years to come—that is, until there is some other President.

But people with that viewpoint, with complete willingness to have the country go deeper and deeper into the red, are out to protect themselves from criticism.

They want to protect themselves by abolishing the committee which calls for economy and attacks wasteful spending.

Their unwillingness to accept criticism, even from an official Government source, bears a close resemblance to the methods of dictatorship.

Yet this attitude persists. When President Truman was Senator Truman he took an entirely different view. Let me quote to you what Harry S. Truman said while he was still in the Senate. He said:

"It seems that when public funds are to be expended no one has any interest in what happens to them, no matter what his responsibilities may be under his oath of office.

"I dislike to make such a statement, but unless this body and the House of Representatives exercise their prerogatives in connection with the purse strings of the Government, much of the money appropriated will be thrown away for no good purpose whatever."

That was Senator Harry Truman speaking as chairman of the War Investigating Committee. That was a patriotic American, deeply concerned with wasteful spending of the people's money. That was a man who agreed that there must be a congressional watchdog over spending to prevent reckless, extravagant men from wasting the money taxed from the pockets and savings accounts of our workers.

The joint congressional committee—this Byrd committee—has been such a watchdog. But now the picture has changed completely.

This administration wants no watchdog committee, no criticism at all. Instead it wants to abolish the committee doing the very work which Senator Harry S. Truman said, only a few years ago, was so essential for the good of our country.

That is something for the people to consider.

In my opinion, the attempt to wipe out the Byrd committee and to deprive the people of its valuable service is another example of the stubborn opposition of the administration to every suggestion for cutting the cost of Government.

You all know about the fine work of the Hoover Commission, which submitted plans to increase efficiency and to reduce costs in the various Government departments and agencies.

The President strongly endorsed that report, except in two important things.

The Hoover Commission strongly backed up and supported the findings of the Byrd committee. The Hoover Commission found much waste and duplication in Government. The administration failed to endorse those findings.

And the Hoover Commission, like the Byrd Committee, called for numerous reductions in spending to effect a saving of 3 to 5 billion dollars a year.

It is significant that the administration has put into effect most recommendations of the Hoover Commission except those which would require cutting the pay rolls and the reduction of unnecessary spending.

The departments and agencies fought those proposed reductions hammer and tongs. And, I regret to say, backed up by the White House, they fought the cuts successfully.

That is the course taken by an administration whose leader and spokesmen declare that they are opposed to balancing the budget now or in the immediate future.

It is another manifestation of the spend-what-you-haven't-got school—the fellows who pile the national debt higher and higher with the explanation that it doesn't matter—our children and grandchildren will pay the bills.

I have quoted from several of those who spoke on the Senate floor in opposition to the bill to abolish the Byrd committee.

At this point, I feel you should hear the words of Senator HARRY F. BYRD, himself. In the course of the debate, he had this to say—and I quote:

"If we continue deficit spending, sooner or later we shall go over the precipice of financial disaster,

"Every Senator knows we are about to embark on another year of deficit spending—although it is a year of perhaps the highest prosperity the country has ever know—a year when there are no new economic emergencies abroad.

"The President has recommended in his budget message less foreign assistance money than is to be spent this year. There are no economic emergencies at home except that brought on by the coal strike.

"With all the earnestness of which I am capable, I ask Senators this question: If we cannot balance our budget now, in God's name when can we balance it? What reason is there to believe that it will be easier to balance it next year, or 5 years from now, or 10 years from now, than it is now?

"I should like to say, further, that 2 years ago we expended $34,000,000,000. No worthy object suffered then. The economic crisis abroad was greater than it is now.

"Now we are spending $43,000,000,000, an increase of $9,000,000,000 in 2 years of peace, with no new emergencies to justify the additional domestic civilian expenditures at home. Six billion dollars of the increase for next year is purely for domestic civilian spending unrelated to past or future defense or foreign assistance. We have nearly doubled our non-war-connected domestic spending in 2 years.

"I think the time has come for us to face the situation squarely and realize that if we embark now on deficit spending resulting from domestic-civilian increases, under the conditions which now exist, we may never again balance the budget of the United States Government."

Those are words of deep significance and stern warning.

They were spoken by a sincere democratic statesman whose love of country rises above political consideration.

They should be given serious thought by every American regardless of political affiliation.

This is ED MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

FEPC

EXTENSION OF REMARKS

OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1950

Mr. YATES. Mr. Speaker, to my friends on the Republican side of the House who fought the FEPC bill because they felt it would hamstring employers in selecting their workers, let me call to your attention an article appearing in the February 25 issue of Business Week, certainly not a New Deal or a Fair Deal publication. The article reports a poll of some of the largest corporations in the country who are operating under FEPC laws containing enforcement provisions, including the Prudential Insurance Co., the Alumium Corp. of America, Pitney-Bowes, Inc., the New York Shipbuilding Corp., among others. Without exception, the employers have indicated that the FEPC law has interfered in no respect with the right of the employer to select the most competent workers and they have had no discipline or grievance problems.

To my friends from the southern States, who charged the FEPC bill as being Communist-inspired, let me point out that the article cites the case of the Bridgeport Brass Co., of Connecticut, which reports that the bill has eliminated entirely a large and growing Communist campaign being waged among the large urban Negro groups and that it has widened job opportunities for minority group members without interfering in the prerogatives of management.

To my friends on the Republican side, again let me point out that the Cleveland Chamber of Commerce, certainly not a New Deal or Fair Deal organization, has thrown its support in favor of an enforceable FEPC because they realized that voluntary FEPC under which the city had operated, was not the whole answer. I am sure this will give food for thought to those who insisted upon the McConnell bill.

CHICAGO NEEDS AN FEPC LAW—AN OPEN LETTER TO THE CHICAGO ASSOCIATION OF COMMERCE

CHICAGO ASSOCIATION OF COMMERCE,
Chicago, Ill.

GENTLEMEN: We're sending a letter of congratulations to the Cleveland Chamber of Commerce. We hope that in the near future we'll be able to send a similar letter to your organization.

The Cleveland chamber is right on the ball. Thanks to its help—and that of labor and other civic groups—the city of Cleveland now has a fair employment practices (FEPC) law. As you know, FEPC makes it illegal to discriminate on account of race, color, religion, or nationality when hiring, firing, or promoting.

When an FEPC was first proposed in Cleveland, the chamber there said: "Let's try it the voluntary way." So for about a year Cleveland groups tried a program of persuasion without the help of a law. They asked employers to hire people on the basis of their qualifications, not on the basis of their skin color or the church they go to or the country their parents came from.

The voluntary approach flopped. The Cleveland Press said editorially: "We learned that voluntary FEPC, no matter how diligently and sincerely run, is almost valueless." Chamber of Commerce leaders, admitting that the voluntary way was not the whole answer, put their stamp of endorsement on an FEPC ordinance. The city council passed it last month by a 27 to 5 vote.

Chicago already has a partial FEPC ordinance. It applies only to the city government and commercial firms with which the city has contracts.

In the past, whenever someone urged extension of Chicago's FEPC to commercial

employers, business representatives have usually said that the voluntary approach is adequate. They said the same about State and Federal FEPC bills.

We're praying that your organization will take a cue from Cleveland. We're hoping that you recognize that the voluntary approach in fair employment usually winds up in a let-Joe-do-it attitude. We're hoping that you recognize that FEPC is the only practical solution.

If you'll study the Cleveland FEPC, you'll see that the law itself embodies much of the voluntary approach. The law provides steps of moral persuasion. First, an attempt is made to settle every complaint of discrimination by a 16-member community relations board. If the board fails, then the mayor tries his hand. If the mayor fails, there is a public hearing. If the public hearing fails, only then is the complaint turned over to the city law department for prosecution.

In many States where FEPC is now the law, employers who first opposed it have since found that their old fears were groundless. They found that they could not only live under the law but actually thrive under it.

Let me give you an example of how they thrive under it. Let's say two men walk into your office and apply for a white collar job. In this case Mr. A is better qualified for the job than Mr. B but Mr. A is a Negro and Mr. B is white. Right now in Chicago, most businesses would pick Mr. B, the white man, if they had to choose between the two.

Under FEPC it becomes more and more the accepted thing to hire people for their ability and not for some phony reason. This is good for business and it is good for people.

We're hoping that you'll give FEPC the same consideration as did your chamber of commerce brothers in Cleveland.

EDITORS OF WORK.

What Would the Loss of Liberty Mean to You?

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. BARRETT of Wyoming. Mr. Speaker, I read with a great deal of interest an editorial by that great American, E. F. Hutton, in the Palm Beach Daily News under date of March 7 last entitled "What Would the Loss of Liberty Mean to You?" Mr. Hutton was the founder of Freedom's Foundation of Valley Forge and has devoted a great deal of his time and thought in fighting communism here and abroad. I commend his editorial for your thoughtful consideration:

WHAT WOULD THE LOSS OF LIBERTY MEAN TO YOU?—THINK THAT THROUGH!

(By E. F. Hutton)

Six years ago Benjamin DeCasseres, one of the outstanding editorialists of our time, wrote the following message. He has since taken his long journey. It is worthy that this should be reread today by those who have forgotten, and those who, perhaps, never saw it—and particularly by our youngsters in the schools.

"I AM THE BILL OF RIGHTS

"I am 153 years old, having been born on December 15, 1791.

"I am the first ten commandments to the Constitution. Until I was written into the Constitution, that document was like a body without a soul.

"I AM YOUR BILL OF RIGHTS

"Don't take me for granted. Like all mortal creations, I can be killed.

"The giant shadow of totalitarian state—slavery—moves over the world. Wherever that shadow falls, I am obliterated. That shadow has fallen over the United States.

"Three men—Thomas Jefferson, James Madison, and George Mason—fathered me. As men brought me to life, I can be slain by men—and will be slain unless you and you and you traditionalist Yankee Doodle Americans organize to defend me.

"I AM THE BILL OF RIGHTS

"I am freedom of religion, freedom of speech, freedom of the press, freedom of assembly. I am the privacy and sanctity of your home. I am your guaranty of trial by jury, as I am the policeman who guards your property rights.

"Cruel and unusual punishment and excessive fines and bail cannot be visited upon you so long as I am alive. In order that all rights not specifically mentioned in the Constitution shall be retained by you—the people. I am the rights of the States against engulfing centralized power.

"I AM THE BILL OF RIGHTS

"Your signed lease to spiritual, mental, and physical freedom. I ask you to meditate on all my ten clauses. Memorize them. Engrave them on your hearts.

"My existence depends on your vigilance—on how vigilantly you watch your rulers. And my eternal enemies, known as dictators, are abroad in the world and here in the United States.

"Personal unlimited power has destroyed the liberties of many peoples in ancient and modern times. It can happen to you, and maybe, subtly and unknowingly to you, it is happening.

"Put every law that is proposed in Washington and elsewhere into the crucible of my 10 commandments. Your question must always be: Not what does a law give me, but what does it take away from me?

"I AM THE BILL OF RIGHTS

"When I am violated, a part of you dies.

"I am 153 years old. Will I reach my 169th year? That depends on you and your children."

Liberty is our national asset. It belongs to "we, the people." There are those who are advocating communism, collectivism, and planned economy. If any of these "isms" become a fact, liberty then will belong to those in power. "We, the people" will have lost it. It is only by direct action on youth by the men and women of our country that a better society can successfully be molded.

Military Air Power in Europe

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks, I present herewith an article appearing in the November issue of the National Air Review:

MILITARY AIR POWER IN EUROPE

(By Ansel E. Talbert)

A shadow is being cast across the face of Europe today by the wings of Soviet Russia's Red air force.

Soviet military aviation now consists of about 15,000 first-line aircraft divided among (1) air armies attached to the ground forces (2) the interceptor arm of the Soviet air defenses and (3) the independent long-range bomber force now being expanded by special order of Stalin. There also are air units attached to the Soviet navy.

The Red air force is numerically the strongest air force in the world although its offensive and defensive capabilities certainly are far below those of the combined strength of the United States Air Force and naval aviation. It is more than twice as large as the German Luftwaffe, which had nearly 6,000 first-line planes available on all fronts in the summer of 1940 to implement Nazi dreams of conquest.

New production for the Red air force includes a jet interceptor with swept-back wings, probably designed by Artem I. Mikoyan and Mikhail Gurevich, and four-engined bombers resembling the American B-29 Superfortress.

Soviet aviation is backed by an aircraft industry which—according to Stalin—produced 40,000 aircraft of all types, including trainers and liaison planes, in 1944. This, by way of comparison, was the year in which the United States constructed 96,000 airplanes, a large percentage of which were four-engined bombers.

The United States supplied 14,795 aircraft of all types to Soviet Russia during the recent war.

There is general agreement among strategists in Europe that the Red air force is a formidable instrument for cooperating with the Red army in a sweep westward across the continent. In fact, in its present composition it is an air force organized primarily for supporting ground troops—mechanized cavalry in particular.

Most strategists believe that with allied forces now available in western Europe—and these forces are being strengthened—the Red air force could hardly be bested or kept from gaining air superiority at any point east of the Pyrenees or the English Channel.

An accurate picture of Soviet air power, however, must bring into focus both strong points and weaknesses. There is evidence of the existence of many of the latter.

The Red air force, for example, did no strategic bombing worth mentioning in World War II. As a strategic air force capable of trading blows against industrial targets during the next 3 years with heavy bomber units of Great Britain and the United States, the Red air force is regarded as second or third rate.

This is so—even now that Soviet scientists have accomplished an atomic explosion—unless the British and Americans allow it to become first rate by default. All signs point to the opposite right now.

Morale of the Red air force, except under conditions of combatting invasion of the Soviet Union, is open to question. This is attested by the not insignificant number of deserters up to the rank of colonel who have been claiming refuge in western Europe during the past 2 years.

During World War II sizable aviation detachments of the German-sponsored Russian army of liberation, commanded by Lt. Gen. Andrei A. Vlassov, former hero of the Soviet Union, were organized at Marienbad and Eger, Czechoslovakia. Recruiting was from among captured Red air force pilots, General Vlassov's air chief was Maj. Gen. Victor Maltzev, former Red air force officer. Ground units of this anti-Stalin army performed well on the eastern front but surrendered without fighting to the Allies in the west.

It is not generally known in the United States that the Red air force high command has been purged again and again by order of Stalin from 1937 through the present postwar period. This is true also of the di-

rectorates of top Soviet aeronautical research centers such as the Zhukovsky Air Engineering Academy in Moscow.

Stalin's policy of using alternately the knout and sugar-candy reward is nowhere more apparent than in the Soviet aircraft industry. A. N. Tupolev, famous designer of bombardment aircraft, and many other outstanding aeronautical engineers have (1) served jail terms for crimes against the Soviet state and (2) received high decorations and Stalin prizes for aviation achievements.

During the last 12 years the post of chief of the Red Air Force has become almost as unhealthy for its holders as was that of Minister of the Interior under the last Czars of Russia. The latter office frequently became vacant suddenly as the result of direct action by revolutionists; the Red Air Force post is vacated only by order of Stalin and the Politburo but the changes come with the same abruptness.

Starting with Gen. Yakov I. Alksnis, who also held the position of Vice Commissar of Defense, the following commanders of the Red Air Force have been removed during the years indicated either by firing squads or by sudden demotion to insignificant posts and disgrace:

Gen. Yakov I. Alksnis, 1937; Gen. Alexander D. Loktionov, 1938; Gen. Pavel Rychagov, 1940; Gen. Yakov Smushkevich, 1941, and Marshal of the Air Force Alexander A. Novikov, 1946.

The careers of General Alksnis and Marshal Novikov shed light on what can happen to high officers in Soviet Russia who make political missteps. General Alksnis was an old-time Bolshevik who became chief of Soviet aviation in 1933. He was obsessed with the idea of making it as progressive and powerful as that of any other nation. In 1934 he visited Great Britain and the Netherlands to observe air progress, and in 1936 he visited Czechoslovakia for the same purpose.

This foreign travel evidently was a serious error. At the start of Stalin's widespread purges of Soviet military men accused of conspiring with foreign powers General Alksnis was appointed to the tribunal which condemned to death Marshal Mikhail N. Tukhacheveky. A short time later General Alksnis faced a firing squad himself.

Marshal Novikov came to power in 1941, a few weeks after the German invasion of Soviet Russia. More than 2,500 Russian planes were destroyed on the ground in forward areas by the Luftwaffe during the first few days of the war. General Smushkevich, then Air Force head, disappeared suddenly.

When he took over General Smushkevich's post, Marshal Novikov was 34 years old and a major general. Almost immediately he was promoted to lieutenant general and on January 18, 1943, to colonel general. The following month he became the first Soviet marshal of aviation and personally conducted Red Air Force operations at Stalingrad.

Marshal Novikov became friendly, as did his opposite number in the Red Army, Marshal Georgei Zhukov, with American military and air leaders. Apparently he lost prestige after Stalin and Molotov made a postwar visit to Germany and saw the results of the combined British-American strategic bombing offensive. There may have been no direct connection between this episode and what resulted, but early in 1946 Marshal Novikov was removed from his post without explanation. It is known that he was sentenced to from 6 to 8 years in prison. Only his outstanding war record saved him from the fate of General Alksnis.

RUSSIAN AIRCRAFT INDUSTRY LAGS

Marshal Stalin is credited in official Soviet publications with being an authority in many fields, including economics, finance, agriculture, labor relations, painting, music, the drama, philosophy, education, literature, history, and others.

Some of Stalin's personal contributions to the arts and sciences are open to question, but there is no doubt about his direct and personal influence on Soviet air strategy.

Stalin's precocious son, Vassily, who at 29 is a Red Air Force lieutenant general, said publicly that not a single Soviet aircraft type existed which does not in some manner embody the suggestions and guidance of my father.

Probably no chief of state has intervened so often in air force affairs as Stalin, except possibly Adolf Hitler. It was Hitler who personally decided over the arguments of Air Marshal Hermann Goering and other Luftwaffe chiefs that the fast German Me262 fighter was to be used instead for bombardment.

This turned out to be one of the luckiest decisions of the war—for the Allies. How constructive some of Stalin's equally arbitrary decisions will be, remains to be seen. Until recently nearly 75 percent of Soviet air strength was assigned to air armies attached directly to and designed primarily to cooperate with the Red army commands.

Such air force organization and stress on ground support aircraft can be traced directly to Stalin's personal experiences in the Russian civil war. An official World War II publication of the Soviet government disclosed:

"In the summer of 1936" (NOTE.—Just before Stalin's first purge of the air force high command), "Stalin said that in 1920 he had observed the tremendous effect of low-flying attacks by Soviet planes on Baron Wrangel's retreating White Guards. Acting upon Stalin's instructions, Sergei Ilyushin designed the IL–2, a classical type of attack plane popularly known abroad as the Stormovik.

"In analyzing the rout of armored German troops, the historians of the future will note the important part played by the IL–2."

There is no question that the Stormovik was an excellent weapon for knocking out German tanks—particularly after the bulk of Germany's air power was shifted to the western front. This was done in an unsuccessful attempt to halt the British-American strategic bombing offensive which eventually paralyzed German oil production and communications.

Historians are likely to remember also, however, that Mr. Ilyushin, the Stormovik's designer, told American correspondents in a wartime interview: "We never agreed with the theory that aircraft would play an independent role in the next war * * * we believed that the air force would be an arm of the ground forces primarily."

Stalin now has changed his mind, reportedly after viewing the results of strategic bombing in Germany. Marshal Alexander A. Novikov, who put Stalin's ground support theories into practice during most of World War II, has been purged, and Gen. Alexander Golovanov, commander of the long-range bomber force which Stalin has ordered expanded, is now a Red Air Force marshal.

Mr. Ilyushin apparently can take a hint, for his most recent designing efforts have been concerned with a four-jet bomber patterned after the new United States Air Force Boeing B–47. This plane crossed North America earlier this year at better than 600 miles an hour.

Serious difficulties have been encountered in putting the new Soviet aviation policy in effect. The aircraft industry of the Soviet Union was the last of any major nation in the world to give up wooden construction of major portions of its first-line aircraft.

Marshal Konstantine A. Vershinin, who succeeded Marshal Novikov as chief of the Red Air Force on March 22, 1946, has been vociferous in calling for increased production efforts from the Soviet aircraft manufacturing industry "to counter the intrigues of international reaction."

In an address on the last Red Air Force Day, Marshal Vershinin, probably inadvertently, pointed a finger at three chief weaknesses of Soviet aviation. He stated then that the Soviet Union was putting special efforts into the development of (1) high-speed jet interceptors for defense; (2) multi-engined strategic bombardment aircraft, and (3) radar aids for all-weather flying.

There is further evidence that one additional weak point—possibly the most basic and important one—is jet aircraft engines. Paul H. Wilkinson, editor of Aircraft Engines of the World, and an experienced engineer, is certain that the Soviet Union is several years behind in jet developments as it was previously in piston engines.

At the beginning of World War II all engines used in combat aircraft of the Red Air Force were slightly modified or redesigned versions of America's Wright cyclone engine, France's Gnome Rhone and Hispano-Suiza engines and Germany's BMW, for which licenses to manufacture had been purchased.

During the early days of the present British Labor Government, the Soviet Union was allowed to purchase more than 50 British jet engines of the Rolls-Royce Nene and Derwent type, but this soon was stopped. Soviet designers have the present help of numerous German technicians but it is unlikely that they have solved all problems of mass producing an outstanding jet engine. This still is a kink in the United States aircraft industry which built the world's best piston engines.

In addition to its lack of strategic bombardment background the Red Air Force during World War II had no actual experience in countering strategic attacks with radar-directed interception. Nearly all escaped Soviet pilots have mentioned particularly the lack of electronic aids to all-weather flying available in the Soviet Union and the obvious progress of the United States in this field. Two years ago Soviet transport planes never operated at night, a feat which Americans have been doing for more than a decade, as ordinary routine.

BRITAIN STRESSES AIR DEFENSE

Britain is playing a vital role in European aviation today but for the time being it is chiefly a defensive one.

The nation is expanding and modernizing the British Royal Air Force and the Royal Navy Air Arm with primary emphasis on the defensive capabilities of both. All first-line day-fighter squadrons in the United Kingdom are equipped with Vampire jet interceptor-fighters of the type holding the world altitude record of 59,000 feet or with Meteor jet fighters having operational speeds of better than 600 miles an hour.

The total personnel of the Royal Air Force at present is about 228,000 as compared with 419,000 in the United States Air Force. There are 30 major aircraft-manufacturing companies in Britain together with 7 additional companies building aircraft engines. Nationalization of the industry is extremely unlikely, a member of the Ministry of Supply told this correspondent.

By June of 1950 the RAF expects to double the present strength of its jet day-fighter squadrons in Great Britain. It also plans to equip all night-fighter squadrons at present flying Mosquitos—one of the fastest twin-engined piston aircraft of World War II—with twin-jet night fighters.

A new swept-back-wing jet fighter developed from the Vickers attacker is being produced for supersonic interception. Fighter planes of superior armament and speed were the RAF's chief asset during the Battle of Britain and now, as before, quality of product is stressed.

Britain is selling relatively small quantities of Vampires and Meteors to all the

friendly nations of western Europe including Sweden and Switzerland. The nation's air representatives have followed this up with negotiations for producing these types under license in the above countries.

This is bringing about a standardization of both aircraft types and strategy among European nations faced with the threat of the Red Air Force.

One of Britain's most important air centers at present is the central fighter establishment located in Norfolk County and commanded by Air Commodore D. F. W. Atcherley. Its current No. 1 priority problem is defense against high speed bombers. This is linked with a study of the likely trends of future air attack against Britain and the nation's allies.

Every RAF pilot now is trained to fly in all types of weather. One cannot get his wings unless he has demonstrated competence as an instrument flyer. All-Empire schools specializing in instrument flight instruction are being created in Great Britain, and pilots from allied nations will be admitted to these and other specialist schools.

Although the British airmen feel that they are unable at present to afford large-scale production of giant bombers of the United States Air Force B–36 type, they have just flown their first jet bomber, the English electric A–1 twin-jet. Also, the nation is known to have larger ones on the drawing boards.

One year from now the RAF expansion program calls for limited production of medium jet bombers. The RAF bomber command's chief offensive weapon at present is the four-engined Lincoln, a conventional piston-engined bomber of slower speed than the American B–29 but larger bomb capacity.

Meanwhile, the Royal Navy has been conducting experiments with jet fighters in collaboration with the British Ministry of Supply looking toward the complete elimination of aircraft undercarriage in shipboard operations. This is done through use of catapults and a new secret flexible flight deck.

Some Navy enthusiasts even foresee the disappearance of the orthodox aircraft carrier with its long flight deck in favor of new carriers of the future which would be less vulnerable to bombardment. They look even further ahead and predict that small teams will be able to set up mobile catapults and mattresslike "flexible flight decks" on land in a fraction of the time now necessary for the building of even small airships.

The Vampire was the world's first jet aircraft to land and take off from a carrier at sea. A slightly modified version of the aircraft called the Sea Vampire already is in operational service with the carriers of the Royal Navy.

In spite of the Sea Vampire's superior performance, Royal Navy scientists conducting the landing experiments believe that complete elimination of the aircraft's undercarriage will save approximately one-twentieth of the all-up weight. This gain, they point out, could be translated into improvements in range, ceiling, climb, or firepower.

Initial tests were made first with models and gliders to determine hitherto unknown details about landing fast jet fighters having no undercarriage. Later production-type Vampires were used on an experimental "flexible flight deck" constructed at Farnboro and later they were repeated on the flight deck of the Royal Navy carrier H. M. S. *Warrior*.

The carrier *Formidable* is being reconstructed to take the Royal Navy's most modern jet aircraft including designs still under development. The flight deck and other equipment of the carrier *Indomitable* has just been surveyed with a view to modernization, for despite the achievements of the R. A. F. in World War II the British discovered that a strong and modern navy air arm was a great asset in modern warfare also.

RADAR WALL, JETS, GUN CREWS

The master plan for defense of western Europe against the Soviet Air Force calls for a radar wall around all of the democratic nations, backed up by jet fighter squadrons and antiaircraft batteries.

The radar wall will extend more than 1,500 miles from the Baltic Sea across Europe and the Mediterranean Sea to the southern boundaries of French North Africa. It will include western Germany and as much of the nation as is in democratic hands when the wall becomes operational.

Each of the nations which signed the Atlantic Pact is expected to take part in the scheme eventually, although the initial plans were worked out by Great Britain, the Netherlands, Belgium, Luxemburg, and France. These countries plan to start constructing radar stations on their own territory before the end of 1949.

The major part of the electronics equipment under present plans will be manufactured by Britain and France, although some may come from the United States.

Cooperation for air defense measures among the nations of the so-called Western Union passed the planning stage last month when on request from the Belgian and Dutch chiefs of staff, the British War Office dispatched two heavy anticraft training teams to Europe. One went to Deventer, about 20 miles northeast of Arnheim in the Netherlands and the other to the Belgian Artillery School at Brasschaat, north of Antwerp, for instructional purposes.

Maj. Gen. C. W. E. Heath, commanding general of Number One Antiaircraft Group controlling the air defense of London, went with them. The request, incidentally, went through the Western Union defense committee's advance echelon headquarters at Fontainebleau near Paris.

Nearly all the nations of democratic western Europe now have chosen the British-designed De-Havilland Vampire or the Gloster Metcor as their standard jet interceptor. Quantity delivery of Gloster fighters and dual-control jet trainers for the Belgian air force is about to start.

France, which is making a considerable effort to become a first-ranking air power, already has received a small number of Vampires from the British Government.

This correspondent learned in France that the nationalized French aircraft company Societe Nationale de Constructions Aeronautiques du Sud-Est had just signed an agreement with the British deHavilland Co. to manufacture the Vampire under license in France.

One of the most interesting developments in aviation on the European Continent is the return of private enterprise to French aircraft manufacturing. Before World War II the entire industry was nationalized and had a poor production record during the crucial months before the fall of France.

Part of this failure was due directly to the sabotage of production by Communist workers during the period of the Hitler-Stalin pact. At this time official Marxist dialecticians were describing the fight of Britain and France against Nazi Germany as an imperialist war.

In the current post-war period which saw Communist ministers included in several French Cabinets, numerous Communist Party card holders wormed their way into positions of responsibility in the French aircraft industry.

A short time ago, while this correspondent still was in France, the government discharged nearly 300 aircraft industry workmen of the nationalized company S. N. C. A. du Nord. These men, all members of the Communist-directed General Confederation of Labor, appeared at a Paris airfield where a new jet fighter prototype manufactured by their company was being tested and vociferously attacked manufacture of weapons for the coming imperialist war.

Later the Government moved security troops into the company factory at Issy les Moulineaux. The 1,400 workers were advised that because of obvious and continued sabotage of combat aircraft construction the factory would be closed until further notice.

A bill has passed the French National Assembly which will allow the French Government to dispose of such parts of the nationalized aircraft industry as the Minister of National Defense designates. It is understood that the present middle-road French Government is anxious to close a large number of the nine nationalized and Communist-dominated aircraft plants in the Paris area.

The industry at present is still between 75- and 80-percent nationalized, but some of the outstanding new military aircraft prototypes are the products of private factories.

The French army of the air has a total effective personnel at present amounting to 73,000 men, Jean Moreau, the Air Minister and an old pilot, admitted to this correspondent that this is insufficient for bringing into being an air force strong and well organized in accord with the place which France and the French Union will occupy in the world of tomorrow.

Sweden is not a member of the Atlantic Pact but the cooperation between Sweden and Great Britain is much closer than is realized in the United States. Considerable numbers of British-built Vampires have been delivered to Sweden during the last 2 years and an unusual agreement has just been concluded. This will allow Svenska Flygmotor A. B. to build deHavilland Goblin jet engines at Trollhattan, send them to British duty-free for installation in Vampire fighters which then will be flown to the Swedish Air Force for delivery.

ONLY UNITED STATES CAPABLE OF HEAVY AIR ASSAULT ON RUSSIA

America's air power, in conjunction with the atom bomb, is providing the only real counterbalance in Europe to the strength of the Red air force.

Important elements of this air power include Air Force squadrons of very long-range bombers operating from bases on land, and Navy air units of very fast planes attached to carrier task forces capable of roaming almost at will the seven-tenths of the earth's surface which is water.

Britain's fast jet interceptors are beginning to gird western Europe defensively, together with radar and anti-aircraft batteries. It may be that in the unlikely event of war with the Soviet Union during the next 3 years these jet aircraft will be able to exact ruinous attrition from Red air force bombardment units.

British Hurricane fighters did that with Air Marshal Goering's invincible Luftwaffe in the Battle of Britain and actually halted the attack. But defense alone does not win modern wars. And admittedly only the United States at present can afford to produce in quantity the complex air weapons necessary to exploit by offensive bombardment several clearly defined weaknesses in the economic and military structure of the Soviet Union.

How formidable is the gantlet of Soviet fighter defenses which they would have to run? According to press association cables from Moscow, the Soviet Union demonstrated some jet fighter planes so fast that foreign observers who watched them streak past could not agree on their characteristics.

This description of dazzling speed would have been more impressive if the detail that the jet fighters flashed across Tushino Air Field at altitudes under 1,000 feet had not been added. At low altitudes even 100-horsepower light planes look fast, as promoters of midget airplane races in the United States discovered some time ago, and the noise is terrific.

The low-altitude flying act is not exactly a new trick in the repertoire of Soviet propaganda. Thirteen years ago on May Day, 1936, press dispatches from Moscow reported that an air fleet which included squadrons of four-engined bombers skimmed the spires of the Kremlin and then at low altitude roared over the crowd with such speed that few figures on the size of the fleet agreed.

The previous May Day, 1935, according to other cables, a formidable air armada of 700 military aircraft came across the Red Square "flying so low that they seemed in danger of clipping the czarist double eagles which still top the Kremlin towers." The cables added: "Speed of the aircraft * * * impressed foreign observers."

During World War II speed was one characteristic for which Soviet combat aircraft were not noted, and although Red Air Force ground-attack aircraft such as the IL-2 Stormovik performed well, Soviet four-engined bombers made only a few sporadic raids throughout the conflict. It would not be well to underestimate Soviet jet fighters, but it also is worth keeping in mind that air shows in the Red Square are not intended to provide data for objective foreign appraisals.

The most obvious weakness of the Soviet Union right now is oil. Air Marshal Goering sourly stated a truism growing out of bitter German experience when he told his Allied captors: "Without oil nobody can fight a war." After American and British strategic bombardment of German oil-supply sources, German panzer units were stranded for lack of fuel. Fighter units could fly only once a week in many cases because they lacked aviation gasoline.

At present the Soviet Union, which produces only one-eighth of the petroleum available to the United States by conservative estimates, is not well supplied with petroleum products for the nation's own economy.

The nations of western Europe are relatively oilless. In the event of a Red Army advance toward the English Channel, the Soviet Union would need large additional quantities to operate the area's transportation system and industry. Before World War II, crude petroleum produced in western Europe amounted to less than 2 percent of the area's total consumption.

New oil fields are being exploited under intensive pressure from Stalin in Siberia and in the huge square of land between the Volga River and the Ural Mountains northeast of Stalingrad. Considerably more than 50 percent of all Soviet petroleum still comes from the rich and concentrated oil fields at Baku on the Caspian Sea.

Until recently, at least, approximately 80 percent of all Soviet aviation gasoline was refined in the Baku area. This, incidentally, is within easy range of American B-29's and British Lincoln heavy bombers based in the Middle East.

To modify this situation, the Soviet Union has been making almost frantic attempts during the last 2 years to move all existing equipment from the German synthetic-oil plants in their zone of occupation to undisclosed areas deep inside Russia. For several years these could produce unaided only a portion of the fuel needs of the huge Red Air Force. Even if sufficient, the benefits of this production would depend on the efficiency of the Soviet transportation system.

Actually, the railroads of Soviet Russia are considered by Allied strategists to be highly vulnerable to air attack, even though there are few marshalling yards in the European sense. The Soviet Union, with, roughly, three times the land area of the United States, has less than one-third the railroad mileage.

Under war conditions, the Russian railway system would be under severe strain without any outside interference. Air bombardment would certainly intensify the strain.

Other high-priority targets in the Soviet Union after oil centers and communications probably would be (1) electric power stations, (2) Soviet aircraft engine factories, and (3) centers such as Moscow. (Besides being a ball-bearing and aircraft manufacturing city, Moscow is the location of many top Soviet air research and aeronautical engineering laboratories.)

The United States Air Force is within theoretical reach of some of the most important strategic targets in Soviet Russia through B-29 units operating from Britain and western Europe, the Middle East, Scandinavia, Okinawa, and several other points.

These attacks could be supplemented and possibly supplied with fighter escort from highly mobile air carrier task forces of the United States Navy. Chiefs of this service have disclosed that the new North American AJ-1 bomber is a plane designed specifically for carrying the atomic bomb.

The United States Air Force is building its future long-range strategy around the huge Convair B-36 with the idea of "conducting, if necessary, intercontinental warfare from bases inside the United States." Gen. Muir S. Fairchild, Deputy Chief of Staff of the Air Force, told this correspondent:

"There is discouraging evidence that the full significance of our widely discussed long-range weapons is seldom completely grasped. Our possession of some such aircraft already has made obsolete the old method of defense against air power which involved conquering or absorbing all possible base areas which would be useful for strategic attack. Now that air attack is possible from great distances to the heart of any major power, none can defend itself from such an attack by piece-meal conquest of other nations."

Whether or not the B-36 is as good as the Air Force claims it to be, this correspondent cannot say. It is beyond question, however, that any future war involving the United States would see major emphasis put on the strategic air offensive. The B-36 has been chosen by the Air Force as its basic future weapon until a better one can be built. Its use should enlarge the capacity of the Nation to destroy any enemy's will to resist.

Tax Freedom Day

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1950

Mr. PLUMLEY. Mr. Speaker, the editorial on Tax Freedom Day, which appeared in the Washington Times-Herald this morning, particularly interested me, so I went to work to find out what our friend the gentleman from Kansas [Mr. MEYER] said to his people. What he said deserves broader distribution than that covered by the columns of his local newspaper as evidenced by the attention paid to it by the editor of the Times-Herald and my own interest therein.

Under permission heretofore granted, I am inserting both the editorial on Tax Freedom Day and the letter to which it refers:

TAX FREEDOM DAY

Representative HERBERT MEYER, of Kansas, has just reported that he is putting all the weight of his office behind a proposal made by the Florida Retailers Association to set aside April 28 as a new national holiday—Tax Freedom Day.

GOOD REASON FOR CELEBRATING

"All of us," says MEYER, "work for the Government from January 1 to April 28 this year—for that proportion of your income goes to pay taxes. On April 28 you will be liberated to work for yourself and your family."

The good Congressman then went on to point out that even those who pay no income tax still get nicked by hidden taxes, such as the 78 different taxes on a quart of milk and the 151 taxes on a loaf of bread and the 201 taxes on a gallon of gasoline. Hidden taxes form one-third of all rent, food, clothing, and fuel costs.

We free Americans are now paying out 32 cents in taxes from every dollar we earn.

Let us by all means observe Tax Freedom Day—if only to commemorate the spirit of our ancestors who fought, bled, and died resisting foreign governments which sought to gain much less power over us than our own Government is grabbing for today.

VIEWING THE CONGRESSIONAL SCENE WITH CONGRESSMAN HERBERT A. (HUB) MEYER

The other day the Florida Retailers Association came up with what I think is an excellent idea. They suggested that April 28 be set aside as a new national holiday to celebrate Tax Freedom Day. You see, all of us, from January 1 to April 28 this year, work for the Government, for all the money you make goes just to pay taxes. On April 28 you will be liberated to work for yourself and your family.

Maybe you don't realize it, but 32 cents or nearly a third of every dollar you earn goes for taxes. Of that amount 21 cents are for hidden taxes, some of which I have told you about. Many people who pay no income tax are under the impression they pay no taxes at all. But the American Taxpayers' Association says this is a fool's paradise. You pay hidden taxes on everything. For instance, a man who earns $950 a year paid out $123.84 in hidden taxes, according to this organization. A man earning $1,800 a year paid out $243. Here is how you pay. There are 78 different taxes on a quart of milk; 151 taxes on a loaf of bread; 100 taxes on an egg; 125 taxes on a woman's cotton dress; 118 taxes on a man's suit of clothes; 154 taxes on a cake of soap; 201 taxes on a gallon of gasoline. Hidden taxes form one-third of all rent costs and one-third of what you pay on food, clothing, electricity, gas, rent, fuel, and other items of everyday living.

Wanting to know just how all of these taxes affected you good folks of the Third District, I asked a tax-research expert to figure out just what share of the colossal national debt of $263,800,000,000 which is anticipated at the end of the fiscal year 1951, is owed by the taxpayers of the nine counties comprising the Third District.

Now hold your hats! You'll have to after you see these figures. Your share of this debt is $455,405,100. Here it is, broken down into counties. This computation is based on population estimates as of January 1,

1949, and a per capita debt of $1,759. Chautauqua County will owe $13,896,100; Cherokee's share is $51,362,800; Cowley will owe $65,434,800; Elk County's share of this debt is $12,488,900; Crawford will be hit for $92,347,500; Labette comes up with $59,102,400; while Montgomery County's obligation runs to $88,829,500; Neosho Count,' is in the kitty for $41,336,500; and Wilson County's share is $30,606,600.

I venture to say you never realized that your shares in this tremendous debt ran into the millions.

But that isn't all so grab your hat again. The President has proposed a spending budget of $42,439,000,000 for 1951.

This tax expert broke down this figure for me to show what each county will be liable for in the 1951 proposed spending budget. He computed it on the consumer income figures in the district for 1948, since the spending power of the people will determine how much of this budget each community must pay.

Are you ready? Chautauqua County's share, based on consumer spending is $1,410,500; Cherokee is down for $4,421,700; Cowley's share is twice as much, amounting to $9,956,200; Crawford County would have to shell out $10,912,800; Elk County gets off easy with $1,264,000; Labette goes up to $7,481,800; Montgomery County has a whopper in $12,406,200; Neosho County gets by with only $5,588,200; and Wilson County comes up with $3,011,300.

Maybe you can get your mind off all this money you owe and your share of the national debt and the new spending program by spending a quiet evening at home reading such deathless prose which you can get for free but paid for by your tax money as Powdery Mildew of Ornamental Plants, Take Care of Household Rubber, and Food for Two, provided, of course, you have any money left to buy food for two.

Taxes have gone up 800 percent since 1941. You can hardly afford to live and if you die your friends have to pay taxes in order to bury you, for all you leave will be eaten up in Federal and State inheritance taxes and the balance due on your last income tax. "To be, or not to be," still is the question.

Revenue Revision

EXTENSION OF REMARKS

OF

HON. A. SIDNEY CAMP

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1950

Mr. CAMP. Mr. Speaker, I have introduced this morning a bill (H. R. 7738) providing for revenue revision and correction of many tax inequities to which I desire to call the attention of the Members of the House.

I have introduced this bill at the request of the section of taxation of the American Bar Association, and this bill represents long and tedious research and work of that section, and their work has been approved by the American Bar Association.

I feel that the views of these distinguished lawyers are worthy of our most serious thought and study, and while I may not concur in each and every item, I have read the bill and I do heartily concur in most of it. This bill, if finally passed, will not, in my opinion, affect the revenue to any great extent, but will remove many inequities that should have been corrected long ago.

Under unanimous consent to revise and extend my remarks in the Appendix of the RECORD, I include therein a full summarization and explanation of the bill prepared by the section of taxation.

SUMMARY EXPLANATION OF PROVISIONS OF H. R. 7738 AND H. R. 7825

These bills, introduced March 16, 1950, by Representative A. SIDNEY CAMP, of Georgia, and March 23, 1950, by Representative DANIEL A. REED, of New York, at the request of the American Bar Association, collect in an orderly fashion a number of proposed changes in the internal revenue laws recommended by the association.

The following statement is designed to set forth in summary the nature of each of the changes proposed by the bill and the reasons therefor.

TITLE I—INCOME TAXES

Section 101, taxable years affected: Except as otherwise expressly provided, all amendments made by this title shall be applicable to taxable years beginning after December 31, 1949.

Section 102, elimination of the life-insurance factor of pension trusts from taxable income of employees: Under the present law, if a plan provides retirement-income-insurance benefits together with death benefits, the employee receiving such protection is deemed to receive current taxable income measured by the cost of term life insurance in the amount provided during the year. The result is inconsistent with the long-standing rule to the effect that group-insurance benefits are not currently taxable to employees. The amounts are generally small and the administrative difficulties far outweigh the advantage in revenue to the Government. PS–58, promulgated January 30, 1947, and revised March 7, 1947, mitigates this burden somewhat, but does not cure the administrative nuisance, both to the Government and to employers and trustees, of treating the life-insurance factor as taxable income. The bar association proposes to eliminate the insurance factor of pension trusts from taxable income by an amendment to section 22 (b) of the Internal Revenue Code.

Section 103, extension to 75 days of the time within which taxpayer on accrual basis may contribute amounts to pension plan and secure deduction therefor on year of accrual: Under the present law, a taxpayer on an accrual basis cannot take a deduction for accrued amount of payments to a pension or profit-sharing plan unless actual payment is made within 60 days after the close of the taxable year of accrual. The bar association has recommended that section 23 (p) (1) (E) be amended so as to extend this time period to 75 days after the close of the taxable year. The payments under many plans are determinable only when the audited results of the year's operations are known, and often this is difficult to obtain within 60 days.

Section 104, union welfare trusts, deductibility of contributions: The enactment of the Taft-Hartley Act has brought into the limelight so-called union welfare funds, many of which provide pension or annuity benefits. It is understood that the Commissioner of Internal Revenue has taken the position that contributions by employers to such funds which provide such benefits are not deductible for income tax purposes unless they meet the requirements of section 23 (p) of the Internal Revenue Code, relating to conventional pension or annuity plans. The result of this position is to put in jeopardy the deduction of such contributions, since it will be difficult in most cases, if not impossible to meet the requirements of actuarial soundness applicable to deductions under section 23 (p). Accordingly, it is proposed to rectify the situation by making it clear that the deductibility of contributions to welfare trusts which meet the requirements of section 302 (c) (5) of the code, relating to ordinary and necessary business expenses. This is believed to be consonant with the intention of Congress, which could hardly have intended that the 1942 amendments to sections 23 (p) and 165 of the code should apply to these welfare trusts. This provision is made applicable to all taxable years beginning after December 31, 1941.

Section 105, pension and profit-sharing plans; extension of capital gains treatment to distributions made within 1 year on account of either the employee's separation from the service or death: Under the present law, if the total distributions payable under a qualified pension or profit-sharing plan are paid to the distributee within one taxable year of the distributee on account of the employee's separation from the service, the amount of such distribution is considered a capital gain to the extent that the amount exceeds the amounts contributed by the employee. This provision is a very desirable one because if, when an employee retires and receives a lump sum payment, he were taxed at ordinary income rates in 1 year on the total amount of distributions over what he has contributed, a large percentage of the amount he receives might be taken by the tax authorities. Subsection (b) of the bar association proposal would amend section 165 (b) of the code so as to extend capital gains treatment not only to situations where the payment is due to the employee's separation from the service, but also to situations where it is due to the employee's death after his separation from the service.

Subsection (a) is an amendment to section 22 (b) (2) (B), to extend the same capital gains treatment to nontrusteed plans. There seems no reason why, if the particular pension or profit-sharing plan of a corporation is set up on an annuity basis rather than on a trust basis, this technical distinction should mean a different method of taxation to the recipient of the payments.

This section would be applicable to all taxable years since 1941.

Section 106, pension plans for partnerships and individual proprietorships: Under existing law, partners and sole proprietors may not be included as beneficiaries under pension plans for their employees under section 165 of the code, although stockholders employed by their corporation are not so affected. The result is to discourage the establishment of such plans for the employees of business conducted in these forms, and to discriminate against employees of unincorporated business. Section 106 would amend section 165 of the code by providing that the sole proprietor or partner who performs personal services in the business shall be treated as an "employee" as well as an "employer" for the purposes of that section; that the part of his income from the business which is attributable to his services shall be deemed "compensation"; and that where both personal services and capital are material income-producing factors, the apportionment of income to services shall be made under regulations prescribed by the Commissioner.

Section 107, taxation of annuity payments: Under present law, annuity payments are treated as in part a nontaxable return of premiums, and the balance as taxable income. However, the formula used treats as taxable income all of the excess annual receipts over and above 3 percent of the amounts paid for the annuity. The result is that many annuitants are never able to recapture their outlay tax-free, while others, through such recapture, incur a sharp rise

in taxable income in the year following that in which the total cost has been recovered under this arbitrary formula.

The proposed amendment substitutes a constant yearly exclusion for the life of the annuitant. If he lives out his exact life expectancy, he will recover tax-free exactly the cost of the annuity. If he lives beyond such expectancy, he will recover tax-free more than his premiums paid; if he dies before the expiration of such expectancy, he will recover less. However, on the average, the results are equitable in that the revenues will not be reduced, and the annuitant's taxable income from this source will be constant.

Section 108, cancellation of indebtedness: Section 22 (b) (a) of the code permits a corporation in certain situations to elect to exclude from gross income the income which would otherwise be taxable to it upon the cancellation of indebtedness, on condition that the basis of its property under section 113 be correspondingly reduced. This provision, in situations to which it applies, relieves hardship by deferring an additional tax burden upon a taxpayer already embarrassed financially. However, the provision is a temporary one, not applicable to cancellations of debt occurring after December 31, 1949; the election to get its benefits must be made at the time the return is filed, it does not apply to noncorporate taxpayers, and it does not apply unless the cancelled debt was evidenced by a security as therein defined.

Section 108 would make the provision a permanent part of the code; would extend the period of election until the expiration of the period for filing a claim for refund; would make the provision applicable to all taxpayers; and would eliminate the requirement that the debt be evidenced by a security. The reason for extending the date for election is that there is great uncertainty under the decisions (Cf. *Helvering* v. *American Dental Co.* (318 U. S. 322) and *Commissioner* v. *Jacobson* (336 U. S. 28)) as to when cancellation of debt results in taxable income to the debtor, and the taxpayer is often unable to determine what action to take at the time the return is filed.

Section 109, last-in-first-out inventory: Subsection (a) gives the Commissioner of Internal Revenue discretion (which he does not now have) in determining when the taxpayer must exercise the election under the involuntary liquidation and replacement provisions as to elective inventories contained in section 22 (d) (6) of the Internal Revenue Code, so that it will be possible for him to provide relief in cases of hardship where the necessary election has not been made within the period prescribed by the statute.

In cases where, upon replacement of elective inventories involuntarily liquidated, deficiencies or refunds are determined for the year of involuntary liquidation, the present law provides that no interest is payable on such deficiencies or refunds. Subsection (b) provides for interest on such deficiencies from January 1, 1948, or from the date for the payment of the tax for the year of replacement, whichever is later; and provides for interest on such refunds from January 1, 1948, or from the date of filing of the claim for refund, whichever is later.

Section 110, alimony paid under separation agreement: Under sections 22 (k) and 171 (a) of the Code, amounts paid in accordance with the terms of a separation agreement between husband and wife, where they are not legally divorced or separated under court decree, are not deductible by the husband or taxable to the wife. With the privilege of splitting income introduced by the Revenue Act of 1948, which is open to all married couples not separated under a court decree, it is believed that where separate returns are filed, amounts paid under separation agreements should be deductible by the husband and taxable to the wife, even though they are not legally separated under court decree. The proposed amendment is to that effect although it should be noted that the husband and wife who are thus separated may, at their option, file a joint return, in which event the recommended change would become inapplicable.

Section 111, deduction of worthless stock loss in case of affiliated corporation: This section amends section 23 (g) (4) (B) of the Internal Revenue Code to remove an apparently unintended discrimination.

Section 23 (g) (4) provides that a corporation may deduct as an ordinary loss the loss on worthless stock in an affiliated corporation. In defining what is an affiliate for purposes of that paragraph, section 23 (g) (4) (B) provides that a corporation shall not be deemed to be an affiliate with the taxpayer unless more than 90 percent of the aggregate of its gross income for all years has been from sources other than royalties, rents, dividends, interest annuities, or gains from securities transactions. The limitation was put into the statute in order to exclude holding companies from the benefits of section 23 (g) (4), but as now worded the law inadvertently excludes a number of operating companies, such as banks and investment companies, just because much of their income is derived from rents, interest, or the like. The proposed amendment would extend the benefits of section 23 (g) (4) to losses on the stock of corporations "actively engaged in a trade or business," whatever the source of their income.

Section 112, extension of business-bad-debt reduction: Under existing law a distinction is made between business bad debts and nonbusiness bad debts. The distinction is important because the former are deductible in full and the latter (in the case of a taxpayer other than a corporation) are treated as short-term capital losses which are deductible only against capital gains plus not more than $1,000 of ordinary income. The nonbusiness bad debt is so defined under existing law as to include true business debts which do not become worthless until after the taxpayer has terminated his business. Since it is manifestly unfair to distinguish in this manner between business debts which become worthless while the business is still in operation and those which become worthless at a later date, section 112 amends the definition of a nonbusiness bad debt so as to exclude a debt arising in the course of the taxpayer's trade or business.

Section 113, change of election with respect to standard deduction: Existing law permits the individual income taxpayer to elect to take a standard deduction instead of itemizing his deductions. This election must be made on the tax return in a manner prescribed by regulations. An election so made is irrevocable. This provision has worked unjustly for taxpayers who find subsequently that they have acted unwisely or whose correct taxable income is subsequently found to be different from that on the return. Section 113 permits the taxpayer to change an election with respect to the standard deductions for any taxable year within the period of the statute of limitations. Such change must be made under regulations to be prescribed by the Commissioner with the approval of the Secretary.

Section 114, wages paid to dependents: Under existing law a taxpayer is permitted to claim a deduction under the income tax for wages paid by him to a person who is a dependent and for whom the taxpayer claims an exemption. Since these wages reduce the extent of the recipient's dependency, it is undesirable to allow the deduction while also allowing the dependency credit. Section 114 disallows the deduction of wages paid to persons who are dependents of the taxpayer.

Section 115, unpaid expenses and interest, related taxpayers: Section 24 (c) of the code was passed at the request of the Treasury to eliminate a great inequity against the Government. Prior to that act, corporate taxpayers would be permitted deductions on the accrual basis for amounts of salaries or interest or the like accrued to related taxpayers, but the related taxpayers (being on the cash basis) might delay for a long time paying or might never pay a tax on the income. Despite the clear purpose of section 24 (c) which was simply to correct the injustice against the Government which was previously possible, the Bureau of Internal Revenue has with success applied that section even to cases where the related taxpayer, although on the cash basis, is actually taxed upon the accrued item upon a theory of constructive receipt. See *Lake* v. *Commissioner* (148 F. (2d) 898). Section 115 of the bill would amend section 24 (c) so as to provide that, if the recipient of income is actually taxed on the income, whether or not received by him, the deduction will be allowed to the related taxpayer.

Section 116, credit for dividends received: Under existing law, section 26 (b) of the Internal Revenue Code limits the dividends received credit to 85 percent of the amount received as dividends from domestic corporations which are subject to income taxation. This credit is not extended to resident foreign corporations having substantial income from sources within the United States. Such resident foreign corporations are frequently owned by domestic corporations with the result that, although the foreign corporation is subjected to the regular 38 percent normal and surtax rates with respect to its earnings from the United States sources, dividends to the parent domestic corporation do not furnish a basis for the dividends received credit otherwise afforded similarly owned domestic corporations. The proposed amendment will remedy that situation by extending such credit, with what are believed to be appropriate limitations.

Section 117, installment sales: Section 44 (b) permits use of the installment method, in the case of sales of realty and casual sales of personalty, only where the payments during the taxable year in which the sale is made are less than 30 percent of the selling price. Where no payments at all are received in the initial period, the Treasury holds that the conditions are not met and the installment method may not be used. The proposed amendment would avoid this interpretation and would permit application of the installment sales provisions where no part of the selling price is received during the taxable year.

Section 118, installment obligations: This section extends to the estate or beneficiary of a decedent who has elected to report income from installment obligations upon the installment basis a deduction for that portion of the estate tax which was imposed upon the value of such obligations, where the executor or beneficiary makes a similar election.

Section 119, taxable years of approximately 12 months: This section gives specific legal sanction to the practice of authorizing the use of a 52-week or 53-week year for the purpose of reporting for the income tax.

Section 120, service rendered for a period of 36 months or more: Existing law provides that if at least 80 percent of the total compensation for personal services covering a period of 36 calendar months or more is received or accrued in a single taxable year by an individual or partnership, the tax may be calculated as if the income had been received ratably over the period, prior to such receipt or accrual, in which the services were performed. The relief provided by this averaging device is limited specifically to cases where compensation has been received in a single year for at least 80 percent of a complete task. Relief is denied in situations

where an individual is employed continuously for long periods but receives portions of his compensation for the work in lump sums at infrequent intervals. Section 120 extends averaging treatment to cases in which 80 percent of the total compensation for work done to date over a period of 36 months or more is received or accrued in a single taxable year. This provision is made retroactive to taxable years beginning after December 31, 1941.

Section 121, election as to recognition of gain in certain corporate liquidations: Many corporations having no substantial accumulations of earnings and profits nevertheless hold real estate or unlisted corporate securities not readily marketable but considerably appreciated in value. Several times Congress has passed temporary legislation to permit such corporations to be liquidated under certain circumstances without adverse effects upon the stockholders; that is, by taxing to the individual stockholder as ordinary income only that part of the distribution which represents accumulated earnings, the remainder being treated as a capital gain, but excluding from tax the unrealized appreciation in value of assets, that gain being postponed until the stockholder sells such assets. See section 112 (b) (7) of the code. Section 127 of H. R. 6712, the revenue revision bill of 1948, would have again provided for such treatment but only for liquidations occurring within some one calendar month in 1949. It is felt that the purpose accomplished generally by this type of legislation is beneficial to the public; and, if this is true, it should not be limited to a single short period. The proposed amendment would make permanent in the Internal Revenue Code the temporary provision of section 127 of H. R. 6712.

Section 122, gain or loss in connection with certain corporate liquidations: Under existing law, if a corporation is liquidated by distributing its assets to its stockholders, no tax is imposed on the corporation on any appreciation in the value of the assets over their adjusted basis (or cost) to the corporation. As far as the stockholders are concerned, any excess of the value of such assets over the cost or other basis of the stock is taxed as capital gains.

On the other hand, if the corporation sells its assets just prior to liquidation, a tax is imposed on the corporation, and when the proceeds are distributed to the stockholders another tax may be imposed on them. In a great many cases disputes have arisen between the Government and the taxpayer as to whether a sale was made by a corporation or its shareholders. The problem first went to the Supreme Court in the *Court Holding Company case* (324 U. S. 331 (1945)), and again in the *Cumberland Public Service Company* case, decided January 9, 1950, where the Court said: "The oddities in tax consequences that emerge from the tax provisions here controlling appear to be inherent in the present tax pattern. * * * Congress having determined that different tax consequences shall flow from different methods by which the shareholders of a closely held corporation may dispose of corporate property, we accept its mandate."

Section 122 provides that if a corporation sells its assets just prior to liquidation, no gain or loss shall be recognized to the corporation. It contains safeguard provisions against liquidation being used as a device for paying at capital gain rates on sales in the normal course of trade.

Section 123, stock dividends: As the result of recent Treasury Department rulings, the receipt by a taxpayer of preferred stock tax-free as a stock dividend or in a corporate reorganization depends not only upon whether the dividend is in form a tax-free stock dividend or the reorganization is in form a tax-free reorganization, but also upon whether the preferred stock so received is sold by the receiving stockholder or whether it is subject to redemption under sinking fund provisions or by reason of an agreement that the stock may otherwise be redeemed by the corporation in whole or in part. This Treasury attitude makes uncertain the previously well-established law as to tax-free stock dividends and as to the tax-free status of stock received in exchanges under section 112 (b) (3) of the Internal Revenue Code. This uncertainty is hampering many legitimate transactions which should be consummated.

The effect of the proposed amendments is to state explicitly what is deemed to be declaratory of existing law, namely, that the effect of the tax-free character of a corporate distribution of stock should not be lost merely because the stockholder sells or intends to sell his new securities or that the new securities are subject to a sinking fund provision of reasonable length fixed with reference to assuring the marketability of the stock or that the stock is subject to redemption, in whole or in part, at the option of the issuing corporation. The proposed amendments also include a provision that would close any loophole that may exist by reason of a taxpayer entering into a tax-avoidance plan to receive a tax-free distribution of stock, sell the stock, and then to have the stock redeemed in the hands of the purchaser.

Section 124, involuntary conversion: Section 112 (f) of the Internal Revenue Code postpones the taxation of profits realized in involuntary conversions where similar properties are acquired to replace those converted. The present statute has been construed to limit the relief to situations where the specific funds received on the involuntary conversion can be traced into similar property. It is often necessary to replace the property before the proceeds of the involuntary conversion are actually in the hands of the taxpayer. Section 124 of the bill amends section 112 (f) so as to provide that it is immaterial whether the money into which such property has been converted is expended directly in the acquisition of other similar property or whether it is used to replace funds already expended by the taxpayer in such acquisition.

Section 125, definition of reorganization: This section provides that section 112 (g) of the Internal Revenue Code (relating to recognition of gain or loss in corporate reorganizations) be amended so as to provide that no gain or loss shall be recognized where assets exchanged solely for stock are transferred to a corporation which is a wholly owned subsidiary of the corporation from which the stock is received. Under the present definition of "reorganization" in section 112, as construed by the courts, a reorganization which would in all other respects be nontaxable may be made taxable if the assets transferred in exchange for stock are transferred not to the corporation issuing the stock but to a subsidiary of that corporation. The nature of the interest of the corporation transferring the assets and the nature of the interest of the corporation issuing the stock in return therefor are substantially the same whether the assets are transferred directly to the corporation which issues the stock or to a subsidiary of that corporation.

Section 126, distribution of stock on reorganization: This section of the bill provides for the nonrecognition of gain from the receipt of stock in certain corporate reorganizations known as "spin-offs." A typical "spin-off" occurs where a part of the assets of the corporation is transferred to a new corporation in exchange for all the stock of the new corporation which is thereupon distributed to the stockholders of the original corporation without the surrender by them of any of the stock of the original corporation.

A similar provision was contained in section 112 (g) of the Revenue Act of 1932 and prior acts but this was omitted in the Revenue Act of 1934 because the decision of the Board of Tax Appeals in *Evelyn F. Gregory* (27 B. T. A. 223 (1932)) indicated that such provision might be subject to abuse and held to apply to what was regarded as in substance the distribution of a dividend. The reversal of that decision in 69 F. (2d) 809 (CCA2, 1934), affirmed 293 U. S. 465 (1935), removed the danger of such abuse. Judicial and administrative interpretation of the law since 1934 has established safeguards which now prevent such abuse of the reorganization provisions. It is proposed to restore this provision to the law because it is believed that it is economically unsound to impede reorganizations which divide one corporate enterprise into a greater number of corporate enterprises where such division is undertaken for legitimate business purposes and is not a mere device for the distribution of a dividend. Where stock of a new corporation is distributed without the surrender of stock of the old corporation, the result is identical, in substance, with transactions in which stock of the new corporation is distributed in exchange for the surrender of either all or a portion of the stock of the old corporation—transactions which give rise to no recognized gain under present law. It is not intended to change the existing law as to such transactions but to amend the law so as to permit in the future the same substantial result to be accomplished with the same tax consequences by a "spin-off" reorganization, all three types of reorganizations being subject to the general limitations embodied in the Gregory case and subsequent decisions based thereon.

Section 127, basis of property included in decedent's estate: Under the present law, if property passes by virtue of a decedent's will or inheritance from him, the income-tax basis for such property in the hands of his estate, devisee or heir, becomes the value at the date of death (or such other valuation date as is used for estate tax purposes). With two minor qualifications, the foregoing rule does not apply to property transferred inter vivos by a decedent even though such property may be includible in his gross estate for estate tax purposes, as, for example, property transferred in contemplation of death. The proposed amendment would change the law so that if property were transferred either inter vivos, or by reason of the decedent's death, and if such property were includible in his gross estate for estate tax purposes, the income tax basis of such property would become, after his death, its value on the date of death (or other applicable valuation date).

Section 128, adjustment of basis for depreciation: This section amends section 113 (b) (1) (B) of the Internal Revenue Code and prior revenue laws to mitigate the effect of the Supreme Court's decision in the case of *Virginian Hotel Corporation* v. *Commissioner* (319 U. S. 523 (1943)). Section 113 requires that the original cost or other basis of property be adjusted to reflect depreciation and depletion sustained since the property was acquired. In 1932 the provision was amended to require the deduction of depreciation "allowed" where it was in excess of the depreciation "allowable." The amendment was made at the request of the Treasury, and the legislative history of the amendment shows very clearly that the sole purpose of the provision was to cover a situation where the excessive depreciation resulted in reducing the taxes collected by the Government in a year which had become barred, so that if the excessive depreciation were restored the taxpayer would in effect be getting a double deduction against the Government. However, the Court in the Virginian Hotel case reached an incongruous and inequitable result. That deci-

sion prevents a taxpayer from correcting a prior erroneous depreciation figure, even when the Government has not been injured by the error. Section 128 would correct this situation in a manner similar to that proposed in H. R. 1104 introduced in the Eightieth Congress, first session. The amendment, in line with the otherwise universal practice of the Federal income tax statutes from 1913 to date, would permit a taxpayer to compute the taxes for any year on a correct basis, without regard to any error in prior years, so long as the error did not deprive the Government of taxes to which it was entitled.

Section 129, redemption of corporate stock in decedent's estate: Difficulty has been experienced by decedents' estates in providing money with which to pay Federal estate taxes and State inheritance taxes where the assets of the estate include stock of a closely held corporation. Stock and securities of that character are quite often difficult, if not impossible, to sell at a price approximating the value determined in fixing the Federal estate tax. A possible source of funds for that purpose is the sale of the stock to the issuing corporation, or the retirement of the stock if it is preferred or redeemable stock. Concern has been expressed, however, that in many such cases the redemption or purchase of the stock (unless the estate's entire holding is so disposed of) will be treated as a dividend, subject to income tax, under the provisions of section 115 (g), which taxes as a dividend distributions in cancellation or redemption of stock that are considered to be essentially equivalent to the distribution of a taxable dividend. To provide liquidity in this respect the proposed amendment makes section 115 (g) inapplicable to such distributions with the proviso that the stock must be subject to the Federal estate tax and with the limitation that section 115 (g) will be inapplicable only to the extent of the amount of death taxes to which the estate is subject.

SEC. 130, retirement of bonds: Section 117 (f) provides capital gain treatment for the redemption of bonds and similar securities in registered or coupon form, although the gain from payment of other evidences of indebtedness is ordinary income. Under the present law, it is possible to convert ordinary evidence of indebtedness into bonds and similar securities without gain or loss and the gain from the redemption thereof will be treated as a capital gain. The Treasury complained that ordinary income could thus be converted into capital gain merely by changing the type of the evidence of indebtedness and in order to prevent this practice H. R. 6712, the tax revision bill of 1948, contained a provision to the effect that capital gain would result in such cases only where the evidence of indebtedness was originally issued in coupon or registered form. It is believed that the purpose sought to be accomplished by this proposal was proper but that it was too extreme. Assets of a character which give rise to capital gain need only be held 6 months under section 117, and the proposed amendment provides capital gain treatment where the conversion occurred 6 months or more prior to the redemption.

Section 131, holding period for capital assets: Under existing law, it has been held (*Commissioner* v. *Gracey* (159 F. (2d) 324)) that if a noncapital asset is exchanged for a capital asset, the holding period for the former may be tacked on to the holding period for the latter for purposes of deciding whether the capital gain is long term or short term. This construction offers a loophole for tax avoidance, and the proposed section closes this loophole by preventing such a tacking on.

Section 132, capital gains upon maturity or surrender of insurance policy: Under the present law, amounts received upon the maturity of an endowment policy or the surrender of a life-insurance policy during the lifetime of the insured are treated as ordinary income. In practical effect, the present system amounts to the taxation in a single year of income that was actually accumulated over a period of many years, and the result is that the recipient may be taxed at a considerably higher rate than that at which he would have been taxed if the net gain had been paid out to him over the life of the policy in the form of distributed earnings. Section 132 of the present bill would eliminate this harshness by amending section 117 of the code so as to extend capital gains treatment to such situations.

Section 133, unlimited deduction for charitable contributions: This is merely a technical amendment correcting an error made in the current Tax Payment Act of 1943.

Existing law waives the 15 percent limitation on allowable charitable deductions of individuals in cases where, for 10 successive years, the contributions of the individual, plus his income taxes paid during the year with respect to preceding years, exceed 90 percent of his net income. However, under the current tax payment system taxes are paid with respect to the current taxable year rather than the preceding year. The current Tax Payment Act failed to make an essential amendment of section 120 of the Internal Revenue Code to provide that the 90 percent limitation applies also to taxes paid with respect to the current year. This amendment, therefore, is retroactive to taxable years beginning after December 31, 1942.

Section 134, net operating loss deduction: The present law permits a corporation, but not an individual, to include in the computation of a net operating loss carry-back or carry-over losses arising from the sale of property used in a trade or business. The proposed amendment is intended to accord to individuals the same privilege now granted to corporations.

Section 135, refunds based on foreign tax credit: Section 131 (c) of the Internal Revenue Code permits the Commissioner, without any time limitation, to assert additional tax for prior years resulting from any claim of foreign tax credit in excess of the foreign tax which is ultimately paid by the taxpayer. However, if the amount of credit claimed under section 131 for foreign taxes is less than the amount ultimately paid, and if the statute of limitations for filing refund claims has expired under section 322 of the Code at the time that the additional foreign taxes are finally determined, the taxpayer is barred by the statute of limitations from securing a refund of United States taxes paid for the earlier year because of his not having claimed a sufficient amount of foreign tax credit. In other words, the assessment of additional United States taxes is never barred, whereas the refund of United States taxes is barred within the customary periods in section 322.

The proposed revision affords parallel treatment in the two instances referred to, providing equality to taxpayers with respect to the treatment of such foreign tax credits.

Section 136, accrual of foreign taxes: Under present rulings, credits for foreign taxes are not allowable to accrual-basis taxpayers until the final determination of controversies abroad with reference to such foreign taxes. Delay in such foreign determination often results in the taxpayer's loss of any substantial benefit of the credit, because of reduction or elimination of foreign income in the later year and the resultant credit restriction under section 131 (b) of the code.

The proposed amendment authorizes the computation of such foreign-tax credits under the rule of accrual in the year with respect to which the tax is imposed.

Section 137, taxation of the income of estates and trusts: Under the law as it existed prior to 1942, the income of many trusts was wholly or partly taxable to the trust rather than the beneficiary, although the income was actually distributed to the beneficiary. To prevent this form of tax avoidance, Congress adopted in the Revenue Act of 1942 a very complicated set of rules for the determination of distributable income. Two of these rules, known as the 65-day and 12-month rules, require the computation of trust income for arbitrary periods of time, and have proved unduly burdensome and difficult to apply.

The proposed amendment will eliminate these highly technical rules without reopening the loophole for tax avoidance which Congress sought to abolish in the 1942 act. This is accomplished by taxing to the beneficiary any distribution from a trust, provided the amount of this distribution does not exceed the amount of net income realized by the trust by the end of its taxable year.

The amendment limits the amounts includible in the income of the beneficiaries to the net income of the estate or trust, thus abrogating the rules of the *Johnston* v. *Helvering* (141 F. (2d) 208), and *McCullough* v. *Commissioner* (153 F. (2d) 345). The amendment is intended to provide that income shall retain its character and identity in the hands of the beneficiary, thus making it clear that the estate or trust is a conduit of property passing through it to a beneficiary.

The proposed amendment also clarifies the law relating to the ultimate tax on items such as capital gains which are taxable as gross income under Federal tax law, but are treated as items of principal under State law. Such items under the proposed amendment will remain taxable to the fiduciary unless the will or trust instrument specifically provides for their distribution to a beneficiary.

Section 138, income of discretionary insurance trusts: This section of the bill provides that section 167 (c) of the Internal Revenue Code relating to the taxation of income of insurance trusts to the grantor, be amended so as to tax the grantor only to the extent that trust income is actually used to pay premiums on insurance policies on his life. This would bring the taxation of insurance trusts in line with the present taxation of maintenance trusts as to which, since 1943, it has been provided that the grantor will be taxed only to the extent that trust income is actually used for the support or maintenance of persons he is obligated to support.

Section 139, statute of limitations in case of failure to file return: There is presently no statute of limitations where no return was filed, however innocently. The proposed amendment would provide a 6-year statute of limitations (which is double the normal period) where the failure to file a return was not due to fraudulent intent. In the absence of fraud, the reasons underlying the policy of repose in other fields appear equally applicable to tax liabilities.

Section 140, statute of limitations where failure to file return results from commissioner's ruling: Under the present law, where a taxpayer files no return, there is no period of limitations upon the assessment of additional taxes even though, in failing to file a return, the taxpayer relied upon rulings of the Commissioner of Internal Revenue. Where the commissioner's rulings, at the time a return would otherwise be due, are to the effect that no return is necessary, the normal period of limitations should operate just as though a return had been filed, and this section would so provide.

Section 141, penalty for failure to file return: Under this section, the provisions of the income tax law relating to penalties for failure to file returns would be amended by liberalizing the conditions under which no penalty is applicable and by vesting in the Commissioner discretion to reduce or remit

penalties in proper circumstances. Under the present law, penalties are not imposed if failure to file is due to reasonable cause, but the courts have defined those words so strictly that in many cases the section works great hardship. This section proposes to eliminate this harshness by an amendment to section 291 of the Internal Revenue Code, and to eliminate a parallel harshness now contained in section 506 (f) of the Internal Revenue Code which denies a deficiency dividend credit to a personal holding company if there is a finding that any part of the deficiency is due to a failure to file the return on time, unless such failure is due to reasonable cause. The principal changes are (a) to provide specifically that if the failure to file results from the belief, founded upon a reasonable basis that no return is required, this shall be deemed reasonable cause and (b) to give the commissioner authority to abate, reduce, or refund the penalty, as he deems proper under the circumstances.

Section 142, period of limitations on claims against transferees: Under existing law, the Commissioner is given 3 years in which to assess income taxes against the taxpayer. If the taxpayer has transferred his assets without consideration, the Commissioner is given an additional year to assess against the transferee. Where, however, the Commissioner has done nothing within the 3 years and the taxpayer thereafter transfers his assets, there seems to be no reason to allow him to revive his dead claim by assessment against the transferee, and the proposed section would specifically prohibit him from doing so.

Section 143, transferee not bound, in absence of timely notice, by determination against transferor: The law provides generally that if assets of a transferor are transferred to another, the transferee, under the trust fund doctrine, shall be responsible for such taxes as may be held to be owed by the transferor. Under the present law, it frequently happens that after such transfer the Commissioner will issue a deficiency notice to the transferor without notifying the transferee against whom the tax will ultimately be assessed. In such cases, as in the case of a dissolved corporation, a petition may be filed by former officers who have no real interest in the liability and the decision may be rendered that the tax is due by the transferor. In a number of decisions it has been held that such a decision against the transferor is binding on the transferee regardless of the fact that such transferee has not had any opportunity to defend himself. Thus, the transferee may never have his day in court.

The proposed amendment provides that no decision rendered against the transferor after the transfer of assets shall be binding upon the transferee unless said transferee shall have been given personal notice of liability and a full opportunity to appear and be heard in said previous proceeding.

Section 144, limitation on refunds in case of waivers: Section 322 (b) (3) of the Internal Revenue Code was inserted therein by section 169 of the Revenue Act of 1942. Section 509 (a) of the Revenue Act of 1943 gave this subsection retroactive effect. The stated purpose of section 322 (b) (3) was to extend the period within which claims for refund might be filed in cases where a waiver of the statute of limitations is given, by permitting such claims be filed at any time within 6 months after the expiration of the waiver. However, according to the interpretation placed upon these amendments by the Treasury Department, they have the effect of cutting down the usual 2-year period after payment within which claims may be filed, in any case where the waiver expires more than 6 months before the expiration of such 2-year period. The provisions of these amendments are quite complicated and, if the Treasury Department's construction is correct, have served as a trap to lull taxpayers into the belief that they would continue to have the right to file claim at any time within 2 years after payment. The amendment here proposed would have the effect in all cases of permitting a claim for refund at any time within 2 years after the payment of the tax.

Section 145, limitation period in certain cases before the Tax Court: By reason of uncertainties frequently existing as to the year for determining the deductibility of a bad debt or of a worthless security, the Revenue Act of 1942 provided a special 7-year period of limitations within which to claim refunds or credits attributable to the allowance of deductions for such items. This was accomplished by the insertion of section 322 (b) (5) in the Internal Revenue Code. This section (as amended by section 504 of the 1943 act) is applicable to years beginning after December 31, 1937.

Under section 322 (d) of the code, this special 7-year statute of limitations is made applicable to proceedings in the Tax Court but that section in this respect was made applicable only to years beginning after December 31, 1942. It thus happens that in certain proceedings before the Tax Court, the 7-year statute is inapplicable to years ending before December 31, 1942, although the taxpayer, had he not filed a petition with the Tax Court, would be at liberty to file a claim for refund and, if necessary, prosecute the refund in other courts. The proposed amendment would make the 7-year statute applicable in all such proceedings.

Section 146, extension of period for refund in case of waiver by transferee: Under existing law, both the taxpayer and his transferee may agree in writing with the Commissioner to extend the period of limitation for assessment of the tax. If the taxpayer does so, his time for claiming a refund of overpayment is correspondingly extended. However (probably due to a legislative oversight), such an extension of transferee liability under existing law does not extend the transferee's period for claiming a refund of an erroneous payment. The proposed amendment would remove this discrimination and give the transferee a similar extension of time.

Section 147, exemption of personal holding company classification of corporation joining in consolidated return: Under the Revenue Act of 1942, a personal holding company not filing a consolidated return was subject to personal holding company tax but not to excess-profits tax. When the 1942 act extended the privilege of filing consolidated returns to affiliated corporations generally, it provided that if an affiliated group wished to file a consolidated return all of the corporations in the group, including any affiliated personal holding company, must join in the return. The bar association believes that it was not the intention of Congress that a holding company in such circumstances should be subject to both the personal holding company tax and the excess-profits tax, and has recommended an amendment to section 501 (b) of the code which would exempt such corporations from the personal holding company classification. Section 131 of the Revenue Act of 1943 changed this rule for the later years of the excess-profits tax (See S. Rept. No. 627, 78th Cong., 1st sess., p. 64), and, of course, the bar association recommendation has no application to years after the elimination of the excess-profits tax. The recommendation applies only to correct inequities done in 1942 and 1943.

Section 148, family partnerships: This section would clarify the tax status of so-called family partnerships. This subject has become greatly confused by judicial decisions which have departed from the otherwise generally recognized principle that the income from donated or purchased property is taxable to the donee or purchaser of that property. The amendment proposed to section 3797 is somewhat longer and more detailed than might be wished, but this detailed treatment seems necessary in order to safeguard the Government's interest and prevent family partnerships from being used as a device to avoid taxes on the income from personal services of one member of the family. Under the proposed amendment, a partner who has contributed capital to the partnership must be recognized as a partner, even though he acquired that capital by gift. On the other hand, if the gift was made by a member of the donee's family, who continues as a partner, the proportion of the donee's interest in the partnership income must bear the same ratio to his capital as that of the donor; if in excess of that ratio, the excess would be taxed to the donor. In such a situation, it is also provided that, if the partnership agreement does not provide for a reasonable allowance for personal services rendered by the donor, a reasonable amount shall be attributed to such services, taxed to the donor and deducted from the taxable share of the donee of the partnership interest.

Section 149, mitigation of statute of limitations: The present section 3801 includes provisions dealing with certain situations in which one taxpayer is taxed on an item of income which has previously been erroneously taxed to another taxpayer, and is designed to avoid the Government's keeping both levies. As it stands now, however, such remedial effect does not apply except where the taxpayer who erroneously reported the income was, at the time of the erroneous reporting, related to the taxpayer who correctly reported the item of income, as (A) husband and wife, (B) grantor and fiduciary, (C) grantor and beneficiary, (D) fiduciary and beneficiary, legatee, or heir, (E) decedent and decedent's estate, or (F) partner.

The proposed amendment eliminates the requirement of relationship, so that if an item of income is taxed to any taxpayer, any other taxpayer who has already paid income taxes on the item will be entitled to a refund of such income taxes.

Section 150, net operating losses allowable to transferors and transferees in nontaxable reorganizations: Where there is a continuity of proprietorship in corporate reorganizations so that gain or loss on such transactions are not recognized for tax purposes, the nontax-recognized transaction should not establish a bar to the normal net loss carry-over and carry-back or the excess profits credit carry-over adjustments. Basis for assets and statutory invested capital are frozen in these transactions, and the successor is for all practical purposes indistinguishable from its transferor. Section 150 of the bill would permit the treatment of net loss carry-overs consistently with this identity, and section 192 would extend similar treatment to the excess profits credit carry-over.

Section 151, interest on deficiencies offset by overpayments for same year: In cases where there is an overpayment of excess profits tax and resulting underpayment of income tax, or vice versa, the taxing authorities charge interest on the entire underpayment from the due date of the return, but credit interest on the entire overpayment, only from the date it was paid, which may be the date of the last installment. Since the underpayment could have been paid in installments if it had been paid on time and since the amount of each installment of the overpaid tax was greater than was legally due, it is only fair to the taxpayer to set off the overpayment against the underpayment and charge or credit interest on the balance. However, present law does not permit this. The section proposal would require it.

Section 152, tax treatment upon death of partner: Partnership agreements often provide for payment of specified amounts of future partnership income to the estate or widow of a deceased partner. Such pro-

visions are designed to produce roughly the equivalent of the decedent's interest in the assets, including his share of income earned by the partnership but not received or accrued at death. The tax status of such payments is uncertain under existing law. In some cases such payments have been taxed as income to the surviving partners and to the estate or widow of the deceased partner.

Section 152 excludes amounts so distributed from the distributive share of the surviving partners, except that this rule does not apply to that portion of the distributions which represents payments for decedent's interest in tangible and other assets of the partnership which have an adjusted basis in excess of zero. Amounts so excluded from income of the survivors are treated as income of the estate or widow of the decedent in the year received.

Section 153, gain or loss on sale or exchange of residence: Under existing law a gain realized upon the sale or exchange of a taxpayer's personal residence is taxable, but a loss so realized is not deductible from income. During the current inflation in real estate, many taxpayers who have been forced by circumstances to move their residences have been taxed upon large gains when they disposed of the old residence but have been forced to reinvest the entire proceeds or even more in order to obtain a new home. This has caused widespread complaint at taxation of ephemeral profits, and it is believed that relief is warranted.

The proposed section 153 limits the recognized gain to the cash and other benefits received and not reinvested, with appropriate provisions to cover anticipatory replacement cases and the rather complicated problem of assumed mortgages. It also provides that the cost of the new property shall be reduced by the amount of gain not recognized on sale of the prior residence or increased by the loss on such sale, as the case may be. The effect is that there is a continuing transaction from the purchase of the first residence until sale of the second, with no tax consequences (except for cash received and not reinvested) upon the disposition of the first residence.

Section 154, employees' stock options: In *Commissioner* v. *Smith* ((1945) 324 U. S. 177) the Supreme Court held that an employee who exercised a stock option which had been given him as compensation was taxable, at the time of exercise, upon the excess of the value of the stock at that time over the option price. Since then the Treasury has laid down such broad rules based upon the decision that it is impracticable for corporations to issue incentive options to their employees, since if the tax accrues at the time of exercise of the option a large part of the stock may have to be sold at once in order to pay the tax, which in some instances, at least, may be based on a paper profit which may never be realized in cash.

This proposal provides deferment of the tax until sale or other disposition of the stock, with appropriate provisions to prevent tax avoidance. It also provides that the taxable compensation cannot exceed the gain recognized on sale of the stock. If the option is sold prior to exercise the entire amount realized therefor is treated as taxable compensation to the extent that it exceeds the cost basis. The proposal is applicable only at the election of the taxpayer, who may elect to be taxed under the present rules if he so desires. It is believed that this proposal will facilitate use of stock options as an incentive factor, will provide a reasonably simple, workable set of rules, and will afford adequate protection of the revenue.

TITLE IA—EXCESS-PROFITS TAXES

Section 191, effective date of amendments: Except as otherwise specifically provided, this title becomes effective upon the enactment of the act.

Section 192, carry-overs and carry-backs allowable to transferors and transferees in nontaxable reorganizations: This is a companion provision to that appearing in section 150, discussed above.

As the law now reads, the excess profits credit carry-over or carry-back is allowed only to the taxpayer. If a corporation loses its identity in a reorganization, the new corporation cannot carry over the unused credit of the old company or companies; neither can an unused credit of the new company be carried back against the excess profits net income of the old company. This section would permit the normal application of these credits by respecting the substantial identity of the old and new corporation.

Section 193, source of preferred stock dividends paid in first 60 days of taxable year, in enacting section 718 (c) (2) of the Internal Revenue Code, Congress apparently desired the conclusive presumption there established as to the source of distribution made in the first 60 days of the taxable year to act as a deterrent to the postponement of distributions by corporations into a succeeding year—postponement often carried out in order that there might be, by this manipulation and timing, a minimization of the reduction of equity invested capital for the year. In the case of preferred stock, where periodical payments are provided for under charter or bylaw provisions, there is no such field for manipulation; and there is no need for the application of a conclusive presumption which may be contrary to actual fact. Section 193 amends section 718 (c) (2) of the code to make the conclusive presumption inapplicable in such cases, and leave the effect of such distribution upon equity invested capital to be tested factually during the first 60 days just as it is tested factually during the remainder of the year.

Section 194, computation of equity-invested capital: Prior to the amendment of section 713 of the code by section 219 of the Revenue Act of 1942, in computing the invested capital of a corporation which acquired all of the assets of another corporation solely for the voting stock, only the basis of the assets on hand at the time of the acquisition by the new corporation could be included in invested capital. In other words, the deficit of the old corporation which did not reduce its own invested capital did reduce the invested capital of the new corporation. Section 219 of the Revenue Act of 1942 was designed to overcome that result and to provide that the invested capital of the new company should be the same as the invested capital of the old company and that the deficit of the old company would not be applied to reduce the invested capital of the new company. In interpreting that section in T. D. 5267 (adding section 30.718–7 of Regulations 109, approved May 27, 1943), the Treasury has taken the position that section 219 does not apply to a tax-free exchange involving two or more transferors. Section 194 of this bill amends section 718 (c) (5) of the code to provide explicitly that, if a corporation acquires all of the assets of one or more corporations under the conditions set forth therein then the benefits of that section should be derived by the resulting corporation.

Section 195, review of abnormalities by the Tax Court: This section would change existing law in the following respects:

1. Restriction of assessment and collection of deficiency while application for relief pending: Since 1924, it has been provided by law that, except in certain unusual cases, a taxpayer may litigate taxes, other than excise taxes, before being called upon to pay them. However, under the excess-profits-tax provisions, as now interpreted by the Tax Court and administered by the Bureau of Internal Revenue, the Commissioner may determine a deficiency in excess-profits taxes and may proceed to assess and collect such deficiency even though the taxpayer has pending a claim for relief, which may or may not eliminate the deficiency in whole or in part. The bill would amend section 732 (a) so as to prohibit the assessment and collection of the proposed deficiency until the claim for relief is finally determined.

2. Tax Court jurisdiction where tax not paid: In *American Coast Line, Inc.*, v. *Commissioner* (6 T. C. 67 (affirmed 159 F. (2d) 665)), the Tax Court held that it had no jurisdiction to review a denial by the Commissioner of a claim for relief under section 722 where all of the statutory excess-profits tax had not been paid. A dissenting opinion in that case described the decision as ascribing an "inconsistent and inequitable" purpose to the Congress, since the statute provides that the taxpayer may withhold a part of the tax in dispute until the relief claim is determined. The bill would resolve this apparent inconsistency and make it clear that the Tax Court may pass upon such relief claims before the tax is paid.

Section 196, appellate court review of abnormalities: Sections 732 (c) and 732 (d) of the code provide that decisions of the Tax Court rendered in relief cases shall be reviewed only by a special division of the Tax Court, and that no review shall be had of such decisions by the court of appeals. The special division of the Tax Court permits no hearing on review of the trial judge's decision. This proposed amendment provides for review of such relief decisions by the full Tax Court, and for review of law questions by the courts of appeals in the same manner as other decisions of the Tax Court are reviewable.

TITLE II—ESTATE AND GIFT TAXES

Part I—Estate tax

Section 201, estates to which amendments applicable: Except as expressly otherwise provided, the amendments apply only to estates of decedents dying after the enactment of the act.

Section 202, rates and credits: The present estate tax rate structure is, for historical reasons, complicated and unwieldy and should be simplified. The proposed amendment combines credits and makes possible computation of the tax due by applying a single schedule to the net estate, which itself would be arrived at by subtracting a single specific exemption and then subtracting a single set of credits.

Section 203, proceeds of life insurance: This proposed amendment to section 811 (g) of the Internal Revenue Code would make it clear that insurance is to be treated like any other property, and affected by all provisions governing the inclusion of other property in a decedent's gross estate. When proceeds of policies are receivable by a beneficiary other than a decedent's estate and all of the incidents of ownership in respect to said policies were irrevocably transferred by the decedent during his lifetime, and not in contemplation of death, the proceeds of such policies should not be included in the gross estate. The present rule seems very unfair, in that life insurance, to the extent that the decedent has paid the premiums thereon, may not be assigned or transferred by complete and outright gift in such manner as to exclude the proceeds from the donor's taxable estate, although such a disposition can be made of any other kind of property.

Section 204, transfers in contemplation of death: This section of the bill amends section 811 (c) of the Internal Revenue Code, relating to gifts in contemplation of death, to provide that no property shal be included in an estate on a theory of contemplation of death if the transfer occurred more than 5 years prior to death. In enacting the contemplation-of-death provision, Congress intended to meet those situations where, in a very real sense, the transferor attempted to

get rid of his property at a time which bore some reasonable relation to impending death. Where the gift has occurred long prior to death the likelihood of tax motivation is remote, and—of equal importance in the satisfactory administration of the law—the problem of proof of the motive for the gift is so difficult as often to result in much unfairness, simply by virtue of the fact that the executor is unable to prove his case.

Section 205, exclusion of interest in employees' trusts: Section 165, while it exempts employees' trusts from income tax under certain conditions, subjects the beneficiaries of such trusts to income tax on the benefits received. It seems undesirable and probably not in accord with the intent of Congress to subject these benefits to both income and estate taxes; and it seems more logical that they should be subject to the income tax rather than to the estate tax. Yet there appear to be some indications in the law today that Federal estate and gift taxes might be applied to the value of a deceased employee's interest in a plan, and to a living employee's power to deal with such interest, respectively. Sections 205 and 257 of the bill would clarify this by amending sections 811 and 1003 of the Code so as to provide that employees' interests in trusts qualified under section 165 shall be exempt from Federal estate and gift taxes.

Section 206, optional valuation: Under present law, an executor can elect at the time he files the estate-tax return to value the property of the decedent as of the date of death or as of a date 1 year after death. This election, once made, cannot be changed. It sometimes happens that at the time the return is filed, the executor considers the election to be of no importance because the value of the gross estate is less than the specific exemption authorized by the law. If the Commissioner of Internal Revenue later increases the value of the gross estate by adding inter vivos gifts which the executor had considered not a part of the gross estate, the election may become most important.

The proposed amendment would make the election available to the executor of an estate not only at the time the return is filed, but also at the time the election becomes important because of the inclusion by the Commissioner of other assets in the gross estate, or because of the increased valuation of reported assets.

Section 207, deduction of expenses paid from nonprobate assets: Under the existing provisions of section 812 (b) of the Internal Revenue Code, permissible deductions from the gross estate for administrative expenses, claims, and the like are only those which are recognized and permitted under laws of the jurisdiction within which the estate is being administered. As a consequence, where expenses have been incurred in connection with assets includable in the gross estate but not comprising a part of the probate estate, and such expenses have been properly paid out of nonprobate assets, a deduction for Federal estate tax has been denied. For example, in *Estate of Wright* (8 T. C. 531 (1947)), a deduction for attorney's fees paid by the beneficiary to collect life insurance which was included in the insured's taxable estate was disallowed. Section 207 of the bill would amend section 812 (b) of the Internal Revenue Code so as to allow a deduction on account of administration and like expenses which are in fact paid out of assets included in the gross estate but not administered as part of the decedent's probate estate, or which are paid by the persons beneficially interested in such assets.

Section 208, time for claiming credit for State death taxes: Under existing law, the credit for State inheritance, estate, legacy, or succession taxes is allowable against the basic Federal estate tax only to the extent that such taxes are paid and the credit claimed within 4 years after the estate tax return is filed. Usually, the amount of State taxes payable cannot be finally ascertained until the Federal estate tax liability is settled. Where that settlement is not reached within 4 years after the Federal return is filed, the credit is lost to the extent of any State taxes paid after the expiration of the 4-year period. The proposed amendment will remedy that situation by extending the credit for taxes paid within 4 years after the Federal return is filed, or before the Federal estate tax is paid, whichever is later.

Section 209, credit for gift taxes: At the present time the Internal Revenue Code provides for a credit for gift taxes paid by a decedent during his lifetime. The limitations placed upon this credit, however, are such as to result in a disallowance of a large part of the amount actually paid as a gift tax in those cases where property on which a gift tax has already been paid is for some reason still required to be included in the gross estate. Section 209 of the bill would amend section 813 of the code to make the credit equal to the full amount of gift taxes that resulted from the prior taxation of the property transferred as a gift.

Section 210, deduction for litigation expenses: In Federal estate tax cases which must be litigated in the Tax Court, the district courts, or the Court of Claims, it is not always clear under what circumstances a deduction is allowable from the gross estate for attorneys' fees and other expenses incurred in such litigation. While the Tax Court has promulgated a rule under which such deductions may be allowed, the proposed amendment would make the deduction of these expenses allowable not only in the Tax Court, but in the other Federal Courts.

Section 211, limitation period for transferees: This section would amend section 900 (b) of the Code to provide that the period of limitation for assessment of the estate tax against a transferee or fiduciary shall be the same as the period of limitation for the assessment of such tax against the estate, except where the estate is insolvent. The Commissioner should be allowed the additional year to proceed against transferees only where the additional tax was asserted against the executor within the 3-year period but was uncollectible because the transfer left the estate insolvent. See comments on section 255, below.

Section 212, extension of period of limitation: Under existing law, the Commissioner of Internal Revenue has no authority to enter into an agreement with a taxpayer to extend the time within which the estate tax or the gift tax may be assessed. Such authority does exist in the case of income taxes. The proposed amendment would extend such authority to estate taxes, and section 253 would accomplish the same result in the case of gift taxes. Occasions arise in which the absence of this authority means that settlement negotiations must be hurried, or that no real negotiations can be undertaken at all because of the shortness of time within which the Commissioner may assess the tax.

Section 213, lien for tax: This would amend section 827 of the code to provide that the lien imposed by the estate tax provisions will be subject to the same limitations as liens for income taxes when applied against purchasers for value and others in like situations, such as bona fide mortgagees and pledges and judgment creditors. Under the present law, the estate tax is a lien for 10 years against the gross estate—a lien which need not be recorded, and which attaches to the property in all but a few instances even though mortgaged, pledged, or sold to a bona fide purchaser for value. It does not attach to property sold to a bona fide purchaser by a transferee, trustee, beneficiary, etc., but does attach to property mortgaged or pledged by such persons and also to property sold by an executor to a bona fide purchaser. It is felt that estate tax liens, like liens for other taxes, should be recorded in order to be valid against mortgages, pledges, and bona fide purchases for value. Section 213 of the bill, therefore, makes the provisions of sections 3672–3679 of the code, which relate to recording release and enforcement of liens for other taxes, applicable to the estate tax.

Sections 214 and 256, powers of appointment: These provisions simplify sections 811 (f) and 1000 (c) of the Internal Revenue Code, relating to estate and gift tax on powers of appointment.

The present law taxes all powers to appoint, whether exercised or not, except two specified classes of powers. One of these exceptions relates to powers to appoint to certain near relatives. The other is intended to exempt fiduciary powers but has proved inadequate for the purpose.

The present law is artificial and complicated to apply, and tends to force property dispositions into narrow and rigid patterns. It was enacted in 1942, but applies to powers created before as well as after its enactment. A short period was originally provided for the release of preexisting powers without tax liability where such release was legally possible. This period has been repeatedly extended because of widespread dissatisfaction with various features of the law. The current extension expires June 30, 1950.

The new provision would take effect July 1, 1950. It treats powers created before the effective date of the 1942 act separately from those created thereafter. Before the 1942 act only the exercise of a general power of appointment was taxable. The 1942 act taxed the exercise of such powers, and also the possession of unexercised general powers, the exercise of many limited powers, and the possession of those limited powers although unexercised. It applied to powers already in existence as well as to those to be created in the future. As to powers created before the 1942 act, the present bill restores the law which was in force prior to 1942, with one minor change, to eliminate the "passing" problem.

The provisions of the 1942 act, taxing the exercise of limited powers of appointment and the mere possession of unexercised powers, constituted a radical innovation. They extended, or might be construed to extend, to emergency powers to invade principal, discretionary powers given to trustees, and other types of powers which had theretofore not been regarded as powers of appointment. The prior law, taxing only the exercise of general powers, had been in force for nearly 25 years. In 1942 there were in existence a great many powers which had been created years before, in reliance on the law as it then existed.

Experience with the practical application of the provisions of the 1942 act to preexisting powers has demonstrated that the pre-1942 law should be restored as to those powers, for the above and other reasons, among which are the following: The impracticability of reviewing all wills and trust agreements already in force in 1942, in order to discover whether they did or did not create powers which might be taxable under the new law; the fact that many such powers will not be discovered until it is too late for the donees to do anything about them; the fact that often such powers are not legally releasable, and in many cases where the power is legally releasable the donee (usually a trustee) feels under a moral obligation not to release it, or the release would seriously impair the arrangements made by the creator of the power for the benefit and protection of his family; powers will be released in most cases where it is possible to do so; and application of a new statute to preexisting powers will tend to promote litigation. Little or no revenue will accrue to the Government, and such as is received will come

from the unwary or those who are powerless to help themselves.

As to powers created after the passage of the 1942 act, the bill subjects to estate tax the possession of an unlimited, unrestricted power of appointment which is exercisable in favor of the decedent or his estate, whether or not the power is exercised, and subjects to gift tax the exercise or release of such a power. This includes a general beneficial power to appoint by will. It also includes an absolute right to consume principal. It provides a test of taxability which is simple, clear-cut, and easy to apply. It is the same test which is used in the marital deduction provisions of the Revenue Act of 1948 to determine whether a power of appointment given to a surviving spouse is such as to make her the virtual owner of the property.

No revenue consideration is involved. Experience under the 1942 act indicates that whether the statute is narrow or liberal, powers will be drawn so that the possession and exercise of them will be nontaxable. The 1942 act tends to encourage the use of inflexible dispositions of property and to discourage the use of individual trustees. Both of these developments are undesirable. Neither the power of appointment provisions of the 1942 act nor the present amendments will bring in any appreciable revenue. The most important consideration is to make the law simple and definite enough to be understood and applied by the average lawyer, and the present bill will accomplish that purpose.

PART II—GIFT TAX

Section 261, gifts of future interests: At present any gift of a future interest is subject to gift tax irrespective of amount. The proposed amendment to section 1003 (b) of the Internal Revenue Code would allow an exemption from gift tax of any gifts of future interests to the extent of $3,000 in any year for all such gifts. The purpose is to remove the necessity of many small returns, and since the exemption for each year is nominal in amount, the effect on the revenue would be negligible.

Section 252, lien for tax: See the comments relating to section 213, above. While section 1009 of the Code divests property sold to a bona fide purchaser of the lien, there is no protection for bona fide pledgees and mortgagees and no specific provision for recording the lien, and this amendment would apply to gift taxes the provisions of sections 3672-3679 of the Code, which relate to the recording, release, and enforcement of liens for other taxes.

Section 253, extension of period of limitation: See the explanation of section 212, above.

Section 254, adjustment of values after period for assesment: While the concept of a statute of limitations is firmly grounded in our law, in the tax field one situation has arisen which is technically not covered by any statute of limitations but which in actual practice should be. In certain cases the Commissioner of Internal Revenue has altered the values placed by the taxpayer on property transferred by gift, after the expiration of the statute of limitations with respect to the gift tax return on such property; or the Commissioner has gone back and revised certain exclusions which were allowed or which were not questioned at the time. The Commissioner has contended that, although he cannot assert any additional tax deficiency based on an outlawed gift, there is no statute of limitations to prevent his placing a subsequent gift in a higher tax bracket by revising values reported in returns for earlier barred years. The result is essentially the same as an extension of the statutory period, however long the time elapsed since the transfer. This amendment to section 1016 of the Code would prevent an increase in taxes for open years by a revision of gift tax returns for earlier years to which the statute of limitations bars the collection of additional taxes.

Section 255, limitation period for transferees: Section 1016 (a) of the code provides a 3-year period of limitation on the assessment of deficiencies in gift tax. Section 1009 makes the donee personally liable for taxes not paid when due, and section 1025 gives an additional year for assessment against transferees, including donees. As construed (See Evelyn N. Moore (1 T. C. 14, aff'd 146 F. (2d) 824)), the Commissioner is allowed 4 years to collect from the donee, even where no attempt was made to collect from the donor within the 3-year period and where the donor was at all times financially able to pay. For the same reasons stated in connection with section 211, above, it is proposed to amend section 1025 to give the additional year to proceed against the transferee only in cases where timely collection from the donor was prevented by his insolvency.

Section 256, powers of appointment: This section is explained by the comments on section 214, above.

Section 257, exclusion of interest in employees' trusts: This section is explained by the comments on section 205, above.

TITLE III—MANUFACTURERS' EXCISE TAXES

Section 301, sale price: Section 3441 of the code, prescribing methods for determining the sale price by which various manufacturers' excise taxes should be measured, originated as section 604 of the revenue bill of 1932, which became section 619 of the Revenue Act of 1932. The report of the Ways and Means Committee on that bill (H. Rept. No. 708, 72d Cong., 1st sess., pp. 37-38) showed the intent to base the tax on the normal factory price, and that where, by reason of the relationship of the parties, the price charged does represent a fair value, the tax should be on the same value as in the case of similar sales between independent parties. However, the courts have held that, where the manufacturer acts as distributor or sells through a controlled sales agency, the tax must be measured by the distributor's sale price, while the manufacturer who does not perform the economic function of distribution is taxed only upon the factory price. See *C. W. Fitch Co.* v. *U. S.* (323 U. S. 532); *Campana Corp.* v. *U. S.* (38 F. (2d) 400); *Ayer & Co.* v. *U. S.* (38 F. Supp. 284). These inequities and discriminations would be avoided by the proposed amendment to section 3441, which would exclude from the tax base in such situations costs attributable to selling and distribution, as distinguished from manufacturing.

Section 302, removal of conditions on refunds: This section would repeal section 3443 (d) of the Internal Revenue Code which requires, as a condition to the recovery of overpayment of manufacturers' excise taxes, that the person who paid the tax establish (1) that he has not included the tax in the price of the articles with respect to which it was imposed, or collected the amount of the tax from the vendee or (2) that he has repaid the amount of the tax to the ultimate purchaser of the article or has secured the written consent of the ultimate purchaser to the credit or refund. These limitations on refunds are grossly unfair in at least two respects. They impose an impossible burden of proof as a condition to the recovery of taxes which admittedly were illegally collected. Generally taxes are refundable upon showing simply that they were illegally collected. If any restriction based on equity is to protect the Government against refund, the burden of establishing the existence and the extent of the equity should be on the Government which asserts it; and if the equity cannot be established the legal rights should prevail. Moreover, the provisions unjustifiably discriminate against one who has promptly paid the taxes claimed of him and in favor of those who have withheld payment.

Section 303, appeals to Tax Court: This amendment would give the Tax Court of the United States jurisdiction over disputes involving manufacturers' excise taxes imposed by chapter 29 of the Internal Revenue Code. At the present time the Tax Court does not have such jurisdiction, and, in contrast with the procedure permissible with respect to income, estate and gift taxes, a person has no alternative but to pay manufacturers' excise taxes and litigate their correctness subsequently—an alternative which is unusually burdensome in view of the restrictions on refunds discussed under section 302, above.

TITLE IV—MISCELLANEOUS

Amendments and provisions

Section 401, statement of grounds for deficiency: In some cases the Commissioner's notice of deficiency is not complete and the issues are not clarified by his answer to the petition. The Tax Court has held that in such cases it has no power to compel the Commissioner to state the basis for deficiency. Such power should be conferred upon the Tax Court and section 401 provides that this be done by an amendment to section 1111 of the Internal Revenue Code.

Section 402, small claims and settlement branch of the Tax Court: An increasing number of cases have been filed with the Tax Court involving small sums of money, and it is common knowledge that there are many more cases in which revenue agents determine deficiencies of a few hundred dollars, sometimes on more or less arbitrary grounds, and the taxpayer feels impelled to pay the tax because of the expenses of appealing to the Tax Court and going to some distant city to have the case heard according to formal court rules. The expense of such a proceeding and such travel may well amount to as much as the tax involved. The persons against whom such small amounts are determined are often people who can ill afford to pay such amounts.

The proposed amendment provides for the establishment of a small claims branch of the court to be administered by one judge of the court. The judge is authorized to appoint part-time commissioners in all of the collection districts throughout the United States who will hear these small cases in an informal manner similar to that prevailing in the small claims acts in effect in many States. All cases in which the deficiency or claim is less than $1,500 would be heard in this manner unless the petitioner expressly moves that his case be heard by the court in the usual manner. Provision is made for appeals from the commissioner to the judge of the court in charge of the small claims branch who will then decide the case appealed subject to review by the full court or by the appropriate court of appeals. Provision is also made that service of any person as a commissioner of the court under the proposed provisions shall not bar such person from acting as attorney in other cases against the United States. This last provision is believed important because it is hoped that the commissioners may be drawn from well-qualified lawyers who would serve in such capacity as a matter of public service thus assuring appointment of the high type of commissioners necessary to make such a plan a success.

Section 403, employment taxes; exemption of payments to employees' trusts: The administrative difficulties and burdens on employers arising from including payments under pension and profit-sharing plans in computing employment taxes are very substantial, because of the requirements as to records, reports and collection of the trivial additional taxes, and the problems arising in the computation of resulting benefits. It is, therefore, proposed to amend sections 1426 (a) and 1607 (b) of the code so as to eliminate from Federal employment taxes all contributions to and distributions from pension and profit-sharing trusts.

Interoceanic Canals—Modern Arms and National Defense

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1950

Mr. MARTIN of Iowa. Mr. Speaker, in the course of my studies on the defense problems of interoceanic canals, and their relation to national security, during the past 2 years, I have placed in the CONGRESSIONAL RECORD a number of able papers and discussions by eminent authorities dealing with the broad subject of the atomic bomb, and the effect on national security and defense.

Most of these were the thoughtful productions of experienced officers with active service in the armed forces during World War II. Another timely contribution of major importance concerning the newest weapons and agencies of warfare, by Dr. Vannevar Bush, regarding as the foremost scientific military authority, was published in the February 1950 issue of Reader's Digest as a condensation of his recent book entitled, "Modern Arms and Free Men."

Dr. Bush, as Director of the Office of Research and Development during World War II, coordinated the work of 30,000 scientists, engineers, and technicians then engaged on the military and naval modern-weapons program. This position, he states, enabled him to observe "as much as any single man can see what science has done and can still do to the art of warfare." In his book he has most opportunely recorded his observations in a convenient form for others to share as "part of the obligation of any citizen who has been given such responsibility and opportunity." In this way he has publicized the essence of a vast and invaluable experience that should be of ever-increasing value in the future.

In my previous discussions I have regularly stressed the obvious deductions to be drawn from the writings of the distinguished authorities thus quoted by me, to the effect that any type of canal is vulnerable, regardless of its features of design; and that the defense of the Panama Canal, or of any other interoceanic waterway which may be constructed, depends on the combined might of the armed forces of the United States, supported by our industrial capacity, plus such local protective means as may be employed.

Underlying all that power, however, and fundamental thereto, as so ably presented by Dr. Bush and demonstrated during World War II, is the widespread scientific and technical ability of the American people. His study, though fully recognizing the terrifically destructive force of the atomic bomb, shows that the only defense against such weapons are potent military and naval organizations under capable leaders. In this respect he emphasizes that the combination of active protective measures and modern defense installations have reduced the ability of an enemy to reach the target; and that the future is far less dreadful and frightening than many have been led to believe. All this emphasizes the other all-indispensable factor I have sought always to stress: this, that the spirit, morale, and alertness of a free people must underly and support every agency and effort of defense.

The thesis of Dr. Bush strongly reinforces the central idea I have persistently presented to the Congress, viz, that the defense of any type of interoceanic canal like the defense of the ports, waterways, railroads, dams, locks, public utilities, and industrial facilities in the United States, is an over-all responsibility of the Federal Government, and depends primarily upon timely active defense measures of our armed forces, supported by the national economy and industrial capacity. It does not, and cannot, depend upon mere passive defense features, such as may be embodied in plans for construction.

In the light of information I have included in my previous remarks it is unmistakably clear that the interpretations, which have made the security and national-defense features in the report made pursuant to Public Law 280, Seventy-ninth Congress, supreme considerations and determinate, are entirely too narrow. The great volume of data on the atomic bomb, published since the submission of the report under the indicated law; that is to say, in December 1947, clearly indicates that the security and national-defense factors, as thus urged, are entirely obsolescent and outmoded, and should not be controlling in the designing of navigational projects.

Thus, the disposal of this argument of defense reduces the problem of planning to its true criteria, to wit, the operational refinements and capacity of the present high-level-lake type of canal.

To make Dr. Bush's study readily available to the Government—especially to the committees of Congress with legislative jurisdiction over interoceanic canals, navigable waterways, and national defense—under leave accorded, I am extending my remarks to include its full text; and I respectfully commend its careful consideration. It follows:

MODERN ARMS AND FREE MEN

(Condensed from the book by Vannevar Bush, scientific military authority. He was director during World War II of the Office of Scientific Research and Development, which coordinated the work of 30,000 scientists, engineers, and technicians)

Is it true that a new all-out war, with atomic bombs and biological warfare, would destroy civilization? Can a democratic regime develop great military strength without distorting its true nature?

There are no precise answers to these questions, just as there is no complete answer to the bigger problem of how to avoid another war. But I believe the technological future is far less deadly and alarming than we have been led to think, and that the hopeful aspects of modern applied science outweigh by a heavy margin its threat to civilization. I believe also that the democratic process is itself an asset with which, if we can find the enthusiasm and the skill to use it and the faith to make it strong, we can build a world in which all men can live in prosperity and peace.

When the First World War ended there were in existence nearly all the elements for scientific warfare. For all the technical devices used in the second war, except only atomic energy, practically every basic technique had appeared by 1918, waiting only development. But the world then went to sleep on the subject, so the Second World War began almost where the first one ended. There were a few exceptions, of course, such as developments in aeronautics, in radar and sonar, and in the science of the atom. However, the whole gamut of new ordnance devices—rockets, recoil-less guns, guided missiles, proximity fuzes, bazookas, frangible bullets—waited for the pressure of war for development. And they then appeared largely outside the organized system of ordnance development, and sometimes in spite of it. Certainly in this country almost no scientific progress on military devices emanated solely from military laboratories or military men.

The Second World War was, far more than the first, a war of applied science. The great campaigns that swept across continents and oceans eventually drew heavily on the whole accumulated stock pile of fundamental scientific knowledge. Should a new war have to be fought in a decade or so, there will be innovations, but probably no such burst of new devices as accrued when organized science first turned its full effort into war, all but exhausting the great unused accumulations of the past.

WAR ON LAND MAY END IN DEADLOCK

There is no longer any such thing as land warfare, exclusively. Amphibious operations and the interaction of air operations with the movement of armies ended all that.

When the Second World War opened actively, with Hitler's offensive on the western front, it soon became evident that the deadlock on land, characteristic of the first great war, was virtually a thing of the past. Masses of mobile artillery could prepare holes, and cavalry in the form of the tank-air team could exploit them. Hitler conquered the Continent because his army had so perfected this method that it overwhelmed customary resistance.

From this fact it would be easy to jump to the false conclusion that the deadlock on land had been permanently and universally broken. Actually, the facilities of defense had improved enormously, and the means of successful break-through in 1940 had become utterly obsolete by 1944. In the final break-through many new factors were present: Long preparation by bombardment of communications, exhaustion of the enemy after 5 years of war, the finest armies the world has seen, effective coordination of allies in the field for the first time in history, unprecedented industrial production, and magnificent leadership.

One of the new primary aids to the defense that appeared in the interval was the use of great quantities of land mines. In the contest between land mines and means for removing them, the mines won out. Portable devices for detecting metallic mines were successfully developed; but they did not work for plastic mines. Dogs were taught to smell out mines—but there are too many ways of tricking dogs for this to be of much use. Great rollers, pushed ahead of tanks, had some success, but not much; an occasional very large land mine could wreck them. "Snake"—pieces of hose full of explosive, capable of being pushed ahead or pulled ahead by a small rocket—could be exploded to clear a lane. Tanks equipped with these devices could proceed, provided the tank itself was not destroyed, but this was a laborious method indeed for fields of great depth. The Russians ignored the fields, moved ahead, and accepted the losses. These could be very large, for example, when mines were built to project a can of explosive into the air to explode there and spread fragments over an area. Russian losses as they advanced reflect this fact. The

days when hordes by their mere number could overwhelm fully prepared positions approached their end.

Moreover, toward the end of the war, a defensive element entered that the Germans did not have: the proximity fuze. In the old method, the shell was timed to explode at a chosen distance above the ground; it was not very precise and could be used only when one could see the target area. The proximity fuze contains a little radio set that triggers off the shell at a predetermined distance above the ground. No observation of bursts and no difficult presetting are necessary.

This fuze increased the effectiveness of artillery against personnel in the open by perhaps ten times, and this gain was equivalent to having ten times as much artillery at work. When artillery effect is multiplied against moving men there is a strong turn in favor of the defense. The proximity fuze appeared in land use in December 1944, at the Battle of the Bulge. On the northern side of the break-through it caught German troops in the open, in the fog, at road intersections, as they advanced, and it spread consternation. Its power was by no means fully exploited; this was a first use, and artillery officers, and especially the high command, did not appreciate what had been placed in their hands. Yet, by means of this fuze, together with air effort as the fog lifted, the lack of fuel on the German side, determined resistance and adroit movement of divisions, the break-through was stopped. The proximity fuze may well have saved Liége.

Mere combinations of tanks and men cannot penetrate a mine field covered by artillery or mortars with proximity fuzes. The tank, moreover, nearly met its match in the last war; perhaps it should have. A relatively small explosive charge can be constructed that, if properly shaped to focus its effect, and triggered off at the right instant and in the right manner, can penetrate the thickest armor a tank can carry. This was the principle used in the bazooka, a light rocket-firing weapon that could be carried and fired by one man. Its muzzle velocity was very low, its precision was poor, it was dangerous to use, but it could stop a tank, and its advent was new strength for the infantry.

The recoilless gun was another innovation that spelled difficulty for the tank. This gun shot forward and backward at the same time. It sounds like an inventor's lurid dream, but the forward effort gave a projectile good muzzle velocity and precision in a rifled barrel, while a backward blast through an orifice removed the recoil and was harmless unless someone inadvertently got close behind the gun. The importance of the gun was that it produced a powerful, hard-hitting, relatively inexpensive weapon of low silhouette, readily moved and used by a couple of men. This weapon and the shaped charge such as was used by the bazooka were never combined. There seems no inherent reason why they should not be. A tank exposed to such weapons would have a short life.

Techniques for airborne-infantry assault were much improved during the war. But the experience of Crete, Normandy, Arnhem, the Rhine crossings showed rather well that the airborne assault is an auxiliary to the advance rather than a means of starting wide sweeps behind the enemy lines. There might be a place for airborne assault in connection with surprise invasion on the scale of an enlarged Pearl Harbor, although this is doubtful. Airborne attempt to penetrate a line adequately protected by early warning, radar, and with fast intercepter planes, would be suicide.

There is a strong indication, therefore, that the defense may again be in the ascendant in land warfare, that the deadlock of the First World War might well reappear if antagonists substantially equal from the standpoint of skilled use of ample technical devices met again at a long land frontier. This might merely throw the weight of the effort elsewhere, but it is an important factor to consider as we look to the future.

Amphibious warfare is another matter. Certainly we can be sure that if neither antagonist could penetrate the enemy lines on land neither could do so by amphibious methods on a thoroughly defended coast. For the difficulties of the landing itself are superposed upon those of penetrating a prepared line and exploiting the break-through. Even if there is no line at all, a successful landing involves dominance in the sea and air and suppression of the enemy under the sea. Obviously we need not fear invasion in the foreseeable future, if we are armed and ready.

THE WAR AT SEA: RADAR

The last conflict may well have seen the end of that most dramatic of the scenes of war: the clash of great fleets. The evolution of sea warfare in World War II, from a technical standpoint, revolved about radar. Radar had its real origin in 1925, when two physicists sent out short radio pulses and studied their reflections from the ionosphere, the conducting layers above the earth that reflect radio waves. There are two ways of using radiation to find the distance to an object: one, to examine the interference pattern of continuous radiation, and the other, to send a short pulse of radiation and examine the echoes. The first was used in the proximity fuze, and is excellent for short distances. The second readily won out as the better for naval use.

Using cathode-ray tubes in much the same way that a television tube displays a scene, radar can make the earth visible from a plane above the clouds, in fog, or at night, with a detail as though one had a map spread out before him. Such an instrumentality was bound to revolutionize many departments of warfare, and it did, especially on the sea.

There were great fleets of fighting ships in existence when the war started. As always, in naval shooting war, the decision in the long run went to the ships that could shoot straightest, soonest, and under most difficult conditions. After stumbling beginnings, we could shoot best, for we had the best radar.

The war ended, or became a contest against a relatively unskilled or unequipped enemy, before the full evolution of warfare on the surface of the sea had run its course. So one development of great potential significance that appeared did not come into full use. This was the guided, or homing bomb.

GUIDED BOMB VERSUS SURFACE SHIP

Bombing from moderate or high altitudes with ordinary bombs is a very haphazard affair. It is quite possible, however, to guide a bomb after it is released, and throughout the half minute or so of its fall, and thus attain real accuracy. This can be done either automatically or with manual controls. With a manual control, the bombardier holds a small joystick; as he moves this, so the bomb moves, for plane and bomb are connected by radio to transmit his signals. He can either watch the actual ship and the actual bomb, or he can watch two radar pips on a screen that correspond to the ship and the bomb, and a simple computer can help his judgment. In the automatic form all this is done by a mechanism inside the bomb itself, operating by radar or by thermal controls.

The Nazis first introduced this device in the Mediterranean during the Italian campaign, apparently prematurely and before sound engineering had made it reliable. Its performance was erratic and the bombs flew all over the sky. Nevertheless, the basic concept was sound and the weapon decidedly formidable. One wonders what would have happened if it had been really perfected and then put into use as a surprise and in ample quantity. As it was, it sank ships and was decidedly disagreeable to meet.

We introduced several forms of guided bombs and used them in eliminating the remnants of the Japanese Navy. In Burma, where an air effort to take out important bridges had been under way for a long time without much success, controlled bombs took them out promptly, the records indicating that one controlled bomb was worth a hundred ordinary ones. But most of the forms came too late to be of much use; in the European theater they did not catch on, largely because no really precision bombing was being attempted there except in support of troops, where rocket-equipped planes did very well.

In the future, guided bombs may be important indeed. With ordinary bombs, which fly many miles horizontally as they drop, high-altitude bombers cannot hit the side of a barn—they cannot even hit a small city with any assurance. The guided bomb alters this whole situation. It can hardly be made to hit with certainty a confused target such as one building in a city. But a great ship alone on the sea is a clear target to radar, and thus for a guided bomb.

Is there any effective defense against the very high bomber using guided bombs? If there is not, the days of large fighting ships—carriers as well as battleships—are over. In all probability, there is a defense, but how effective it may be will be questionable for a long time to come. In a possible future war, if it should occur while the world has its present general interrelationships, the only enemy fleet of any moment would be a submarine fleet.

SUBMARINES REMAIN THE BIG THREAT

The First World War showed the ability of the submarine to interrupt commerce, even though the U-boats of those days were clumsy, fragile affairs. In the interval of peace two things happened, one to the advantage of the submarine, one to its disadvantage. The submarine acquired more underwater speed, longer endurance, and a tougher hull. By the time the Second World War opened it could submerge rapidly to several hundred feet and maneuver in tight circles. The submarine could always use listening devices just as well as a surface craft could, and this fact, added to better performance, made the old forms of attack on the submarine practically obsolete. The depth charge, even when the second war began, was nothing but an ashcan filled with TNT with a hydrostatic fuse to explode it at a given depth, and it sank at a rate of only 5 feet per second, so that the submarine had considerable time in which to get out of the way.

However, during the peace a very important means of detection had been developed in naval laboratories both here and in England. Called sonar, the device is to underwater detection what radar is to air. The ship carrying it emits a pulse of relatively high-frequency sound and then examines the pattern of returning echoes. By timing the interval, and by a directional receiver, the distance and direction of the submarine can be obtained. Sonar can also determine the depth of the enemy.

It is important to note that radar pulses cannot travel more than a few feet under water. Moreover, there are strict limits as to what can be done wth sonar pulses and their reflections, because of attenuation of the signal and confusion of echoes from the bottom, so that a few thousand yards under good conditions seems to be the limit of range. There is no such thing under water as radar's range of many miles in air, and searching craft were further hampered by the fact that their sonar would not work at high speeds. Still, sonar seemed to be the answer to the submarine as it existed during World War II.

Perhaps it would have been, if there had been an equal advance in attack weapons, but we entered the war with the same old ashcans and held to them tenaciously even though they were clearly outdated. The undisputed power of sonar gave us overconfidence, and we paid for this later in excessive sinkings.

The submarine war developed into a race between techniques, and for a long time the issue was in doubt. By late 1942 sinkings of surface ships had mounted to the point where they threatened to cut us off from Europe and terminate our land efforts. By the spring of 1943, however, the power of new antisubmarine devices became decisive. Let us examine the methods of attack that saved the situation.

There were two great methods of broad search, highly effective at the time, and now both obsolescent or greatly reduced in value. The first of these was direction finding by radio. Through an error that will probably not be repeated, the Germans communicated by radio from Berlin with their submarines continuously throughout the war. Doing so enabled them to pass on information in regard to the position of convoys and to assemble their wolf packs for attack. But it was a boon to us. Radio stations listening to their messages could take cross bearings and give a rough position of the sending submarine. Consequently, we generally knew about where the enemy was located and could plan accordingly.

The second great method was that of radar. The submarines of the day had to spend a considerable fraction of their time on the surface to charge their batteries. When on the surface they could be detected by radar at a distance of 20 or 30 miles. A radar-equipped plane could therefore sweep great areas, as much as 5,000 square miles an hour. Even the enormous areas of the open ocean begin to yield when fleets of planes are thus equipped.

THE HUNTER-KILLER GROUP

The most deadly combinations, however, was the hunter-killer group. A small aircraft carrier plus other surface antisubmarine craft accompanied a convoy, or left it for direct attack upon a U-boat cencentration. Radar sweeps gave the necessary knowledge of position, and specially equipped aircraft alone or in combination with the surface craft pressed home the attack. When we thus carried the war to the enemy, the tide began to turn.

Magnetic airborne detection, MAD, also appeared. While severely limited in range, it could find a submerged submarine by the distortion the submarine produced in the earth's magnetic field. The device never came to full fruition and was used mostly in blimps in coast defense. Yet it very neatly denied the passage of the Straits of Gibraltar to submerged submarines proceeding quietly with the tide, after all other means had failed.

The sono buoy supplemented these means and was particularly useful from aircraft. One cannot listen to a submarine's underwater noise from an aircraft or for that matter from a surface craft at high speed. But one can drop a small buoy to lie quietly on the surface, listen through a microphone that it lowers to suitable depths, and broadcast by radio what it hears. A submarine submerged after having been caught on the surface by radar was no longer safe even if no surface hunting ships were present. Aircraft could keep contact with it by rings of sono buoys, each dutifully sending its identification signal and the news of the submarine's progress. Aircraft, in relays if necessary, could thus keep the submarine under surveillance until its underwater endurance was exhausted and it was forced to surface, or until surface craft could arrive and take up the trail by sonar. Moreover, new means appeared for attacking it while it was still submerged.

The large depth charge, which lost its combat value when submarine hulls became so thick that a nearly direct hit was necessary for lethal effect, was replaced by forward-throwing weapons which could spray a pattern of small charges well ahead of the attacking ship, by spigot guns or rockets. These charges sank rapidly, and when one hit the hull of a submarine it blasted out a hole bound to be lethal. The weapon was designed to cover an area with a pattern of charges like a shotgun pattern, leaving no gaps, and thus shooting became more deadly. Most important, it could be directed to one side or the other in accordance with last-second sonar observations and could be fired while the submarine was still under sonar contact, not after the attacking vessel in passing over the submarine had lost contact.

SUBMARINE-KILLING PLANES

The rocket-carrying plane was appallingly effective. To the U-boat crew on deck at night it must have been really terrifying. A high-speed plane, having located the submarine by radar, could come diving in at a moderate angle, switch on a blinding light for a final guidance or fire by radar alone. In the few moments of attack it had the fire power of a whole battery of field artillery. Its most deadly weapon was a rocket with a solid head. This was aimed to hit well short of the submarine; it had a long, shallow underwater trajectory; when it hit a submarine it went clear through, leaving a gaping hole on both sides and chaos within. Few submarines caught by surprise on the surface by such a plane could hope to survive.

It almost appeared that in the presence of the plane, radar and other deadly devices for attack, the day of the submarine was over, not only for the war but permanently. It might have been, except for two new and important improvements in submarines themselves, introduced by the Germans. If they had come soon enough they might have changed the course of the war. But when the Germans finally brought them out the battle had become much too one-sided for them to restore the balance.

These two innovations were the high-speed submarine equipped with snorkel, and the long-range torpedo.

The importance of the high-speed, relatively quiet submarines designed by the Germans lies in the fact that they can readily get into position for convoy attack and escape afterward. In fact, if they can outrun the surface antisubmarine craft, or travel at such speed that the latter's acoustic devices are greatly limited, they are much to be feared. They step up the pace at sea. During the past war we ran such ships as the *Queen Mary* safely without convoy because they were faster than the enemy submarines. If the submarine speed is the same as or greater than that of such ships, this method is ended.

The snorkel, however, is even more important than more speed. The snorkel is merely a pipe arranged so that the submarine can run submerged on its engines, with a small end of the pipe sticking out, like a swimmer breathing through a long straw. An ingenious contrivance prevents difficulty if the seas slop over the top of the pipe by momentarily closing the pipe so that no water enters, and this is the real technical advance. In the brief intervals when the pipe is closed, the engines draw their air from the hold of the submarine, with some crew discomfort, but otherwise without reducing performance. A snorkel is very hard to see, either by radar or by eye, especially when there is a bit of sea running. It does not make the submarine completely immune to radar search, but it decidedly decreases the possibility of discovery. It is undoubtedly possible to build submarines that run on their engines when completely submerged, thus dispensing even with the snorkel.

The long-range torpedo introduces an element of surprise that is highly significant. The point is that the range of sonar against submarines is limited, and the range of a torpedo can be made to exceed it if one makes the torpedo large and expensive enough. Thus, if the submarine can fire a deadly torpedo from well outside sonar range, the advantage seems to be entirely with the submarine, which can pick off the escorts of a convoy and then close in for the kill.

The fact that emerges is that the day of the submarine is by no means over. If we entered a war soon, against a technically and industrially strong enemy, and if that enemy could effectively apply modern devices at sea, we should have the whole job of overcoming the submarine to do over again on a new and unattractive basis. Again we should face the severe threat that a nearly immune submarine fleet might determine the outcome of the war in favor of the enemy. Many of the successful methods of the last war are now obsolete against the truly modern submarine. There is no cure-all. To cope with the situation we need to be forging ahead in a dozen fields of difficult technical effort.

The situation is by no means hopeless, of course. If a submarine can be pinned down by air cover, using sono buoys, MAD and diverse other devices, it can most certainly be disposed of, and it will not matter whether or not it is a modern submarine of high speed and long submergence. We may have to adopt new tactics, perhaps, to clear and protect sea lanes rather than to convoy. We may have to depend more than in the past upon mines and upon blocking the submarine in its ports. More probably, we shall employ methods and devices not now fully visualized and developed as experience with modern submarines may indicate. The job will be tough. It can certainly be done.

Twice in recent history aggressors have sought to cut the world apart by submarine and thus to prevail. Twice they have failed. We must make sure that a third similar attempt would also fail. For this assurance we need a vigorous program in the hands of a virile and generously supported Navy, in the closest of cooperation with science and technology throughout the country. We need a Navy intent on the full accomplishment of its main mission, and not diverted by the sirens of more spectacular fields, or arguing on the defensive in regard to its importance as compared with any other service.

IN THE AIR: IS MASS BOMBING OBSOLETE?

Dogfighting in the air, as a determining feature of really modern war, is probably now a thing of the past. The appearance of the jet fighter changed that. Jet engines increased the disproportion between the performance of the long-range bomber and the short-duration fighter. They made speeds in the air so high and turning radii consequently so large that dogfights became almost impossible. Jet engines increased the effectiveness of the fighters' operation over their own territory with the aid of land facilities, and correspondingly decreased the possibility of defending bomber fleets by accompanying fighters. They may well have made mass bombing at moderate altitudes against an alert enemy obsolete.

To understand this, one needs to remember radar's part in defense. First, the long-range early-warning installation, located on coasts, or borders, capable of detecting planes as far as the curvature of the earth permits—at 200 miles or so if the incoming planes are high. Second is the interceptor-control radar which places on the cathode-ray screen images of all the planes within its range in the sky. Finally, there is the radar on the interceptor planes themselves, used to effect the final contact, and even to fire the guns. To penetrate a defense thus equipped is an appalling task for any bomber fleet.

We have one more threat to the bomber to consider—the guided missile. Two developments have led to the guided missile: the advent of automatic controls and the appearance of new ways of projecting a body through space. Soon after large planes came into use there appeared, also, automatic devices for handling them, notably the automatic pilot. This takes over on a long flight, steers a straight course at constant elevation, allows for all the bumps and deviations, and gives the pilot relief. Now here were all the elements of one sort of guided missile—an aircraft with no crew, adapted to be preset and to fly to a designated target, carrying a load of explosives.

In addition, a number of new engines for propelling aircraft were developed during the war. The simplest by far was the ram-jet. It is merely an open tube. Its own motion—it needs 3,000-miles-per-hour speed to work well—produces sufficient compression at the front end to blast hot gas out the rear and keep it going. A fire in the middle of the tube to heat the gas is the essential mechanism.

To drive short-range, high-speed missiles, the ram-jet is almost ideal. It can be shot out of a gun or driven by rockets to reach the desired high speed, and thereafter it can travel at bullet speed or higher and keep going for ten or perhaps a hundred miles. Over short ranges it certainly can be aimed in the vicinity of the target, and from there it appears that reasonably complex homing devices might bring it to the point where its proximity fuze could detonate it with lethal effect to an aircraft. The device is in its infancy, and only time will tell what can be accomplished with it. Its significance lies in the fact that it appears to be the great future enemy of the bomber.

Let us assume that devices of this sort can indeed attain a range of, say, 50 miles, and that with that range they can home with precision and a reasonable percentage of hits upon a bomber. Certainly the bomber cannot maneuver out of the way of a missile that comes in with the speed of a shell from a gun. Certainly it cannot survive a hundred pounds or so of high explosive detonated in close proximity. Perhaps the bomber can jam the controls of the missile, if it knows the missile is coming and knows its combinations of frequency, but the advantage here seems to lie with those on the ground, who can choose a variety of systems, so that if one is encountered others are not.

The days of mass bombing may be approaching their end. If so, it is a good thing for the world.

INTERCONTINENTAL ROCKETS UNLIKELY

No weapons in the form of pilotless aircraft appeared during the last war until near the end. The single entry in this field was the German V–I, the buzz bomb that began in June 1944 to harass London. This was just a self-controlled aircraft, redesigned for the specific purpose of bombing a city 30 miles in diameter, from a range of 200 miles. The air frame of the V–I was made simple and inexpensive for quantity production. Its motor was an exceedingly simple affair, cheap to build and capable of running only for an hour or two before it was worn out. Each V–I carried about a thousand pounds of high explosive. Had the Germans been able to launch these devices at the rate of about 3,000 per day as they had intended, they might well have stopped the invasion. But the device was highly vulnerable in the light of concurrent developments in antiaircraft artillery.

London, left wide open by the diversion of antiaircraft batteries to Normandy when the invasion occurred, suffered heavily from the buzz bombs for a while. When the batteries were replaced with radar-controlled guns, electrical computers and proximity fuzes, the buzz bombs made almost ideal targets, flying slowly at constant altitude and in a straight line. Ultimately the defense brought down some 85 percent of the buzz bombs that came within range. The buzz bomb was very decidedly countered.

The German V–2, unlike the V–1, was a true rocket, not a pilotless aircraft. It was an expensive and complex affair, involving great ingenuity and remarkable engineering skill. Its propulsive force was produced by a great blast of hot gases ejected to the rear. It flew in an arc, 75 miles up into the stratosphere, and descended at 3,000 miles per hour, well above the speed of sound, so that its arrival was not heralded, and one heard the roar of its passage through the air only after its ton of high explosive had detonated.

It was a guided missile in a certain limited sense. Its propulsion, which occurred only in its first flight up through the atmosphere, was somewhat erratic, so that its flight was watched by radar during this brief interval, and radio signals were transmitted to cut off its propulsion at the optimum instant. After that it flew in a free trajectory, and its precision was far from good.

Will high-trajectory guided missiles of this sort soon be spanning thousands of miles and precisely hitting chosen targets? Some eminent military men, exhilarated perhaps by a short immersion in matters scientific, have publicly asserted that they will be. We have been regaled by scary articles, complete with maps and diagrams, implying that soon we are thus all to be exterminated, or that we are to employ these devilish devices to exterminate someone else. All sorts of prognostications of doom have been pulled from Pandora's box of science, and these have had influence on the resolution and steadiness with which we face a hard future, and they have done much harm, vague as they are. But this one is explicit, and we can treat it.

The German V–2, of 200-mile range, carrying a ton of explosive, was nearly at the limit of effective range for a chemically propelled single-stage rocket. Its range can be substantially increased in three ways: Its payload may be decreased until at 400 miles or thereabouts it will carry no explosive whatever; its size and its cost may be increased to carry the present payload a greater distance, though range does not go up in direct ratio to size; it can be made into a multistage affair, with an enormous rocket giving birth, when it has done its work, to a smaller one that proceeds from there, and so on. If we are content to pay millions of dollars for a single shot at a distant target, it can be done in this way for any stated distance.

No escape from this dilemma is to be had in new chemical fuels. We are already near the limit of the amount of energy that can be chemically packed into a given weight. But doesn't the availability of atomic energy change this situation? Perhaps the best reply is that it is a close thing whether atomic energy can compete on a cost basis with chemical fuels for producing energy for commercial purposes even under the relatively easy conditions on the ground, where weight and space are not limited.

As we have stated, a rocket can be made to fly vast distances if one disregards costs. But can such a missile be made to hit anything at the end of its flight? The V–2 could be made to hit with reasonable frequency within 15 miles of a point of aiming at a range of 200 miles. A similar missile flying 2,000 miles could be depended upon to hit within 150 miles of its target with reasonable frequency. This performance can certainly be improved upon perhaps by adding to the missile instruments of precision, sights, and homing aids. It could then hit a target, perhaps within 10 miles, perhaps even within a mile or two if all went very well indeed.

Its cost would be astronomical. As a means of carrying high explosive, or any toxic substitute therefor, it is a fantastic proposal. If we employed it in quantity we would be economically exhausted long before the enemy.

There is a common notion that during war costs do not count. There is no greater fallacy. The error comes from the belief that civilian resources are unlimited. They are not. Costs are more important in war than at any other time, for the need for over-all effectiveness is then more imperative. Every development and procurement of a useless device detracts just that much from progress along highly necessary lines.

Before we devote a large amount of manpower and materials to building an expensive missile, we should be very sure it is going to damage the enemy more than the strain of building it damages us. No industrial concern would launch a development without prior cost studies or without causing it to run the gantlets of tough-faced engineers with sharp pencils. Military organizations can proceed without this unpleasant preliminary skirmishing, and often do.

NO WEAPON IS ABSOLUTE

What will war be like if it comes to the world in total form? It would involve intricate techniques, some of them new, but it would be no affair of push buttons. In fact, except for the greater use of the atomic bomb, it would not differ much from the last struggle.

No man can predict the future of the atomic bomb with certainty, but it is now clear that such bombs are expensive and will remain so. Of course radical short cuts in their manufacture may be found, but many of the best physicists, chemists and engineers of this country, and of Great Britain and Canada, have been seeking such a process now for nearly a decade. They have examined every conceivable approach, and they have not found it.

A large proportion of the cost of atomic bombs comes from the production of fissionable material itself; hence there is an accumulative factor which warrants close attention. Money spent in peacetime for weapons that deteriorate or become obsolescent may be money largely lost. But fissionable materials deteriorate very slowly, and they can be stored. In preparing for a war that may be remote, there is thus a considerable reason for concentrating on the weapon that is sure to last until needed, and this is especially important for democracies that fight when they must, not when they choose.

The atomic bomb is for the immediate future a very important but by no means an absolute weapon, that is, one so overpowering as to make all other methods of waging war obsolete. Indeed there is no sign whatever of the emergence of any device so deadly that it makes all others obsolete, and this applies to gas, the spreading of radioactive poisons, and biological warfare. The war gases have improved, but the means of delivering them have become more difficult as means of defense have improved. The spreading of radioactive substances offers great difficulties, and although the biological sciences have made spectacular advances which can be utilized in the spreading of diseases, they are also producing marked results on the side of protection. The theory that world conditions have so altered as to make biological warfare more effective is not supported by the facts.

If all-out war came tomorrow, or in a few years, or at any time before our enemy had a considerable stock of atomic bombs, would it destroy civilization? It certainly would not. War would again be a brutal contest, evil and distressing; the damage would be large, and we should share in it, but we would by no means be knocked out, and we would win it. Unless we get soft, unless we are clumsy in meeting the tactics

of cold war, we are not in immediate danger. If war begins, and the opening settles into a slugging match, the ultimate advantage will lie with that nation which has scientific and technical ability widespread among the people, industrial capacity and versatility, and a determined will to prevail. It is here that our strength lies, and it is in these aspects that we must preserve it.

A NEW PEARL HARBOR?

We ourselves cannot force a war, striking at some time when the advantage lies with us. For if we did thus embark on a prophylactic war, we should lose the very freedoms we cherish; these freedoms would have to be suppressed to cause us to embark on such a course. We would not strike, because our moral sense as a free people would not allow us to do so; we would not strike, because we would sense that we would lose our birthright if we did.

Totalitarian states are bound by no such inhibitions. Indeed one thing is certain: if another great war is started by a dictator, it will be opened by a smashing, great surprise offensive calculated to paralyze us before we are aroused. He would send his submarine fleets to sea and place them on strategic trade routes, and thus gain a heavy advantage in the undersea warfare to follow. He would mobilize in secret and set his armies in motion so that they would assault strong points before they could be fully manned. Above all, he would launch his air fleets, and, if he had atomic bombs, he would direct them at our key cities. We must also take into account the delivery of bombs by submarine, the bombs being lobbed into coastal cities by rocket projectors perhaps from submarines 25 to 50 miles at sea. The threat of such a surprise attack is a handicap we must face, and it is a severe one. It alters, and makes wider, the margin we must keep in the race of preparedness.

The old scarehead story that atomic bombs could be moved in suitcases may be dismissed. The idea of bringing in the pieces and assembling them in an innocent-looking warehouse or consulate is probably also farfetched. It could be done, of course, even though a great deal of skill in assembly is called for. But one bomb thus planted would hardly be an effective opening blow in a war.

A real peril would be to carry atomic bombs in innocent-looking merchant craft that can be moored near cities, to be blown up bodily when the time for surprise attack comes. More flexible, and hence more to be feared, is the scheme of planting the bombs on the bottoms of harbors or in canals, through trapdoors in the holds of merchant ships, to be detonated later by time fuse or even by radio signal. Presumably bombs thus placed near various cities would be detonated all at once as the opening shot in a total war. There is no trick method of determining whether a ship carries such a deadly load. The atomic bomb does not advertise its presence in the unmistakable manner of highly radioactive materials. The damage to a city could be very large if such an infernal machine went off in its harbor—not so large perhaps as some of the accounts would indicate offhand. Also, the wall of radioactive mist that spreads from the underwater explosion would be a very terrible thing.

The world is not now likely to be thrown into open war by accident as it used to be. It will come only if our potential enemy feels that his strength plus the surprise factor is sufficiently great to overcome us, and if he feels that time thereafter will be moving against him. We can decrease the value of surprise by staying alert in peacetime.

The principal element of our preparation for possible surprise attack is an intelligence system of high effectiveness, capable of warning us. No iron curtain is utterly impenetrable. The operations necessary to set in motion a major surprise attack are ponderous and far-reaching. Dictatorship and oppression produce individuals who dare to flee and then dare to talk. There is no reason why we should not know, reasonably well, what is afoot.

After the war a Central Intelligence Agency was created, but it has been under the command of military men whose careers have lain elsewhere, it creaks at the joints, and it is not yet sufficient for its tough task. Scientific intelligence is not conducted well by Mati Hari methods or through agents who know no science. We need a modern intelligence agency in every sense of the word, using modern methods as they were partially developed during the last war, not a musical-comedy affair or a stodgy refuge, not even the half-successful affair we now have, but an organization qualified to meet our needs in this kind of world. It does not cost much. We know how to build it, after the experience of the last war, for we did not do badly at all on intelligence work then, after we got our hand in and learned how. But the really able men who functioned then have largely scattered into civilian life, the type of ability needed is rare, and the work is not attractive. The task can be done, by an individual of great mental and organizational capacity, having ample authority and the full backing of the President of the United States. As we value our peace of mind we had better be about it.

We conduct the disagreeable contest of the cold war at great disadvantage. But the manifold blessings of freedom give us enormous strength, in its full development dwarfing the potential strength of any system of regimentation. It has been popular for many years to complain about the wastefulness of the democratic system of government. We had come to expect 50 cents' worth of results for every dollar paid in taxes. Benevolent dictatorship was thought be to efficient by comparison, and it was held that a dictator could get results much more generally and cheaply. But when research teams were sent into Germany after the war to study such problems as the German handling of strategic materials, manpower, propaganda, military organization and coordination, they were amazed. The Germans had made astonishing mistakes in every sphere of action, which continued throughout the war without correction. Every team we sent returned convinced that the democratic system is clearly more efficient, dollar for dollar and hour for hour, than any totalitarian system.

The teams also found the key to the difference, the key to effectiveness of the democratic system. It lies in the fact that in a democracy criticism flows both ways, up as well as down. This factor, plus our Government's ability to secure the completely frank judgment of experts in any field, far more than offsets the apparent looseness of democracy.

The type of pyramidal totalitarian regime that the Communists have centered in Moscow is an exceedingly powerful agency for cold war. It can force its people to enormous sacrifice and thus build great quantities of war materials. It can educate large numbers of men and women in science and engineering, construct far-flung institutes, mechanize agriculture and ultimately create mass production. But it is not adapted for effective performance in pioneering fields, either in basic science or in involved and novel applications. It has many of the faults of the German dictatorship, magnified to the *n*th degree. Hence it is likely to produce great mistakes and great abortions.

This does not mean that we can cease our own advances in the techniques of war. The Communists can copy and improve, and a whole mass of scarcely developed techniques remains from the last war as material for this process. It does mean that we must continue to break new ground, and that we can do so with our heads high; we have a system essentially adapted for the purpose, if we do not distort it or sacrifice it to false gods of fancied efficiency.

One source of strength is our widespread industrialization. The fact that there are literally millions of youngsters who can drive and repair cars, who build their own radio sets and communicate as "hams" all over the world, gives us a whole generation of competent, resourceful mechanics and electricians and the best possible insurance for strength and safety in a world of modern war. Every corner garage, every radio club, is a center of training; training that can be quickly transformed into ability to operate the complex implements of war.

During the Second World War, for example, one radio ham, whose formal education had been limited to grammar school, helped fight from a laboratory. He was a mechanic and had picked up his knowledge of radio while he made his living, just as millions of other American boys still do. He became America's principal designer of magnetrons. He can talk today with Nobel-prize physicists, and can tell them things they want to know.

In the long, hard race we have embarked upon we must maintain and increase our industrial sinews, keep our free-enterprise system on an even keel and thus foster the strength of our economy. It will profit us little to have stocks of bombs and planes and then bring our governmental and industrial system crashing down about our ears.

Future total war need not come if we fully maintain our strength. It need not come if we realistically resolve that it shall not. It need not come if we make our democracy work. It need not come at all, for if the strength of free peoples prevents it for a generation, that same strength can then produce a new sort of world in which great wars will no longer occur. For this consummation we face a task that will test us as we have never been tested before, that will test whether we really mean it when we say that we believe in human dignity and human freedom, whether we can really submerge selfishness and petty motive and bring our enormous latent power to bear, to make our way of life function with true effectiveness for the good of all.

Research on Disease of Oak Trees

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I append a letter from a valued constituent, William E. Gullam, of North Reading, Mass., in his capacity as secretary of the Massachusetts Tree Wardens' and Foresters' Association:

Massachusetts Senators and Representatives, United States Congress, Washington, D. C.

HONORABLE GENTLEMEN: By vote of the members of this association at our thirty-eighth annual convention, February 15–16, 1950, at Boston, the following resolution was adopted:

"*Be it resolved*, That this association go on record as backing the United States Department of Agriculture request for an appropria-

tion for research work on the diseases of, or on, oak trees; and so notify our Senators and Representatives in the United States Congress."

We sincerely hope that they will be supported likewise by all other groups similarly interested in the preservation of our State and national shade trees; and that all means available shall be exercised for their protection and maintenance, as well as the prevention of those diseases now threatening us on a national scale.

We most earnestly urge that suitable action be taken to establish funds and provide facilities for the conduct of necessary research, and that preventive remedies and all information gained therefrom be made available for our general advantage in meeting this grave situation.

Respectfully yours,

WILLIAM E. GULLAM,
Secretary-Treasurer.

Tories Saw Business Ruin and Socialism in HOLC

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the national weekly newspaper Labor, issue of March 18, 1950:

TORIES SAW BUSINESS RUIN AND SOCIALISM IN HOLC—NEW DEAL AGENCY PROVES GREAT SUCCESS, BUT SAME CRIES ARE RAISED AGAINST FAIR DEAL

A simple ceremony at the White House this week recalled events which should reassure the American people, when, as now, they read and hear assertions that the Government is ruining business.

President Truman watched approvingly while a $26,000,000 HOLC check was presented to John W. Snyder, who presides over Uncle Sam's Treasury. What was back of this ceremony?

In the days of the "Hoover hunger," there was desperation among the mortgage companies, building and loan concerns, and bankers who had financed homes at inflated values. Hundreds of thousands of jobless people could not keep up their mortgage payments. Real-estate money lenders all over the country faced bankruptcy.

The came the New Deal, like the Fair Deal of today, a bogyman of business. Congress created the Home Owners' Loan Corporation, gave it Government money and orders to save the situation.

Loud cries from the mortgage men pierced the skies. "The New Deal," they shouted, "was going in for socialism." Uncle Sam was embarking upon a foolish adventure that would cost him a loss of at least $1,500,000,000.

In short, the HOLC was greeted by Tories with the same outcries they make against Fair Deal measures now. But what happened?

The HOLC got busy, saved a lot of distressed home owners, and literally bailed out the banks, mortgage, and building and loan firms. In return for their sour mortgages, they got billions in good Government bonds from Uncle Sam.

The money lenders' frowning faces suddenly were wreathed with smiles. This HOLC is a pretty good thing after all, they privately admitted. But were they grateful?

As soon as they were saved, they turned around and tried to bite the hand that bailed them out. They pushed a bill which would force the HOLC to hand back to the money lenders all the mortgages which had become safe and sound, while Uncle Sam would keep all the mortgages which were still sour.

Of course, that would have made the HOLC a financial failure, and the Tories would have shouted we told you so.

That bill was fought and killed by John H. Fahey, an honest, able, and devoted public servant, who came from big business to head the HOLC. In all the country, Labor was the only newspaper of national circulation which supported Fahey in that fight. He was grateful and said so.

Under Fahey's management, the HOLC saved home owners, bailed out the mortgage men, and paid off $3,500,000,000 Government bonds provided for those purposes.

In the White House ceremony this week, the HOLC made its first repayment, $26,000,000, on the stock which Uncle Sam bought in that agency to give it a start.

Now, Truman said, the HOLC has paid off 95 percent of the Government's entire investment, and will soon pay the rest. Instead of the predicted $1,500,000,000 loss, Uncle Sam will come out with a handsome profit.

It is a good thing to remember that New Deal story, when the Tories of today shout ruin and socialism at the Fair Deal.

About Owen Lattimore

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of March 15, 1950:

ABOUT OWEN LATTIMORE

Thomas F. Murphy, the Hiss case prosecutor, said the other day that one of the hardest things to find in these times is a man who will admit that he is a Communist. It is better, he said, to set up a persevering watch to determine how closely a man's opinions coincide with the party line.

We think this formula could be more profitably applied by Senator MCCARTHY, particularly in the case of Owen Lattimore. Whether he is a card holder or not, it would produce weighty evidence that this State Department adviser on the Far East rarely has had a thought that would trouble the Kremlin.

He was among the first of that coterie of left-wing experts to underwrite the idea that the Chinese Communists were simple agrarian reformers.

In his 1945 book, Solution in Asia, Mr. Lattimore said the Asiatic peoples did not intend to become the victims of imperialism again, and that the Allies must understand their drive toward self-expression and cooperate by helping them. "These people," he explained in an interview, "may not be able to read or write, but politically they are mature."

Once an adviser to Chiang Kai-shek—on President Roosevelt's recommendation—he later turned on Chiang and denounced him for dictatorial tendencies. There's little argument about Chiang being dictatorial.

But Lattimore's 1945 book was described by a sympathetic reviewer as an "appeal to Chiang to set free the democratic forces which have proved effective in northwestern China."

And what were those democratic forces?

Those democratic forces were, of course, the totalitarian Communists—and a year later Gen. Marshall was in China on an abortive mission to work out a coalition between the Chinese Communists and the Nationalists.

Last year, when the State Department's White Paper wrote off the Nationalist cause, paving the way to our present debacle in China, it accurately reflected the thinking of Mr. Lattimore.

More recently, in the January Atlantic, Mr. Lattimore wrote: "Sound (United States) policy would avoid premature or excessive strategic deployment in the Far East." That had been made our policy.

Again: "United States policy should aim to increase the ability of countries in Asia to do without Russia." That, too—the suggestion that a potential Tito could be built up in Red China—has been made our policy.

And again: "For the problem of recognition of the new government of China, the United Nations offers the ideal avenue to a solution. If * * * a majority of non-Communist countries in Europe, Latin America, and Asia should vote to seat new Chinese representatives (meaning Communists) to the United Nations, the United States should not vote against that verdict."

And that also has been made State Department policy. Only last week it was announced that we would abide by a majority decision in giving the Chinese Reds places in the UN. Which would be recognition by the back-door route, despite the fact that we still recognize the Nationalists as China's legal government.

What real difference would it make if Mr. Lattimore, and the others responsible, had the purest of intentions? Molotov himself couldn't have master-minded an American Far East policy more to Moscow's liking.

Resolution to Repeal Sixteenth Amendment (Income Tax Amendment)

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. COUDERT. Mr. Speaker, I have just introduced a resolution to repeal the sixteenth amendment, which authorizes the Federal Government to collect income taxes. The proposed amendment would permit the Federal Government to resort to an income tax only for the purpose of grave national emergency proclaimed by the President and approved by each House of Congress, and for the purpose of reducing the national debt and payment of the interest thereon.

Reduction of the debt is of the utmost importance to preservation of the value of the American dollar. If this amendment should become law, Congress should continue to pay off a minimum of at least one-half of 1 percent per year of the present $260,000,000,000 national debt by limited use of the income tax.

The income tax in the hands of reckless and irresponsible bureaucracy is the most deadly danger to the American system of government, and the liberty

which it was designed to safeguard. It is rapidly leading to complete breakdown of the States and localities as effective instruments of government, and transforming them into mere arms of the Federal Government to distribute Federal hand-outs. It is destroying the incentive and hope of the American citizen because it deprives him of the fruit of his toil and therefore of the possibility of independently achieving economic security. It creates an overpowering central government upon which the economically helpless citizen will become a servile dependent. What is left of liberty when government alone controls the pay check or the ration card?

Desperate situations demand desperate treatment. Only complete elimination of the Federal income tax power, or at least drastic limitation upon it, will effectively curb the destructive monster that the Federal Government has become—hence this resolution to repeal the sixteenth amendment, and to limit use of income taxes to the essential purpose of national debt reduction and payment of interest, and to use in war and emergencies akin to war.

Its enactment would curtail the activities of the Federal Government to a great degree and revitalize the States. It would leave sufficient funds to the Federal Government to provide for national defense, for veterans, and for the expenses of the general Government. The remaining necessary domestic activities now carried on at Federal level could be taken on by the States, which would have exclusive access to income taxation for that purpose.

Commitments for foreign aid by their own terms should expire in less than 2 years. There is little likelihood of adoption of such an amendment within that time.

Repeal of the sixteenth amendment would not affect the operation of the present Federal social-security system.

Only a thoroughly aroused public will get action. If all those citizens who are conscious of the menace of the Federal income tax system, emphatically and persistently demand action, action will be had. If the American Republic is to survive in anything like its present form, if the traditional liberties of the American citizen are to live, if dollar earnings and savings are to retain any value at all, then action must come quickly. Congress will act if enough citizens demand action. Of course, it will not be easy to dislodge anything as firmly planted as the Federal income tax. But if we shy away from the impossible, we shall be less likely to achieve the possible.

Tariff on Rubber Footwear

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1950

Mr. GOODWIN. Mr. Speaker, in commenting further upon the great interest among all the people of the city of Malden in my district over a threatened reduction in tariff rates pertaining to imports on rubber footwear, I bring it to the attention of my colleagues that a resolution has recently been adopted by the Malden city government introduced by Councilman Jacob Aronson, passed by the common council and by the board of aldermen, and approved March 10, 1950, by his honor Mayor Fred Lamson. A copy of this resolution as it has come to me under certification from Raymond F. Mooney, city clerk, is as follows:

Whereas any further reduction in tariff rates pertaining to imports on rubber wear would result in mass unemployment and the employees would find it difficult to obtain similar employment: Now, therefore, be it

Resolved, That the Malden City Council go on record as opposing any further reduction in tariff on imports of rubber foot wear both waterproof and canvas.

St. Patrick, the Patron Saint of Ireland

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1950

Mr. SABATH. Mr. Speaker, on the 17th day of March we again honor St. Patrick, the patron saint of Ireland. In Catholic churches and at public meetings throughout the world, St. Patrick's benign spirit will preside with solemnity and prayerful mien over the altars of great and ornate cathedrals and over small and simple one-room countryside churches.

With graciousness and good cheer, the kindly spirit of St. Patrick will pervade the atmosphere surrounding the festive banquet tables of Irish fellowship clubs, the Ancient Order of the Hibernians, and other great Irish societies.

America is truly transformed on March 17 into an Ireland, with millions of Americans of Irish extraction wearing proudly the shamrock and the green carnation symbolic of the warmth and generosity of the Irish spirit and personality.

The story of St. Patrick, although well known, bears constant repeating. Patrick was born in greater Britain, the son of Calphwinius and Concessa. As a boy he fell into the captivity of warring tribes on three different occasions, each time being put to work keeping watch over flocks of sheep. Even at an early age he demonstrated a strong faith and reverent respect for God. It was his daily custom to arise before daybreak and pray at length; he would follow this procedure during the day and before retiring late at night in all kinds of inclement weather so as to adore and praise God.

After he was liberated, he undertook holy orders and began to study religious works. Suffering untold hardships, he traveled far and wide throughout France—then called Gaul—Italy, and the Tyrrhenian Sea islands.

Under the Primacy of Pope Celestine, he was consecrated a bishop and made his way to Ireland on behalf of the spiritual salvation of the Irish who were then worshiping idols. Only with the aid of a provident God could this sainted figure have succeeded in this mission where evil forces, enemies of the faith, physical hardships and privations were in the ascendancy.

These endeavors resulted in a religious revival during which catholicism spread throughout Ireland. Churches were built, priests ordained and bishops consecrated. Ireland became known as the Island of the Saints so effective was the preaching of St. Patrick.

The fame of St. Patrick spread to other lands. His prophesies and his spiritual greatness gave greater impetus to his endeavors on behalf of the Catholic Church to which he was endeared.

Exhausted and spent, after many years of fatiguing labors and administrative cares and responsibilities, St. Patrick, in the fifth century of Our Lord, passed on to his reward. Today he rests at Down, in Ulster, the apostle of Ireland.

On March 17, more than on any other day, I shall give kind thought and expression to the personal tribute paid me by the Irish government receiving as I have yearly, real Irish shamrocks—greetings to the Irish people through their legal representatives.

This bond of friendship between the people of Ireland and my humble self has been of many years' standing, for it was my great honor and privilege to draft and pass House resolution 49, in the Sixty-fifth Congress, declaring it to be the sense of the Congress of the United States that Ireland should be a free and independent state, free of British rule, oppression, and tyranny. Nothing in my legislative career of 44 years in the House has given me a greater thrill and satisfaction for I have always been cognizant of the heroic efforts of the Irish people in search of freedom, who in 1848 during the potato famine in Ireland, suffering the same indignities and privations of other immigrants from other parts of the world sought asylum here and went on to do their part to develop and contribute to the growth and progress of this great country of ours.

I always recognized and appreciated the broad and liberal views and policies of the Irish Nation on behalf of the oppressed and persecuted of other lands seeking refuge also in Ireland.

I wish to remind my colleagues that immigrants from Ireland, true to the American spirit, were like immigrants from other shores. It is because of the immigrant that the ideals of freedom and liberty, the foundation stones of our American Republic, have endured. These newcomers stood for political and religious freedom. They not only advocated these foundation stones—they fought for them. And so it has come to pass that from a country of 13 small States with a spread-out population of about 3,000,000 we have developed to almost 150,000,000 in 48 States, exclusive of our island territorial possessions, with more people desiring admission into our

sacred Union as, for example, Hawaii and Alaska.

I have seen a great many St. Patrick Days come and go, and with each passing I pay greater tribute to the immigrant Irishmen whose sons and daughters in each generation have faced, along with the sons and daughters of other immigrants, the difficult problems concerned with the maintenance and progress of our country. The Irish forebears met adversity and conquered it. They were willing and anxious to work, they helped build our buildings, our houses of commerce, they made their contributions to the professions—but more still they developed an unquenchable spirit for an American nationality which has become the desire of all peoples throughout the world to seek and attain.

How well this fact is demonstrated is seen in the development of my beloved city of Chicago. A perusal of its first city directory in 1844, when the population was 9,000, show a more than respectable number of Irish names, the Nortons, O'Briens, O'Learys, the Burns, the Burkes, the Caseys and Cassidys, the Daileys and the Donlins, the Gallaghers, the Givins, the Higgins, the Hogans, the Kellys, the Kennedys, and so on down the alphabet. They were men of the professions, tradesmen, artisans, and laborers. In short, they helped Chicago grow great—great in industry, in commerce, and more important than all, great in political and religious freedom.

I could enlarge further on the gifts of the Americans of Irish extraction to the growth and development of my beloved city, citing the names of mayors and governors in Chicago and the State of Illinois. Suffice it to say that at present our mayor, Martin J. Kennelly, recognized as an able administrator who is reflecting credit on, and following in the footsteps of, the many sons of St. Patrick who have dedicated themselves to the basic principles of the American system which dedicates itself to the equality of opportunity and self-improvement, a decent standard of living and the stimulation and preservation of human and spiritual values which the patron St. Patrick so eloquently typifies.

Well do I remember the many instances of the loyalty of Americans of Irish descent demonstrated in critical periods of our country's history. Many are the examples. However, one stands out very vividly in my mind, namely, the situation which prevailed in April of 1918 when we were at war with the Kaiser. At that time Ireland was still struggling for freedom from Great Britain. Irish patriots were fighting at great odds to escape the cruel and servile treatment of the selfish and unconscionable British aided by their Ulster allies.

It was at this time that Great Britain, sorely pressed after 4 years of hard fighting, called for conscription of the Irish youth. Immediately there began a fierce debate both in America and in Ireland. Should the Irishman, deprived of his constitutional and personal rights, allow himself to be conscripted into British forces? Should not—do not home rule and conscription travel together the same road? Is not Ireland fighting for moral issues—freedom and liberty against an aggressor? How then can Great Britain, it too fighting for a moral principle, require loyalty and fealty of Ireland when she refuses justice and equality to those of southern Ireland? Although evidently supporting the Irish cause and bitterly opposing Great Britain's persecution of the Irish in Ireland, the answer came immediately and without hesitation from the native-born and naturalized Americans of Irish extraction when they published that the Irishman in Ireland or their relatives and friends in America who do or say anything to hurt Great Britain in this her hour of peril strike at the cause of America and her allies who are banded together in common effort against a German war machine bent on enslaving the world.

I remember well how this sweeping declaration of faith and allegiance coming at a most critical period from the descendants of Old Erin brought renewed hope and courage to all engaged in the great battle "to make the world safe for democracy." For it brought heart to our disheartened allies whose low morale and tired bodies were giving ground to the sledge-hammer blows which the "boche" were dealing on French and Belgian battlefields. Revivified and with fresh courage and renewed confidence, the American doughboy of Irish origin, his comrades of all races and creeds, the English "Tommy" and the French "poilus" joined hands to carry on their counterattacks against the common enemy.

On the other hand, this declaration of fealty to the allied cause brought home to the Germanophyles all over the world and particularly the German propagandists in Ireland who infested the Emerald Isle that Ireland had rejected their advocacy of force and violence to foment discord and disunity in the country where they had hoped to stir up rebellion and civil war and from which they had hoped to attack England nearby. The campaign of treachery and treason had failed in Ireland. The open door was closed tight in the face of Kaiser Wilhelm and his boche hordes.

I must not fail to revert to my early days in my beloved city of Chicago where the memory of great and generous men of Irish origin who, many in number, helped make our city the great metropolis and melting pot it is. In public life, in our patriotic and civic organizations, be it in labor and industry in our commercial life, in the arts and sciences, in our schools, in the church, in our law-enforcing agencies, the men and women who on this day honor their patron Saint Patrick, always demonstrated a devotion to the ideals of good government and fine human relations.

I found them as a group true to every righteous cause of their country, indefatigable workers determined to carry on, in the best traditions of America, on behalf of justice, freedom, and democracy.

All praise and glory to the Irish on this St. Patrick's Day of 1950.

Uncle Bob Doughton

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. REES. Mr. Speaker, I am submitting for the CONGRESSIONAL RECORD a fine tribute to a very distinguished Member of this great body.

The tribute appears in a recent issue of the Lutheran, a magazine of the Lutheran Church, and is contributed by a distinguished American, one of the leading pastors in America, Dr. Oscar Blackwelder, pastor of the Church of the Reformation in Washington.

The membership of the House, I know, will appreciate this splendid article:

UNCLE BOB DOUGHTON

I once asked the late Mrs. Robert L. Doughton if she realized that her husband's homely appearance is a political asset. She wanted to know what I meant by "homely." I can hear the chuckle in her voice yet. I told her of a relative of mine in the North Carolina district which Mr. DOUGHTON has represented for 40 years, who said to me, "All you have to do is to look at BOB DOUGHTON to know he is honest."

He is the oldest man in Congress and the second oldest in length of service. He has served 40 years (20 terms) without a defeat. Representative ADOLPH SABATH, of Illinois, has the longest service, with 44 consecutive years.

Seriously, I have come to feel that a strikingly handsome man is handicapped in public life. Men just don't vote for him. I could document that statement. The handsome may carry the ladies' vote, but men seem to mistrust them.

RUNNING AGAIN

Mr. DOUGHTON is 86 and running for reelection. His mental dependability and his amazing physical health belie his years. A Washington newspaper editoralized on him, thinking he should quit. The letters received inspired another editorial, which bowed to the manifest devotion in which he is held by his constituents. Anyone who attempts to run against him is just wasting his time, money, and energy, in my opinion.

I chanced to be in the gallery of the House when a young, freshman Republican arose to oppose an argument Mr. DOUGHTON had just made. The freshman began with a profuse apology for daring to differ with such a mature man. Mr. DOUGHTON thanked him for his courtesy but added, in effect, that if he could not hold his own without having people defer to age, he would quit.

WAYS AND MEANS

He has chairmaned the powerful Ways and Means Committee, perhaps the most important in the entire Congress, for a longer time than any other in American history. And he is not honorary chairman either.

Uncle Bob is a very early riser and gets to his office between 6 and 6:30 a. m. A story got afloat some years ago that as he came across Capitol Hill going to his office one morning he chanced to meet a stenographer on his staff. He congratulated her on her sense of initiative and enterprise. "Come on in and let's start on some letters," he said. She came in and went to work but in reality was just getting in from a dance.

REPRESENTATIVE GOVERNMENT

I hope I am not overpainting the picture of a good friend. Uncle Bob illustrates to me the way a man can make good in public life.

Here are some of the secrets of one of the most beloved men on Capitol Hill. He tends strictly to the business with which he is entrusted. He keeps close to his constituents and transacts their business with dispatch and accuracy. He is a great human being with splendid capacity for friendship. He is an indefatigable worker, capable even at his present age of long, strenuous hours. He has maintained the captaincy of his own conscience. He is a man of unimpeachable integrity. Men like BOB DOUGHTON make it easier to believe in representative government.

OSCAR F. BLACKWELDER.

Why an Investigation of Lustron?

EXTENSION OF REMARKS
OF
HON. ALBERT M. COLE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. COLE of Kansas. Mr. Speaker, because of the wide interest in the Lustron situation, I wish to submit for the RECORD the following copy of a letter I have written to Mr. SABATH, chairman of the Rules Committee:

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 14, 1950.

Hon. ADOLPH J. SABATH,
Chairman, Rules Committee,
House of Representatives.

MY DEAR MR. SABATH: On October 19, 1949, I introduced a resolution, House Resolution 393, to authorize a select committee to investigate the Lustron loan.

I mentioned this resolution recently when I appeared before your committee. I will appreciate it very much if you will call up this resolution for hearing before the Rules Committee.

I am enclosing a short memorandum which contains a brief account of the reasons why I think this investigation is of great importance to the Congress.

Thank you very much for your courteous consideration of this request.

Sincerely yours,

ALBERT M. COLE,
Member of Congress.

WHY AN INVESTIGATION OF LUSTRON?

In 1947, the RFC made its initial loan to Lustron as a pilot project to determine whether houses could be produced by mass production. Thirty-seven million five hundred thousand dollars have been used for this purpose. Eighty-two thousand houses were promised by the end of 1949. Actually, 2,000 were produced.

Lustron is now in the hands of a receiver, and conservative estimates place the loss to the Government at $30,000,000.

The pilot project is a failure. The success or failure of this, and similar future proposals, is of tremendous importance to Congress. A careful, nonpartisan investigation would answer these questions:

First. What is the field for Government in promoting pilot or experimental projects?

Second. How may monopoly and unfair competition be avoided if such projects are undertaken by Government? For example, Harnischfeger, of Wisconsin, has produced thousands of excellent prefabricated houses which sell for $6,500 to $8,300. This firm, and many others, are operating without Government assistance. Can this firm, and the other prefabricated house manufacturers compete against free-and-easy Government money?

Third. Did Lustron fail because all such pilot projects promoted by Government are doomed to failure?

Fourth. Did Lustron fail because of mismanagement and favoritism, or just lack of foresight and funds?

I believe Congress and the people are entitled to the answers to these questions.

Case for "Thou Shalt Not"

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. McCULLOCH. Mr. Speaker under leave to extend my remarks in the RECORD, I include the following article from the Wall Street Journal of March 16, 1950:

CASE FOR "THOU SHALT NOT"—TAKING POSITIVE STAND ON ISSUES ISN'T ALWAYS THE MOST CONSTRUCTIVE; THERE'S ALSO VIRTUE IN BEING NEGATIVE

(By William Henry Chamberlin)

Americans are in the habit of hearing lectures on what a dreadful thing it is to be negative. Every proponent of some new scheme of spending billions of dollars of public funds for some vague and starry-eyed purpose tries to attach the adjective "positive" to his proposal and to blast its critics as persons cursed with a negative type of mind.

There are prophets of doom who suggest that America will go under if it does not propose some "positive" alternative to communism and prove that free institutions serve the average man better than dictatorships. Very often the suggested alternative turns out to be some form of leveling collectivism, very akin to communism, only without unpleasant features like concentration camps.

As for the supposed obligation of free political and economic institutions to prove their superior attractiveness, there is a very simple test that should convince anyone capable of being affected by rational argument. Line up on one side the people who often at personal risk to themselves and their families, have refused to live under totalitarian rule. Line up on the other those individuals who have voluntarily left free countries to enjoy the supposed blessings of dictatorship. The proportion in this fair and honest plebiscite would be about one hundred to one. And if one could interview freely the members of the minority, one would get some very sad and regretful stories.

"IT ALL DEPENDS"

But, so runs the argument, we must be "for," not "against," positive, not negative. Well, it all depends on the issue at stake. The Gadarene swine presumably were in a positive mood when they ran over the cliff and perished. They might have been better advised if they had been more responsive to negative arguments.

Nor is it true, as is sometimes alleged, that men can only be induced to fight and sacrifice and die if they are offered the prospect of being "for," not "against." It has often been easier to induce people to agree on what they don't have than on what they do.

It would not have been feasible to obtain general agreement among Englishmen of the seventeenth century on a positive political program. But most of them disliked the idea of being taxed without their consent, jailed without warrant and otherwise pushed around by agents of the Crown.

And so, out of many negative restrictions on the power of the executive branch, developed something very positive and very desirable indeed: the rights of the man and the citizen. The same story was repeated, with some variation, when the American colonies broke away from British rule a century later. The men who founded this Nation were united more by what they disliked than by what they favored.

In reading through the American Constitution it is remarkable how often those "negative" words, "no" and "not" recur. "Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press. * * * No soldier shall in time of peace be quartered in any house without the consent of the owner. * * * The right of the people to be secure in their persons, houses, papers and effects, against unreasonable searches and seizures, shall not be violated. * * * Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted. * * * No bill of attainder or ex post facto law shall be passed. * * *"

But out of these and many other limiting and prohibiting clauses in the Constitution emerged the edifice of our civil political liberties.

The French Revolution never produced what its ideologists dreamed of: a society in which liberty, equality, and fraternity were the guiding principles. But, with all its fearful excesses, the effects of which are still painfully felt in French psychology and in the nature of French society, the Revolution achieved certain negative benefits. It swept away antiquated privileges of birth and caste and made opportunity much more nearly equal for all Frenchmen.

RECORD OF EIGHTIETH CONGRESS

We heard a good deal in the last American election about an alleged "do nothing" Congress. Actually the record of the much abused Congress would compare favorably with that of its predecessor or its successor. But what a fundamentally absurd idea it is to judge the efficiency of a Congress by the number of laws it passes.

One might just as reasonably rate a physician's competence by the number of doses or operations he would order for a patient. There is a world-wide tendency to pass too many laws, with the result that many are unenforced and some are unenforceable. A legislative body that passed a minimum of new measures and repealed a good many old ones, would most probably deserve very well of all the people who elected it.

"The state swelled and the people shrank." This is how a great Russian historian, V. O. Kluchevsky, describes the growth of absolute power in Czarist Russia. And this is a universal law of history. As the state becomes more powerful the individual shrinks, sometimes to the point of extinction.

The contrary side of this proposition is equally true. Where the state is kept within bounds by a long series of "Thou Shalt Not's," by strict legal limitations on its power, the individual enjoys the best prospect of a free, and happy, and prosperous life. The history of human liberty is very largely a record of negative restrictions and limitations, checks and balances, devised for the purpose of preventing the state from succumbing to the invariable temptation to arrogate too much power to itself.

The Americanism of Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. CHAUNCEY W. REED
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. REED of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address on the Americanism of Abraham Lincoln by Col. Robert M. Woodward of Chicago, Ill., broadcast from radio station WHFC, with studios in Chicago and Cicero, Ill., on Saturday, February 11, 1950:

February 12 is a date that is especially cherished, not only by all loyal and patriotic Americans, but also the world over by those who instinctively recognize greatness of soul in the conduct of human affairs. It can well be said, February 12 is a special day in the calendar of human advancement, for it is the one hundred and forty-first birthday of Abraham Lincoln, martyred sixteenth President of the United States, who alone of all the incumbents of that distinguished office, is considered worthy of being coupled with the Father of our Country.

We do well, to mark this annual occasion in American life with due solemnity, taking to heart Lincoln's inspired wisdom, marvelous patience, and touching kindliness which animated his being, and makes his truly blessed memory immortal. Here was a statesman and personality whose fame endures, and whose renown is as constant and as chastening as the stars: only he could have saved the Union and strengthened its foundation of freedom for all, as only his illustrious predecessor, George Washington, whom he idolized from the days of his youth, could have led our forefathers to freedom in their struggle for independence. Such leaders are, indeed, few and far between, they have marked out for all time, the course that must be followed in this great land of ours, if as Lincoln said in his classic Gettysburg Address, "Government of the people, by the people, for the people, shall not perish from the earth."

We know that we live in the most critical times, times that try men's souls. Fear, uncertainty, and mistrust prevail the world over. People everywhere are nervously asking, "What of tomorrow?" There is only one answer to this universal disquietude, and there is only one way to save the day and prevent the ultimate destruction of mankind by A-bombs and H-bombs, and perhaps weapons which may be even more dreadful and devastating. Now, as in Lincoln's time, when the Union was threatened with dissolution there is one hope for peace and for fraternal relationships between nations, and that is, by the application of the humanity and sanity of Abraham Lincoln, both in domestic and foreign affairs.

If the application of Lincoln's high, moral principles cannot solve such problems as our labor difficulties and end the recurring strife of wage earners and management, nothing else can. If the uprightness of Abraham Lincoln cannot do away with political corruption in city, State, and Nation, nothing else can. If the warmly, friendly approach of Lincoln in all matters and at all times, expressed so well by him, "with malice toward none, with charity for all" cannot resolve the stalemate between American democracy and proletarian dictatorship, nothing else can. The first thing we should take to heart as we feel Lincoln's noble spiritual presence in our midst, especially at this time, is that he loved and served his country with all his heart, soul, and strength. He was always concerned with safeguarding the future, and fulfilling the high ideals of the American Republic and to mankind at large.

His brooding concern for his native land made him keenly sensitive to any danger, both from within and without which threatened its growth, its happiness, and its very existence. Calmly he surveyed the situation, free from rancor, and it was consequently given to him to see with the eyes of a prophet.

I know of nothing that is better calculated to win for our beloved country, confidence in the uprightness and unselfishness of our intentions with regard to all other nations, and make it possible to adjust the existing differences, than the widest possible circulation, translated into every tongue the principles and ideals of Abraham Lincoln. We hope that as many Americans as possible are made aware that Lincoln defined the irrevocable objective of all true Americans within and beyond our borders.

We must be ever honest and sincere as Lincoln was in dealing with domestic and foreign problems of every kind, our faith and courage must be as dauntless as his was in pursuing this goal, which is nothing less than the goal of salvation for us and for all humanity.

Our prayer, as united Americans, now and always, must be that Lincoln's noble, human spirit may never cease to abide with us, for the minute that we forsake his counsel and his example, nothing else, however, formidable and seemingly invincible materially, can assure our strength and national security.

The Abraham Lincoln way of thinking and acting, and the exercise of the right to vote in all elections in every precinct throughout the Nation, is our only security. Furthermore, we must keep in mind that any kind of contravention of the Bill of Rights in the Constitution of the United States, is a thrust at the Nation's life, and treason to the American people. Make no mistake about it, violations of the rights, guaranteed by the Constitution, is subversive and more insidious than any other kind can possibly be.

Yes, I repeat, the Lincoln way of thinking and acting under all circumstances is the only way for all of us to conduct ourselves, whatever party we belong to, whatever creed we profess, and however otherwise we may differ one from the other. As I see it, our choice is between a united, strong, and impregnable America, and a divided, consequently weakened, despite our matchless material wealth and power.

We are called upon, particularly during the recurrence of Lincoln's birthday, to listen to a voice which will never cease to be heard by every generation of his fellow Americans, and humble ourselves, as he did, in seeking divine guidance in all matters affecting our national welfare and standing among the nations of the earth.

I conceive it to be the duty of everyone who is privileged to serve his fellow Americans in a public capacity, to steep himself in the life of Abraham Lincoln, and to conduct himself accordingly. Lincoln's life should always be the yardstick of public service, and those who are unwilling to be so guided in their public actions, demonstrate their unfitness to occupy positions of public trust of any kind, major or minor.

In the preservation of American freedom and democracy, Lincoln had an unfailing appreciation of the worth of all who toil for a humble living. He remains the champion of the cause of the common people from whom he sprung, and in whose interest he served to the end. "God must love the common people," he said, "He made so many of them." He repeatedly made mention of his humble origin. In a speech at New Haven, Conn., he declared: "I am not ashamed to confess that 25 years ago I was a hired laborer, mauling rails, working on a flatboat—just what might happen to any poor man's son. I want every man to have a chance." That is the American message, a message that will do more to rid the world of remaining autocratic and ruthless rule over the lives of the people of other lands, and points the way to real freedom and full opportunity, than is possible by any other course of action.

My fellow Americans, we can make our greatest contribution to the world's peace and progress by rededicating ourselves in these momentous days to the humanity and humility of Abraham Lincoln. A distinguished lawyer once said: "States are great only as men may make them great; men are great only as they dare and do." Lincoln said the rights and privileges preserved by the Constitution may not last unless every man, woman, and child shall recognize his responsibilities and duties under the Constitution.

You, my fellow citizens, are aware that many of us are often inclined to dwell on our rights rather than our duties. I say, it is the duty of every citizen in these critical times to stand firmly against all individuals or groups whose aims and purposes are to change our form of government, and I deem it appropriate to quote 10 golden rules of conduct so amply stated by the Honorable Leland M. Ford, who must have been inspired by the thoughts and actions of the immortal Lincoln when he stated:

1. You cannot bring about prosperity by discouraging thrift.

2. You cannot strengthen the weak by weakening the strong.

3. You cannot help small men by tearing big men down.

4. You cannot help the poor by destroying the rich.

5. You cannot lift the wage earner up by pulling the wage payer down.

6. You cannot keep out of trouble by spending more than your income.

7. You cannot further the brotherhood of man by inciting class hatred.

8. You cannot establish sound social security on borrowed money.

9. You cannot build character and courage by taking away a man's initiative and independence.

10. You cannot help men permanently by doing for them what they could and should do for themselves.

It has been wisely said that history is made up of the biographies of our outstanding men, men who have left an imprint on advancing civilization. It is from men of this character that we draw our greatest inspiration. They are the beacon lights that lead us onward and upward to greater and better things. This is why each year we should commemorate the birthday of Abraham Lincoln.

In conclusion I wish to remind you that Lincoln's life was comparatively a short one. However, the span of one's life is not measured by its length, but by the deeds performed during its brief period. The span of life of Jesus of Nazareth was only 32 short years, but after 2,000 years His example and teachings are among the most potent influences in the world today. Abraham Lincoln died at the age of 56, but in that short space he acquired immortality.

We cannot all be Lincolns, but we cannot escape the influence of his life upon humanity. The world is a better place, by far, because Lincoln's principles still live in the hearts of his countrymen, because no man had a greater regard and understanding of the human spirit than did Abraham Lincoln. His benign influence shall endure for all time—as long as there exists oppression, intolerance, and injustice. The beacon torch of Lincoln's spirit shall point the way of all mankind to follow.

Giovanni da Verrazzano

EXTENSION OF REMARKS
OF
HON. JAMES J. MURPHY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. MURPHY. Mr. Speaker, under unanimous consent to extend and revise my remarks in the Appendix of the RECORD, I include therein an article by Daniel Santoro of Staten Island on the discoveries of Giovanni da Verrazzano:

GIOVANNI DA VERRAZZANO—A SHORT HISTORY OF HIS DISCOVERIES

(By Daniel Santoro)

The year 1950 marks the four hundred and twenty-sixth anniversary of the discovery of the Hudson River, the Bay of New York, and Staten Island by the Italian cosmographer and navigator, Giovanni da Verrazzano. The magnificent statue by Ettore Ximenes, erected in 1909 through the good will of the Italian colony of New York, stands symbolically overlooking the bay which he discovered. The inscription on the pedestal records a historic truth:

"In the year 1909, America and Italy commemorate Giovanni da Verrazzano, Florentine, the first European to sail these waters, preceding another, more fortunate, for whom they were named, and whose shores were destined to be the site of one of the world's capital cities."

Giovanni da Verrazzano, the son of Pier Andrea da Verrazzano and Fiammetta Cappella, was born in Greve di Chianti, near Florence, Italy, about 1485. Some historians have attributed a title of nobility to the Verrazzano family, and the coat of arms of a count may still be seen in the old house in Via delle Pinzocchiere, near the famous church of Santa Croce.

Early in life he had developed a love for the sea, and he became very familiar with the Mediterranean waters. Having acquired a certain skill and reputation as a pilot, we find him engaged in the services of France on an expedition to discover the supposed strait to Cathay. In August 1508, Verrazzano entered the Gulf of St. Lawrence, thus preceding Cartier by 27 years. This search for a water route to the East Indies, however, was futile, and the ship returned to France.

Not very much is known about Verrazzano's activities at this time. Undoubtedly he must have made the acquaintance of many leading Italian merchants and bankers who had fled from the Italian republics for political reasons, and had found refuge in France. Among these were the Rucellai, friends of the Verrazzanos.

Monarchs and merchants in their eagerness to expand their kingdoms and trade respectively, sought the services of Italian navigators who surpassed all others in knowledge and skill. Cristoforo Colombo had gained wealth and vast lands for Spain; Giovanni and Sebastiano Caboto, sailing on a northern route, had planted the banner of England on the coast of Labrador upon which England based her claims to the North American mainland; Amerigo Vespucci, serving the king of Portugal, discovered the great southern continent, and his name was given to both western continents. Giovanni da Verrazzano was chosen by France to fulfill her dream of wealth and empire.

Exhausted by religious strife, political rebellions and the war against Charles V, emperor of the Holy Roman Empire and archduke of Austria, France lagged far behind England in projects of exploration and colonization. The Papal Bull of 1493, strengthened by the Treaty of Tordesillas (1494) excluded her from all territory beyond 370 leagues west of the Azores. With the capture of Constantinople by the Turks in 1453, Genoa's trade was ruined, while Venice's greatly declined as a result of Portuguese sailors who sailed around the coast of Africa thereby establishing cheaper trade routes with India. Thus the center of world trade had shifted from the Mediterranean to the Atlantic, and France looked to the west.

Undaunted by the threat of excommunication imposed on all who sailed under the French flag, and willing to risk hanging by the Spaniards, Verrazzano saw his opportunity. Finding favor at the French Court (for the Italian Luisa di Savoia exerted great influence on her son; Luisa di Savoia became Regent of France during her son's capture after the Battle of Pavia), he obtained permission to organize an expedition from Francis I (Francois d'Angoulême, son of Luisa di Savoia, who, upon the death of his father-in-law, Louis XII, became King of France on January 1, 1515). Turning to the wealthy Italian bankers of Lyons, the fuorusciti (political exiles), as they were called, he succeeded in obtaining their financial backing. These merchants were only too eager to increase their trade, and were easily persuaded by Verrazzano's eloquence and reputation. In August 1523 Verrazzano and his crew of 50 men sailed from Dieppe on the 100-ton ocean-going caravel, the *Dauphine*, with three other ships.

A violent gale, however, compelled them to return to Brest. Two of the ships were lost, and the third, the *Normande*, refused to hazard the treacherous journey. On January 17, 1524, Verrazzano sailed aboard the *Dauphine* intent on finding a passage to the Indies.

Sailing along a route in the neighborhood of 34 degrees north latitude, he sighted the American Continent (at a point above Cape Fear, S. C.), and coasted southward for about 50 leagues. Aware that the Spaniards were exploring the lands to the south, Verrazzano turned and proceeded northward charting the coast and giving names. To the isthmus separating the ocean from Pimlico and Albemarle Sounds, which Verrazzano erroneously mistook for the Oriental Sea, he gave the name of Isthmus Verrazzano. Other names with which he baptized the sea coast include: Arcadia (Maryland), di Lorenna (Delaware), the first promontory Lanzone (Cape Henlopen), the second Bonivetto (Cape May), the largest river Vandoma (the Delaware) and a small mountain, di S. Polo (the Navesink Highlands).

Verrazzano's report to the King of France is the first original account (thus far known) of the Atlantic coast of the United States and it clearly describes his voyage of discovery and exploration. The account of his first landing on the American Continent reads thus: "The inhabitants being numerous, we saw everywhere multitudes of fires * * * We sent the boat on shore with 25 men to obtain water * * * Many of the natives came to the beach, indicating by various friendly signs that we might trust ourselves on shore * * * A young sailor was attempting to swim ashore through the surf to carry them some knickknacks, like little bells, looking glasses, and other trifles.

"He tossed the things to them, and turned about to get back to the boat, but he was thrown by the waves, and so dashed by them that he lay as if he were dead upon the beach. When the people saw him * * * they ran and took him by the head, legs and arms and carried him to a distance from the surf. The young man * * * uttered very loud shrieks in fear and dismay * * *

"Afterward they laid him down at the foot of a little hill, expressing great astonishment at the whiteness of his skin. Our sailors in the boat seeing a great fire made up, and their companion placed very near it, full of fear * * * imagined that the natives were about to roast him for food * * * But as soon as he had recovered his strength * * * they hugged him with great affection and accompanied him to the shore. The young man made his way safely to the boat, and remarked that the people were black * * * that they had shining skins, (were of) middle stature, (had) sharp faces and delicate bodies." (The translation used is that of Joseph G. Cogsell.)

Sailing northward Verrazzano made various landings along the coast, and finally came to "a very pleasant situation (between) some steep hills" (the Navesink Highlands, and the high ground at the east end of Staten Island) "through which a very large river, deep at its mouth flowed to the sea; from the sea to the estuary of the river, any ship heavily laden might pass, with the help of the tide which rises 8 feet. But as we were riding at anchor in a good berth, we would not venture up in our vessel, with a knowledge of the mouth; therefore we took the boat, and entering the river, we found the country on its banks well peopled, the inhabitants not differing much from the others, being dressed with feathers of birds of various colors." Verrazzano then goes on to relate how the Indians greeted them with shouts of joy, and how they showed them where to land safely with their boat. Going beyond these hills (inside The Narrows) he describes "a very beautiful lake (the upper bay) three leagues in circuit" where the Indians were rowing "in 30 or more boats from one shore to the other." He called this Bay Santa Margarita, and the river and the surrounding land Angoleme.

How long they remained here is uncertain. "A violent contrary wind blew in from the sea" and forced them back to their ship. Weighing anchor Verrazzano sailed eastward but always within sight of the coast, and proceeded from inlet to inlet, from bay to bay along the Atlantic seaboard, he discovered "an island of triangular form" (Block Island or Martha's Vineyard) about the size of the island of Rhodes which he named Luisa (in honor of Luisa de Savoia). He did not land here because "of the unfavorable weather" and proceeded toward the mainland till he came to a "very excellent harbor," Rifugio (Narragansett Bay). From here he continued sailing past Maine, and reaching as far as northwest of Sable Island, he turned the ship and headed back to Europe landing in Dieppe on July 8, 1524. Verrazzano failed to discover the route to Asia; instead he discovered the Hudson River, the Bay of New York, and Staten Island.

Little is known of Verrazzano after his return to France. Some historians maintain that he made a second trip to America. Ramusio states that he was devoured by cannibals in Venezuela; others say in Brazil. The Italian poet, Giulio Giovio, in a recently uncovered poem, states that Giovanni's brother Girolamo da Verrazzano, watched helplessly from the boat while Giovanni "was being devoured by savage Indians." However, this is not very probable since on May 11, 1526, Giovanni had made him the beneficiary in his testament, and it is not likely that one names as beneficiary a person who was to undertake the same dangerous mission. Nor did Girolamo, who was an excellent cosmographer, indicate on his map the place where the incident was reported to have happened. Others still say that he was captured by the Spaniards in 1527 and hanged.

The official recognition given to Henry Hudson as the discoverer of the Hudson River by the legislature of the State of New York on March 27, 1906, rightully belongs to Giovanni da Verrazzano. Early Dutch historians, eager to claim credit for their nation, hardly mentioned Verrazzano, while they filled their history books with stories of

Hudson. The English could not have given him the credit since it would have been against their interest.

But the voice of truth cannot be silenced; it is louder than the roar of the waves; mightier than the power of the storm. It shall be heard.

A Long-Range Farm Program—Republican National Committee's Agriculture Subcommittee Reports

EXTENSION OF REMARKS
OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1950

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks, I present the report of the Honorable Axel J. Beck, of South Dakota, chairman of the Subcommittee on Agriculture of the Republican National Committee. Mr. Beck's report gives the background of the committee's work as well as its recommendations.

The report follows:

FINAL REPORT AND RECOMMENDATIONS TO THE REPUBLICAN NATIONAL COMMITTEE BY SUBCOMMITTEE ON AGRICULTURE

The Republican National Committee, at its January 1949 meeting in Omaha, with Chairman SCOTT's appointment and Chairman Gabrielson's continuation of a subcommittee on agriculture, recognized the problems confronting that industry as basic economic ones, and as problems having like importance from a political point of view, and by that act delegated to your subcommittee the difficult task of finding answers and solutions which not only would meet the requirements of practical farming under conditions which now exist and be receptive to the farmers, but which also would fit into the scheme and pattern of the philosophy and concept of free enterprise.

We, as members of your committee, accepted that assignment with a great deal of hesitancy. We were dubious concerning constructive accomplishments. We recognized the tremendous difficulties which were involved and we entertained no great hope of finding answers to questions which over the years had proved so baffling and concerning which there had been so much disagreement.

Our preliminary investigations and inquiries, however, soon led us to conclude that the viewpoints of practical dirt farmers on questions relating to a farm program had seldom been sought an never emphasized and that our committee, even though it couldn't find all of the answers which it had been called on to supply, could at least make a contribution in this field by furnishing an opportunity for the operators in the field of agriculture—the ones who had seen and felt the impact of Government entry therein, the participants and actual observers—to tell of actual experiences and to advise and counsel on legislative proposals relating to a long-range farm program.

With such self-imposed restrictions as to the scope of our inquiries, we found no difficulty in deciding upon the heart of the farm belt, with Sioux City at the junction of three of the great farm belt States in its center, as our field of operations and upon that city as the forum from which the agricultural voice of America should be heard.

We need not in this report stress all of the particulars which preceded or which took place during the Sioux City meeting, except those which ought to be stressed and which we regard as being highly important.

The reception given us by the host State and city belongs in that category. Iowa, under the leadership of its distinguished citizen and Governor, William S. Beardsley, and Sioux City, expressing itself through its popular mayor, Dan J. Conley, and cooperating through a smoothly functioning chamber of commerce, extended a welcome to the conference which not only gave official prominence to it, but a vivid interest setting also.

The presence of and participation in the conference proceedings by nationally prominent Republican leaders, likewise, was tremendously important and significant. The conference but for the attendance of Senators Aiken, of Vermont; Young, of North Dakota; Butler and Wherry, of Nebraska; Thye, of Minnesota; Kem, of Missouri; Hickenlooper, of Iowa; and Mundt, of South Dakota; and Congressmen Hope, of Kansas; Andresen, of Minnesota; Stephan and Curtis, of Nebraska; Talle, Hoeven, Gross, Martin, and LeCompte, of Iowa; Case, of South Dakota; Governor George T. Michelson, of South Dakota; and Chairman Guy George Gabrielson, would not have been appraised as an event having national significance. That attendance silenced our critics who were ready to charge the Republican Party with indifference toward agriculture.

The farm organizations' participation in the conference proceedings are events which must be classified likewise. The conference record without their statement would not have been complete. In those statements we have expressions from recognized farm leaders on basic agricultural policies, on existing differences in viewpoints and on approaches to the solution of the long-range farm problem. All of them merit study and full consideration since they represent results of painstaking and conscientious and technical and practical research over a period of years in the field of agriculture.

Other observations which we made concerning that conference are summed up in our statement of October 1. It in substance told of the character of the conference proceedings, the interest it created, the commitments our party made and what was accomplished by it. We submit it for the record of this committee and as a part of our final report. It reads as follows:

"The subcommittee on agriculture today, through its chairman, made the assertion that the Republican Party's next step in its fight for agriculture and a restoration of a sound economy and as a sequel to the recent National Farm Conference, should be to see to it that the majority recommendations from the farmers at that conference for a long-range farm program prominently be kept before Congress as it formulates legislation of that type.

"Those recommendations," he added, "consisted of demands for high level parity price supports, continuation of recognized soil conservation practices, storage, insofar as possible, on the farms, of adequate stock piles of nonperishable farm products, tariff protection at parity levels, and utmost freedom from Government interference with and control of farming."

"The Republican Party by sponsoring the conference and by inviting the farmers to participate in it," he continued, "impliedly pledged itself to keep those recommendations before Congress and it is a pledge that the party can be depended upon to keep.

"Something else, too," he emphasized, "came out of that conference, that same group of farmers reflecting the traditional independence and self-reliance of the farmers of America, declared themselves against subsidies and doles, strait-jacket Brannan-plan methods of regimentation, and the shackles and the chains it proposes for agriculture."

The farmers insisted in the course of that conference that adoption of the recommendations would result in prosperity for agriculture which in turn would mean prosperity for the Nation.

Commenting upon the character of those recommendations, he pointed out further, that the conference record consisted of complete statements from all of the major farm organizations, of statements by nationally known economists and of the experts in the field of agriculture and of more than 100 farmers from more than 15 Farm Belt States, and that those recommendations, therefore, represented a correct cross-section view of the farmer thinking of America.

"They reflected," he said, "realistic as well as constructive thinking on the part of farmers, in that they point the way to a gradual, safe, and systematic departure from our present rigged economy and a return to the American way of life and our system of free enterprise."

Concluding his remarks, he observed that the farmers of America at a conference spotlighted nationally, sponsored by the Republican Party, but otherwise nonpolitical, for the first time in history had a chance to tell their side of the story of agriculture. In telling it, they took the lead and they pointed the way. They warned that the rugged individualism, exemplified by the testimony of Dan Casement, the colorful Kansan who spoke at the conference, if invoked now, can be as harmful and as dangerous to our economy as the views of the extreme leftists and those who would make the farmers serfs in a welfare state. They brought practical sense to a problem which by reason of politics has been made confusing, and they give it an importance which must not be overlooked.

"The administration forces in Washington," he continued, "are already claiming that the farmers who spoke at the conference should be ignored, that their recommendations should be disregarded and that the conference record should have no effect."

"The Republican Party and the Republicans in Congress, on the other hand," he finally concluded, "will see to it that the conference pledge to the farmers of America will be kept."

Accordingly, your committee has reached the conclusion that recommendations as to objectives to be attained under a long-range farm program should be a part of this report. Such action is in line with the majority recommendations, which came out of that conference. It is in accord with the compact made with the farmers and the kind of results they were led to expect.

The recommendations we have agreed upon do not follow the methods or plans prescribed by any one of the farm organizations or by any individual or group of individuals, but are based on all of the evidence and testimony which is in the conference record and upon other evidence which has come to the attention of your committee and are intended as recommendations, only, for a plan, rather than the plan by which the desired objectives can be achieved.

OBJECTIVES

1. Administration by farmers through a system of farmer elected township and county committees and State directors, and a national farm board appointed by the President.

2. Full parity price at all times on all cash nonperishable crops, restricted only by marketing quotas on each farm when on August 15 of any one year the total estimated national supply of any specific commodity crop exceeds 150 percent of the predicted requirements for the next year.

3. Full parity price at all times, also, on all feed nonperishable crops—such crops to be in terms of production units based on feed value—limited only by acreage restrictions on individual farms when the supply of such

crops in terms of such units, stored thereon, on December 1 of any 1 year, will exceed 150 percent of its assigned production.

4. Unrestricted livestock production, supported at full parity in the market place, by Government purchases from livestock processors of enough of their products to maintain the market at that level. Losses, if any, from sales of accrued surplus, resulting from such purchasing operations, to be financed by a fee of $1 per hundred pounds imposed on the killing sale of all livestock. Such fee may in the event of a declared marketing emergency be increased to as much as $2 per hundred, or, when unnecessary by reason of self-sustaining market, or a sufficient surplus of fee collections, be entirely suspended.

5. Eggs and dairy products to be supported at full parity price levels by a fee on the products marketed, under the same general plan as is established for livestock. The fee base in this field being broad, it is safe to assume that a small fee will sustain such price structure.

6. Semiperishable crops to be maintained at full parity price levels, also, under a Government-purchasing and a market-quota system.

7. Facilities for storage of nonperishable feed crops on the farms.

8. A sound soil-conservation program to insure continued fertility of our soil, proper and essential mineral content, and one which will tend to minimize the disturbing facts of soil erosion.

9. Encouragement of research and new uses of agricultural products and the development of new industries to utilize additional production.

10. A flexible tariff at the parity level for all products of agriculture.

POLICY

The Republican Party, traditionally constructive, departs, under this plan, from negative philosophies of curtailed production and enters an era of full productivity.

By it we propose incentive for agricultural production records, efficiency in operations, and we point to permanent means by which a farmer can operate at a profit, hold what he has acquired, and meet the problems of ever-increasing overhead costs.

With it we propose production which increases sales, engenders demand for goods and labor, and which raises standards of living. We boldly reject the hopelessness of the scheme of a low price for a big crop and a high price for a small one, with the results in terms of dollar income virtually the same.

As we launch it we shall abandon the false concept of scarcity as a means of acquiring plenty, and we shall underwrite a program for farm income at 1948 levels and correspondingly high ones in other fields.

The Republican Party, under the terms of this plan, in conjunction with full parity price for all farm products, proposes an end to further unwarranted Government intrusions in this field, a restoring of administrative and operational control to farmers and a creed which may properly be called, the American code of agriculture.

FARMER ADMINISTRATION

Control of the industry in which the farmers are directly interested should and can be exercised by them through election of township and county committees and State directors and majority representation on the national board. Such representation shall be by appointment by the president from State directors or persons who shall have held such positions. Other members of that board shall also be appointed by the President in a manner so as to represent other interests in the Nation. Such a board shall have controlling power in all matters relating to administration and policy; the Secretary of Agriculture shall be ex officio member and its presiding officer.

PARITY

Parity is in the nature of an equalizing measure. It may also be referred to as a formula under which the price for the things that a farmer sells goes up and down as the prices in other fields fluctuate. Farm products, therefore, on principle, must be kept at full parity price levels.

SUPPORT PRICE

Full parity prices for cash and feed nonperishable crops can be maintained by 90 percent commodity loans callable at parity. This is in line with what experience has taught us.

STORAGE ON FARMS

Provisions shall be made to carry 50 percent reserve of nonperishable feed crops in storage on the farms at all times. Such a stock pile will protect the Nation against shortage in case of drought or war. It will operate as an automatic check on tendencies to overproduce. The useless costs incidental to Government storing will be eliminated. Shuttling of feed crops from farms to Government storage bins and back again when such supplies get low will be ended and savings will be effected both by farmers and the Government.

This method for storage will furnish insurance against crop failures, since the supply on each individual farm in short crop years can be sold on a higher market or used as feed. A crop reserve of that size in the possession and control of individual farmers can be likened to a reserve account by a corporation or a bank which is created to protect against unanticipated emergencies or losses. Such assets on every farm will add stability to the farming business and it will cover temporary individual farm unit setbacks, which otherwise might be quite serious.

SURPLUSES

By combining crop and livestock production under our plan, we are not only working toward more production normalcy in the field and more balance—factors which by themselves will simplify the troublesome question of crop surpluses and assure better incomes—but by the expedient of converting of increased amounts of such surpluses into livestock products—of which there is almost always a shortage and for which there is constant demand—we are providing channels for disposition which formerly did not exist, we are arranging to meet normal market demands and we are reducing the cost of absorbing such surplus to the extent that they can be paid without any expense to the Government and out of the fee we propose.

SELF-FINANCED

Upon a theory which from the standpoint of principle is comparable to that underlying minimum wages and the principle applied by business when it assesses the cost of its products, including taxes, to the consumer, we are not only freeing agriculture from the charge that it is recipient of subsidies and doles and holding prices of farm products at parity peaks, but we are also financing the whole venture by a fee which will be added to the price of the things which are produced.

SPECIAL FEATURES

The farmer under this plan will be free of the controls by overlords in the Department of Agriculture. He can make his plans for short periods or he can make them on a long-range basis. He can make his farming conform to special requirements of his own farm unit or to his own individual management pattern. He is once more restored to the position of independence he once held with a protection, however, which assures him earning opportunities comparable to that of individuals in other fields.

ISSUE PRESENTED

Your committee in making this report and submitting this plan, has sought not only to keep its pledge to the farm conference, but by our recommendations that the plan be submitted to the Republicans in Congress as objectives to be attained by the Republican Party in its fight for agriculture, we are not only suggesting specific commitments from our party to the farmers, but we are also focusing the attention of the Nation on the fundamental differences which exist between the so-called Brannan plan and the type of a farm program which the farmers want, which they must have, which they recommended in the course of that conference, which in substance is reflected by the plan we have proposed, and which as already indicated we have termed "the American code of agriculture."

CONCLUSION

The Republican Party is without a long-range farm plan. It must have one if it expects to win the confidence of the voters in the Farm Belt in the coming elections. That plan must be such as to appeal to the average, typical, and practical farmer. It must be positive and specific. Generalizations are not enough. The farmers are demanding a bill of particulars and are entitled to it.

This report contains proposals which meets those demands and it suggests objectives which not only fit into the American farmer's concept of free enterprise and ours, but also into the pattern laid down by the whole committee and the Republicans in Congress at the recent Washington meeting.

Your committee, in this connection, suggests that the 20-percent decline in last year's farm income, the predicted one for the coming year of an additional 10 percent, the admitted damaging effect of such declines on the whole economy and the Agriculture Department's implied admission of failure as it proposes dumping and destruction of surplus crops, has focused the attention of the Nation on need for specific and constructive measures to prevent prospective collapse of the farm products price structure. Announcement concerning such measures for that reason should be made at this time.

This report is being submitted to the chairman of the policy committee in accordance with the action taken by the whole committee at its executive session on February 5. We ask that it be filed and approved and that the recommendations in it, as to objectives, be submitted to the Republicans in Congress as suggestions for basic farm policy of the Republican Party.

Respectfully submitted.

Axel J. Beck, Chairman, Subcommittee on Agriculture of the Republican National Committee; Subcommittee Members: Axel J. Beck, Chairman; Mrs. Gilford Mayes, Vice Chairman; Mr. B. L. Noojin; Mrs. A. C. Remmel; Mr. C. C. Spades; Mrs. Ralph A. Harris; Mr. C. Norman Brunsdale; Mrs. John B. Cooley; Mr. James P. Winne.

American Taxpayers Pay the Bill

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1950

Mr. DONDERO. Mr. Speaker, Valentin Gubitchev, the convicted Russian spy, is going back to Russia, not to jail, and the United States Government is paying the major portion of his passage aboard a North Atlantic luxury liner.

The State Department arbitrarily dictated that Gubitchev be sent to his homeland and that he be freed from serving a just sentence of 15 years for stealing vital United States secrets.

Gubitchev, as a Russian attaché of the United Nations, is paid by the United Nations. The United States, through the American taxpayers, contributes 46 percent of the cost of operating the United Nations.

Gubitchev has been drawing his pay ever since his arrest and all the time he was on trial, and the United Nations is buying his ticket back to Russia.

Forty-six percent of Gubitchev's salary came from the people of the United States—the people he was spying upon.

Forty-six percent of the cost of the spy's trip home will be paid by the taxpayers of the United States.

Forty-six percent of all of Gubitchev's expenses while in the United States was paid for by the American taxpayers.

Bureaucratic Control of Medicine

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution recently adopted by Unit No. 90 of the American Legion Auxiliary, Melrose, Mass., as certified to me by Emma L. Burns, president, and Irma L. Berthel, secretary. The resolution is as follows:

Whereas the American veteran in two world wars has defended the American free-enterprise system, which has made possible the development in this country of the highest standards of medical care and the finest medical institutions attained by any major country in the world; and

Whereas having experienced the shortcomings of impersonal, assembly-line medical care inherent in the form of Government-controlled medicine necessary in time of war, the veteran understands the dangers of imposing such a system permanently on the entire population; and

Whereas compulsory health insurance would impose an unjust tax on the veteran's pay check for medical care to which he is now entitled free of charge as a reward for his service to his country; and

Whereas compulsory health insurance would force a tax of 3 percent on the income of the employed veteran, rising to a tax of at least 6 percent within a few years, creating new financial burdens which would increase the costs of necessities of life and lower the standard of living for veterans and other citizens: Now, therefore, be it

Resolved, That the American Legion Auxiliary, Melrose, Mass., Unit 90 does hereby go on record against any form of compulsory health insurance or any system of political medicine designed for national bureaucratic control; that a copy of this resolution be forwarded to the President of the United States, to each Senator and Representative from the State of Massachusetts, and that said Senators and Representatives be and are hereby respectfully requested to use every effort at their command to prevent the enactment of such legislation.

One Freedom Indivisible

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. JENISON. Mr. Speaker, the story of Abraham Lincoln remains one of the greatest sources of inspiration in the history of our Republic. The annual observance of his birthday anniversary properly has become a source of renewed devotion to the cause of the people and their representative government. Under leave granted me to extend my remarks, I desire to call the attention of my colleagues to a challenging address delivered on Lincoln's birthday in his home city of Springfield, Ill., by Harold E. Stassen, former Governor of Minnesota and now president of the University of Pennsylvania. Mr. Stassen's audience was made of Young Republicans in Illinois, whose enthusiasm gives renewed hope for the preservation of the principles so well exemplified by the words and deeds of the Great Emancipator.

Mr. Stassen's address follows:

ONE FREEDOM INDIVISIBLE

(By Harold E. Stassen)

Chairman BROWN, Congressman DIRKSEN, Congressman JENISON, National Chairman Tope, members and guests of the Illinois Young Republican Federation, Abraham Lincoln was one of those few men in all history who deeply understood the nature of man and had the unshakable courage to act in accordance with his convictions.

He believed—he knew—that man was meant to be free, and in moving addresses he declared that this Nation could not endure permanently half slave and half free.

Standing fast upon this principle, Lincoln welded together a powerful and victorious political party; he took the leadership of the Nation, and he brought it through its hour of grim trial as one undivided United States of America. There can be little doubt now of the everlasting rightness of his position or of the benefits that have flowed to all mankind, regardless of color, by reason of Lincoln's actions. We salute the memory of Abraham Lincoln tonight.

At this midcentury point, in America and in the western world there is another, but closely related issue which needs clarification and decision. After Lincoln's time, as freemen were stimulated to invent and place into extensive use machines to work for men, rather than to have men toiling as slaves to man, remarkable productivity was achieved and unequalled progress was made. But with this rapid industrial revolution came abuses and dislocations, and booms and depressions.

Some of the resulting problems were wisely met by the adoption of important new rules and regulations and provisions, such as the antitrust and antimonopoly measures, the early enforcement of which was associate with Theodore Roosevelt; the Federal Deposit Insurance Corporation to safe-guard credit and deposits, which was set up under an amendment presented to the Congress by Senator VANDENBERG; and the social security measures to aid the temporarily unemployed, which were established under Franklin Roosevelt. These actions all applied the basic, sound methods of a government of the people, by the people, and for the people. They established rules and prescribed limits of action whereby the exercise of one man's freedom would not unduly infringe upon his fellow man's enjoyment of freedom. These same methods had been employed from the very earliest days of our Nation.

Through the vigilance of our Republican Party and through some key decisions by the Supreme Court, we have thus far, in the main, retained our individual economic freedom in America. This is the principal reason for the fact that our average worker's home has a better standard of living than the average worker's home in any other country in the world and it is the principal reason that the number of good jobs available to the worker is very high.

Under that liberty, individual management and free workers and capitalist tools have together increased the results that can be obtained from a day's work by 100 percent in a single generation of 25 years. Unfortunately, a goodly part of that gain has been taken away from the worker through the cheapening of the wage dollar by the unsound economic policies of his government.

Unfortunately also, in that generation, the whole world has been lured by another set of proposals. Frequently confused and rarely clearly defined, the central purpose of these alien proposals is that instead of piecing out carefully the means and limitations under which free men can work out their problems, with competition providing rewards for efficiency and penalties for inefficiency, these proposals manifest the belief that the simplest approach to any problem is for government to step in and take over the entire situation involved in that problem. "Let the government do it," is the slogan. Nationalization, government ownership, blanket controls, price fixing, heavy taxes, governmental distribution of goods, and governmental operation of all or a major part of the economy are the methods of this school of thought.

In various forms and in varying degrees it has crept into the entire western world. Its extreme form appears in the absolute collectivist views of the totalitarian materialists of the Continent: Marx and Engels and Feuerbach, Lenin and Stalin and Hitler. In the democracies, however, it has been frequently advocated as a defense against communism, as the ideal system of the future. Its purpose, so we are told emphatically, is to maintain the political and religious freedom of men.

But, as the various experiments in governmental operation of an entire economy, or in the nationalization of major industries or professions or sections of an economy, are attempted, we can observe the resultant effects upon the lowering standards of living, the decreased liberties, and the restricted way of life of the people. And as we watch the unfolding of these schemes a central point emerges. It is a point which I believe must be precisely stated and dramatically emphasized. It is this:

The economic freedom of man—that is, his freedom to buy and to sell, to work and to profit, to produce and to build, to invest and to manufacture, to mine and to distribute, to save and to spend, subject only to broad and fair rules of the economic road—cannot permanently be divided from his other freedoms.

In fact, in the long-term view, all of the freedoms of man are indivisible. The tendency to speak of a number of freedoms has resulted in confusion, it has created the impression that man can turn over to government a part of his freedoms and retain the rest. But throughout the world the evidence accumulates that man's situation is not static and that if he is but partly free, he will either gradually win full freedom or slowly lose all his freedom.

If a man becomes subservient to the men in authority in his government for what he may eat and what he may wear, for where he may work and what he may earn, for what he may produce and how he shall profit,

for what he may build and where he may live, then he cannot truly be free in what he may say or write, or how he may worship, or how he may live.

A man must either have complete freedom or he will not for long be truly free at all. A man cannot permanently be half a slave and half a freeman.

It is this great issue which our Republican Party must take hold of with a firm and confident grasp. Assuming clear and definite position, the party must translate the issue to the people in forthright terms. The issue must not be presented negatively, as mere obstruction, but by means of positive, dynamic programs by which progress can be made and freedom retained. Obviously there will be disagreements in the details of such a program, for no program of action can ever be worked out without adjustment of views and honest compromise freely arrived at. But on the great fundamental principle that the freedom of man is indivisible and that government must not have the power of economic life and death over its people, there can be no compromise, there must be no compromise.

I believe that this is the key truth which the Republican Party must make crystal clear and present to the people as its fighting issue.

It is the most progressive, dynamic principle of all time. Its correct interpretation will lead to greater progress, to better conditions of living, and to brighter prospects of world peace than any of the confused, pseudo-liberal, reactionary doctrines of these recent decades. It does not in any sense limit the objectives and goals of man. Rather it does precisely the opposite. It points out the only true course by which the goals of happiness and security can be realized and maintained. It sets the standards by which government shall establish fair boundaries to one man's exercise of his freedom, boundaries that prevent his infringing unduly on the exercise of the freedom of his fellowmen. It indicates the way in which government shall help in performing those functions which men cannot perform for themselves, but it prescribes methods that retain man's individual freedom and methods that do not subject him to the whim or caprice of other men in government.

And here are some more specific examples of what this principle does:

It emphasizes the importance of preventing monopolies and international cartels, which in effect take away man's freedom to buy and trade.

It brings to us a sharp realization of the fundamental evil of the dictatorial labor leader who prevents the members of his union from working though they wish to do so, who ruthlessly obliterates from his union those who have different views, and who slams shut the door on those who would be apprentices in the field of labor that he controls.

It warns that we must not permit Government to take over the control of the medical professions by any compulsory health plan.

It demonstrates that we must forbid Government to take actions which would greedily grasp such large portions of a man's earnings that he is denied the freedom to spend and use and enjoy the fruits of his own labor.

There is a double evil in the proposals to increase the economic power of the Government over the people.

I have emphasized the unfortunate restriction on the citizen's freedom. The other bad effect is that it increases the power and bigness of Government itself. All the warnings of the great men in our history against a too powerful and too centralized Government were wise. The current world scene corroborates earlier history in this respect.

Government is like a fire. If it is kept within bounds and under the control of people, it contributes to the welfare of all. But if it gets out of its place, if it gets too big and out of control, it destroys the happiness and even the lives of the people.

One of the lessons of America's unparalleled progress is that Government's principal role is to protect men and to prevent crushing burdens from being laid upon them and to leave them free—truly free and completely free. Our Government in the past has in the main held to that role, and the sum total of the results of the freedom it has fostered has been progress far in excess of anything that totalitarian systems can accomplish. Freedom means strength far beyond that of cumbersome and clanking collectivism, which cows the worker instead of releasing his energies. It is the virile idea which will penetrate iron curtains and push through colonial barricades and move all mankind toward progress and toward peace.

The bright source of the doctrine of the true freedom of man is that stream of philosophic thought that can be traced to ancient Greece. It received major impetus from the Christian religion and from Judaism, and was implemented by Magna Carta, by the Declaration of Independence, and by the Constitution of our country. The fundamental concept of man's inherent rights—that he is meant to be free and that he is an individual possessing human dignity—does not really permit of the mixed interpretations of socialism or of communism. Neither does it permit of a cold and ruthless capitalism, nor of a domineering, dictatorial hierarchy of labor. It requires the evolvement in this industrial age of a modern people's capitalism and a modern, free man's government which with skill and ingenuity and flexible adaptiveness constantly sets up those new rules and new limits to keep the game of life of free men fair, to ease the plight of those who are ill or unemployed or aged, but never to so burden the producer, or so reward the slacker, as to undermine the virility of an economy.

Let us always have in mind that every attempt in the history of the world to establish a loafers' paradise has wound up in a dictator's hellhole.

My message to the Young Republicans of Illinois and of the Nation today is this:

Let us rebuild the Republican Party as a dynamic, fighting party with this issue of the true freedom of man as our central rallying point.

Let us make it clear that if people are looking for a political party that will promise to everyone ever larger hand-outs from the Public Treasury, they should look elsewhere that we hold that the Public Treasury is in reality the people's pockets, and that we will not seek to win votes by false promises nor by leading the country down that road that inevitably ends in a cheapened dollar and ultimate misery and suffering for all when resources are drained.

Let us make it clear that if the people want a political party that will take over and politically dominate the medical professions in exchange for promises which the experience of Britain show cannot be fulfilled, they should look elsewhere.

Let us make it clear that if they want a political party that will try to delude them into thinking that someone else is going to pay the tax burdens, they should look elsewhere.

Let us make it clear we seek to build a political party that is frank and forthright with the people, a party that promises above all that it will not weaken or destroy any of the freedom of the people, that it will seek ever to maintain an incentive for every man and woman to use his hands and brains and capital in worth while and productive accomplishment and service, and that it will steadfastly refuse to maintain or to operate any system of governmental hand-outs, to provide soft cushions for loafers or chiselers or dishonest 5-percenters.

Let us also declare with deep sincerity that man cannot truly be free if discrimination against him because of his race or religion or ancestry shuts doors to him of education or of employment or of shelter or of justice. Thus we shall make clear that, having adopted this great principle, our party cannot contemplate and shall not consummate a fusion with those forces in our country affiliated by name with the opposition party who seek to join with us partially to protect economic freedom for themselves but even more to deny true freedom to others in their midst.

Rather should we associate ourselves with those thoughtful, forward-looking people throughout the Nation who seek sound and steady progress toward our high ideals for all our people without discrimination.

Our objective further means that our people must have and hold fast to that code of moral and ethical conduct which has been developed from the depths of our great religions and which provides a self-discipline in our relationship to our fellowmen that is more important than any laws or rules or decrees. The lessons of history indicate that unless there is a code of conduct which causes people as a whole to have respect for the rights of their fellowmen, to regard them as individuals endowed with human dignity, to treat them with justice regardless of the terms of any laws or rules, that unless there is such a basis for the relationship between men, there cannot be true freedom, for the only alternative method for keeping such a society functioning is through laws and decrees possessing such detail and providing punishment so rutheless and extreme as to wipe out human liberties.

This approach means that we cannot rest in the face of misery and suffering, and it means further that in our humanitarian efforts to alleviate misery and suffering we must never ask that the rights of those who are in need be subjugated to government. We must instead ingeniously devise methods of aid that permit the retention of full freedom of the individual who is aided.

Let me say bluntly that if we adopt this basic objective, ours will not be an easy road. Embodying it in programs and instruments of government is difficult; interpreting it to the will and understanding of a people is complicated. But it is worth the price. It is not a route to easy victory in elections. But I believe it is the only route to victories that are worth while. It is the only route to victories that can be crowned by administrations that contribute deep and lasting value to the people of the United States of America and to all mankind.

We must alertly recognize that many men, either because of a sincere but mistaken belief in socialism or because of a cynical indifference to everything but victory at the polls, employing local political-machine techniques will make exaggerated promises of material gains to the people, hoping thus to win elections and as a byproduct to place more and more power in the hands of those in government.

The course I advocate would require that each of us must guard the freedom of his fellow men as jealously and effectively as he guards his own. The businessman's economic freedom to produce and manufacture and sell and profit is really inseparable from the professor's academic freedom to teach and write and research. The laboring man's right to work and to quit work and to change work is inseparable from the doctor's and dentist's right to practice their profession independently. The right to buy and to sell is inseparable from the right to publish and to assemble. The entire way of life of freemen springs from one concept of the indivisible freedom of man. It is as

freemen, thoroughly understanding the importance of their freedom and helping other men to win true and complete freedom, that Americans can gloriously fulfill their position of leadership in the world. This, as I see it, is the great task of the Republican Party.

I ask you young men and women gathered here tonight, and the citizens listening in, to step forward throughout the Nation to meet the challenge of this task.

Brock Pemberton

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an editorial which appeared in the Washington Evening Star on March 14 regarding the death of Mr. Brock Pemberton.

My wife and I were privileged to know Mr. Pemberton for a great many years. He was a charming and loyal friend. He was an able craftsman of the theater. He was a leader. He participated generously in the community in which he lived. He was a civic-minded citizen who played an intelligent and contributive part in the many matters which affect the welfare of the men and women who lend their skills and talents to the stage. He was interested in their problems. He was greatly loved.

Beyond all this, he was a patriotic and courageous American who strove energetically to preserve the vital opportunities inherent in our free society. He was deeply apprehensive regarding the threats to that society, both foreign and domestic.

He will be greatly missed and deeply mourned, not only by those who knew him and loved him but also by many others for whom he represented a dependable and helpful influence in the theatrical world.

I extend to his wife and to his brother my deepest sympathy at this time of grievous loss.

His life was gentle, and the elements so mixed in him that nature might stand up and say to all the world "This was a man."

The editorial follows:

BROCK PEMBERTON

Brock Pemberton was first of all an American. He came out of the Middle West and proved that he could win success in New York as definitely as anybody from overseas. That was something pretty important to do in the twenties when foreign names were fashionable and even quite talented artists sincerely believed that it was imperative to have a European background. To set up as native a work as Zona Gale's Miss Lulu Bett against such a pattern took courage, but Mr. Pemberton had his share of that quality and proved it again and again whenever there was need of it in his experience.

Perhaps he owed something to the example of William Allen White, under whom he trained in Emporia. In any case he remained a newspaperman by instinct if not in continual practice all his days. He possessed a keen sense for situations compelling in character, however simple and unpretending in other respects. Most of the plays he produced were matters of addition—works in which details accumulated until they reached a wholly natural climax. He judged a script by its power to create a demand in the mind of the audience and then to meet that demand by satisfactory action. There were occasions when he failed, but the net result of his endeavors was triumphant achievement. If only for Harvey, he will have a permanent place in the annals of the American theater.

The Return of a Native

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. MACK of Illinois. Mr. Speaker, last week Oakland Cemetery in Petersburg, Ill., claimed the body of a great American author.

Edgar Lee Masters, who became famous almost overnight in 1914 with the publication of Spoon River Anthology, was returned last Friday for burial in Petersburg, where he had spent his childhood days. It is significant indeed that he chose to be laid away here where Spoon River Anthology had its setting and in the same cemetery that claims the bodies of two of the writer's subjects, Mitchell Miller and Ann Rutledge.

Mr. Masters was not only a great author, as he had also distinguished himself as a successful lawyer prior to the time he gave up his practice in Illinois to devote full time to his writings. He was an active Democrat and while in Chicago was one of the founders and the first president of the Jefferson Club.

While he has passed on, his works will live forever. He will go down in history as a great American author and one who added much to American literature. As part of my remarks, I include an editorial by V. Y. Dallman, editor of the Illinois State Register:

RETURN OF THE NATIVE

Edgar Lee Masters, poet and iconoclast, has come home. Always the land of the Spoon River was in his heart, and today he is laid to rest there, a native son returned to his own country.

Perhaps some future poet will pen as postscript to Spoon River Anthology, Masters' own epitaph. It will be as stark, as moving, as bitter as those of the anthology that lifted him to fame.

It was Masters' great tragedy to outlive his muse and the renaissance in poetry he created. His career was long and colorful, begun in great dreams and ended in frustration.

But always in his writings there persisted an unchanging affinity for the country of his boyhood. In one of his last books, the Sangamon, he tells in detail of the people whom he knew. Unlike much of his writing—caustic, searching, probing intimate depths—the Sangamon is written in a tender, reminiscent mood. To this country all of his life, Edgar Lee Masters gave unwavering devotion.

Today he returns a tired wayfarer. Squire Davis and Lucinda Matlock Masters, whom he idealized, are waiting for him.

The long journey is ended, and who can say how well or ill it was pursued? Better than us posterity can give the answer. Putting aside the triumphs and defeats and puzzling paradoxes, let us honor a man who used truth not like a swinging censer of mystic beauty as did Vachel Lindsay, but as a cutting edge, exquisitely keen, implacably wielded.

Let us not discuss his books or his philosophy or his individualism. Suffice it to say that Edgar Lee Masters has come home.

Inter-American Commission of Women

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following request for cooperation presented by the chairman of the Inter-American Commission for Women, Senora Amalia De Castillo Ledon, to the women Senators and Representatives of the Congress of the United States on January 26, 1950:

INTER-AMERICAN COMMISSION OF WOMEN—REQUEST FOR COOPERATION PRESENTED BY THE CHAIRMAN OF THE COMMISSION, SENORA AMALIA DE CASTILLO LEDON TO THE WOMEN SENATORS AND REPRESENTATIVES OF THE CONGRESS OF THE UNITED STATES, JANUARY 26, 1950

The functions of the Inter-American Commission of Women, as set forth in the Organic Statute of the Commission approved at the Ninth International Conference of American States, in Bogotá, include the following objectives: To work for the extension of civil, political, and social rights to the women of America; to study their problems and propose means of solving them.

The aforesaid Commission, which I have the honor to serve as Chairman, therefore appeals to you, the representatives of your countrywomen in the Congress of your Nation, to cooperate with active efforts and with your votes in promoting the adoption of laws that will tend to improve such aspects of the position of women in the United States as fall within the scope of the objectives of the Commission.

As you know, this Commission, which is striving to establish equality of rights between the sexes in all countries of our hemisphere, is not a politically partisan organization. Consequently its appeal for your cooperation is directed through me to all of you alike, the women Senators and Representatives of the two leading political parties in this country; for the problem of general interest, calling for a collective attempt to arrive at the solution, without distinction as to class or political parties and doctrines.

A Convention on the Granting of Civil Rights to Women, approved at the Ninth International Conference of American States, in Bogotá, was signed by the representatives of all the American countries except the United States.

With reference to that instrument the Assembly recently held in Buenos Aires by the Inter-American Commission of Women adopted a resolution which reads, in part, as follows:

"Whereas its importance (i. e., the importance of the convention) is bound up with the potential enjoyment of unanimous

support by agreements adopted within the framework of the American regional system;

"The interpretation of the term 'civil rights' has by now been made sufficiently clear in the constitutions and codes of a majority of nations, and reaffirmed by the 20 countries signatory to the above-mentioned convention,

"The Special Assembly of the Inter-American Commission of Women

"*Resolves*, To express the hope of the Inter-American Commission of Women, that the United States will proceed, in due time and in conformity with the special restrictions of its legal system, to adapt its laws to the juridical norms under which it is feasible to sign the Inter-American convention on the granting of civil rights to women signed by the 20 countries at the Ninth International Conference of American States, in Bogatá; and the further hope that the countries signatory to the said convention will proceed to ratify it as soon as possible, if they have not yet done so."

Accordingly, I ask for your influential and decisive support within the legislative body in which you serve as representatives of the women of North America, in order that the hopes thus expressed by the Inter-American Commission of Women may meet with a favorable response conducive to a satisfactory solution of the problem in the near future.

At the same conference in Bogotá a convention on the granting of political rights to women was likewise approved. This instrument was signed by 12 countries, including the United States.

Consequently, as Chairman of the Inter-American Commission of Women, I make this additional request: That you intervene with the appropriate authorities in order to bring about the swiftest possible ratification of the above-mentioned convention by the Government of the United States. Such ratification will undoubtedly serve as a stimulus to the other signatory countries that have not yet ratified the instrument in question.

For the rest, as official representatives of your countrywomen—representatives elected to posts of such high eminence from among the ranks of the most distinguished and the most able—you must surely be the women capable of exercising the greatest influence, in the Congress of which you form a part, for the purpose of enabling other women, in greater numbers than hitherto, to occupy in the future important elective posts in which they, like you yourselves, can strive for the advancement of women in every phase of life.

It is a well known fact that the number of women in the Congress of the United States has decreased rather than increased; and our most attentive and vigorous efforts are required in order to remedy this negative trend.

Thus, on behalf of the commission, I solicit your valuable cooperation and ask for expressions of opinion and for pertinent suggestions, to the end that our organization may serve the interests of American women in the present and in the future, responding as efficaciously as possible to the hopes that they have placed in it.

The women of the United States have at their disposal the power inherent in their organizations, and to those organizations also we look for effective support. Moreover, North American women are in a position to draw upon experience acquired through long years of arduous endeavor, and upon vast cultural and economic resources. In short, they have available all of the elements necessary for decisive and valuable collaboration; and it is this collaboration that I request in the name of the commission, to the end that the basic principles of our organization, principles concerned with the welfare of American women, may be successfully applied for the attainment of their rights.

American Veterans Committee Asks Excise Repeal

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1950

Mr. KLEIN. Mr. Speaker, under leave, I am inserting in the RECORD a transcript of testimony given before the House Ways and Means Committee on March 2, 1950, by Mr. Robert R. Nathan, an outstanding economist and lawyer. Mr. Nathan spoke on repeal of excise taxes and general tax policy, in behalf of American Veterans Committee (AVC), an organization of World War II veterans which consistently pursues its policy of "citizens first." I think this sound expression of policy, together with the very illuminating colloquy between Mr. Nathan and the able chairman of the Ways and Means Committee, supplies essential background which we should all bear in mind as we approach the subject of new tax legislation.

Mr. Nathan's statement follows:

STATEMENT OF ROBERT R. NATHAN, CHAIRMAN, NATIONAL LEGISLATIVE COMMITTEE, AMERICAN VETERANS COMMITTEE, WASHINGTON, D. C.

Mr. NATHAN. My name is Robert R. Nathan. I am an economist with offices at 3 Thomas Circle, Washington, and am appearing here today on behalf of the American Veterans Committee as chairman of their national legislative committee.

The American Veterans Committee, which is commonly called the AVC, is composed of World War II veterans. This organization is primarily interested in the preservation of the free and democratic process we have here, and in increasing the standard of living and achieving continued prosperity in America. The slogan of the organization is "Citizens First, Veterans Second." I think that signifies its general views.

In the last convention of the AVC organization held in Chicago about 4 months ago, there was stated in the platform the following reference to taxation:

"We favor adoption of a tax program based upon the ability to pay, flexible over time, and geared into a fiscal policy which will provide for full employment.

"One of the most pressing needs of our Government today is the revision of the national, State, and local tax programs to gear them to the needs of a fully employed and expanding economy with special reliance on the principle of taxation according to ability to pay. Toward this end, we urge the President of the United States to appoint a special nonpartisan, technical tax commission, similar in principle to the Hoover Commission, this commission to work with the Council of Economic Advisers to set up a sound, just, and stable tax program.

"We oppose Federal, State, and local sales and excise taxes because they fall proportionately more heavily on lower-income groups, not being based on ability to pay. We urge the immediate repeal of all wartime excise taxes and substitution of more progressive taxes to make up the loss in Government revenues."

That was the statement included in the last platform adopted at the last convention of the AVC.

The CHAIRMAN. Right there, just for information, you speak of recommending that the President appoint a nonpartisan tax commission. You mean bipartisan?

Mr. NATHAN. Bipartisan, yes, I am sure they meant that.

The CHAIRMAN. If it were to be nonpartisan, I should like to get acquainted with them.

Mr. NATHAN. To elaborate just briefly on those taxation principles of the organization, first of all I would like to emphasize that we believe in the achievement and maintenance of prosperity and full employment in America. It depends in a very substantial degree on the type of tax program which the Federal, State, and local governments, but more importantly the Federal Government, adopt. It is our belief that of all of the instruments that the Government has for guiding and directing and stimulating economic activity, the tax program offers the greatest opportunity of all. If there is one area of legislation which has the greatest influence on economic activity and the well-being of the country, it is our feeling that the tax program is the one that is the most important of all.

It is not only the amount of tax which is collected, but also the types of taxes, because as we all know, certain taxes have a much greater incidence and much greater impact and much greater burden on certain economic activities than do others. While there are some people who believe in the general principle that taxes should be collected for revenue purposes only, that view completely ignores the fact that different taxes do have different economic impacts. Therefore, we ought to carefully consider the types of taxes we adopt in order to raise the revenue essential to pay for the Government's services which are needed.

For instance, if there is need for additional buying power because there is unemployment, we feel that taxes should be cut at those levels which would tend to increase buying power. If there is need for additional investment, taxes can be shifted so as to provide greater incentives for investment. If the country is faced with inflation, then the tax problem, it seems to me and to our group, is obviously of a different nature, the needs are of a different nature than the taxes which are essential if the country is faced with unemployment and deflation.

Therefore, we feel that great emphasis should be placed on the fact that the tax program should be geared primarily to the economic needs of the country in order to insure full employment.

As you all know, at the present time unemployment appears to be on the increase. The Census Bureau of the Federal Government reported 4,500,000 people able and willing to work and seeking work in the month of January of this year. Figures for February are not yet available, but there has been some discussion among those familiar with the background of the data that probabilities are that unemployment was probably higher in February. That is, higher than in January. Maybe somewhere between four and one-half and five million unemployed.

I think this is clearly the result of the fact that there is not an adequate demand for the products of American industry. Industrial leaders, managers, corporate executives hire people when they can sell the products which they produce, and they do not hire people and they do not produce goods when they cannot sell all they can produce. Businessmen are not inclined to hire workers and produce products just because they like to. They produce mainly because they feel there is a market for the goods produced.

Therefore, we feel that the tax program at this time must relate to the fact that there is at the present time an inadequate demand for all of the products of American industry, and that is why we have this level of unemployment somewhere between four and one-half and five million. That is why we feel a reduction in excise taxes is appropriate at

this present time. Excise taxes are paid directly by the consumer or are passed on to the consumer. Therefore, they tend to bear directly on consumption. They are a burden on consumption. They tend to cut down expenditures by the consumer, and we think it is in the interest of the country at this time to reduce excise taxes. These taxes, especially the wartime excises, were imposed during the war to keep down demand, to keep demand down so that the resources of this country during the war would be diverted to producing matériel essential to win the war. That purpose was largely fulfilled, and therefore the purposes for which the wartime excise taxes were imposed no longer exist.

That raises the question about Government revenues and the balanced budget, the relation between expenditures and receipts. We believe that a balanced budget and debt retirement are entirely appropriate and desirable in periods of full employment and high levels of economic activity. There is now a moderate amount of unemployment, and whether or not we should have a balanced budget depends on how we can raise the revenues and whether higher tax revenues will tend to further restrict employment.

It is our feeling that it is possible at this time to raise some additional taxes to offset the excise taxes and these increases will not further harm the employment picture or the economic scene. In his message to the Congress, the President suggested many ways and means of getting revenues to offset the loss from the excise-tax reductions. We believe that his proposals to close the gaps and loopholes can be especially fruitful. I would just like to mention a few of those very briefly.

I happen to be personally familiar with some of the economic facts in the oil industry, and it is my impression that these loopholes that exist in favor of individuals and corporations in the oil industry are entirely unjustified. If those loopholes are closed and the oil industry were not given added incentives and were not given added benefits of the magnitude they have today, the Government could get additional substantial amounts of revenue without in any way really interfering with the development in that industry.

We recognize that incentives are important in this economy of ours. Incentives are necessary and must be provided. But after all, there is a limit to these incentives, and the permission granted to the oil industry to deduct all of the development costs as current expenses, and especially the fantastically large depletion allowances, have permitted individuals and companies to earn very great amounts without paying taxes thereon.

I think the Secretary of the Treasury in the Department's official statement before this Committee presented some figures on how large those gains were and have been. We feel such loopholes ought to be closed, and this will help to offset the loss from less in excise taxes, which in turn will help the economy and help business.

The CHAIRMAN. Is that your last proposal?

Mr. NATHAN. The elimination of these loopholes in the oil industry we feel will offset the excise tax losses, and the last statement I made was that the cut in excise taxes would really help business.

I feel that making the oil industry adopt its share of the tax burden will permit us to cut these excise taxes, replace that revenue, and the country as a whole will be better off.

I feel the same thing might be said of the State and local bond interest payments. The Federal Government should not permit this loophole to persist. If people pay taxes on the interest which they receive from Federal Government bonds, the law should provide that future flotations of issues by State and local governments should not be tax exempt, and interest thereon should be subject to income taxation.

About the over-all picture of taxes, I want to emphasize again that it is our feeling that the tax instrument is the most potent one which can help us to achieve and maintain full employment and not go through booms and busts as we have in the past. For the past 10 years this country has enjoyed a period of intensive prosperity, largely as a result of the war effort, and the backlog of wartime demands. Already there are many disturbing signs that this prosperity may not continue. We as veterans feel that there is an obligation to veterans and to every citizen in this country for the Government of this country to do everything in its power to be sure that this prosperity which we have enjoyed in war will be enjoyed in peacetime. It is not going to be possible to achieve these objectives if we sit back and sort of hope that we will have continuous prosperity. The history of our economic development is a history of boom and bust, of going up and down. There is no reason at all to feel that in the future, unless we have positive measures and positive steps and constructive programs to avoid depressions, they will not come again. We feel that they will come unless something is done to prevent them.

And in the area of taxation, the Government has an important instrument of doing something to achieve that objective. In periods of inflation the Government must tax so as to avoid the weaknesses, the distortions that develop and bring on depressions.

I have studied the subject myself for a long time, and I am convinced that depressions do not come from some divine source or that they are inevitable. We can do something to avoid them. Depressions come because certain weaknesses and certain distortions develop in the system in boom times, and in those times we should adjust and shift and change our tax program to avoid those weaknesses.

Similarly, when business begins to decline, we have to change our tax program. We have to reduce taxes at lower-income levels so that there is more consumption. We have to give more incentive to business, perhaps in the form of accelerated depreciation, so there will be investment when investment is declining.

I think that need for flexibility in the tax system, flexibility in accordance with where we are—in terms of economic activity—where we are moving, what the trends in business are, is a very, very important principle.

In the last 10 years we have had very little basic change in our tax structure. Of course, the rates have changed. Types of taxes have changed. Ten years ago the total tax take by the Federal Government was a much smaller percentage of the national income than it is today. Today the amount of taxes has a much greater impact on our total economy than 10 years ago. Therefore, the time has come for a thorough reappraisal and overhauling of the tax program, an overhauling of a complete nature, a thorough study of the program in relation to the impact that it has on our economy and economic policy. For that purpose I want to reiterate that the American Veterans' Committee calls for a commission representing the Congress and the interested public organizations, like the Hoover Commission, to be set up to intensively study the role of taxation, not only as a source of revenue but primarily as a vehicle to help achieve economic stability. It should reconsider all of our tax structure, all of our tax rates, to try to introduce a degree of flexibility, to introduce into our tax system the basic principle that tax policies, tax programs, shall be geared to achieving economic stability. We can accomplish that objective and help bring about prosperity if an intelligent tax survey is made and legislated.

The CHAIRMAN. We are very much interested in your discussion of the tax problem and how it affects the economy of the country.

Your last remarks recommended a commission to make a comprehensive study of this problem along the line of the Hoover Commission.

Mr. NATHAN. Yes, sir.

The CHAIRMAN. The Hoover Commission report has been made. It is before Congress. What is the veterans' position on the report of the Hoover Commission insofar as it relates to veterans?

Mr. NATHAN. I am glad you asked me that. This last week end, Saturday and Sunday, we had a meeting here in Washington of the National Planning Committee of the American Veterans Committee, including 25 members from all over the country. We had representatives from Oregon, and Florida and Texas and Oklahoma, and other parts of the country. And unanimously that committee, which is the executive committee of the organization, supported the Hoover Commission recommendations for changes in the Veterans' Administration. We support fully and wholeheartedly the revisions that the Hoover Commission suggested with respect to the Veterans' Administration.

The CHAIRMAN. Has there not been a great deal of complaint by many veterans over the country against the Hoover report, so far as it affects the veterans.

Mr. NATHAN. Yes, the American Legion has taken that position.

The CHAIRMAN. Where are the views of the veterans on that subject?

Mr. NATHAN. Different groups, of course, Mr. Chairman, do take different positions. The Legion has taken a stand against the Hoover Commission recommendations on the Veterans' Administration.

The CHAIRMAN. The Legion is pretty strong.

Mr. NATHAN. Quite strong, sir, in numbers.

The CHAIRMAN. If the veterans themselves cannot agree, I am not surprised that the Members of Congress should have difficulty in reaching a conclusion, either satisfactory to themselves or their constituents. I just want to get your viewpoint. I am very much interested in your entire discussion.

Mr. NATHAN. I feel there is almost no proposal or policy which would be recommended on any important subject on which there would not be quite divergent views, mainly because of vested interests. Some members of our organization in discussing this Hoover Commission proposal on the Veterans' Administration this past week end felt that some opposition to that revision was due to the feeling in some groups that they would not have as much power and control in the Veterans' Administration as before. Whether that is the reason they object to it, I do not know, but our own feeling was that the Hoover Commission recommendations were intelligent ones, well thought through, and would give more effective administration and would tend to save money.

I feel if there is enough education and discussion of this subject around the country, and there are many groups that have taken it up, the junior chamber of commerce has done an excellent job of organizing community forums, and if the people understand the implications of it, the Hoover Commission recommendations will be adopted. We could have a type of Hoover Commission report on taxation and it is likely that if they came out with a proposal of a certain nature, the NAM might take exception to this and the CIO might take exception to that; of course, we would not have uniform agreement.

If there is enough discussion and enough education so that people really understand

the issues, we can come to some constructive conclusion. I do not think we will get uniform support for all of the measures.

The CHAIRMAN. It does appear to me that you are taking a broad, patriotic, and unselfish view of this subject, right or wrong. That is the way it impresses me, very definitely.

You suggested that the tax system should be geared in two ways, in both of which I was very much interested; first, geared to fit the economy of the country; and, second, geared to produce adequate revenue.

Mr. NATHAN. That is right, sir.

The CHAIRMAN. Do you visualize very great difficulty in reaching a sound conclusion on just how to gear a tax system to the economy of the country? Would there be as many opinions about that as there are business groups and industry organizations?

Mr. NATHAN. Yes, undoubtedly there will be, but may I just offer an illustration? In 1946 we were faced with quite an accumulation of wartime backlog demand. We have had considerable inflation in the postwar period. That inflation, I think, has brought certain difficulties to us. There are certain distortions in the economy that resulted from price relationships. I think that in the period from 1946 to the present period we had a much more rapid rise in investment, new plant and equipment, than we have had in consumption. That cannot take place for very long. I think that if in 1946, 1947, and 1948, we had tried to increase taxes to draw out some of this money that was going into investments, so we would increase our plant and equipment at a slower rate, of course, we would have had a lot of objections because certain individuals never want to pay taxes. After all, I do not think anybody really enjoys paying taxes. Nonetheless, if our program is geared to the fact that we can have continued good business and not have another 1929–1932 come along, and that is clearly understood, and again, it is a matter of educational process, we can bring enough American people around to have an overwhelming majority in favor of these principles. It is not simple.

The CHAIRMAN. What group in the country is there that does not complain about present taxes, or protest against higher taxes? The country is made up of groups.

Mr. NATHAN. As a matter of fact, I do not think there is any group in the country who would not object some way or other if you tried to increase taxes. For instance, I suggest that we ought to do something about these loopholes which I sincerely believe prevail in the oil industry.

The CHAIRMAN. Have you heard of any group opposing that?

Mr. NATHAN. The oil industry opposes it, sure, but that is always true. What we must do is try to place the broader interest above certain limited interest, and that is after all the democratic process. Maybe some of us would like to drive down the street 90 miles an hour and just enjoy it, but if we do, we will hurt somebody. So we have to protect the largest numbers by restricting those who would be inclined to go to extremes.

I believe that the overwhelming majority of the people today would feel that we ought to close these loopholes in order to put the tax system on a more equitable, more just basis, and a sounder economic basis.

The CHAIRMAN. In addition to gearing the tax program to the economic needs of the country, you stated that it also should take into account the fiscal needs of the Government. You referred to a balanced budget, but stated that you do not know whether this is exactly the time or not. I would like you to elaborate on that, whether we should continue the proposed rate of deficit financing, or whether we should have deficit financing, but on a lower scale at this time. Some of us believe that, so far as possible in peacetime, when the country is reasonably prosperous, Congress ought to provide sufficient revenue to pay the bills it incurs. I would like to have you elaborate on that a little at this time.

Mr. NATHAN. First of all, I agree with the general principle you just stated, namely, that in prosperous times we should have adequate taxes to pay the bills and to retire some of the debt. In times of less than full employment or in times when there is substantial unemployment, we cannot help but have a deficit, because the needs of Government spending are greater and sources of revenue are less.

At the present time, even with the four and one-half or five million unemployed that we have, the deficit can and should be reduced, but it can be reduced only if certain kinds of taxes are imposed.

May I illustrate? For instance, if your committee or the Congress insisted on cutting the deficit now by increasing excise taxes another two or three billion, that would be a tragic mistake. Such increases in excise taxes would bear directly on consumption. They would reduce the demand for goods. That would mean more unemployment.

On the other hand, if we today close some of these loopholes that exist, we could get more revenue, reduce the deficit, and it would not adversely affect the economic picture. We ought to move toward a balanced budget by trying to get taxes in those areas which will not affect total economic activity or have the least effect on them.

The CHAIRMAN. There are no proposals to increase excise tax revenues. On the contrary, there is a tremendous demand for some reduction in, and relief from the burden of, the excise taxes.

Mr. NATHAN. That is right.

The CHAIRMAN. Would you think we would be able to offset the loss of revenues that would result from reduction of the excise taxes by closing loopholes?

Mr. NATHAN. I can only rely on the official figures of the Treasury, and there the indications are that by closing four or five loopholes, we could offset them. We probably could increase our total Federal revenue and more than offset the cut in excise taxes by increasing the taxes in other directions.

For instance, in 1948, the total corporate profit picture would have permitted some further taxation on corporate profits without destroying incentive. Our tax program must take into account the fact that not only must we try to stimulate more consumption, more demand on the part of the people, but also more investment on the part of business insofar as the total consumption will support that investment. The corporate profits in 1948 were at such a level that we could get a higher total revenue from corporate profits without curtailing corporate investment below what it would be anyhow. That is another source of revenue.

The CHAIRMAN. Suppose taxes on corporate profits are increased. It may be that profits are very high in some corporations, even unreasonably high, which has resulted because demand for goods was so far in excess of the supply, and the manufacturer and the merchants could ask about what they pleased and still could sell their goods. The time has come now when they probably cannot do that. Should we increase the corporate tax, I am asking for information now, then is it probable that the corporations would offset that tax as they do now by increasing the price of their goods, so the tax would be paid by the consumer as a concealed tax?

Mr. NATHAN. There is a big argument as to whether or not corporate income taxes really can be passed on to the consumer when you have intensive competition.

The CHAIRMAN. What is your opinion?

Mr. NATHAN. In an intensively competitive industry, I do not believe that it can be passed on to the consumer. If companies do not have profits, they do not pay the tax. If they try to raise their price in order to meet that extra tax, I think the competitive situation will not permit that to take place. That is different from the steel industry.

The CHAIRMAN. I live in a section where the textile mills are a great industry. They have never been more fully employed, running night and day, than they are right now.

Mr. NATHAN. They had a decline last year.

The CHAIRMAN. I do not know how the textile industry is in New England.

Mr. NATHAN. New England has had quite a decline and some areas of distress unemployment. But that industry right now is in better shape than a year ago. A year ago there was a decline. There are some industries where I am sure that the industry would try and probably be successful in passing on an increase in its corporate tax to the consumer, as in the steel industry. The steel industry raised its prices in December of 1949, presumably because they had the pension and welfare program, which I think was fully justified, and which was granted last fall. My own guess is that the steel industry in 1950 would have made, even without a price increase, more profits than ever in their history. Their cost of scrap has gone way down. Their cost of raw materials has gone way down. Yet they went ahead and raised the prices in face of record profits. That is not a very competitive industry where they can get away with that kind of an action. As soon as one company raised the prices, the others almost automatically did the same.

The CHAIRMAN. Suppose the rate of taxation is geared to fit the steel companies. Income of other industries must be taxed at the same rate, but, in your opinion, can other industries stand as heavy an increase in the corporate tax as the steel industry? Might that not break the back of some other corporations or businesses?

Mr. NATHAN. It may, but first of all I would suggest that the increase in the rate be a modest one, and in the second place, in those industries where profits are not very high obviously the tax payment would not be high. If you went from 38- to 42-percent tax, obviously the amount of tax paid by a company not very prosperous would not be very much. But the amount of tax paid by a company which was very prosperous would be substantially higher.

I might add that we ought to restudy our whole corporate-tax structure and try to arrive at some kind of a progressive taxation on corporations which would introduce some of the principles of the excess-profits tax and some of the principles of the undistributed-profits tax.

The CHAIRMAN. Would the Government, in your opinion, be justified in adopting a fiscal policy that would increase the amount of our deficit financing? You have stated that ordinarily when times were reasonably prosperous and employment is high, we should not only balance our budget, but pay something on the public debt. We always expect some unemployment. Many people never will work and would not take a job to do a full day's work for a reasonable day's pay if you offered it to them.

Mr. NATHAN. There is always some turnover.

The CHAIRMAN. The unemployment problem is not very serious.

Mr. NATHAN. It is not what I would call satisfactory, but it is still not of major, serious proportions today.

The CHAIRMAN. Do you or do you not believe that we are spending too much money and perhaps should take some steps in lowering Government expenses to balance the budget and lighten the tax burden.

Mr. NATHAN. It depends on what we are spending it for.

The CHAIRMAN. If it is spent right.

Mr. NATHAN. If it is spent right we are not spending too much. We may be spending too little. For instance, I have talked to some people who think that a war is inevitable. At the same time they talk about cutting expenditures. If I were convinced that a war were inevitable, I would want to increase our expenditures 50 percent, maybe 100 percent for defense purposes. It all depends on the concept we have in mind. I do not think expenditures by the Government today are too high compared to the needs. Maybe we are not spending enough on certain defense areas. It depends on what the requirements are. To the extent, however, that there is any waste anywhere, obviously that cannot be justified. We should eliminate waste. We should increase the efficiency of government and eliminate duplication, but the biggest items of expenditures today are for defense, and the items that are related to the war, such as the veterans expenditures, and the ECA appropriations and interest on the national debt, which are fully justified. If our security were really seriously threatened today, perhaps we are spending too little, so the expenditures have to relate to the needs of the country.

The CHAIRMAN. So you do not believe that at this time there is any serious danger to the economy of the country from excessive taxation and unnecessary great expenditure of money?

Mr. NATHAN. By no means. I think that we have had in the last 4 years the greatest prosperity in peacetime we have ever had in America, except for a slight decline in the first half of 1949, with the highest tax rates we ever had in the history of this country, and actually we had higher taxes before the first part of 1948 than we have now. And we had great prosperity. I do not think that the present levels of taxation or expenditures are adversely affecting the economy.

The CHAIRMAN. Has not supply nearly caught up with the backlog in the demand for goods and services that developed during the war? And when production overtakes consumption, would that not affect the profits and employment, too? If we are about caught up, is not that one reason for unemployment?

Mr. NATHAN. We must realize that every dollar the Government spends, like on tanks or airplanes or ships, or every dollar it spends for veteran service or every dollar it spends for ECA appropriations is a demand just the same as you and I go out and buy groceries or buy automobiles or clothes. Government expenditures are demands for the goods of industry and create a market for American industry just the same as private. I agree, generally, it is much better to have the largest segment of the economy in private hands, rather than in public hands. I would like to see us, of course, go back to where we had a $5,000,000,000 budget of spending and $5,000,000,000 of taxes, but I do not think that is feasible under the present circumstances.

The CHAIRMAN. You would not go on record as saying you believe that a government can tax and spend itself into prosperity?

Mr. NATHAN. I believe it can spend itself into prosperity temporarily.

The CHAIRMAN. Maybe a man can spend himself into health by taking a lot of dope, but what about later on?

Mr. NATHAN. That is not the solution. We ought to look for a fundamental solution.

The CHAIRMAN. I thought you would not say that extravagance is the solution of our economic difficulties.

Mr. NATHAN. We spent our way into prosperity during the war presumably. In 1939 we had 10,000,000 unemployed, and by 1942 we had practically no unemployment. The reason was because the Government spent so many billions to demand the goods of industry. That is not certainly a desirable solution. The real solution is increased private spending, and a proper tax program can help achieve that objective.

The CHAIRMAN. Are there any further questions?

We thank you.

Mr. NATHAN. Thank you.

The Russian Question

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1950

Mr. MACK of Washington. Mr. Speaker, under leave heretofore granted to extend my remarks, I am inserting an editorial from the Kelsonian Tribune, of Kelso, Wash. It is entitled "The Russian Question" and I feel confident that the Members of Congress will wish to read it:

THE RUSSIAN QUESTION

Why does not the Government of the United States take cognizance of a fact which should be self-evident to any schoolboy—that there will never be a permanent peace in the world until Stalin and his gang of Communist cutthroats are removed from power?

Why do we not build our foreign policy around the only guaranty which can insure world peace and prosperity—human liberty and equality throughout the world?

Why do we turn our backs on the lessons of our own Revolution, and dicker with dictators while their subjects writhe in slavery?

The average man will say, "Ah, but the policy you suggest will surely lead to war?"

Short-sighted viewpoint. The Communist world and the free world are drifting inevitably toward war as matters stand, and for the same reason that the North and the South clashed in the Civil War. The problem is the extension of the slave system, or the police-State system, into political and economic fields which both sides view as vital to their self-preservation.

The only hope of avoiding such a war lies in the overturn of Stalin's gang. The Communists see this clearly. They, too, want to avoid war. They want to avoid it by overthrowing all capitalist governments, and replacing them with regimes friendly to Moscow—that is, subservient to Moscow. This has been the announced objective of international communism for the past 30 years.

So there should be no reason to shrink from the reaction which would take place if we were to announce that our objective is to throw Stalin and his gang out of office, and replace them with a regime based on the voice of the people.

We found we couldn't do business with Hitler. We fought him, at great cost of life and substance. We are now trying to educate the German people in the ways of democracy.

Is there any reason to believe the Russians would be harder to educate in the ways of democracy than the Germans? No. There have been the seeds of democratic movements in the Ukraine, the Don Basin, the Caucasus, and all the satellite nations, for many years. Czechoslovakia was a true enlightened democracy until March 1939. She could be made one again tomorrow, if this country would announce its intention of ridding the world of Russian communism. If this country would initiate a movement of counter-revolution throughout the Russian dominated areas. If this country would immediately begin to give all aid, short of war, to anti-Communist movements anywhere. If this country would reactivate the OSS, and begin the all-out penetration of the satellite countries with agents, arms, political agitation and propaganda, all with one aim—to create islands of freedom within the Red empire, and eventually to link these islands together and strangle the Red power.

If anyone protests that this is impossible, our reply is simply this: Choose this path, or face the certainty of atomic war within the bitterly near future.

There is only one addendum to our woeful prophecy. This Nation is getting scant and unrealistic service from its State Department. To carry on the global struggle for self-preservation in which we are now engaged, we need more than diplomats in the State Department. We need tough-minded strategists, whip-cracking planners and do-it-now political manipulators.

In 1947, your editor submitted to the State Department a manuscript arguing in favor of the policy outlined here. The only comment of the female "expert" in the State Department who reviewed our manuscript was that it was "naive."

To one who was an intelligence officer in a fine infantry division during 3 years of combat, and who had written enemy estimates before the Anzio break-out, the annihilation of the Colmar pocket and the crossing of the Rhine, this gratuitous slap in the face from an armchair strategist was nettling, to say the least.

So we intend to keep hammering at this theme, whether anyone wants to listen or not. We are confident that history will write the final chapters with very few changes in the earlier text.

Voice of Alameda

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1950

Mr. MILLER of California. Mr. Speaker, the board of regents of the University of California recently ordered the members of the faculty to take a loyalty oath. Refusal to take the prescribed oath meant dismissal.

The faculty, through representatives, has announced resistance to this order. Nationally and internationally known educators at that great institution have led the fight against this move.

It is reported that among the regents who voted against the mandatory loyalty oath were Gov. Earl Warren and Dr. Robert Gordon Sproul.

The faculty group has not receded from its position as the deadline approaches.

The Alameda Times Star has published a timely and pertinent editorial on the subject. It points up the futility of trying to instill by law the love for our democracy that can only be sincere when it springs from within the individual.

The excellent editorial follows:

VOICE OF ALAMEDA

We are more than a little bemused to see that the board of regents voted for institution of loyalty oaths at the University of California, setting the penalty at dismissal for those who do not take them.

On many different occasions during the past year we have remarked that those people who vote for a loyalty oath to keep out Communists or other subversives do it either because they know no better, or because they have a cynical disregard for the public, thinking that by so voting they will keep themselves in public favor through this peculiar anticipation of the public's natural desires to keep subversives out of teaching posts.

Those regents who voted for the loyalty oath have shown themselves remarkably unwise in our opinion.

They evidently have not yet been able to realize that:

1. Communists are duty bound to lie when by so doing they will advance their cause.

2. Through swearing a loyalty oath, Communists will be able to take on a protective coloration which will deceive those poor dopes, who would otherwise throw them out, into thinking them to be honest Americans.

The Antismoke Job

EXTENSION OF REMARKS
OF
HON. JAMES J. MURPHY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. MURPHY. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the following editorial from the New York Times of January 19, 1950, which I consider most appropriate on the problem of air pollution:

THE ANTISMOKE JOB

Last November a special committee composed of two physicians, two chemists, and two engineers found evidence of serious air pollution in some parts of Staten Island. Residents of Rossville, across the water from industrial towns in New Jersey, complained of ill effects from smoke. A resolution called on the United States Public Health Service to make a comprehensive survey of air pollution on the island. Now we have the answer to that resolution. The proposed study has been deferred because "needed technicians for such a study are not available for the required 3- to 6-month period."

This, it seems to us, is a highly unsatisfactory conclusion. Medical men on Staten Island found 29 residents of the north and south shores complaining of stomach disorders, nose irritation, and inability to sleep. A Richmond County Medical Society committee confirmed that there was strong evidence of air pollution on the island. Yet a "scarcity of technicians" is permitted to prevent the thorough study that seems warranted in this interstate matter.

We are dissatisfied with the whole progress of air-pollution control in New York City. What the people need are periodic reports of the amount of sootfall in various locations, along with other objective measurements, so that they can tell for themselves whether the city is making any progress on pollution abatement. If any such measurements are being taken by the bureau of smoke control, they certainly do not see the light of day. Some years ago such measurements were taken for a time, and it would be useful if we had comparisons of sootfall in the same locations now.

Until we have scientific measurements throughout the city and such data are put in the hands of the public, we shall be forced to view with reserve all claims of progress.

Resolution of the FBI National Academy Associates of Georgia

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1950

Mr. DAVIS of Georgia. Mr. Speaker, the FBI National Academy Associates of Georgia met in convention in Thomasville, Ga., on January 18, 1950.

The membership of that organization are men who have a deep appreciation of the fine work which Director J. Edgar Hoover and the Federal Bureau of Investigation have done over the years in protecting the citizens of America from criminals and from those who have engaged in subversive activities.

The members of the above-mentioned organization share the natural resentment which the American people generally have felt and expressed regarding recent efforts of certain left-wing elements to discredit Mr. Hoover and the Federal Bureau of Investigation. They, therefore, adopted in this convention a resolution expressing their respect for Mr. Hoover and commending him for the great contribution he has made to law enforcement and the protection of our country and Government.

This resolution also congratulates Attorney General McGrath and expresses the sentiments of the organization regarding several other matters.

I am glad to bring this resolution to the attention of Congress and under leave previously granted, I insert it herewith:

RESOLUTION PASSED BY THE FBI NATIONAL ACADEMY ASSOCIATES OF GEORGIA ON JANUARY 18, 1950

Whereas our Nation's foremost law enforcement agency, the Federal Bureau of Investigation, has recently been unwarrantedly criticized; and

Whereas the FBI is the guardian of our national freedom, and our individual rights as citizens and as law enforcement officers; and

Whereas having the highest respect for Director J. Edgar Hoover, and being appreciative for his contribution to law enforcement and the public during his nearly 26 years of service; and

Whereas attacks on the FBI are attacks on our Nation's security and serve the purpose of undermining faith in democracy and the destruction of confidence in democratic institutions, and disregard for law and order: Therefore be it

Resolved—

1. Condemn vigorously the attacks which have been levelled at the FBI and Director Hoover.

2. Congratulate the Honorable J. Howard McGrath, Attorney General of the United States, for his clear thinking and forthrightness when he recently announced that he sees no reason to change the wiretapping policies with respect to the FBI.

3. Call upon the President of the United States to publicly endorse the policy of his predecessor as President who initiated the wiretap policies of the United States.

4. Commend heartily Director J. Edgar Hoover for his patriotism, protection of our liberties, and wise use of wiretaps.

5. Request Congress to authorize by law the FBI's right to use wiretaps in espionage and subversive activity cases where the national security is at stake, and in other types of criminal investigative matters where a human life is in jeopardy as has been the national policy set by the administration for so many years.

6. Expresses its indignation and most vigorous condemnation of the exhibitionism recently displayed in our courts and calls for an end to clowning in court and restoration of dignity to the courts.

7. In calling upon Congress to put an end to the Russian propaganda being spread by Communist and other disloyal persons; be it further

Resolved, That a copy of this resolution be sent by the secretary to—

1. The President of the United States.
2. The Attorney General of the United States.
3. Director J. Edgar Hoover, FBI.
4. Speaker of the House of Representatives.
5. President of the Senate.
6. Each United States Senator and Representative from the State of Georgia.

LT. JAMES H. WINN,
Secretary, FBI National Academy Associates of Georgia.

The Communists Don't Scare Easy

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington News of March 16, 1950:

THEY DON'T SCARE EASY

Secretary of State Acheson has taken to the political stump to whip up interest in that new catchword of our foreign policy—"total diplomacy."

By that, as he has explained it, he means we should all get in the fight against expanding world communism and not leave it to the State Department alone—which is a more sensible thought than Mr. Acheson may suspect.

For instance, yesterday in his San Francisco speech the Secretary dramatically drew a chalk line between China and the rest of Asia, and warned international communism not to step over it. You know what'll happen if the Communists cross over? Well, America will give "limited" assistance to the resisting nations.

We very much doubt that this will stop communism in its tracks. In fact, there'll be no need for the Commies to cross the line—they've already gone around it. The Red threat that perils French Indochina today, for example, is not so much from a southward invasion as from the Moscow-assisted native Communist forces already inside the border.

The Chinese could tell Mr. Acheson all about that. But surprisingly we find Mr. Acheson telling them just how they got in their present mess:

"As old friends, we say to the Chinese people that we fully understand that their present unhappy status within the orbit of the Soviet Union is not the result of any choice on their part, but has been forced upon them."

This is a curious and belated departure from the old doctrine of the State Department left-wingers that communism in China

evolved from discontented agrarian reformers who represented the real Chinese people.

Mr. Acheson lamented that United States help "on a massive scale" after the war did not bring peace and recovery to China, whose conquest by the Communists he blamed on the failure of the Nationalists.

He did not mention that American support was withdrawn from the Nationalist Government because it failed to satisfy the Communists' demands for a coalition at a time when the Reds were all but defeated.

To Return St. Patrick to Ireland

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. JAVITS. Mr. Speaker, I was much interested to note on a card sent me by a constituent commemorating the day of the patron saint of Ireland that St. Patrick's See at Armagh, his grave at Downpatrick, as well as the scenes of his boyhood at Slemish are cut off from the body of Ireland, being situated in Northern Ireland, which is still attached to Great Britain. Last month I introduced a resolution on the unification of Ireland which presents an effective plan for attaining this objective. The resolution provides for a plebiscite of the people of all Ireland to be taken under the auspices of a United Nations Commission for Ireland designated by the General Assembly pursuant to articles 11 and 35 of the Charter. It is stated to be the purpose of such a plebiscite to create conditions which will make possible the entry of Ireland into the United Nations. Article 11 and article 35 relate to the powers of the General Assembly thus dispensing with Soviet obstruction or the veto and provide specifically for bringing to the attention of the General Assembly the dispute to which a state is a party whether or not such state is a member of the United Nations. In view of the dispute between Eire and Great Britain on the subject of Northern Ireland, a dispute which affects the maintenance of international peace and security in that area, it would appear to be a matter for the General Assembly. The General Assembly could then proceed in all Ireland as it did in the cases of Greece and Indonesia to appoint a commission which would supervise an election and establish the conditions for it. Then it would be clear for membership by all Ireland in the United Nations, a question of the greatest importance in view of Ireland's position in the North Atlantic area. It is to be noted that this is a very practical solution as United Nations commissions of this character have been very successful in just such situations in using their good offices to bring about a conclusion to a long-standing dispute dangerous to world peace and security.

This resolution follows:

Resolved, That it is the sense of the Congress that the maintenance of international peace and security requires settlement of the question of the unification of Ireland and that the people of all Ireland, including the people of Eire and the people of Northern Ireland, should have a free opportunity to express their will for union and that this be attained by a plebiscite of the people of all Ireland under the auspices of a United Nations Commission for Ireland, to be designated by the General Assembly pursuant to articles 11 and 35 of the Charter, which shall establish the terms and conditions of such plebiscite with the objective of the entry of Ireland as a member of the United Nations.

Imports of Foreign Nuts Imperil Western Nut and Cherry Industries

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1950

Mr. MACK of Washington. Mr. Speaker, large quantities of walnuts recently have been imported into California from Manchuria and are selling at more than 30 percent under the prices of domestic nuts. If these imports of nuts continue, our nut orchards of the Pacific coast, an agricultural business in which thousands of families are engaged, face ruin.

Nut raising is not like most other farm and business enterprises. It requires seven or more years to bring nut orchards into a bearing stage. Yet this business of nut raising, after years of work and investment to get it into a productive and profitable stage, can be ruined almost overnight if foreign competition from low-wage, low-living standard countries is allowed to flood the American market with foreign nuts.

If this should happen many hundreds of orchardists with years of labor and money invested in their orchards will find it necessary to cut down their trees and go into some other type of agriculture. We should act to prevent this calamity befalling them.

I have before Congress a bill, H. R. 6780, which would restore the peril-point principle to the making of reciprocal trade treaties. Under the peril-point principle, the Tariff Commission, when a reduction in the tariff on any commodity is being considered, will make a study of the effects of a tariff reduction on the industry involved and will make a report, based on factual material, showing the level to which a tariff could be reduced, in the commission's opinion, without destructive effects on the industry.

If the peril-point principle is restored, as is proposed in my bill, H. R. 6780, it is less likely that any trade agreements will be made which would cause irreparable harm to such industries as walnut, filbert, and cherry raising.

Under leave to extend my remarks and include extraneous material, I append to this statement a letter I have received from John E. Trunk, general manager of the Northwest Nut Growers, an organization composed of hundreds of Oregon-Washington nut raisers. Mr. Trunk's letter follows:

A short time ago when I was in San Francisco calling on the buyers I found in the hands of one of our customers a quantity of Manchurian shelled walnuts. This gentleman gave me considerable information. He said 2,000 cases of 55 pounds each had arrived from Manchuria and had been stored in bond, and therefore were not reflected in the usual import figures. He had purchased a quantity at 42 cents and said additional could be had at 40 cents. This price schedule is duty paid, delivered San Francisco, and is more than 20 cents per pound under the prices for comparative grades on the domestic market.

A situation of this kind just seems intolerable to me. Here we are having our Government spend a huge sum of money on behalf of our domestic walnut industry so that millions of pounds of shelled walnuts can be diverted to the oil mills with practically no revenue to be derived from that source.

It is my understanding that all of China, and particularly Manchuria, are under Communist control or domination. It certainly can't be said that we should be thinking of reciprocal or free trade with countries of that type.

I would like very much to see this looked into. Our own man in Chicago, Mr. A. R. Mars, writes to say that the Walter Johnson Candy Co., of Chicago, and who have a branch in Los Angeles, are the world's largest makers of fudge candy. They use pecans and walnuts, and when we tried to interest them in our shelled walnuts they said they would like to use them, but they were buying Manchurian in the 40-cent bracket.

There is no necessity of my telling you what this is doing to an already overburdened and quite sick shelled-walnut market.

Anything you can do to probe into this situation will be appreciated.

With kind personal regards.

Sincerely yours,

NORTHWEST NUT GROWERS,
JOHN E. TRUNK,
General Manager.

Perennial Question

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Memphis Commercial Appeal of March 8, 1950:

PERENNIAL QUESTION

A hardy perennial among questions asked by Americans of themselves and others concerns the reason why so many otherwise courteous, considerate persons become ill-tempered boors when behind the wheel of a car. The fact is obvious, but the reasons are far and difficult to seek. Some observers say it proves the average human being is not well fitted for the control and exercise of power. Others suggest drivers work off on the general public their peeves of various sorts, feeling fairly secure because of a large measure of ability to get away fast, and so on and on.

One main reason for discourtesy, or lack of courtesy, as the case may be, is found, we believe, in lack of education in safety and

lack of training in the use of an automobile. The community has an obligation to keep a program of education going all the time in this regard, but it is far easier to teach the young. This phase of traffic is just another reason why we think every graduate of a high school should have a diploma in automobile driving, in comprehension of the traffic laws, and in understanding of his obligation and responsibility to the general public while he is in the role of driver.

Income Tax—Gettysburg, 1949 Version

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. WEICHEL. Mr. Speaker, I am enclosing a commentary on the preparation of income tax from an unknown author:

GETTYSBURG, 1949 VERSION

One score and sixteen years ago, our fathers brought forth upon this Nation a new tax, conceived in desperation and dedicated to the proposition that all men are fair game.

Now we are engaged in a great mass of calculation, testing whether that taxpayer or any taxpayer so confused and so impoverished can long endure. We are met on form 1040. We have come to dedicate a large portion of our income to a final resting place with those men who here spend their lives that they may spend our money.

It is altogether anguish and torture that we should do this. But in the legal sense we cannot evade—we cannot cheat—we cannot underestimate this tax. The collectors, clever and sly, who computed here, have gone far beyond our poor power to add and subtract. Our creditors will little note nor long remember what we pay here, but the Bureau of Internal Revenue can never forget what we report here.

It is for us, the taxpayer, rather, to be devoted here to the tax return which the Government has thus far so nobly spent. It is rather for us to be here dedicated to the great task remaining before us, that from these vanishing dollars we take increased devotion to the few remaining; that we here highly resolve that next year will not find us in a higher income bracket; that this taxpayer, underpaid, shall figure out more deductions; and that taxation of the people, by the Congress, for the Government, shall not cause our solvency to perish.

Payment of Salary to Valentin Gubitchev

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. TABER. Mr. Speaker, the people of America have discovered, to their great sorrow, that Valentin Gubitchev is on the pay roll of the United Nations at $6,000 a year, and that 40 percent of this salary is now being paid and has been paid ever since his arrest for spying on the United States, by the United States through its contributions to the UN. Is it not about time that he was taken off that pay roll? And is it not about time that the representatives of the State Department should show enough interest in the United States to stop this activity?

Federal Reserve Board

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1950

Mr. SHAFER. Mr. Speaker, since my speech in this House on February 21 in which I called attention to the un-American and immoral packing of the Federal Reserve Board I have been deluged with letters, telephone calls, personal visits, and telegrams from bankers, businessmen, lawyers, and other citizens from all parts of the United States, suggesting that I further explore the subject. I have received many letters on the subject; a truly amazing number in view of the very limited publicity given to my remarks. They reveal a state of mind—a fear of the powers and autocratic conduct of the Federal Reserve Board—on the part of bankers, bank customers, and business people generally that is quite different from any situation I have ever before noted in this Republic; and I think I am well advised to go into the matter more thoroughly and carefully.

I was very much surprised that no communication was sent to me by Mr. Thomas B. McCabe, Chairman of the Board, but I did note a rather impassioned one by the former chairman, Mr. Marriner Eccles. This indicated a weird situation of the Board wherein a former Chairman was mysteriously bounced from his job by President Truman, in a situation which has never been explained. Was it that the White House was aware of this packing procedure while Mr. Eccles was Governor, and in its soft-peddling way removed him from his position of one-man rule, surrounded by his stooges, and now still another stooge is yet in the person of the Chairman of the Board? I assume the communication is intended as a defense of his successful campaign to set up the Board as an obedient and submissive group who would do bidding without question or public remark. But, as a matter of fact, Mr. Eccles' letter openly confirms the most important criticism I have made; to wit, that the letter and spirit of the law has been violated in the selection of the Governors by failure to regard that provision intended to insure equitable geographical representation on the Board. Mr. Eccles does not deny that Governor Evans, a native-born, lifelong citizen of Iowa, a man who even to this day considers himself and refers to himself as an Iowan because of his large farming and business interests in that State, was, nevertheless, appointed from the grand Old Dominion State of Virginia, although he was only a temporary resident of that State because of his importation here to the Agricultural Department by Henry Agard Wallace, as Wallace's personal aid and protégé, as a corn-hog plower-under.

Mr. Eccles does not deny that the late Governor Clayton, a native-born, lifelong citizen of Utah, Eccles' personal protégé and clerk for more than 20 years, always, like Eccles and several members of his staff, a loyal Utah citizen, was appointed from, of all places, the Commonwealth of Massachusetts and Boston. What an unkind and underhanded blow to the ghosts of the sturdy New Englanders whose high principles of honesty and fair play have played such an important part in building the moral fiber of this Nation. In my previous talk on this subject I explained why the late Mr. Clayton was said to have moved to Boston shortly before his appointment to the Board.

Mr. Eccles did not deny that Governor Szymczak was reappointed at his, Mr. Eccles' insistence, in 1948 for a full term of 14 years, in spite of the fact that he had been serving continuously and without interruption as a member of the Board for more than 14 years; and that by his reappointment he would (and there seems no reason for his throwing up the "cushy" job)—if he serves out his term—he will have been a member of the Board continuously and without interruption for more than 29 years. This, in the face of positive provision written into the law by this Congress that no member of the Board would be eligible for reappointment if he had served a continuous term of 14 years. I am not interested in the devious evasions indulged in by Mr. Eccles, his staff of lawyers, and others, in accomplishing this continuance in office of one of Mr. Eccles' most loyal henchmen. What I am interested in is calling attention of this Congress to the brazen disregard of the letter and spirit of its laws, by these bureaucrats who, apparently and by their high-handed, star-chamber methods, regard themselves as untouchable and above the law and this Congress.

Mr. Eccles does not deny that in his own personal case as a member of the Board, the spirit of the law has been violated so that he, by having himself juggled and shifted from one term to another, will be permitted to serve a far greater number of years than the 14-year maximum which this Congress thought it was fixing when the Federal Reserve Act of 1935 was enacted. If Mr. Eccles serves out his present term he will have served as a member of the Board continuously and without interruption more than 24 years.

Stripped of all nonessential talk and consideration, the cold fact is that the great northeastern, southeastern, Southern, and southwestern sections of the United States are represented on the seven-man Federal Reserve Board by only one single bona fide resident of any of those vast areas, and that man is Thomas Bayard McCabe, a New Deal, Fair Deal, Republico Democrato, hailing

from Chester, Pa. Mr. McCabe is a pleasant, well-meaning and agreeable sales gentleman, with a limited knowledge and experience in Federal Reserve matters. The administrative ability as a public official of this delightful and successful sales manager of a toilet paper concern was thoroughly and painfully brought to light during the 4 months of hearings by the Senate committee which was considering his appointment 2 years ago. His ability as a private business executive is best illustrated by the fact that his paper company has progressed more in the few short years he has been away from it than it did during the entire period of his long career as its active president.

There is nominally one other representative of the Eastern States on the Board, a retired businessman named Draper, whose 10-year term on the Board expired on February 1 of this year, and he is serving in the embarrassing capacity of a "hang-over" awaiting the appointment of his successor. Governor Draper's service has been marked by routine and unquestioning obedience to Mr. Eccles, and I doubt that the minutes of the Board will reveal more than two instances during the entire 10 years that he voted contrary to Mr. Eccles' wishes.

At present there are only five members of this seven-man Board serving proper terms, Messrs. McCabe, Eccles, Szymczak, Evans, and Vardaman—with Mr. Draper occupying a sixth place because of failure of the President to name his successor. Governor Evans is absent from the Board most of the time, and has been for the past year or more, so four active members are conducting the Board's business in Washington, with Mr. Draper standing by "on sufferance," as it were. This is not a healthy situation, especially in view of the casual attitude of Mr. McCabe as an administrator and leader. It is a situation much to the liking, I presume, of Mr. Eccles and his hand-picked staff, because it gives them continued and practically undisputed sway in Board matters.

And my prediction is that unless this Congress puts some pressure in the proper place the two vacancies on the Board will not be filled, but the situation will be allowed to drag on indefinitely.

I note in the Eccles' letter no hint of the customary declaration that he was speaking as an individual and not for the Board. Of course, I thought—and so did the public, I believe—that Mr. Eccles had been repudiated and removed as head of the Board when Mr. McCabe was appointed Chairman in 1948. But after looking into the matter and asking many questions of people who should know, I don't seem to find any evidence that Mr. McCabe has done much else than to physically occupy the Chairman's office in the Federal Reserve Building, and causing Mr. Eccles the slight inconvenience of moving a few doors down the hall on the same floor.

As to Governor Vardaman, he is one of the closest personal friends of President Truman in Washington official life and there is less said about it than of any other man. I found out from long-time employees of the Federal Reserve Board, who are very uncomfortable about the one-man rule there, that Mr. Vardaman is regarded as the great dissenter in many of the Board's policies and I assume that his dissents reflect a very uncomfortable feeling of the man in the White House who sees a bureaucrat remaining as the real Chairman of the Board even after he has been displaced.

Certainly there has been no change in policy, or in basic thinking, or in arbitrary and bureaucratic conduct by the majority of the Board and Staff. It is true that the statements of the Board and its communications with the various committees of the Congress have become more verbose and longer and almost wholly innocuous and "straddling" in their content. But the old staff is still on the job, efficient, intact, and impregnable. Mr. McCabe has been allowed to bring in one economist, an excellent man, so I am told, by the name of Riefler, to try and teach McCabe the ABC's of national economics, fiscal finance, and otherwise guide him. This man has done a good job, it is said, but is apparently getting discouraged over his pupil, and it is rumored that he is considering becoming a member of the President's Economic Council—that new-thoughtist body headed by Mr. Leon Keyserling.

I am further informed that Mr. McCabe also brought along with him an able young assistant who up until a few months ago acted as his personal secretary. But late last year he too became discouraged, it is said, over the impregnability of the Eccles selected staff, and resigned his position with the Board and went back home to Chester, Pa., and the paper company.

As things now stand, Mr. McCabe is the nominal head of the Board, but he has not made one single major change in personnel or policy during his 2 years of administration. Since he has, presumably, the backing of the Administration, he could make almost any change he desired; so, I am bound to conclude, in view of his acquiescence and failure to act, that he, like some of his colleagues, is satisfied to be and function in all things as an Eccles satellite, or at least, as a messenger boy for Eccles' hand-picked board, and for Eccles' more thoroughly hand-picked staff.

It should be borne in mind that this Board is, theoretically, a direct agent of this Congress. It operates without any supervision whatsoever as to policies, personnel, or expenditures, except those broad provisions of congressional enactments directly applicable to the Board. It is not subject to the Bureau of the Budget. It is not subject to the Comptroller General. It derives its money from assessments on Federal Reserve banks made by the Board itself, and without recourse on the part of the banks. It spends its moneys thus derived without supervision or limitation or examination from any other Federal agency. It can employ as many people as it desires, and whoever it desires, without reference to any other person or Federal agency. And it can spend as much money as it wants for whatever legal purpose it wants, with little or no restriction, and with no accountability except to the Congress itself.

The only report of its activities and expenditures required by the Congress is the Board's long and laborious and boring annual report. This report covers the high lights of policy, activities, and expenditures, but is limited as to detail, and is in no sense a detailed financial report. There is also a policy record kept and filed with the Congress, I believe, but that relates solely to the official voting record of the Board members, and has nothing to do with other activities or expenditures.

. I am not prepared to say at this moment that I am opposed to so much authority being given the Board; nor am I prepared to say that the Board has unduly abused its powers or made expenditures which were not justified. But one point I do want to make, and it is the one which is uppermost in my mind at the moment: And that is, that a Board such as this, with so much power for good or evil, for economy or extravagance, should be well above suspicion as to quality, qualifications, manner of selection, and legal qualifications of its membership. The selection of men to serve on such a Board should carefully follow the intent as well as the letter of the law. There should be no shifty skullduggery, or questionable procedure such as fake residency claims, technical avoidance of the law's letter as to length of service, or other technicalities. Above all, men of independent judgment, men of banking or business experience in their own right, and men above question as to their impersonal and objective approach to those questions properly coming before the Board should be selected. Any appearance of packing or of one-man control or domination; or overbalancing in favor of one political party or one school of thought—all of these weaknesses should be avoided.

And I submit that they have not only not been avoided in the case of the present Board; but I charge that many of the faults mentioned are present in the incumbent Board. And I think this Congress should look into the situation carefully and see just what this hand-picked Board and staff are doing with the tremendous and potentially dangerous authority it possesses, and just what is being done with the vast sums of money which the Board has at its command. And, too, I think the Congress should inquire into the question of Board membership to see if fraud was perpetrated in the appointment of Governors Evans and Clayton and in the reappointment of Governors Eccles and Szymczak. And the Congress might also inquire to see whether or not it is the intention of the administration to let the two present vacancies stand and allow the continuance of the present out-of-balance Eccles-dominated Board; or will the administration carry out the intent of the law and appoint two qualified men to fill these vacancies who shall give the Board

something in the nature of the legally intended balance geographically, economically, politically, and otherwise?

Repeal the District of Columbia Sales Tax

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. O'BRIEN of Michigan. Mr. Speaker, August 4, 1949, I introduced H. R. 5879 to repeal the District of Columbia Sales Tax of 1949. Revenues far in excess of anticipations have already been collected by this sales tax. The Commissioners of the District of Columbia are now preparing to ask for legislation to abolish personal property taxation in the District and to lower the real estate tax. The real purpose of the District sales tax is thus being disclosed. Its purpose was not so much to meet the financial obligations of the District and relieve the Federal budget from making up the District's deficit as it was to take local taxpayers out from under their existing tax obligations and put the tax burden inordinately upon the consumers purchasing the necessities of life. The Committee on the District of Columbia has not yet given consideration to H. R. 5879, the sales-tax-repeal bill which I introduced last August. They should do so before acceding to the request of the District Commissioners for legislation to eliminate the personal property tax in the District and to lower the real-estate tax.

St. Patrick's Day

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. O'BRIEN of Michigan. Mr. Speaker, March 17, the day of St. Patrick's death, more than 1,500 years ago, is commemorated through Ireland and wherever the sons and daughters of Ireland have immigrated, as a tribute to the holy bishop who brought to the Emerald Isle the knowledge of Christ's teachings. Loving God and one's fellow man was the lesson of the Gospels and this was the lesson that St. Patrick brought to Ireland. It was the Christianity of Apostolic times vitalized by the blood of the early martyrs and ardent with the zeal of the catacombs. Through all the vicissitudes of conquest, rebellion, and liberation the people of Ireland have kept the faith as St. Patrick taught them and are a living example that the minds and wills of men can be proof against any force however mighty.

The American Way

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, March 16 (legislative day of Wednesday, March 8), 1950

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Otto E. Koegel, of the New York bar, as the fifty-sixth Founders Day address, at the American University in Washington, D. C., on February 23, 1950. Each year the Founders Day address is dedicated to a distinguished American. This year the address was dedicated to Mr. Daniel C. Roper, for 50 years a public servant. I am advised by the Public Printer that the manuscript will make approximately 2¾ pages of the CONGRESSIONAL RECORD, at a cost of $225.50.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE AMERICAN WAY—DOES IT COMBINE IDEALISM AND INDIVIDUALISM OR MATERIALISM AND COLLECTIVISM?

(By Otto E. Koegel, of the New York bar, member of the board of trustees)

FOUNDERS DAY ADDRESS

The American University was chartered by Congress in 1893. Its founders were a group of Christian statesmen who believed that the growing cultural and world importance of Washington made necessary the creation of an institution of higher education which would be distinctly American in its traditions and program. The vision of Bishop John Fletcher Hurst, of the Methodist Church, commanded the support and interest of Americans in all the States.

On founders day in 1943 a group of industrial leaders joined together to place in Hurst Hall a carillon in memory of Daniel C. Roper. The committee on the memorial was headed by the late Hon. W. A. Julian, then Treasurer of the United States, with Gov. Ernest Draper, of the Federal Reserve System, as its secretary. The inscription on the carillon plaque reads: "Daniel Calhoun Roper, 1867–1943, for 50 years a public servant."

"For the true liberal there is but one country—the world; but one religion—love to God and man; one politician—he who benefits and elevates the human family."

A condition in the gift of the carillon provided that each year on founders day a distinguished American should deliver an address devoted to the theme of the meaning of the word "American." The Daniel C. Roper address was delivered on the fifty-sixth founders day by Otto E. Koegel, Esq., of the New York bar, a member of the board of trustees of the American University.

PAUL F. DOUGLASS,
President.

You may recall that during the war King George VI, speaking to a world audience, expressing words of faith and courage, spoke these lines of M. Louise Haskins, "I said to the man who stood at the gate of the year: 'Give me a light that I may tread safely into the unknown.' And he replied: 'Go out into the darkness and put your hand into the Hand of God. That shall be to you better than light and safer than a known way.'" Deep spiritual significance is implicit in this metaphor.

Does it represent the idealism of most Americans? I think it does. But to some very influential ones and to some opinion makers it should not. Why do I say that? For the reason that a materialistic view of existence and ethics is held by a numerically small but influentially large number of social scientists, jurists, and others in and out of Government. Such view under the name of pragmatism is infiltrating into our philosophy of law and Government. For good or ill it is time that we should all examine it and see how it affects our historical conception of fundamental human values.

To get straight to the point, the basis of Christian ethics—to use that term in a broad and nonsectarian sense—is under attack from vantage points of influence. Those leading the attack have emphasized the preeminent position that jurists and lawyers are in to make that attack take on substance. Changes in our underlying legal concepts, such as that which Jefferson expressed in the Declaration of Independence, that men are endowed with certain inalienable rights by their Creator, can have far-reaching effects If the superstructure of the American way is adjusted to a certain underlying foundation, a shift of the foundation may topple the edifice.

There are amongst us those who feel that that would be a desirable result.

First, let me read to you a declaration of beliefs by a number of American intellectuals including John Dewey: "The time has passed for theism or deism—the universe is self-existing and not created—modern science makes unacceptable any supernatural or cosmic guarantees of human values." You may be astonished to learn that this is the pragmatism of Mr. Justice Oliver Wendell Holmes.

The dictionary definition of pragmatism is the doctrine that practical results are the sole test of truth. The idealist agrees that honesty is the best policy, but he rejects the thought that it is solely a matter of policy. The idealist believes that virtue is its own reward without relation to objective experience.

Now let me read the opening words of the declaration of human rights adopted by the United Nations: "Whereas recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the world."

These words are in direct conflict with the declaration I first read to you. No real pragmatist would subscribe to them.

And the pragmatist haughtily rejects the words in the Declaration of Independence so familiar to us all. They are: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights." And in the preamble of the Declaration of Independence refers to the laws of nature and of nature's God, which words they scorn even more.

Thus the main issue is joined between pragmatism—which is but a new look for materialism—and idealism, which is belief in a Divine Creator.

Most Americans accept idealism as their creed. Likewise they reject collectivism, believing it to be undesirable for them. Perhaps there is a connection between pragmatism and collectivism on the one hand and between idealism and individualism on the other. It seems we have two sets of twin ideas, not always identical and sometimes strange acting ones. But there is a discernible basic pattern of affinity between the ideas in each set. The outstanding collectivists denounce idealism as an arch enemy of the people.

To the pragmatist natural law—in the sense that men are endowed by their Creator with certain unalienable rights as Jefferson wrote—is humbug, a favorite word of Mr. Justice Holmes.

Having deprived men of all natural rights and relieved them of all natural obligations to one another it becomes philosophically easy to justify might makes right which the pragmatists do—and that is but a step to tyranny. Generally, that describes one of the sets of twins.

Now for the second set. To the idealist those sacred words in the Declaration of Independence and those which refer to nature and nature's God, express true law just as Cicero expressed it 25 centuries ago. "True law is right reason comformable to nature, universal, unchangeable. * * * It is not one thing in Rome and another thing in Athens, one thing today and another tomorrow; but in all times and nations this universal law must forever reign, eternal and imperishable. * * * God Himself is its author, its promulgator, its enforcer."

Americans accept this view. They believe that no earthly law-making body, past, present, or future, can alter the requirement that men shall show good will toward one another. Told that they don't know what that means does not alter their viewpoint. Apprehension of it may change according to time and circumstance, and it is not perfect except in the ideal. But where the individual is thus idealized he assumes a responsible self-esteem. He develops selfreliance or individualism. It was Oliver Wendell Holmes, Sr., father of the great Justice, who said the author of the song America, "Created something imperishable by using the word 'My' in 'My country, 'tis of thee,' instead of the word 'Our.'" It thus clearly appears as a country of persons, each with an individual sense of proprietorship and responsibility; not one in which the individual is but a corpuscle of the State.

I think the prime political objective of all men of good will is to abolish poverty. As to how best to do that, well-meaning men disagree. However, most Americans believe that our way to do it is ever to strive to create a better society of opportunity and incentive for the individual—a society in which the individual will experience the maximum of self-reliance; where each individual having physical or economic handicaps will be assisted to overcome them in order that he may become self-reliant. This is a big order and of course cannot be done all at once but it is the American ideal. That ideal is under attack. It is against that attack that I am addressing myself.

The author of the Epic of America has said that the American mind bears within itself at the same time a strong idealism and a strong realism. President Wilson gave full expression to American idealism in his message to Congress in 1917 asking for a declaration of war. Many will remember the moral curses we placed on our opponents in two world wars for their might makes right philosophy. I have suggested to you that Mr. Justice Holmes held the same view. Norman Thomas says there is such a thing as chain reaction in men's thinking. Well, Holmes, the great jurist—actually a conservative in politics—has left a legendary reputation among lawyers as liberal and idealist. He was neither. He was utilitarian.

Let us examine in a little more detail the case for individualism as against its opposite number collectivism (a political inquiry) and save idealism versus materialism (a metaphysical one) for our last and most important remarks.

Our political thought is enveloped in a welter of confusion of terms. We are apt to be led into that hazy medium of words wherein we all drown. Conservative, used now by some in an opprobrious sense; progressive and liberal which have many connotations; New Deal, Fair Deal, right of center, left of center; left and right wing; and so on. It would be a blessing if we were always alerted to these propositions: That accumulation and concentration of power always lead to a demand for more power; that every supernumerary in Government or on a Government pay roll means less production; that a pyramiding public debt if not checked leads to national bankruptcy or socialism; that 160 years of clinical evidence supports our incentive society as the most productive; that as Wendell Willkie put it, only the productive can be strong and only the strong can be free; that we cannot proceed indefinitely in a direction away from private ownership and responsibility without destroying our incentive society; that once in a great while it is desirable that we should take our political bearings. It has been said that "the definitizing of error often is the beginning of its disappearance," or as Bacon saw it, "truth to emerge sooner from error than confusion."

Both major political parties and most Americans profess to be opposed to the general ownership and control in the State of the means of production and distribution of goods. That is what we call socialism. That term, like individualism, to Dr. Dewey is a majestic abstraction. I submit there is considerable room for a difference on that point. I should like to quote extensively from the late Dr. Borden Parker Bowne, one of our great philosophers, and a profound thinker in metaphysics and ethics. In his work the Principles of Ethics, he states the matter so clearly from my point of view that I feel justified in quoting extensively from him. He says: "The idealogist (not idealist) is a real menace unless he has practical wisdom or is held in check by others who have it. In particular, man is complex, and not always adapted to the schemes provided for him.

"(Socialistic schemes) have been favorites with speculative minds since the time of Plato; and in general they have had a lofty moral aim. * * * Socialism may have an aim essentially Christian. * * * The general difficulty with it is that it pursues a laudable end by unwise or destructive methods."

George Bernard Shaw has written that "modern socialism does not, like communism, advocate revolution as the only means for success. Neither does it reject it as a last resort. The difference is one of tactics and not of objective." A former New York City official in Philadelphia, on April 15, 1932, told the Academy of Arts and Sciences: "Having once captured the Government and shelved the Supreme Court, we Socialists would nationalize as many large industries as we could chew. We would do it peacefully if possible, and we would do it otherwise if necessary."

And returning to Bowne: "It is needful, first of all, to make clear to ourselves that the inequalities and evils found in society are by no means all due to society itself. To begin with, there is an inequality of power and faculty in the constitution of man, and no legislation in the world can ever remove this and its consequences. Equality, except in the sense of one law for all and impartiality in its administration, is an idle dream. Society can as little produce it, as it can enable a rhinoceros to sing, or legislate a cat into a lion.

"The most beneficent feature in the moral order is that which puts a premium on produce, skill, and character, and serves a writ of ejection on idleness, ignorance, and animalism."

Former Dean Pound, of Harvard Law School, said in New York last week that "security today is being made to include security against one's own fault, improvidence, or ill luck, or even defects of character; that to fulfill this expectation the law seems more and more to be called on to pull him out of the ditch, bind up his wounds, set him on his way, and pay his hotel bill. Relief from the burden of poverty, want, and fear are laudable humanitarian ideals, but much at least of the program, if not beyond practical attainment, is certainly beyond practical attainment through law."

Again, says Bowne, "The best thing about the view (that the instruments and forces of production should be taken over by the state) is the clear insight into the worthlessness of all the familiar, socialistic cure-alls; but its holders have never thought it out, whether in its economic bearings, in its internal organization, or in its adaptation to men as we find them. If it diminished production we should have less to divide. If it rewarded all service alike it would produce heartburnings and injustice. If it did not direct production there would be no security against wasted effort. If it did direct it we should need a very wise central authority and very submissive subjects. That we should have either is highly improbable. As to its adaptation to actual men, nothing could be more insane than the fancy that society is to be redeemed by removing the motives to individual effort which lie in private property and private ambition. It is pleasant to conceive of a society where each should exist for all, where the best should rule and the rest should serve, where the inventor should present society with the fruits of his genius, where those of feeble powers should thankfully accept the humble place assigned them by the ruling powers, and where everyone should have his eye fixed on the public good. Unfortunately, the men for such a scheme do not exist on this earth, and when they do the scheme will be needless. Meanwhile, we shall have to get on as we are, not only fixing our eyes on the millennium, but now and then taking some account of human nature itself."

And a great natural scientist, Prof. J. Arthur Thomson, of Aberdeen University, has said on the same subject, "Civilization has indeed mitigated the severity of nature's Spartan methods, and has thrown off the yoke of natural selection, but it has not put an end to struggle nor the need for it. We are face to face with ugly and terrible social arrears, and since we cannot return to nature's stern regions which Plato approved, it behooves us more strenuously to substitute for natural selection a similar method on a higher turn of the spiral. We cannot return to nature's tactics, but we must adhere to her strategy or perish miserably." He is saying that, in the long run, we will perish if we abandon individualism for collectivism. Continuing, he says, "Huxley saw in nature a vast gladiatorial show, a ubiquitous Ishmaelitism, every living creature for itself and extinction taking the hindmost. But he did not adequately appreciate the fact that throughout the struggle for existence in nature, there is often a pathway to survival and success through increased cooperation, kindliness, and mutual aid, as well as through increased competition and self-assertion. And it is this line of combination and mutual aid that man must especially follow; it is the one he has followed in making some of his greatest advances."

And Bowne, the sage and philosopher, was equally emphatic that mere opposition to all Socialist controls is not enough. Says he, "Legislation can do a great deal in the way of protecting public interests from private rapacity. Society also must look after the poor and the sick who are not otherwise cared for. It must do this also in a more humane fashion than has been the rule.

"But society cannot afford to do anything which will relieve the healthy individual from

the necessity of working out his own salvation."

Bowne, my kind of liberal, was by no means unsure of the common man. He disagrees with those who, since the time of Socrates, have urged that it is ridiculous to give the vote of the peasant as much weight as that of a philosopher. He says, "History shows that the peasant with plain sense and conscience is as trustworthy as the philosopher. Historically, distinctions of intelligence beyond those of plain common sense have wrought more harm than good."

The American people agree with Plato that the equality of unequals is inequality. But they also believe that human dignity demands that every man should be assured as a reward for his best efforts a decent minimum of economic security. What that should be and how to attain it is a big question, to be sure. However, one thing seems certain—most Americans do not wish to give up their idealism and individualism in exchange for a promise of more creature comforts. They know the promise, even if initially kept, would ultimately be repudiated. Inevitably tyranny rises as freedom of the individual sinks.

I now come to the most important characteristic of the American way, idealism, which I have suggested is a corollary of individualism.

The American way is entirely incompatible with the Freudian dictum that religion is "the universal obsessional neurosis." It is a rejection of the dismal dictum that all we are is but the result of "accidental collocations of atoms." On our coins we read "In God we trust." It is not with the quality of empty ritualism that we sing from one of our great anthems, "Our Father's God, to Thee, author of liberty * * * Great God, our King."

Yet, some leaders in legal thought in this country go to Freud, the scientist, in search of the ultimate explanation. These leaders, including some of our highest judges, poke intellectual fun at those of us who have what they call the "carry-over of the childish respect for paternal omnipotence," and they say we feed on dreams and delusions. They say this is derived from a filial emotion and that a child, "left to his spontaneous conceptions, finds nothing very sacred about God," a statement that suggests to some of us philosophical illiteracy. Emerson long ago had thought of this and he has the answer: "Children, it is true, believe in the external world. The belief that it appears only is an afterthought, but with culture this faith will as surely arise on the mind as did the first." That a child from its beginnings could be isolated and left to its spontaneous conceptions is a statement that does not even rise to the dignity of an hypothesis.

The chain reaction these views have produced has resulted in enthroning a few demigods outside of their own spheres. Mr. Justice Holmes, truly a very great jurist, is one. I have said before, many lawyers would regard him as a great liberal and an idealist. He was not an idealist and not a liberal in the sense of the current political use of the term. Perhaps utilitarian would be the best one-word description of him.

In a letter to Pollock when he was 88 years old, Justice Holmes said, "I see no reason for attributing to man [in the cosmos] a significance different in kind from that which belongs to a baboon or a grain of sand." When 85 years of age, in a letter to Dr. Wu, he said, "It makes me enormously happy when I am encouraged to believe that I have done something of what I should have liked to do, but in the subterranean misgivings, I think, I believe I think sincerely, that it does not matter much. This is private talk, not to be quoted to others, for one is shy and sensitive as to one's inner convictions, except in those queer moments when one tells the world as poets and philosophers do." There is not much inspiration in a philosophy that nothing matters much.

And, again quoting the great Justice himself, "I hardly think of man as so sacred an object as Laski seems to think him. I believe that Malthus was right in his fundamental notion, and that is as far as we have got or are likely to get in my day. Every society is founded on the death of men. In one way or another some are always and inevitably pushed down the deadline. I think it a manifest humbug to suppose that even relative universal bliss is to be reached by tinkering with property or changing forms of government so long as every social improvement is expended in increased and unchecked propagation. I shall think socialism begins to be entitled to serious treatment when and not before it takes life in hand and prevents the continuance of the unfit."

There is more than a little fuzzy thinking in that observation. First he would not substitute socialism for the status quo until we decrease propagation. If socialism has any validity it surely is not limited to a future population which will owe its existence to a state planned parenthood scheme. Mind you, the great judge was speaking not only of the reproduction of the congenitally unfit. As to them there is very little if any disagreement. He was speaking also of increased propagation. Then what are to be the rules for producing the master race? Who is to make the rules? In a collectivist state, theoretically at least, everyone. I submit this to the verdict of common sense.

Writing to Pollock in 1920, Justice Holmes says, "I loathe war. But I do think that man at present is a predatory animal. I think that the sacredness of human life is a purely municipal ideal of no validity outside the jurisdiction. I believe that force, mitigated so far as may be by good manners is the ultima ratio, and between two groups that want to make inconsistent kinds of world I see no remedy except force. It seems to me that every society rests on the death of men."

In summing up, Prof. Harold J. Laski, has said, "There is, in short, in Mr. Justice Holmes a Spinoza proclaiming that might gives to right its letters of credit."

In brief, to Justice Holmes there is no such thing as moral ought. In his view, so we are told, the Golden Rule is there is no Golden Rule. One school of legal thought, consecrated to his philosophy, with many followers in high places, rejects the idea of free will, which it says appears "throughout literature, religion, philosophy, and legal dogma, but has little scientific evidence to support it," and its followers profess to believe that "by controlling the individual's environment you can control his character, and predict his future actions." Writing cautiously, one of them says, "The task of doing this is stupendous." This is the understatement of all time. Who is going to devise the control; and who is going to control whom?

This same professor, writing in the Harvard Law Review, also said, "The wise businessman, distrusting the judicial process, stays as far as possible from it, and then to many scientists the legal profession rises but little higher than that of the osteopath," a somewhat adventitious observation. Perhaps this was intended to displease the osteopaths. However, I know of some highly placed jurists who esteem them.

Justice Holmes was possessed of great mind and resolution. He made immense contributions to our jurisprudence. Although saying somewhat scornfully that the law was not for poets, he, the son of one, wrote very much like one. The very artistic quality of his writing gives him an especial influence. He recognized that no deed could compare with the ability to influence thinking, and he said so. Influence on men's minds may be a creeping one and its insidious nature not always easy to perceive.

It has long been anachronistic to speak of inert matter, but today it is thought of in almost abstract terms. Now, in conventional thought, we regard matter as energy, and energy as an attribute; but an attribute of what? Also many able, scientific thinkers see no conflict between science and religion, but view them as incommensurables. There are others, many of them so-called social scientists, who hold a contrary view. As to creation of living creatures, science offers certain contributions to the discussion and then, as Professor Thomson says, we remain qua science agnostic. However, to most minds it seems imperative to go on to metaphysical theory and it is better to do this frankly and deliberately than unconsciously or at random.

I think many pragmatists simply resolve the problem qua science and do not bother further with the problem because of a colossal unawareness of its existence. Emerson said, 'He that has never doubted the existence of matter, may be assured he has no aptitude for metaphysical inquiries."

There would be less confusion in law and politics if we would accept the view that the law is an art and not a science, as some maintain.

"Where," asks General Smuts, philosopher and statesman, "was the Spirit when the warm Silurian seas covered the face of the earth, and the lower types of fishes and marine creatures still formed the crest of the evolutionary wave? Where was the Spirit when the solar system itself was still a diffuse fiery nebula?"

That question he has answered—but equivocally—affirming both idealism and what he calls naturalism. But our unequivocal and satisfying answer is the one found in the first four words of the most majestic passage of literature, the first verse of Genesis—"In the beginning God."

Or as Emerson has said it:

"Idealism sees the world in God. It beholds the whole circle of persons and things of actions and events, of country and religion, not as painfully accumulated, atom after atom, act after act, in an aged creeping past, but as one vast picture which God paints on the instant eternity for the contemplation of the soul. Idealism saith: matter is a phenomenon, not a substance."

Thoughts are things.

Lord Kelvin said "The only contribution of dynamics to theoretical biology is absolute negation of automatic commencement or automatic maintenance of life."

Dr. Einstein has given his approval to a book, The Universe and Mr. Einstein, in which it is stated:

"* * * if the universe is running down and nature's processes are proceeding in just one direction, the inescapable inference is that everything had a beginning.

* * * * * *

"So all the evidence that points to the ultimate annihilation of the universe points just as definitely to its inception fixed in time."

Yet the pragmatist is not content to take a doubting position as to idealism. With confidence he issues a cold and barren manifesto in opposition. That is precisely the position taken by most leading collectivists of the world.

Science describes, but never explains. As it pushes back the frontier the philosophical problem still remains unchanged. "Science never destroys wonder, but only shifts it higher and deeper. When the halfgods go, the gods arrive." Then as Professor Thomson asks, Should we not get back oftener to

the emotional realization of height above height, which is expressed in Emerson's picture of the little child looking up through the maple branches—

"Over his head were the maple buds,
And over the tree was the moon,
And over the moon were the starry studs,
That drop from the angels' shoon."

Any subjective system of ethics must rest on a theistic foundation. Any other system is a precarious one. The Pater Noster—Our Father who Art in Heaven—is a part of the American way.

It was not a churchman but a victorious general in the hour of victory who stepped on the deck of the battleship *Missouri* to warn a listening world in these words: "We have had our last chance. * * * The problem of survival basically is theological and involves a spiritual recrudescence."

The American people are progressive, not in spite of their idealism but because of it. Their idealism is what will make them continuously more tolerant and unbiased, without which there can be no progress. They know they have improved their incentive society and they are resolved with God's help to continue to improve it. In that they will succeed if they are not forgetful of fundamentals.

King Solomon's words have not lost their meaning. "Where there is no vision the people perish!"

Address by Hon. Edward Martin, of Pennsylvania, Before Annual Meeting of the Tri-State Sheep and Wool Growers Association

---

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, March 17 (legislative day of Wednesday, March 8), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me before the annual meeting of the Tri-State Sheep and Wool Growers Association, at Washington, Pa., on March 10, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a real pleasure to be here with my own people—the folks from the farm.

Many of you know that I was born on a sheep farm, only 14 miles from where we are meeting tonight.

The first hundred dollars I ever accumulated was earned in the sheep business. That was a large sum of money in these days and represented a lot of hard work.

I know your difficulties and your problems. I know what competition from foreign markets means to you. I know what interference by Government can do to your business.

That is why I welcomed this opportunity to discuss with you the relations between Government and agriculture and the effect of that relationship upon the general welfare of all the people of the United States.

I had particularly in mind the trend in recent years toward greater and greater centralization of power in the Federal Government and the increasing danger of bureaucratic control over the destiny of every farmer and every worker.

Equally important, I wanted to hammer home the warning that a nation which adopts reckless, wasteful, and extravagant spending and continues year after year to pile up additional billions of dollars of debt is on the road to national bankruptcy.

So long as that course is pursued the day of reckoning must arrive. With it will come financial collapse. And what is more important, freedom of the individual will be destroyed.

The dictatorship of the socialistic state will gain control and this great Republic will no longer be the land of liberty and opportunity that made us the greatest nation on earth.

My friends, it is not pleasant to paint such a gloomy picture. But it is one that cannot be glossed over. It must not be ignored.

It would be easy to say it cannot happen here. But when we consider what has been happening and find that we are on the same course that has led other great nations into the strangling slavery of socialism we dare not fail to take warning.

Let us review briefly the increase in the size and the cost of Government.

In less than 20 years the annual expenditures of the Federal Government have skyrocketed from $3,000,000,000 to $42,000,000,000. In the same period the number of employees on the Federal pay rolls rose from 570,000 to over 2,000,000. The number of departments, bureaus, agencies and commissions increased fourfold to over 1,800.

Today the interest on the national debt alone is more than the total cost of Government only 16 years ago. And when we think about that debt, which now stands at almost $257,000,000,000 and is going higher every day, we must remember that it represents a burden of about $1,800 for every man, woman and child in the United States. That means approximately $7,000 for the average family of four.

Remember also that this staggering burden of debt, the greatest the world has ever known, is not a mere bookkeeping item. It must be paid. It will be left by those who created it as a liability to be met by generations yet unborn, our children's children and their children—far into the future.

During the present fiscal year the Government operated at a cost of $5,500,000,000 beyond its income. For the next fiscal year President Truman has recommended expenditures which mean another deficit of $5,100,000,000.

Is it not time to stop and ask ourselves how long we can survive as a free Nation if we are to continue to spend beyond our income at the rate of $5,000,000,000 a year?

I submit that question to you as Americans and as patriotic citizens who are deeply concerned with the future of America.

No segment of our population is so much interested in preserving freedom as the farmer. He knows that liberty and national solvency are interwoven. One cannot exist without the other.

The American farmer is an independent citizen who knows the value of self-reliance, hard work and thrift. He wants to build his security on his own efforts, his own skill. He asks no special favors from the Government. All he asks is a fair price at the market for his products and a fair price when he buys the things he needs.

The farmer wants to stand on his own feet. He wants to do his own thinking, free from restrictions, regulations and regimentation by bureaucratic Government officials.

Instead he has been made the victim of an administration that seeks to gain political advantage by promising everything to the farmer if he will submit to a program of Government control such as has been proposed in the Brannan plan.

That fantastic scheme would place the farmer under complete regimentation from Washington. It would make the Secretary of Agriculture a supreme dictator over the 6,000,000 farmers of America. The farmer is promised a high income at the expense of the taxpayers, but he would have to give up all his independence. He would have to submit to acreage allotments, production goals, marketing practices including marketing quotas and conservation and good land practices.

All of these restrictions upon the farmer's right to run his own affairs would be directed from Washington. That means he would be told how many acres he could plant, what crops he could raise, how to cultivate his land and where to sell his product. He would have to keep detailed records of all his operations and report the figures to the Department of Agriculture. After placing himself in this socialized strait-jacket the farmer would have to depend upon a hand-out check from the government for his livelihood.

It is impossible to estimate how much such a program would cost. But one thing is certain. It would saddle the consumers and taxpayers of America—and that includes the farmer—with an additional tax burden of at least seven to eight billion dollars a year.

The cost of administering the Brannan plan alone could be staggering. It would require an army of investigators, inspectors, bookkeepers, accountants, supervisors, lawyers, and experts, all on the Government pay roll.

It is not surprising, therefore, that the leaders of most of the recognized farm organizations have denounced the plan as dangerous, socialistic, and destructive of the farmer's initiative and incentive.

In the Hoover Commission's report on the Department of Agriculture it was pointed out that in the last 20 years the department has expanded from 22,000 employees to over 82,000 and that its expenditures have increased from $26,000,000 to $2,500,000,000 in 1949.

With this expansion there has developed a great deal of costly duplication and overlapping of services. In some rural counties from 5 to 10 separate agencies operate at the same time. Short-term loans to farmers are made by four separate Federal agencies. Some of the funds received from the Treasury by these agencies are invested in Government bonds so that the Government pays interest on its own money.

The Hoover Commission cited the case of a farmer who wrote to the Department of Agriculture seeking advice on the best type of fertilizer to use on his soil. He received answers from five separate offices and all the answers were different and contradicted each other.

Recently one writer stated that the Agriculture Department can't seem to make up its mind whether it is supposed to increase the Nation's farm output or decrease it. He pointed out that the price-support people are paying out $1,400,000,000 this fiscal year to keep surplus crops off the market while another office, full of experts, is spending the taxpayers' money to help the farmer increase his output.

These are some examples of Government in agriculture. They lead to the conclusion that it would be better for all concerned if there were less Government in agriculture.

A sound, efficient farm program is essential to the welfare of the whole country. A prosperous agriculture is fundamental for a prosperous America. The initiative and incentive of the farmer must be encouraged as the best insurance that the consumer will

have an adequate supply of food and fibers produced on the farm.

He must be given tariff protection against the importation of unlimited agricultural and livestock products.

In the early years of our Nation's history we were largely an agricultural country. Ninety percent of our people were engaged directly in farming.

It was then that Thomas Jefferson, great champion of individual freedom, sounded a warning, from which I quote:

"Were we directed from Washington when to sow and what to reap we should soon want bread * * * when all government, in little as in great things, shall be drawn to Washington as the center of all powers, it will become venal and oppressive."

Jefferson recognized the value of agriculture as one of the most important of all the activities of mankind. He feared the time when a majority of the people would no longer be tillers of the soil. He feared the time when the Federal Government would assume power to regiment and control the farmer.

He fought against the dangers to liberty and an all-powerful control Government and Government at oppressive cost.

We must take up that fight. We must not stand idly by while political demagogues and socialistic minded do-gooders spend us to destruction. We must not accept the sugar-coated promise of security to be handed to us on a silver platter by a generous paternalistic government.

If we depend upon that false promise we will see our freedom slip away, a little at a time, until all liberty is destroyed.

From the days of Lexington to the surrender of Japan farmers have been in the front line, battling for the God-given freedom of the individual.

The farmer has been steadfast in support of the church and has aided in strengthening the moral fabric of our Nation.

It is a glorious record and has contributed so much to the greatness of America.

At no time in the history of the United States has it been more important than now to put on the short sword and to fight for righteousness, clean and economical government and for the American way of life.

We must all enlist in the battle for a strong, solvent, dynamic America.

All the various types of agriculture should organize to insist upon economy in government, sound fiscal policies and a balanced budget.

Working together in the spirit of patriotism, such organizations can wield tremendous influence for a better, happier, and more prosperous America.

Foreign Policy of the United States

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, March 17 (legislative day of Wednesday, March 8), 1950

Mr. CONNALLY. Mr. President, the Secretary of State, Mr. Dean Acheson, yesterday delivered a very notable address on foreign policy at Berkeley, Calif. I have in my hand a copy of an editorial from the New York Herald Tribune dealing with this address, and treating it very comprehensively and favorably. I ask unanimous consent that the editorial be inserted in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE BASES OF POLICY

Secretary Acheson, in his speech at Berkeley yesterday, has stated with great strength and clarity the basic realities of the Soviet-western problem, and the basic principles and policies with which the administration, through him, is seeking to deal with it. Here is a considered capstone set upon that concept of total diplomacy which the Secretary, in a series of remarkable and forceful utterances, has been setting before the Nation and the world. And here is a firmness of grasp and sharpness of insight which are beyond challenge save on the most carefully weighed and responsible grounds.

The Secretary has been under simultaneous attack from two quite opposite directions. The idea that his policy is influenced by some insidious (and unexplained) sympathy for communism becomes merely frivolous in face of his masterly analysis of the real nature of the profound division between east and west—a moral issue of the clearest nature. The opposite, and more serious, attack accuses him of a do-nothing defeatism in face of this dangerous chasm, of inflexibility, of a failure to make new peace advances or think up new policies more apt than the present ones to soften the Kremlin's heart. Can this attack be sustained?

New policies or peace offers are obviously worse than useless unless they fit the actual problem at issue. The Secretary's statement of the nature of this problem is scarcely open to challenge. He outlines seven contributions which the Kremlin could make to the restoration of peace. Can any thoughtful American argue that asking for these is asking too much, or indeed that the United States could accept any peace settlement which did not provide at least these minimum conditions of assuagement and stability? They are, as the Secretary himself warns, conditions which the Kremlin has shown no desire of meeting. But can the west offer, within the limits imposed by the necessity of maintaining its freedom and its safety, anything which might change the Politburo's mind?

Those who so argue put themselves under a grave obligation to suggest just what such offers might contain. Unfortunately, it is one of the worst difficulties of the problem that the Kremlin today is quite satisfied with things as they are. Its tactics of infiltration and propaganda are doing well enough; it is under no breaking economic strain; it is not terrorized by atomic fears; it is under no particular pressure to make peace. It would probably be pleased if western rearmament were halted and could doubtless use western capital if it were offered in vast amounts, but it has given no hint that it needs these things badly enough to make any real changes of policy in return for them. The truth is that cold war is in large measure a necessary "way of life" for the Soviet dictatorship, and to convince the Politburo that it had better be abandoned is not an easy problem.

"Our attitude," says the Secretary, "is not inflexible, our opinions are not frozen, our positions are not and will not be obstacles to peace. But it takes more than one to cooperate." And no suggestion for bringing the Kremlin to believe that cooperation will serve its own interest has yet been advanced that gives as much actual promise as the Secretary's policy—a policy of firmness, of strength, of freedom, of courage to sustain the cold war burdens and unity in holding firm for a real peace. The only alternative yet to be advanced is that which the Secretary mentions—"to allow the free nations to succumb one by one to the erosive and encroaching processes of Soviet expansion."

Farm Production and Farm Markets

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, March 17 (legislative day of Wednesday, March 8), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD some remarks by Mr. Wheeler McMillen, editor in chief of the Farm Journal, on the subject Crop Research Reward, as printed in the Nebraska Cattleman for March 1950.

In this address Mr. McMillen points out the great importance of conducting research to meet our problems of farm production and farm markets. As Mr. McMillen says, it may well be that $1 spent on research may accomplish more in the way of finding markets for our surpluses or new crops for our acreage than a hundred dollars spent on buying up and destroying surpluses.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CROP RESEARCH REWARD

(Parts of an address by Wheeler McMillen, editor in chief, Farm Journal, Philadelphia, Pa.)

Already this morning there has been considerable discussion of agriculture's biggest question. You have adopted a resolution on it—a magnificent resolution. That question is whether or not ranchers and farmers in America are going to continue to be free. There are innumerable aspects of the question, and perhaps I can illustrate only one of them by referring to a bit of agricultural history which is familiar to all of you.

There are, I see, among you a few who, like myself, can well remember, let us say, a quarter of a century ago, when, had anyone asked what was the foremost question before agriculture he would have been told that it was the question of farm surpluses. It was not long after that question first began to be acute when Government began to undertake to do things about it. Since 1933 Government has distributed in subsidies to agriculture, primarily intended to accomplish something to solve the surplus problem, more than $12,000,000,000, and has spent in addition the high percentage of cost for the administration and distribution of those subsidies, the political brokerage that goes on with all such matters.

We have had a series of laws designed to solve the surplus problem. Each law has cost a little more money. Each law has created new problems and set up new phases of the question. And today, 25 years later, right here in the very middle of the twentieth century, what do we hear? That there are rolling up great surpluses of wheat; that there is on hand a great surplus of cotton; that there are enough dried eggs in storage to provide a breakfast for every American for a year if the hens all quit laying; and that there are accumulations of this and that and the other; and that now, after $12,000,000,000 in 25 years, we must embark upon still more costly programs which impose upon farmers more and more problems. That is the history of Government whenever it undertakes to accomplish things which Government by its very nature cannot accomplish.

Government actually and properly has but two functions. One of them is to protect the

citizens and the Nation from any attack by foreign powers. That is the primary function of government. The other is to protect the citizen from aggression by his fellow citizens. Now, government does not too well accomplish either of those functions. If governments were capable of accomplishing these two jobs, it would have been possible for us to say that during some 10,000 years of human history that we can guess at or know about there might have been a little more than 350 years of peace. Governments do not do a good job on their first function. And anyone who has ever had occasion to get himself tangled up in the courts of law will cheerfully agree that government does not too well and certainly not too economically perform the second function of protecting the citizen from aggression by his fellow citizen.

We have in the United States by common consent more or less agreed that government might undertake certain other functions in fields where private and individual enterprises cannot supply enough capital, assume enough risk or expect rewards adequate to the capital and risks incurred. We are accustomed to having our mail delivered by government. It might be done better nowadays by private hands, but probably could not have been when the post office was instituted. We are accustomed to suppose that it is entirely proper—and I believe it is—for government to, let us say, keep statistics on the livestock industry and upon grain production and upon the business activities and the employment of the country. We need that and it contributes to the advancement of our country. It is entirely proper that the government should engage in certain kinds of research, particularly of the fundamental kinds that helps us to understand a little better the laws of nature. It is proper for government, we believe, to assume some functions in the promotion of education. We think there ought to be some definite limitation as to how far we ought to permit government to go in that field.

Taking the field of research as it is of concern to you: We, I think, have no disagreement upon the idea that it is a function of the Federal Government to combat the existence and spread of foot-and-mouth disease in Mexico in order to prevent it from attacking our herds in the United States. Upon that point I might digress just long enough to say that we have known for years and years that there could be other outbreaks of foot-and-mouth disease in the United States. Mr. Mollin said we have had them as early as the latter part of the nineteenth century. Had we been farsighted enough in 1920 to have established that laboratory that we are trying yet to get established, we might by this time know enough about the character of foot-and-mouth disease and how to fight it so that it would not be the menace that it is today. We are just starting 25 or 30 years too late to build that laboratory—but again it is better late than never.

Through research, we are constantly lowering our costs, and as we lower costs, we enable more people to enjoy more meat and to enjoy it more often. Through lowering costs we widen our markets. And it is unfortunate perhaps that we permit ourselves in agriculture to think too much about the price we receive and not enough about the costs we put out, because in the long run the income that enables us to enjoy something beyond the necessities of life is the result of price times the quantity we have to sell minus the cost of production. Those are all factors of our agricultural income. Quality becomes reflected in price.

During this quarter of a century we have made some progress. You are doing things on your ranches today that no one would agree 25 years ago you could be doing today. On every farm in America practices are being followed today to lower costs and produce goods that were not possible a quarter of a century ago, and these real ventures have one thing in common; nearly every one of them, I think, is the product of research which has been placed in our hands today because scientists and engineers have been constantly peering into these laws of nature and the materials of nature and come up with new facts with which our great business organizations and countless smaller organizations have been able to turn into new material and new buildings that we enjoy in our own labor.

The Government, you know, expended in order to look after the 1948 potato crop, something like $200,000,000. I inquired the other day as to how much was available during the same period for research to find out new ways to utilize potatoes. The figure was $69,000. That $200,000,000 to take care of a potato crop for 1 year was four times all the money that was spent for all kinds of research that year by the Federal Government. It didn't solve a single problem with potatoes. It created some new ones for this year.

Now, if we are going to spend any Government money should we not spend it in fields that are productive, in fields that will bring us results? You who live on the great plains would like to have more productive grasses. You would like to have some legumes, perhaps, if they exist anywhere in the world, that would add nitrogen to your soil. You in Florida would probably like to have a grass that would stand the heat and the freezes both so that you wouldn't have any interruptions, be without pasture. All over America we have the needs for new kinds of crops.

Just think of this: One new crop on the great plains of America that would pay a little better than wheat, enough better to tempt farmers to put 25 percent of their acreage in that new crop, would solve the wheat surplus probably once and for all. One new crop, or a few such new crops, in the cotton area, could prevent the recurrence of cotton surpluses.

Now we know that mere law making doesn't work. We know that research does work and there are plenty of places to look for new crops. We do know in the United States there are probably not more than 200 species of plants as crops. In the United States and Canada, north of the Rio Grande there are 15,000 species of plants native to our soil. On the face of the earth there are some 300,000 species of plants. Out of all that marvelous abundance we have found out how to use as crops only about 200. There alone is a field for research that challenges the imagination.

Rivers, Harbors, and Public Works in Pennsylvania

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Friday, March 17 (legislative day of Wednesday, March 8), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I made before the Committee on Appropriations on the subject of rivers, harbors, and public works in Pennsylvania.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR EDWARD MARTIN

Mr. Chairman and members of the Civil Functions Subcommittee of the Senate Committee on Appropriations, in submitting this statement I wish first to express my sincere appreciation of the recognition given by your committee to the urgent need of Pennsylvania for more effective protection against damage by recurring devastating floods.

The extent to which many areas of Pennsylvania have suffered loss of life and property and disastrous dislocation of production is well known to members of the subcommitee.

There is ample testimony of record to justify the expenditures now requested. On behalf of the people of Pennsylvania whose welfare and economic progress depends to a large extent upon the completion of the flood-control projects now under construction, I ask approval of appropriations in the amounts recommended by the Bureau of the Budget. These amounts, I am convinced, represent the minimum requirements to insure orderly and efficient progress on the individual flood-control projects.

I am therefore requesting this committee to approve appropriations as follows:

Conemaugh Reservoir, $9,000,000; Sunbury, $1,200,000; East Branch Clarion Reservoir, $2,000,000; York, $90,100; Williamsport, $1,200,000.

For the maintenance of existing projects I ask the committee's approval of amounts as follows:

Tionesta Reservoir, $60,000; Crooked Creek Reservoir, $60,000; Mahoning Creek Reservoir, $33,500; Loyalhanna Reservoir, $40,000; Youghiogheny Reservoir, $60,000; Johnstown, $15,000; Punxsutawney, $8,000; York, $18,000.

In addition, I ask the committee to appropriate the full budget amounts that will enable the engineers to proceed with the planning work on new projects authorized by Congress.

The projects and the amounts requested are as follows:

Allegheny River Reservoir, $30,000; Allentown project, $50,000; Bear Creek Reservoir, $50,000; Johnsonburg, $10,000; Prompton Reservoir, $25,000; Shenango River, $50,000; Swoyersville and Forty Fort, $30,000; Uniontown, $40,000.

Two other projects for which I ask planning appropriations are included in the omnibus civil-functions bill. They are the Dyberry Reservoir project for the Lackawaxen River for which $50,000 is needed, and the Bradford flood-control project which requires $50,000.

In turning now to the rivers and harbors projects, I would like to call your attention to the fact that Pennsylvania is the only State of the Union which has three great ports giving access to the ocean trade routes of the world—the port of Philadelphia, with access to the Atlantic, the port of Pittsburgh through the Gulf of Mexico, and a Great Lake port at Erie. The maintenance of these great ports is vital to the industrial strength of Pennsylvania and to the economic expansion of the Nation.

Two items for which I ask approval are to carry forward improvements on the Monongahela River which are of vast importance to the coal, steel, and other industries in western Pennsylvania. They are the Morgantown lock and dam located at Morgantown, W. Va., $2,000,000; and lock No. 2 at Pittsburgh for which $3,780,000 is requested.

The completion of these modern locks and dams is of such great importance to the industrial life of western Pennsylvania that I request an appropriation of $100,000 for

further planning of Monongahela River improvements.

I ask the committee to approve the item of $4,000,000 for culm-removal operation on the Schuylkill River; $500,000 for the Ohio River lock and dam construction; and an additional appropriation of $250,250 for open-channel work on the Ohio River.

The importance of providing sufficient funds for the maintenance and operation of river and harbors projects cannot be overemphasized.

I therefore request approval of the full budget amount of $3,248,000 for dredging the Delaware River from Philadelphia to the sea, and recommend that $2,000,000 be appropriated to maintain dredging operations in the Delaware River between Philadelphia and Trenton, N. J.

I further request the full budget amount for the Monongahela River, $89,300 for maintenance dredging in the pools formed by the dams and $1,011,500 for operation and care of existing locks and dams; Allegheny River, $33,500 for maintenance dredging and $343,700 for operation and care of locks and dams; Youghiogheny River, $20,000 for maintenance dredging in the 9-foot channel between the mouth of the river and McKeesport; Ohio River lock and dam construction and open-channel work, $8,835,700 for maintenance; Schuylkill River, $1,000,000 to maintain dredging necessary to provide adequate facilities for the large commerce; Erie Harbor, $67,000 for dredging to maintain the 25- and 26-foot depths in channel entrances and the harbor itself, ranging in depth from 18 to 23 feet.

Radio Station WHAM

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, March 17 (legislative day of Wednesday, March 8), 1950

Mr. IVES. Mr. President, WHAM, Rochester, N. Y., is one of America's truly great radio stations. Public service has been the keynote in WHAM's operating policy since the station first went on the air in 1922.

In radio's early days, when the industry grew so rapidly, stations were changing frequencies and transmitting power almost at will, resulting in tremendous interference except in the cities where the stations were located. The persons who suffered by this interference were the farmers and small-town residents, who were almost completely forgotten by the then new wonder, radio.

On the advice of a group of radio engineers the Federal Radio Commission in 1928 set up 40 clear channels, interference-free frequencies, to give the neglected rural population at least part of the service which city residents then enjoyed. WHAM was assigned one of those clear channels, 1180 kilocycles. Then, as now, it proved worthy of that sacred trust—serving well its many listeners, rural and urban, in western New York and northwestern Pennsylvania.

To demonstrate the value of WHAM to its area I ask unanimous consent to have inserted in the Appendix of the RECORD a statement on its highly valued orchard spray service, which is about to begin for another season, and to include also letters from agricultural leaders commending WHAM for this service.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

WHAM'S CLEAR CHANNEL SERVES NEW YORK FRUIT BELT

Station WHAM is a 50,000-watt clear-channel station situated in the heart of the world-renowned fruit belt that lies along the southern shore of Lake Ontario in the State of New York.

Fruit growing is one of the really big industries in up-State New York. In the area served by WHAM, the 1949 fruit harvest totaled 20,090,000 bushels of apples; 1,428,000 bushels of peaches; 2,900 tons of sweet cherries; 17,500 tons of sour cherries, and 1,195,000 bushels of pears. Valuation of this crop was over $40,000,000.

Crops of this caliber are not products of chance. They are the result of scientific planning and culture, and Station WHAM plays a large part in the fruit program in up-State New York by cooperating each year in a fruit spray service that has pioneered a new orchard-growing technique that has gained prominence across the United States.

Back at the turn of the century, fruit growers in the WHAM area met their first big orchard foe, the San Jose scale. To combat this serious threat to the orchard industry, fruit men set up a spray program, the success of which was so obvious in terms of bigger and better crops that research in spraying was extended to other fruit pests and has continued without let-up in an ever-expanding program of endeavor and success.

Research has brought to light the priceless information that insect development and harmful tree growths are dependent upon combinations of precipitation, humidity, and temperature. Certain combinations of these factors will produce certain harmful results to orchards. Therefore in WHAM land, fruit specialists of the various county farm bureaus work in conjunction with the United States Weather Bureau, diagnose weather conditions, and then predict what preventive sprays or dusts should be applied.

In the early days of this technique, a telephone network was used to spread daily word of what should be done to prevent disease development. The slowness of this technique created a big difficulty. By the time the last member of the telephone network was contacted, it was often too late to spray effectively. In 1946, Ralph Palmer, fruit specialist for Monroe County Farm Bureau, worked out a plan with WHAM that overcame this objection. Special equipment in Palmer's home was remotely controlled from the station's studios. Each morning, after working out his specialized information, Ralph Palmer went on the air and told growers just what to do. The huge success of this plan in Monroe County paved the way for the same type of operation to be set up in Orleans and Wayne Counties. The broadcasts start early in March or April and continue until the middle of July. The system was of such importance that a full account was published by the United States Weather Bureau with its nationally distributed weather map for Friday, August 22, 1947, under the title "Weather and Fruit Growing."

Station WHAM considers fruit spray service one of its most dramatic examples of the assistance a radio station can extend to farmers and orchardmen when it has the facilities with which to do the job.

WHAM's complete farm division is rendering a highly valued public service to New York and Pennsylvania residents. Its fruit spray service is just one example of its value to the agricultural industry. WHAM, with its interference-free clear channel, is able to get this urgent information to growers over a vast rural area, many parts of which would have no radio service were it not for this clear-channel station.

STATE OF NEW YORK,
DEPARTMENT OF AGRICULTURE
AND MARKETS
Rochester, N. Y., August 24, 1949.

Mr. GEORGE HAEFNER,
Farm Announcer, Radio Station WHAM,
Rochester, N. Y.

DEAR MR. HAEFNER: I have recently been in contact with a number of farmers throughout western and central New York and cannot refrain from writing to tell you how much they appreciate your agricultural news, particularly the morning and midday periods. Apparently WHAM has been able to reach out to many of our New York State farmers and these farmers with whom I have talked certainly appreciate your fruit report and Market News Service.

May I, at this time, add my personal thanks for the cooperation you have extended to this office in the use of our market reports.

Very truly yours,

H. H. DUNCAN,
Assistant Director.

COOPERATIVE EXTENSION WORK IN
AGRICULTURE AND HOME ECONOMICS,
STATE OF NEW YORK,
Rochester, N. Y., August 22, 1949.

Mr. GEORGE HAEFNER,
Radio Station WHAM,
Rochester, N. Y.

DEAR MR. HAEFNER: I want to take this opportunity to write you about the radio fruit program which WHAM has broadcast in recent years. As you know, this program started under the regime of Tom Murray some 4 years ago and immediately attracted a considerable audience with a strong demand that it be enlarged and extended. This year witnessed a considerable expansion over the 1948 season and was widely listened to.

Starting March 23, we broadcast 6 days a week until mid-April, when we went on 7 days a week. By late June we were back to 6 days a week, July 1 to 5 days and July 15 to 3 days. The program was discontinued August 15 and might well have run another week.

While the program was designed primarily for fruit growers in Monroe and Orleans Counties, it was widely listened to in all western New York—especially after June 30 when it was the only fruit program on the air in western New York.

Although the timing information was not readily usable outside of western New York, there was also a substantial audience in such other fruit areas as central and northern New York, the Hudson Valley, New England, and along the shore of Lake Erie in Pennsylvania and Ohio. We estimate that more than 5,000 western New York fruit growers listen regularly.

Many farmers who grow no fruit listen to the weather portion of the broadcast.

The fruit growers are very enthusiastic about the service and it would now not be possible to go through a spray season without it. In addition to being a splendid service program it has been highly effective as an educational feature and many growers have learned more in a few years about fruit problems from this broadcast than in the previous one or two decades.

Your organization is to be complimented on this public service and you would have a real argument on your hands should the program be abandoned or restricted.

Better plan on starting again March 15 or soon thereafter in 1950.

Sincerely yours,

RALPH G. PALMER,
Associate County Agricultural Agent.

KENDALL, N. Y., *August 26, 1949.*

STATION WHAM,
Rochester, N. Y.

Mr. RALPH PALMER,
Monroe County Farm Bureau,
Rochester, N. Y.

Mr. ARTHUR WEST,
Orleans County Farm Bureau,
Albion, N. Y.

GENTLEMEN: My thanks for the fruit broadcast service for the season which has just closed. You may not receive many letters but I am sure that all fruit growers appreciated it very much. I know of many city workers who listened to it every morning on their way to work in their cars, and it caused many questions to be asked as to our problems. The weather forecast was one which caused comment because it was nearly always nearer to what happened than the other regular forecast.

You all did a swell job and I hope that it will be repeated next year.

Sincerely yours,

JOHN W. TUCKER.

ORLEANS COUNTY EXTENSION SERVICE,
Albion, N. Y., August 23, 1949.

Mr. GEORGE HAEFNER,
Radio Station WHAM,
Rochester, N. Y.

DEAR GEORGE: I would like to take this opportunity in behalf of our fruit committee to thank you and the management of WHAM for the excellent cooperation we have had this season in the radio fruit spray service.

We had about 1,200 fruit growers and about 600 vegetable growers following daily weather reports and spray service. Numerous city and village people listened in, too, and wrote for specific information on their trees or berries, and mentioned the program.

Fruit growers in adjoining southern counties also wrote us, indicating a wide coverage. A number of dairy-fruit growers report having put radios in the barn to get the daily spray service and weather reports.

Even the Geneva Experiment Station workers tune in to get the daily weather reports and follow field spray developments.

Growers are anxious to see the program continued again next spring, and we hope to have your continued fine cooperation.

Yours sincerely,

ARTHUR G. WEST,
County Agricultural Agent.

FEDERAL-STATE MARKET NEWS SERVICE,
Rochester, N. Y., August 19, 1949.

Mr. GEORGE HAEFNER,
Farm Director, WHAM,
Rochester, N. Y.

DEAR MR. HAEFNER: We expect to start our daily market reports on or about August 24 and at that time we will begin sending you (via teletype collect) excerpts from these daily reports for broadcasting over WHAM.

This is the beginning of the twenty-sixth season during which this office has furnished your station with agricultural information of vital importance to growers and shippers over the large territory which you cover.

During the 9 months of each season that you broadcast this information we received many very favorable comments from both growers and shippers in this territory regarding your station and the manner in which you handle our reports. Sometimes during a period of 24 hours your announcers often repeated two or three times many special reports that we might furnish; such as frost damage in competing sections, etc. Such handling of market reports is most certainly appreciated by the rural population of New York State as well as adjoining States.

Again let me thank you for the splendid cooperation that continues to exist year after year between this office and WHAM.

Very truly yours,

A. L. THOMAS,
Local Representative.

The Ministrations of Religion

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Friday, March 17 (legislative day of Wednesday, March 8), 1950

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Looking at Life," written by Erich Brandeis, and published in the Morgantown (W. Va.) New Dominion, on March 15, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOOKING AT LIFE

(By Erich Brandeis)

A few evenings ago a truck driving through one of New York City's crowded melting-pot sections, skidded on the icy pavement, and ran over a boy who was playing in the street.

Both of the youngster's legs were crushed. He was unconscious. It was evident that he did not have long to live.

Out of the crowd came a priest. He kneeled down by the boy's side and prayed. The boy was a Jewish boy.

The truck driver, tears streaming from his eyes, had stopped his vehicle and he, too, kneeled down by the boy's stricken form and prayed. The driver, as I later found out was a Protestant.

As usual in New York, before the ambulance had time to arrive, thousands had rushed into the block, where the accident had happened.

It was only with the help of two husky policemen that the grief-stricken mother could make her way to her son's side.

Tenderly, she took her son's head into her arms and prayed to God—in Yiddish.

Then the ambulance came. The boy was taken to the hospital where he is now confined.

The doctors are hopeful that he may live, although he may be crippled for the rest of his life.

However, perhaps their skill and the combined prayers of Catholics, Protestants, and Hebrews will make him whole again.

Not much of a story in these days of world-shaking events.

Yet in it may lie the answer to so many unanswered questions we ask ourselves.

In it may also lie the answer to the hundreds who have written me and asked why there must be so much dissension in religion.

There is no dissension in religion.

The dissension is among the churches.

Whenever there is a disaster, whenever man's weak ego cries out for God's help—man knows only one God—the God of his soul.

When God is needed instantly nobody asks those who need help whether they are Catholic, Protestant, or Jewish.

That priest, that truck driver, that mother, although each belonging to a different church, did not pray to different Gods. They prayed to the same God.

How many gods do you sticklers for methods think there are?

Do you, who believe that only in your faith lies salvation, dare to say that those who don't share it are heathens?

You may as well say that unless you pray to God dressed in a certain costume, He will not hear you.

You may as well insist that Heaven is reserved entirely for your own clique.

I, for one, deny that the very cleavages that divide man on this earth are God-made, I believe that man's soul cries out for unity, and I call upon the churches to set the example.

No FEPC Retreat

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Friday, March 17 (legislative day of Wednesday, March 8), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial from a recent issue of the Metropolitan Star of New York City. The statement will be useful, I think, to those who wish to evaluate accurately the position we are now in, in regard to civil-rights legislation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO FEPC RETREAT

Good victories are never bought cheaply. Sometimes, the road is easy. Sometimes it is a rough highway, filled with obstacles.

The road to passage of a just FEPC bill is not an easy one to travel. Progress in a democracy is slow but sure. That is the way of a democracy. That is the only way we would have it.

Thus, the good people seeking progress through enactment of a just FEPC bill should not be disheartened by the emasculated measure forced through the House by a coalition of narrow-minded Dixiecrats and reactionary Republicans.

There are liberal men and women in both parties—yes, even in the South—who will ultimately repudiate this blotch on American democracy.

This Congress was voted into office with a mandate to protect the civil rights of all Americans. There can be no compromise in this crusade. There can be no retreat from the front lines of decency and progress.

The FEPC fight now goes into the Senate. There still is a good chance of getting a good bill out of this Congress. But that will depend upon you—and you—and you.

The full force of American opinion must be brought to bear on Congress. Every enlightened American must inform his legislator of his intention to support a bill giving an FEPC power to enforce its decisions.

The fight for FEPC is not merely one against discrimination. It represents a battle that has been going on for years against reaction; against Rankinism and all that RANKIN apparently espouses. The entire world is watching the FEPC fight, for if we can wipe economic discrimination from the face of America we will encourage democratic forces elsewhere to combat discrimination, dictatorship, totalitarianism, and all the evils of bigotry.

We, in New York State, are fortunate in that both of our Senators are enlightened statesmen, in the forefront of the fight for just causes. Both our Senators—IRVING IVES, Republican, and HERBERT LEHMAN, Democrat—are pledged to support a just FEPC bill.

We must give them the support they deserve. We cannot falter now because of a temporary setback.

It is ironical that the cause of FEPC should have suffered its serious blow on the eve of Brotherhood Week. It is up to us to correct that situation.

The time for action is growing short. The Administration bill—supported by every forward-looking American—will be brought up in the Senate by March 10.

Let them hear your voice now. Let the voice of America tell the Senate there will be no retreat along the road to progress. Together, Americans all, we must march ahead and inspire the world with our good deeds—pointing the way to peace and brotherhood for all mankind.

Banking Service for Everyone

EXTENSION OF REMARKS

OF

HON. JAMES J. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1950

Mr. MURPHY. Mr. Speaker, under unanimous consent to extend and revise my remarks in the Appendix of the RECORD, I include therein an address by Mr. E. A. Mattison on banking service for everyone:

BANKING SERVICE FOR EVERYONE

(By E. A. Mattison, executive vice president, Bank of America, San Francisco, Calif; before the savings and mortgage conference, American Bankers Association, New York, March 13, 1950)

Banking service for everyone is probably an idealistic conception so far as the whole body of the banking business is concerned. Perhaps one way to achieve it would be to follow the suggestion which came to us in the form of a cartoon. The drawing showed a big sign over one of our larger branches reading: "No waiting, no delay, 48 vice presidents."

Even in a certain bank out in California, where banking service is already available for everyone, everyone doesn't use it. Everyone doesn't yet need banking service. But we are working on that, too.

Perhaps that indicates something of the nature of the job we face. Even though we are all progressive enough to think seriously of fully democratizing our banking services, and making them available to all who care to use them, we have an obligation to go farther than that.

The very nature of banking is uniquely one of service. Its only reason for existence is service to others. A shoemaker could wear his own shoes and a farmer eat his own corn and beef and a tailor wear his own clothing, and these three could trade around among themselves. But what good would the banker's product be merely to himself or a few neighbors?

The experience of some of us goes to show that the accomplishment of banking services for everyone is reached over a road which is made rough by many obstacles, many bumps and detours, misunderstandings, misinterpretations, and disappointments, and beset by vexations of the spirit and more than a few holdup men.

I, however, am not the man who would counsel you to stay off this road, as the scenery along the way is spectacular and your destination is worthwhile. And it is a road we all must travel, because no one can stand still where he is today, no matter how much he would like to.

A. P. Giannini, the founder of the Bank of America, who gave me my first lessons in actual banking, used to beat it into my head that the more important job was to conduct the business so that more and more people would want banking service—would need it. That meant operating in a way to advance the general economy, to foster growth and create opportunity.

I think you will agree that his point has been proved. You are well aware of California's economic position today. And that one bank, at last year end, had 4,088,000 deposit accounts, including 2,649,047 savings accounts. In that single year 1,398,000 borrowers were accommodated.

Therefore we can stipulate that savings and commercial banking is public service, and we can look anybody in the eye and make it stick. And mark this—it happens to be one of the living facts in the American scheme of things that can keep this trend toward the so-called welfare state from turning it into a farewell state—farewell to freedom, rising standards, and incentive.

I suggest to you, gentlemen, that if all bankers will unify into a shoulder-to-shoulder front on this concept of doing all business on the basis of public service, we will win the intelligent support of the people and cause the tide to turn.

Is that an extravagant statement? It is not. It is straight and narrow truth. Bankers are a lively force in every community throughout this land, and regardless of what is said by their traducers, bankers almost everywhere are respected and the example they set has a powerful influence for miles around.

Banking service for everyone, then, means more than opening the door to small accounts. It means constructive service to the entire community, a service which creates opportunity, enterprise, employment, and—naturally—new customers. By way of illustration let me mention that Bank of America has more customers today than there were people in the whole State of California 25 years ago.

I hope you'll pardon me making an occasional reference to that bank I just mentioned. I guess I'm like the man who was always talking about his wife. One day a friend protested. "For heaven's sake," he said, "don't you know any other women you can talk about?" And the man's answer was: "Oh, yes; but I know my wife better than the others."

Anyway, the effect of good banking service may be inferred from the recent figures which show the income of the average Californian is approximately $25 per month higher than the national average, and bank deposit figures show per capita bank deposits for the United States to be $894, as against $1,207 in California.

As a matter of fact, the banks of this country as a whole have advanced quite a way along the road of banking service for everyone. Some individual banks are lagging behind, but they are not represented here today. Everybody in this audience is here because he is progressive. So let us review the things that are being done to provide banking service for everyone.

First, we welcome a deposit account from anybody, whether he wears greasy overalls or a top hat, and we open his savings account for a buck even though it may cost us more than that to put it on the books.

We spend good money in advertising to bring these people in, and we spend more money to preach the gospel of thrift and to persuade these people to build up their accounts.

We incur increased operating costs by installing systematic savings programs such as Christmas Club and Thrift Club, knowing that although it costs us money we are making a sound investment, one which will bring us and our communities a fat return in happier, healthier and wealthier citizens, and a consequent big increase in the number of profitable customers.

We make a further investment in teaching oncoming generations the virtues of thrift by persuading the schools to install school savings systems, and we employ specialist tellers who travel to these schools and on specified bank days collect the deposits of the children. As we accept deposits of pennies the cost of collecting and recording and protecting them is often many times the cash value of the deposits, but we have proved by experience that no sounder investment could be made. The children who participate grow up familiar with at least part of the banking function. Many, many are the histories of substantial success won in the business world by men and women who got their first practical lessons in accumulating and conserving funds, and putting them to profitable work, through their school savings banking.

By the way, in these days of alarm over juvenile delinquency, there is a little noted constructive side to saving which was touched on in an editorial in a California newspaper last month. The editorial expressed the view that the youngster who is taught the meaning and value of thrift is not likely to grow up with a blind determination to get money or valuables which belong to others. The lad who is taught to save, said the editor, soon gains a sense of self-reliance and responsibility. He learns the importance of standing on his own feet and attaining his goals through his own efforts.

I have limited myself to savings banking up to this point because this audience is made up mostly of savings bankers, but the subject assigned me is banking service for everyone, which means I must touch lightly on other aspects of banking services before I wind up.

But before we temporarily turn away from savings, we of course have to refer to the lending services in that category, and here again the progressive minds in this audience will agree on this with me: That public service exists in the lending of savings funds just as emphatically as in the deposit services.

The insured loans in the FHA and the GI fields have enabled us all to extend credit for home construction to a much greater extent than would have been possible otherwise.

This has resulted in a much wider degree of home ownership with all its attendant virtues, which include more permanence in family life, a chance for more families to get their roots down, a chance for young folks to develop a real sense of home stability, a better standard of living, a higher moral tone, and an all-around healthier and happier mode of life.

If that isn't a substantial public service I never heard of one, and we have proved at the same time that the laborer is worthy of his hire by making some money at it. And it is only a small part of the story.

These same aspects appear in all types of real-estate lending, whether the loans are insured or not. That is—they appear when we have the wholesome view in mind that we are engaging in free private enterprise from motives of public service and enlightened self-interest. They do not appear where there is no motive other than self-interest. Fellows of that kind do not believe in banking service for everyone. A large "Do not disturb" sign, while not visible to the human eye, is as obvious over their doors and their desks as if painted on a card,

and it would make no difference how many vice presidents they had.

Of course, as I have hinted, this business of serving the public conscientiously is not all milk and honey. Popular acceptance can grow to the point where you stir up the destructive attention either of a jealous type of competition or of those professional reformers whose real profession is riding on the backs of those who really produce and achieve.

Any business institution, and especially a bank, can no more discharge its responsibilities to the community by merely paying taxes than can the individual citizen. We must all seek constantly for new services, new ways to extend our usefulness. And while on this theme let me mention that I agree with those savings bankers who believe that their lending functions, now legally limited to real-estate loans and corporation bonds, could, and should be extended to the personal-loan field, and bring more of this sort of financial service into the scope of banking.

Logic suggests that business done by loan companies must be bankable, as much of the money they lend is wholesaled to them by banks.

In the effort to render a full credit service, the savings banker is the most handicapped of all, and the field to which he is limited by law is one in which nonbank lenders are extremely active.

Incidentally, here in the East you savings bankers have a command of long-term money which gives you an advantage even over your cousins in the commercial banks. Perhaps you could apply more pressure to this advantage by paying more to your depositors to encourage their thrift and build your loanable funds, and earn more through your increased volume of lending. That would be no more than the type of good, clean competition from which the public would benefit.

The general scope of banking has certainly widened within this generation. To continue with the list of things being done to provide banking services for everyone, there are of course individual savings accounts, joint savings accounts, trustee savings accounts, Christmas club and thrift club savings accounts, time deposits, open accounts, allotment savings accounts, and certificates of deposit.

On the commercial side are the checking accounts, individual and joint, regular checking and tenplan, and such refinements as the personalized check, and such services as automatic transfer of funds from checking to savings accounts.

On the list of bank credit services, under a policy to provide the type of credit best suited to the needs of all, are commercial loans, real estate loans, loans to farmers, personal loans, automobile financing, automobile repairs, automobile loans, doctor-patient loans, household appliance and furniture financing, insurance premium financing, loans to buy, build, or repair homes, term loans for small business, loans to trucking concerns, industrial equipment financing, farm equipment financing, aircraft financing and GI home and business financing.

Then there are all the various trust services, the safe-deposit services, the collection of drafts and checks and installments for customers; courtesy cards, letters of introduction for travelers to correspondent banks, travelers checks, money orders for all occasions, and all the foreign banking services, including foreign exchange, letters of credit, collections and discounts and foreign-branch facilities.

That is just a quick run-down to remind us all how the variety of bank services has expanded and to indicate that, as we travel on, there is always a new horizon ahead for us all, new fields for healthy competition from which the public benefits.

It seems to me that an important part of providing these services for everyone is to see that everyone knows about it, just as much for the public-relations benefits as for increasing the volume of the business. But let us be sure we understand what we mean when we talk about public relations, because so many bankers interpret the term as no one else ever does, and they have been doing so for a long time.

I was sitting in our Los Angeles offices one day when an officer from a bank in Arizona dropped in. He said he wanted some briefing on public relations, as he had just been given that assignment by his bank. A bright young man of ours started on a thumbnail outline of public-relations concepts as we have learned them, but it soon became apparent our visitor was "all at sea." At last he broke in and said: "Hold on. I'm not talking about interpreting our bank to the public. I am a salesman after new business. How do I go about it?"

In other lines of business a sales representative never thinks of calling himself a public-relations man, and we in banking can hardly expect the public to understand our attempts at public relations if we do not understand them ourselves. And so it was patiently explained that while a salesman should not misrepresent himself as a public-relations man, he should nevertheless do his work with the knowledge that he must be governed by good public-relations policies.

Such policies must govern selling just as they govern all contacts with the public. And this brings me around to the most important point of this subject, the conclusion that good public relations demands we provide banking services for everyone. And that we sell them honestly, giving full value for value received. Any banker knows from experience with his customers that shoddy goods and services at fancy prices will ruin a business, and all the press blurbs inspired by another misconception of a public-relations man will not save it.

The full job of serving everyone takes us not only among the individuals to whom progressive bankers have opened their doors, but out beyond the walls of our offices to the groups and organizations and communities where opportunities for service may be found.

Take the organized American community, and when you set aside the few large centers where experienced financial guidance can be found within city government, there remain thousands upon thousands of cities, towns, and villages where professional staff talent of that kind simply does not exist. Consequently, when such communities are faced with bond issues and other problems of finance they would be exposed to exploitation and unnecessarily high costs but for the public-service-minded banker who makes the talents and facilities of himself and his organization available, at a fair cost, to that community. The very woods are full of opportunities to perform service for all.

In September, being convinced that no real depression elements existed in the economy, and believing that prices and quality were at a stabilization point, we inaugurated a campaign to instill confidence in people and inspire them to buy the things they desired but had been hesitant to purchase because of the uncertainties in these respects. Our buy-now campaign was waged over a broad advertising and merchandising front, through such mediums as newspapers, periodicals, billboards, radio, and direct mail. By these means, our thought and our voice were directed to help manufacturers and dealers to sell goods, and our credit facilities were made more widely available than ever before to assist people in acquiring worthwhile things.

Community building activity often calls for sacrifices of time and convenience, and thanks for it are often delayed, but it is the job of the banker to carry his share of the load, and he cannot make the claim of providing service for everyone until he does.

A good banker, of course, always counts the cost. But as he believes in balancing the books he counts the benefits as well. In addition to profits, one of the benefits is a growing appreciation for the banker in the community, and consequently a greater assurance of his continuance in business. There have been disquieting indications that without a larger degree of public appreciation the days of the private-enterprise banker in this country might be numbered. A. P. Giannini, in acknowledging the great growth of the Bank of America, made the statement that "If our institution has become great it is by consent of the people we serve." In my humble judgment that is a statement that could well be hung over every banker's desk. There could be no better reminder of who is boss.

Another area to be embraced by any complete set of banking service is that of small business.

Many of the small-business men in my circle of acquaintance are pretty self-conscious over the eternal fuss made about them by the politician. Out on the west coast, of course, the small-business man's financial needs are thoroughly taken care of by the private enterprise banker, and this was publicly confirmed by Secretary of Commerce Sawyer after his recent tour out there.

Incidentally, it was just a few years ago that a congressional committee came out our way to see what new laws could be passed to meet the financial needs of small business. After a few sessions in San Francisco the inquiry fell apart and the rest of the California schedule was abandoned. Small business had told the investigators: "Leave us alone. We are doing all right."

That illustrates exactly what I mean. When we do provide the banking services needed our customers tell the investigators: "Leave us alone. We are doing all right." We serve our own best interests by serving the public interest. Nobody denies that small business does have its financial problems. My point is, these problems can be solved with bankers who are willing and determined to solve them. It is when we neglect to solve them that the politician finds his opportunity to step in and close off another field to private democratic banking.

We have heard it said that in Moscow they teach the doctrine that capitalism has no basic soundness and therefore is bound to fall of its own weight. The Commies seem to think that all they have to do is give us a push or two, and then stand by to pick up the pieces.

That is a very queer doctrine in view of the most obvious fact that the whole modern industrial world was produced by capitalism, and it is equally obvious that without capitalism to support it, the world would disintegrate into chaos and poverty-stricken misery.

Since capitalism is founded on the principle of saving, and the use of savings in the production of goods and services by democratic privately owned enterprise, the importance of the role of the banker is as plain as the stripes in the American flag.

We must not let anybody take that importance away from us. We must not submit to constriction in our services, to derogation of our leadership in the economy, to a debasement of our functions or a subordination of our role. We must not continue submissively to accept bureaucratic or socialistic encroachments, for that could only end in defeat for all democratic enterprise.

Rather, we must advance. This advance can be made by providing banking service for everyone. Make it as cleanly competitive as you like, for ethical competition spurs progress.

Let's advance by improving our present services, hunting for new ones, promoting opportunity and employment. Let's shake off

inertia and any bindings with outworn tradition. Then, with popular support won by our combined efforts, we can prove, more than any other single segment of our society, that the American democratic-capitalistic way, properly administered, is more than a match for specious theorists who bait their totalitarian traps with appeals to human greed, slothfulness and ignorance.

We are on the right road. Let's keep going.

Commodore John Barry, a Great American

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1950

Mr. O'HARA of Illinois. Mr. Speaker, under leave granted, I am extending my remarks to include an address on Commodore John Barry which, on the invitation of the Irish War Veterans and the urging of my distinguished colleague the gentleman from Nebraska, the Honorable EUGENE E. O'SULLIVAN, I am undertaking to deliver on St. Patrick's Day at the annual ceremonies at the monument in Franklin Square in Washington, erected by a grateful nation in memory of one of its greatest heroes. The address follows:

It is fitting that annually on St. Patrick's Day those of Irish blood should gather at the monument of Commodore John Barry.

On the occasion of the dedication of this monument President Woodrow Wilson said of him that when John Barry left the shores of Ireland he brought with him to the shores of America his heart.

I would pause here to suggest that the greatest of all the many contributions Irish blood has made to the lands of their adoption has been that of human sympathy. The Irish heart is a tender heart and Irish ears are never closed to the cries of distress from those who are in need of friends and of help.

It is said that in the first half of the eighteenth century 500,000 young men of Irish blood left their native land to scatter throughout the world. They served in every army and in every navy in all the countries of the universe. Their descendants remained in those alien lands, and it is not too much to say that it was their influence on public opinion that either sparked or aided in the sparking of every good fight for practices and laws on the heart side.

It could not have been otherwise. The long years of oppression, of cruel injustices, and of bitter hardships had put deep in the Irish blood something that centuries under more friendly circumstances could never remove. How long the ancestors of my Irish grandfather and of my Irish grandmother were eking out existence in the bogs when their lands had been taken from them, and they would not bend the knee to the snapping of the fingers of an invader, I know only from the legends of my family which is not unlike that of most Irish-American families. But what I of myself know, as you of yourselves know, is that the voice of protest against any kind of inhumanity that in the years of Ireland's grief was planted in Irish blood still speaks in the blood that is in me and that is in you.

We cannot reach back into the yesterdays of history and ease the pain of Irish patriots and Irish martyrs. But God in His grace giving us strength and the opportunity, we will not cease wherever our lot has placed us to come to the aid of those who are abused and oppressed. The quickest way to reach the fighting Irish is through the heart.

Commodore John Barry in a very special sense is our hero of the War for Independence. I think this practice of giving special nationalistic acclaim to the fathers of our liberty serves a useful purpose. It tends to keep constantly reminding us of that which we never must forget. That which we have in this land of freedom, which we all enjoy and prize, was given us as the joint contribution of all the races and all the peoples from which we sprang.

For the memory of Commodore John Barry we feel an affection heightened by the fact that his modesty and spirit of self-effacement left it almost entirely to the researchers of history to establish long after his passing the tremendous magnitude of his work. In a period when many men in leadership were given, if not to self-laudation, at least to writing copiously of events in which they had been participants, Commodore John Barry did the job and having done it forgot it and started on another.

I am not surprised that one of his most recent biographers, not of his blood or of his religion, states that each new research into the forgotten records of the past establishes Commodore John Barry on an ever-heightening pedestal. His skill and his courage at sea and in combat long have been the subject of song and story. What we are glimpsing now, more and more with every year, is that Commodore John Barry was one of the outstanding constructive geniuses of his age.

I would say that the title that has been accorded him, "Father of the American Navy," is appropriately conferred and especially in one sense, which seems not to have received the attention it deserves.

During the years the American Navy has been noted for the independence of its officers and their impatience at times with civilian supervision. I do not wish to get into a discussion of this phase of Navy spirit in connection with recent events, as each situation must be judged strictly by the facts and circumstances governing that situation. Therefore any similarity, may I explain, is merely coincidental.

It is interesting, however, in viewing Commodore John Barry in the light of the title accorded him, "Father of the American Navy," to note that Barry was the first naval commander in our history to lock horns with a civilian authority that stood then much in the position of our present office of the Secretary of the Navy. The affair almost cost him his command. The vote in the Congress for his removal failed only because it was a tie. Had there been a change of but one vote, the genius of John Barry would have been lost to the American people in that field where he was so brilliantly preeminent.

What John Barry said to his civilian superior was that he knew more about ships than all the civilians put together, which, of course, was true, and when the superior thus addressed accused Barry of disrespect to the office of authority, Barry shot back at him this classic:

"Damn you, I don't value you more than my duty requires."

Barry was not a man of letters. His writing was confined to rough entries in the logs of his ships and the briefest of correspondence. Yet in the exasperation of receiving an order which to a seagoing man seemed the improper thing he coined a phrase which will live as long as his fame.

Commodore John Barry also was the first American naval commander to run head-on into an economy drive. The proud fleet that he had built, with the majestic flagship, the *United States*, the queen of the waves, was whittled down to the barest skeleton in the name of economy. Those were the years when the great sea power of Britain, opening to the British the rich commerce of the world, was in the building stage. One cannot but wonder how different might have been the fortunes of the British people for the last century and more if when economy was destroying the American fleet a similar economy was lowering the Union Jack.

But after his death the fame of Commodore John Barry gained the victory over another economy drive. In the name of economy the bill authorizing the building of this monument was fought in the Congress. Even after its passage, President Theodore Roosevelt was urged to veto the appropriation on the ground that the Federal Government could not afford to put $50,000 into a memorial for one of the greatest of heroes. President Roosevelt replied that he was determined to cut Federal expenditures to the very bone, but he didn't intend to begin by using the ax on good old Jack Barry.

We stand clustered around this monument on this St. Patrick's Day of 1950, as other gatherings will do in the years ahead, and we wonder if any appropriation of $50,000 almost four decades ago could have returned a richer yield. It is idle to say that the sight of a monument to a great man does not with all of us have the moving power of inspiration and of influence.

Countless thousands of men and women and children have stood before this monument and have gone back to their homes in every State in the Union, and to all corners of the world, the better for having had communion with the spirit of one of the greatest of our Revolutionary heroes.

Voteless Washington

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, March 17 (legislative day of Wednesday, March 8), 1950

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the appendix of the RECORD an article entitled "Why Freedom Can't Ring Here—Citizens of the Nation's Captial Treated as Defective Americans," written by Jesse C. Suter and published in the March 1950 issue of the General Federation Clubwoman.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY FREEDOM CAN'T RING HERE—CITIZENS OF NATION'S CAPITAL TREATED AS DEFECTIVE AMERICANS

(By Jesse C. Suter [1])

It is surprising how many people from out in the States are amazed when they visit Washington and learn that their fellow Americans permanently residing in the National Capital have no part whatever in

[1] The writer, Jesse C. Suter, is a second generation District native. He is a member of the editorial staff of the Evening Star and the Sunday Star, acting chairman of the Citizens Joint Committee on National Representation, a vice president of the Association of Oldest Inhabitants, and former president of the Federation of Citizens' Associations and of the Society of Natives of the District of Columbia. He also was chairman of the Citizens' Advisory Council. He has for a number of years had a civic column in the Sunday Star, under the heading Civic problems, civic bodies.

the government of their country. For here these truly national Americans, holding allegiance to the United States but not to any State, are regarded as being American citizens solely for the purpose of bearing the burdens which fall alike on all Americans.

They are required to pay all national taxes, obey all national laws, and to fight, bleed, and perhaps die in the defense of their country, in whose government they are permitted no part.

Only in the bearing of these burdens are they on an equal footing with the citizens of the several States. But when it comes to the possession and enjoyment of valued fundamental American privileges, the equality vanishes into thin air.

Boys from the District and boys from the States serving overseas in the armed forces during World War II were brought to stern realization of this political inequality, when an opportunity was afforded servicemen to vote by mail in the national election. Those from the States were accorded the privilege of voting, while their comrades in arms from the District of Columbia, who were sharing the same hardships and dangers, could not in the same way participate in the government of their country for which they were fighting.

Viewing the originals of the Declaration of Independence and the Constitution of the United States always gives visitors to Washington a genuine thrill. But they will look in vain in Washington for an exemplification of the underlying principles of the American Government which makes it a Government of the people, by the people, and for the people. However, here it is, in effect, a Government of a part of the people, by a part of the people, and for all of the people. As strange as it may seem, the shot fired at Lexington and heard around the world has not been heard yet in Washington, and consequently freedom can't ring here.

Existence of so amazing a situation deserves analysis and an explanation, as it should be accounted for in some manner. We find that these 100 percent Americans permanently residing in the District, exceeding in population a number of the States, are not permitted representation in the Senate and the House of Representatives, which constitute the Congress. The Congress is both the local and the National Legislature of these voteless people. We also find that these people have no vote for the President, even though he is not only their President, but is virtually their governor, for he appoints all of their local administrative and judicial officers. That gives an explanation in a nutshell, but not an excuse.

NO POLITICAL STATUS

The existence of this state of affairs is due to the fact that the Constitution of the United States neither provides for nor prohibits such representation and voting privileges for the citizens of the seat of government. Provision for representation in the Congress and among the presidential electors applies only to the people of the sovereign States which comprise the Union. It is even silent as to defining the political status of the bona fide residents of the seat of government.

The only reference in the Constitution to the seat of government is found in article I, section 8 and seventeenth clause. It is as follows: "(The Congress shall have power) to exercise exclusive legislation in all cases whatsoever over such District (not exceeding 10 miles square) as may by cessions of particular States, and the acceptance of Congress, become the seat of the government of the United States."

This completes a full thumbnail diagnosis of the political ills and disabilities which beset these District people. The disease has been called political inequity, un-Americanism at the very heart of the Republic, but by whatever name it is called, it is a loathsome disease which should not be permitted to contaminate the entire country.

In a few words, the ailment is a complete lack of political status through omission by the founding fathers to include in the Constitution any provision for the enjoyment by these people of fundamental rights now denied them. It is hard to believe that those who had rebeled and waged a successful war against a similar condition would create at the seat of the new government a condition duplicating that to which they had so strenuously objected.

DISCUSSED IN 1801

Regarding the failure of the founding fathers to provide for the enjoyment of citizenship rights by the inhabitants of the future seat of government, of unknown location, Augustus Brevoort Woodward, in discussion on Some Considerations on the Government of the Territory of Columbia, published in Washington in 1801, had this to say:

"The novelty of the measure, and the great uncertainty which then prevailed whether the government they proposed would ever pass into actual operation, may serve as an apology for their not entering more into detail. * * * There can, however, be no apology for us of the present day, who have seen this Government prosperous and happy for 13 years; * * * and who now behold its advention to the place of its destination; if we refuse to turn attention to it at this period, and to make a deliberate, effectual, and constitutional provision for its participation in the general councils, and for its domestic government. * * *

"They have themselves afforded an easy and safe avenue to the amendment of that document which was the result of their labors. Not to use that instrument, which they have put into our hands, on an occasion which so urgently demands it, is to yield to a culpable lethargy. It would be an act of treachery to the people whose liberties are thus surrendered to the caprice of a legislature in which they hold no representation; it would be a vital wound to the existence of republicanism, in a nation which had such an example constantly in view."

AMEND CONSTITUTION

The diagnosis and case history having been completed, the next step is to apply the curative remedy. Many experts know that this will be thoroughly effective and will result in the complete Americanization of these voteless and unrepresented Americans.

The need is to amend the Constitution through an enabling provision under which the Congress could cure these unique political disabilities. During nearly 150 years, numerous proposals to amend the Constitution to correct this oversight have been drawn. A number of hearings have been held on such proposals, but the required joint resolutions carrying the proposals have had no consideration on the floor of either House of Congress.

Three times the Senate District Committee has made favorable reports. The House Judiciary Committee once favorably reported it, as did its subcommittee in 1945. Also in 1945, a subcommittee of the Senate Judiciary Committee favorably reported the amendment, but the full committee did not act. The only adverse report was in 1941 by the Senate Judiciary Committee.

A DEBT OF GRATITUDE

The District Federation of Women's Clubs has for years supported the proposal and with other organizations of women participated in most of the hearings. The late Mrs. Carrie Chapman Catt, head of the woman-suffrage movement, appeared in some hearings and was represented by letter at others.

On one occasion, Mrs. Catt related how she had been questioned in the capitals of South American countries about the voteless and unrepresented people of the District of Columbia. "So I find," said Mrs. Catt, "that this question of disfranchisement in the District of Columbia is not a thing that concerns only our own country, but the entire two continents." Continuing, she said: "Now in going about, when people ask me why the people of the District are disfranchised, I find that no history, and no explanation * * * has ever satisfied the person with whom I have been speaking. It never seemed fair, nor right, nor just to me; and I have never consequently been able to make it seem fair to anyone else." She also said: "I have never felt more certain of anything in my life than that an amendment of this character would be quickly passed by the legislatures of our various States by a large majority."

It is interesting that among leading workers for woman suffrage were able District women who gave unstintingly of their time and influence. They worked, knowing all the while that when the nineteenth amendment was added to the Constitution they would not be among the beneficiaries unless and until another amendment was added giving the men and women of the National Capital the right and privilege of being represented in the House and Senate by members of their choice and of voting for the President and Vice President.

The enfranchised women of the Nation owe these District women a debt of gratitude which they should discharge by going wholeheartedly into the fight to Americanize their voteless and unrepresented sisters.

PENDING AMENDMENTS

Proposals for the required amendment are pending in the Committees on the Judiciary of both House and Senate. House Joint Resolution 320, by Representative OLIN E. TEAGUE, of Texas, is the same as the Sumners-Capper amendment. Senate Joint Resolution 132, by Senator MATTHEW M. NEELY, of West Virginia, differs slightly in form.

The Neely proposal would add the following amendment to the Constitution:

"The Congress shall have power to provide that there shall be in the Congress and among the electors of President and Vice President members elected by the people of the District constituting the seat of the Government of the United States, in such numbers and with such powers as the Congress shall determine but such representation and powers shall be no greater than those of a State. All legislation hereunder shall be subject to amendment and repeal."

The District, as the seat of the Government, is a populous and permanently separate unit which is not and should not become a State or a part of a State. The intent of the amendment is to provide that the effective rights of these citizens' participation in the Federal Government shall be as nearly similar to those of citizens of the States as may be, without impairing the supreme authority of the Government over its capital.

When the Constitution is so amended and the Congress has implemented its provisions, then we can let freedom ring.

Membership of the Federal Reserve Board

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, March 20 (legislative day of Wednesday, March 8), 1950

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a letter addressed to Representative PAUL W. SHAFER, of Michigan, written by Hon. Marriner Eccles, of the Federal Reserve

Board. This letter was written by Mr. Eccles in response to a statement by Mr. SHAFER upon the floor of the House of Representatives about the Reserve Board. In order that the point of view of Mr. Eccles be made available to the public, I believe this letter should be printed in full in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 7, 1950.

Hon. PAUL W. SHAFER,
House of Representatives,
Washington, D. C.

DEAR MR. SHAFER: Your statements about the Federal Reserve Board in your speech on the floor of the House on February 21 and in the Appendix of the CONGRESSIONAL RECORD on February 15, contain so many misconceptions and misstatements of fact that I cannot permit these utterances to go unchallenged. They do a great injustice to R. M. Evans and M. S. Szymczak, members of the Board of Governors, to the late Gov. Lawrence Clayton, as well as to myself. In making the unfounded charge that the Board has been packed through violating the appointment provisions of the law, you cast wholly unwarranted reflections upon the Senate Committee on Banking and Currency, and the Senate itself, in the discharge of its function of confirming appointments. As a matter of simple justice I believe that the correct facts, which are set forth below, should be placed in the CONGRESSIONAL RECORD.

In the first place, you are obviously unfamiliar with the intent of the provisions of the Federal Reserve Act with regard to appointments. Section 10 of the act states:

"In selecting the members of the Board, not more than one of whom shall be selected from any one Federal Reserve district, the President shall have due regard to a fair representation of the financial, agricultural, industrial, and commercial interests, and geographical divisions of the country."

This section of the law was purposely drawn in very general terms as Senator Glass was at pains to explain when the Federal Reserve Act was first presented in Congress. The House Committee on Banking and Currency, of which Mr. Glass was the chairman, in a report which you will find on pages 305 et seq. of the authoritative volume, the Federal Reserve System, by the late Henry Parker Willis, who was the economic adviser to the committee, stated:

"The provision that the President in making his selection shall so far as possible select them in order to represent the different geographical regions of the country has been inserted in very general language in order that, while it might not be minutely mandatory, it should be the expressed wish of the Congress that no undue preponderance should be allowed to any one portion of the Nation at the expense of other portions. The provision, however, does not bind the President to any slavish recognition of given geographical sections."

The law provides for seven members of the Board; there are 12 Federal Reserve districts. Hence, all districts could not be represented on the Board at any one time. It was never the intent of the law that the Board should be representative of sectional interests. The wording of the law was designed to negative sectional representation, and to emphasize the public interest through broad distribution of representation of financial, agricultural, industrial, and commercial interests.

Taking up the individual cases in the order in which you discussed them in your speech on the floor of the House:

You state that there was a deliberate evasion of the spirit of the law because Mr. Evans was appointed from the fifth Federal Reserve district. Mr. Evans has resided in the fifth Federal Reserve district since the end of 1936 and, in fact, established his voting residence in Virginia, though this is by no means required as a condition for appointment from a Federal Reserve district. He was appointed in March of 1942 for the unexpired portion of the term of Mr. Chester C. Davis, who resigned to become president of the Federal Reserve Bank of St. Louis. Mr. Davis, who preceded Mr. Evans as the Administrator of the AAA, was himself named to the Federal Reserve Board from the same fifth Federal Reserve district. His appointment, as was that of Governor Evans, was passed upon by a Senate committee of which Senator Glass was a member, and chairman of a subcommittee on Federal Reserve matters. As the chief sponsor of the Federal Reserve Act Senator Glass was presumed to know more about its content and intent than any other living person. Senator Glass did not and, of course, would not, knowing the law, raise any such far-fetched objection as you stated in your speech, either to Mr. Davis' or Mr. Evans' appointment. Both came originally from Iowa. Both had resided for a number of years in the fifth Federal Reserve district. Both were selected to be representative of agriculture nationally.

You also stated that Mr. Evans, at the time of his selection, was a close friend of Marriner Eccles. The fact is that I had only a casual official acquaintance with Mr. Evans. He was strongly recommended by Mr. Davis, who had an intimate knowledge of his fine record in the agricultural field. He was also supported by national farm organizations, particularly the American Farm Bureau Federation. To suggest, as you do, that Mr. Evans would lend himself to a packing of the Board is an affront and an injustice which I resent on his behalf. If you had any acquaintance whatever with the man and his record, you would know how false this imputation is.

Your statements with regard to Mr. Clayton are equally far from the truth. Again, because you are ignorant of the law as it was drawn by Senator Glass, you make the false charge that Mr. Clayton's appointment violated the spirit of the law. Then you state that in January 1945 Eccles had Clayton moved to Boston, Mass., where he assumed the nominal position of president of Clayton Securities Corp., of Boston, a company owned and operated by Clayton's brother. You added that before he went to Boston it was understood that President Roosevelt had agreed to his appointment to the board after he had established a residence in Boston. There was no such agreement whatsoever nor did I have Mr. Clayton moved to Boston. When Mr. Clayton left Utah at my instance in December of 1934 to be my assistant when I became governor of the Federal Reserve Board he sold his home there, gave up his voting residence and settled in Washington. He had no plans for returning to Utah. He went to Boston at the request of his brother, to my great regret and not with my urging—quite the contrary. He bought a home there and became a voting resident of the State. So far as I knew he intended to remain there indefinitely. Your insinuation that this move was a part of a scheme to circumvent the law is utterly baseless and again a grave injustice to a man of independent mind and judgment. I urged his appointment to President Truman because of an internal situation which had developed on the Board. Governor Szymczak was absent on an important mission in Europe as an economic adviser to our military government in Germany. Ronald Ransom, of Atlanta, vice chairman of the Board, was gravely ill, and, in fact, on his deathbed. Governor Vardaman, who had been on the Board a comparatively short time, was visiting the various Federal Reserve banks to become better acquainted with the System and, as a result, was absent for extended intervals. As a consequence, the problem of obtaining a quorum of the Board became acute. In this situation I recommended to President Truman that he name Mr. Clayton inasmuch as he had had a long experience in commercial as well as investment banking, he had been my close associate in Federal Reserve policy matters and administration ever since 1934. In addition to his experience in banking and in the Reserve System he was a graduate of the Harvard Law School. I knew of no one better fitted by experience, by temperament, by qualifications generally than Mr. Clayton to come on the Board and immediately assume the responsibilities which an inexperienced man could not have been expected to shoulder without a long period of apprenticeship.

Again, your imputation of "packing" the Board by Mr. Clayton's appointment is a grave injustice to all concerned, including the President and the members of the Senate committee who thoroughly inquired into his qualifications. I had personally discussed his appointment with Senator TAFT, who was well acquainted with him, with Senator WHITE and with Senator MILLIKIN, the three ranking Republican leaders, and also with Senator TOBEY, then chairman of the Senate Banking and Currency Committee. They all indicated that they would favor his confirmation if the appointment were made. Likewise, other New England Senators, including Senators SALTONSTALL and LODGE, of Massachusetts; FLANDERS, of Vermont; MCMAHON, of Connecticut; and BRIDGES, of New Hampshire, were consulted and gave him their support. Moreover, the leading bankers of the First Federal Reserve District likewise supported Mr. Clayton's appointment. In fact, I am not aware of any dissenting voice that was raised in the New England district by bankers, Members of Congress, or anyone else. He was confirmed without a dissenting voice on the floor of a Senate in which the Republicans had a majority. Your insinuation that Mr. Clayton was a rubber stamp is as baseless as your other reflections upon Board members.

As for Governor Szymczak's appointment, your speech appears to imply that Board members should not serve longer than 14 years. The provision that "any person appointed as a member of the Board after the date of enactment of the Banking Act of 1935 shall not be eligible for reappointment as such member after he shall have served a full term of 14 years" was written into the Banking Act of 1935 for the first time and became effective on February 1, 1936. Previously there was no limitation. The 1935 act was not retroactive and there was no requirement, legal or otherwise, to stand in the way of Governor Szymczak's appointment as of February 1, 1948, to a full 14-year term. That was the judgment of counsel for the Board as well as the judgment of the Senate Banking and Currency Committee which inquired fully into this question and recommended his confirmation by the Senate, where he was unanimously confirmed. It would have been a great misfortune to lose the services of Governor Szymczak who is still a comparatively young man. His industry and devotion to his task are well known to all who are acquainted with him. Your tortured misreading of the facts are as unjust to him as to the others.

As for myself, it is ludicrous for you to suggest any lack of independence on my part. If there is any one thing with which I have been charged above all else is that I have been too independent of White House or Treasury or other influences, in or out of Government. I have never run for, or sought, public office, nor have I ever engaged in political activities. I have no political or other axes to grind. As one who has spent most of his adult like in banking and business I am quite as solicitous as you are to preserve our system of private enterprise and our democratic institutions. To this end I think it imperative to prevent any "packing" of the Federal Reserve Board and to maintain its independence.

Sincerely yours,

M. S. ECCLES.

Secretary Acheson and the Extremists

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1950

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include an editorial from the San Francisco Chronicle entitled "Secretary Acheson and the Extremists" and an editorial from the New York Times entitled "Challenge to Russia."

I commend the sane and balanced tone of these editorials to the American people. They follow:

[From the San Francisco Chronicle of March 2, 1950]

SECRETARY ACHESON AND THE EXTREMISTS

Secretary of State Acheson has been placed unfairly in a squeeze between extremist groups. We suggest that those Americans who are not extremists take stock of what's going on and give him the solid backing he needs to carry on with his job.

From one side, the leftists are heckling him for being too tough with the Russians. This is being carried on not only by the Communists but by a highly vocal segment of starry-eyed people who still believe humility on the part of America is the key to an accommodation with Russia. Both of these groups, for their various reasons, want Acheson to approach the Kremlin, hat in hand, and petition for another hearing on the atomic-energy matter and related problems. This would be highly pleasing to Stalin, and gratifying to Communists everywhere, but Acheson can see no further gain from holding our hat in our hand, and we believe most Americans thoroughly agree with him.

From the other side, the extreme rightists are giving him relentless trouble over the Hiss matter. From his statement expressing compassion for Hiss and from his previous statement that he would not turn his back on his personal friend, they are construing Acheson as a condoner of treachery and a partisan of communism. We do not see how this follows. It seems to us quite compatible with fundamental Americanism for a man to feel compassion for another, whatever the depths of his trouble. And Acheson's refusal to turn his back on his long-time friend impressed us as a position in support of human decency, rather than in favor of whatever defections of which Hiss might be guilty.

One thing is certainly clear—Acheson cannot be guilty of the accusations thrown at him by both sides, for they are irreconcilable.

We suggest that a careful review of Acheson's life and of his record in public office will disclose no shred of actual evidence that he is other than a human being and an earnest, devoted American. And his recent record convinces us that he is also a singularly competent Secretary of State, performing ably under a set of international conditions that render that job more difficult, and more critical in terms of potential consequences, than it has ever been in history.

Since the manner of performance of this international task bears importantly upon the lives, welfare, and survival, of all of us, we regret these systematic mud-slinging campaigns as aiming to diminish the effectiveness of the Secretary of State in the performance of his main duties. We do not, of course, expect the Communists to pipe down, and it would probably be starry-eyed on our part to expect the extreme rightists to realize they are playing into the Communists' hands. But there is need and opportunity for the overwhelming majority of nonextremists to raise their own voices in behalf of fair play, and a reasonable chance for Acheson to do the job he is trying to do for all of us.

[From the New York Times of Friday, March 17, 1950]

CHALLENGE TO RUSSIA

In two major statements on American foreign policy Secretary Acheson has challenged Soviet Russia to make good with deeds its propaganda for peace and the coexistence of the Communist world and the free world. In what may be taken as a reply to recent speeches in Moscow, Mr. Acheson has offered a seven-point program on the basis of which peaceful coexistence could be achieved and the cold war ended.

This program, in effect, calls upon Soviet Russia to halt its policy of aggression and to cooperate, with unmistakable evidence of good faith, in finding peaceful settlements for all outstanding problems. It particularly calls upon the Soviet Union to cooperate in concluding peace treaties with Germany and Japan, and final settlements with Austria and Korea, in conformity with Russia's wartime pledges and with the principles of the United Nations. It calls for the withdrawal of Soviet military and police forces from the satellite areas, so that the nations in these areas may achieve genuine independence and self-government, as agreed upon at Yalta. It calls for an end of Soviet obstruction in the United Nations and for Soviet cooperation in finding an effective system for the control of atomic weapons and the limitation of other armaments. Finally, it calls upon the Kremlin to stop using Communist fifth columns for the overthrow of other governments, to cooperate in assuring proper treatment for diplomatic representatives, and in general to cease distorting the motives and purposes of other nations and to open up Russia for an exchange of persons and ideas with other countries.

Mr. Acheson is, of course, aware that this program demands an abandonment of the Communist program of world revolution and a reversal of the policies which the Soviets have pursued during and since the war. For this reason he entertains little hope that the Soviet leaders will accept his challenge. Yet this is the only program on which we can negotiate without betraying the principles for which we stand and abandoning the nations which have placed their trust in us. It is a program for peace, but not peace at any price, or peace with dishonor.

Hope of progress in this direction not being bright, Mr. Acheson faces the grim alternative. This can be only a continuation of the cold war, in which we must wage total diplomacy until an honorable and trustworthy settlement can be reached. We cannot use Soviet methods of totalitarian diplomacy, but we can use programs of our own to build and strengthen a free world in which our way of life can flourish. This is the purpose of the Truman doctrine, the European recovery program, the North Atlantic and Rio Pacts, the military assistance program, the point 4 program for developing underdeveloped areas, and our championship of a world order based upon the United Nations.

Heretofore these programs have been of primary aid to western Europe. Now Mr. Acheson proposes to extend them to Asiatic nations as well, wherever they can be made effective within the limits of our resources. Recognizing that Asia is undergoing a revolution, he calls upon the forces of both freedom and nationalism in Asia to join in the struggle of the free world against Soviet imperialism and colonialism, and promises whatever aid we can give, either military or economic, as the case may warrant. He specifically warns the Chinese people against permitting their new Communist masters to plunge them into aggressive adventures beyond their borders.

This is a program which the American people can endorse as the minimum program for the achievement of the aims for which we fought in two world wars. It is a program aimed primarily at making peace with Russia. In supporting it, we will do well to consider the question whether we must wait upon Russia in all these matters, or whether we can adapt this program, in cooperation with the rest of the free nations, to extend the area of peace and freedom by making peace with our former enemies. This, too, would be an act of total diplomacy, the possibilities of which deserve examination.

Training Program for the United States Coast Guard Reserve

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Monday, March 20 (legislative day of Wednesday, March 8), 1950

Mr. CAIN. Mr. President, I ask unanimous consent that a recent letter to me from Admiral Forrest Sherman, Chief of Naval Operations, be printed in the Appendix to the RECORD. Admiral Sherman sets forth his reasons why the United States Coast Guard Reserve ought to be provided with a training program. The Nation understands that port security will be a question of major concern in the future. The House of Representatives is presently considering the wisdom of activating the Coast Guard Reserve in this session of the Congress. Admiral Sherman's views will be helpful to this consideration.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NAVY DEPARTMENT,
OFFICE OF THE
CHIEF OF NAVAL OPERATIONS,
Washington, D. C., March 15, 1950.

Hon. HARRY P. CAIN,
United States Senate,
Washington, D. C.

DEAR SENATOR CAIN: I have your letter of March 10, as well as that of March 7, which you gave me during our attendance at Operation Portrex.

Your letter of March 10 is very much appreciated. I am grateful for your kind remarks and for your offer to be of help; both are quite heartening.

With respect to your letter of March 7, I feel that the interests of national defense will be well served by the establishment of a Coast Guard Reserve. That, of course, will require funds for the training of such a reserve at the present time. An annual appropriation of $4,100,000 for such purpose is not excessive.

In the event of mobilization, it is contemplated that the Coast Guard will perform the following specific functions: (1) Port security; (2) harbor master duty at advance bases; (3) beach patrol duty; (4) reactivation and manning of high-frequency direction-finding stations; and (5) harbor defense—inshore and offshore patrols in small craft.

A reserve component of the Coast Guard should be trained to proficiency in the foregoing matters. Such training would not

duplicate training now being given the Naval Reserve.

Thank you for your letters and your good wishes.

Cordially yours,

FORREST SHERMAN,
Admiral, United States Navy.

Fertilizer Prices

EXTENSION OF REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. KEEFE. Mr. Speaker, no one can deny that fertilizer is a necessary product in the development of any successful agricultural program. Because of its importance and because of the necessity that the Congress and the various State legislatures be constantly alert to what is taking place in the fertilizer field, I have tried to secure the attention of the Congress to legislation that ought to be enacted into law. I offered H. R. 3045 more than a year ago in an attempt to deal with this problem.

Mr. William G. Holman, of Washington, has been devoting himself to this problem for years, and he recently wrote a letter under date of March 14, 1950, to the National Fertilizer Association, which is informative on this subject. In order that the record may be kept straight, under unanimous consent, I include that letter as part of these remarks:

WASHINGTON, D. C., *March 14, 1950.*
THE NATIONAL FERTILIZER ASSOCIATION,
Continental Building,
Washington, D. C.

GENTLEMEN: I have just read a statement made by you in the March isue of the Fertilizer Review which reads as follows: "We knew from the price indexes that the cost of a ton of fertilizer is higher today than it was in 1925. The actual figure is—let's see—8 percent; a ton of fertilizer costs about 8 percent more now than it did 25 years ago."

A statement made by Mr. O. V. Wells, Chief, Bureau of Agricultural Economics, United States Department of Agriculture, and published in the December 1948 issue of the Plant Food Journal, shows that your statement is far from being correct.

Mr. Wells said that: "The Bureau of Agricultural Economics indexes indicate that fertilizer prices last fall were only 55 percent above the average for the prewar years, 1935–39," and the Bureau probably did not take into consideration the facts that I shall bring to your attention.

Namely, that the farmer is forced to use 50 percent more fertilizer per acre today than would be necessary if the fertilizer had contained the same proportions of water-soluble and organic nitrogen that it did prior to 1925.

You failed to tell the public that prior to 1925, only one-third of the nitrogen in fertilizers was derived from water-soluble sources—such as nitrate of soda, and sulfate of ammonia—if we are to believe the source tags that appeared on the bags.

The remaining two-thirds of the nitrogen was derived from organic sources, such as dried blood, fish scrap, animal tankage, and cottonseed meal.

You probably know that Federal and State agronomists recommended these proportions, and believed that one-third of the nitrogen from quickly soluble sources was as much as the plant could take up before some of it was washed in the soil water beyond the reach of the plant roots.

You know that when fertilizer was made this way, the average consumption per acre was three to four bags—and it grew tobacco that made Buck Duke and Dick Reynolds rich and famous.

You also know that soon after the enactment of the Webb-Pomerene Act, a few fertilizer manufacturers acquired control of the phosphate market—see Federal Trade Commission report—and that soon after that they compelled other manufacturers to increase the water-soluble nitrogen content of the fertilizer to 65 percent, and to reduce the organic nitrogen content to 35 percent.

The farmers complained about this radical formula change, and soon thereafter, the State laws were amended. These amendments permitted the manufacturers to increase the total nitrogen content of all fertilizers 21 percent, to take the source tags off of the fertilizer bags, and to use almost unlimited proportions of the cheap, water-soluble sources of nitrogen without letting the farmers know that this was being done.

The radical reduction in the organic nitrogen content of the fertilizer forced the farmer to use at least 50 percent more fertilizer per acre in order to get enough organic nitrogen to feed his crop to maturity, and this increased the amount of the farmer's national fertilizeer bill $250,000,000.

The use of so much of the cheap, water-soluble sources of nitrogen was soon followed by an extensive spread of destructive plant diseases that had never plagued the farmers prior to the time these radical formula changes were made, and eminent scientists believe that food crops grown with an excess of soluble nitrogen have a lot to do with the increased incidence of vascular diseases and degenerative diseases.

The record shows that the National Fertilizer Association was indicted and fined $9,000 in a Federal court in North Carolina for violations of the Sherman Antitrust Act, and for having exerted an undue influence on State lawmakers, and law enforcement officials, and the attention of the Congress has recently been called to the fact that the fertilizer interests have been subsidizing the research work of the Bureau of Plant Industry. For what purpose, gentlemen, for the public good or for the purpose of enlarging and extending the corrupting influence of these predatory corporations?

This is an evil influence, gentlemen, and one that strikes at the foundations of popular government.

If I were in your place, and wanted the respect and esteem of the public, I would openly advocate the enactment of H. R. 3045 that will compel all manufacturers to be honest with the farmers; such a law would make it easier for State enforcement agencies to see that the farmer got an honestly made fertilizer, and would help to protect the health of the people.

Yours very truly,

WILLIAM G. HOLMAN.

Wildlife Restoration Week

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. BEALL. Mr. Speaker, under unanimous consent, I include in my remarks in the RECORD the proclamation of Wildlife Restoration Week, March 20–25, 1950, by the Honorable William Preston Lane, Jr., Governor of Maryland:

EXECUTIVE DEPARTMENT, ANNAPOLIS, MD., GOVERNOR'S PROCLAMATION, WILDLIFE RESTORATION WEEK, MARCH 20–25, 1950

Whereas 11 years ago the President of the United States declared the week beginning March 20 as Wildlife Restoration Week; and

Whereas those interested in conserving our valuable wild birds, mammals, fish, oysters, and crabs, have continued to observe this period from year to year by fitting celebrations and meetings to bring before the public the need for protecting and conserving these replaceable natural resources; and

Whereas Maryland is one of the richest States in the Nation in these resources, and much progress has been made by nature lovers, farmers, sportsmen, and all conservationists in providing a better environment for wildlife. It is, therefore, proper and fitting that we pause in our daily rush and struggle for survival, and give our valuable wildlife and its perpetuation, due consideration.

Now, therefore, I, William Preston Lane, Jr., Governor of Maryland, do hereby proclaim and declare the week beginning Monday, March 20, to Saturday, March 25, as Wildlife Restoration Week and urge the people of the State interested in and concerned with wildlife and the welfare and progress of the State, to properly observe this period, and educate the people in every way possible to the necessity of preserving and increasing our wildlife resources through proper land-use programs and wise conservation laws; and to cooperate with all the State agencies charged with their management, so that they may be preserved and wisely utilized and enjoyed by this and all future generations.

Given under my hand and the great seal of the State of Maryland, done at the city of Annapolis this 13th day of February, in the year of our Lord 1950.

WILLIAM PRESTON LANE, Jr.

By the Governor:

VIVIAN V. SIMPSON,
Secretary of State.

Veterans and the Hoover Report

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. CRAWFORD. Mr. Speaker, two major proposals involving veterans and of much interest to our citizens are now very much to the front in Washington. One has to do with the educational features of the Servicemen's Readjustment Act and the other with the Hoover Commission report and recommendations on the Veterans' Administration itself.

A report to Congress by President Truman, recommending a tightening up of the regulations having to do with GI education at Government expense is now before it. Weaknesses in failures in the program as operated since the war are pointed out, and the President has recommended that Congress take suitable action, as it has done previously with respect to other types of training, to assure that all trade and vocational training conforms with the original sound intent of the Servicemen's Readjustment Act.

Advance notice to veterans taking GI educational courses will be issued on April 1, 1950, and will set up the Veterans' Administration policy for future guidance in such matters. In a report to Congress Veterans' Administration Administrator Gray states, "the crux of the matter is whether a veteran who has taken a course of training any time prior to July 25, 1951, and who has completed it or voluntarily withdrawn prior to July 25, 1951, will be eligible to initiate another course in the same or different field at any time between July 25, 1951, and July 25, 1956, the final termination date of the education and training provisions of the law for most veterans. This regulation says he will not be eligible to do so. We are convinced that this is in accord with the clear intent and legislative history of the law as well as being sound public policy. This regulation is important. The reason it is being issued so far in advance of July 25, 1951, is that this advance notice will provide opportunity for all veterans who are affected by it to make their plans in the light of it."

TIME PROVISIONS

The original servicemen's readjustment act provided that veterans should initiate any course they intended to take within 2 years after discharge or the termination of the war, which ever was later. This time was extended to 4 years by the Seventy-ninth Congress. For the purpose of this law the termination date of World War II was set at July 25, 1947, or 1½ years after general demobilization. Under this time limit most veterans would have had 5 to 5½ years after discharge in which to initiate a course of training.

We will be glad to assist any veteran in the Eighth District in any problem which he may have in this connection by obtaining additional information for him if he will send us his C number and information on his problem.

Tightening up is scheduled for some training courses and for a clamping down on schools and courses not beneficial to veterans. The President's message points out that there are many instances where a veteran was trained for occupation for which he is not suited and in which he will be unable to secure a job. The VA has recommended that Congress strengthen the educational program by prescribing minimum standards. Failure of some schools to cooperate has resulted in a volume of overpayments to students who ceased to take courses. VA also asks legislation to require schools to promptly report when veterans discontinue, interrupt, or fail to attend their courses.

Hoover Commission report on VA is now a storm center in veterans' circles. Certain officials of the American Legion have been outspoken in opposition to parts of the Hoover Commission recommendation for thorough overhauling of the structure of the Veterans' Administration. Similar opposition has been voiced by the Consolidated War Veterans Councils, representing nearly every organized veteran group in Michigan. The American Veterans Committee and the Junior Chamber of Commerce of the United States, the latter composed of many veterans, too, have endorsed the Hoover Commission proposals.

HOSPITALS

The Commission pointed out United States hospitals are being operated by the Army, Navy, VA, and Public Health Service and recommended these should be combined under one Federal system named United Medical Administration. The four agencies would operate Government hospitals in this field jointly. Penal and Indian hospitals would not be included. The Commission has recommended that all Government building construction be done under Interior Department. This would include VA hospitals but the VA would be represented on Interior's medical board.

INSURANCE

Pointing to deficiencies in the Veterans' Administration handling of United States Government life insurance and national service life insurance, the Hoover Commission proposes that an insurance corporation be set up within the VA to handle insurance matters.

LOAN GUARANTIES

The VA guarantees loans to veterans up to 50 percent of loans but not to exceed $4,000 on real property and $2,000 on personal and guarantees up to 20 percent of loans partially insured by FHA. Pointing out the VA is inexperienced in the lending field and foreclosures will add a burden of real-estate management, the Hoover Commission recommends that the veterans' housing loan guarantee program be transferred to the Housing and Home Finance Agency of Government, except the VA should continue to certify the eligibility of a veteran for these guaranties.

Duplications are also hit in the Hoover reports which show the VA has 88 different manuals, 665 varieties of technical bulletins, and over 400 circulars. It says there is also an excessive number of staff officers on major programs causing confusion. Lack of cooperation of the armed forces in fully advising servicemen of rights and insurance is blamed for other difficulties.

Great Record of the Home Owners' Loan Corporation

EXTENSION OF REMARKS
OF
HON. CHARLES B. DEANE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. DEANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story which appeared in the New York Times of March 10, 1950, on the thrilling story of the accomplishments of the HOLC, which through these years has done so much to protect the American home:

WASHINGTON, March 9.—A faded document of a year of despair was swapped in President Truman's office today for a $26,000,000 check for the Treasury.

The money was the first installment being paid by the Home Owners' Loan Corporation on the $200,000,000 advanced by the Government as capital stock in 1933 and afterward.

Thus, with the black ink of solvency, the Government began to write the final chapter of the vast operations that saved thousands of homes from foreclosure during the depression era. The $3,500,000,000 of bonded indebtedness of the HOLC has been paid off.

Only the old document was at the White House today. It was dated August 8, 1934, and it was a typewritten stock certificate, with faded signatures, for $26,000,000. John W. Snyder, the Secretary of the Treasury, had been notified by the Federal Reserve Bank in New York that HOLC had deposited the $26,000,000 check there.

Thereupon Mr. Snyder took out his pen, receipted the certificate and surrendered it to William K. Divers, Chairman of the Home Loan Bank Board.

Expressing his pleasure in a long statement, President Truman harked back to the days when city homes were being foreclosed at the rate of 1,000 every day. He recalled that some people feared the Treasury would suffer huge losses by lending directly to home owners. Now that HOLC would be liquidated within a year, he asserted it would leave the Treasury a surplus of several million dollars.

VOICE OF AMERICA BEAMS STORY

The Voice of America made the most of the story, beaming it to Europe and over the iron curtain, apparently as an example of how a capitalist democracy copes with adverse economic forces.

"The record of the Home Owners Loan Corporation illustrates a lesson that has been proved time and time again in recent years," said President Truman. "It is that by wise use of its powers, the Government can engage in broad programs of social benefit—and conduct them efficiently and without waste of public funds.

"The Home Owners Loan Corporation was successful in terms of dollars and cents. But much more important, it was successful in terms of human values—in helping hundreds of thousands of families to maintain themselves as self-reliant home owners, secure in their hard-earned property, and free of the threat of eviction through no fault of their own.

"We should all be proud of this demonstration of bold and constructive Government action for the good of the whole country."

The certificate paid today was not the earliest that was issued, but it was the largest outstanding and so it was given priority for first repayment. Others at the ceremony were Raymond M. Foley, the Housing Administrator; J. S. Baughman, general manager of HOLC; O. K. Laroque and J. Alston Adams, members of the Home Loan Bank Board, and John Fahey, the former chairman of this Board.

Mr. Divers said the HOLC still has 125,000 accounts amounting to $175,000,000 on homes, the remainder of a huge program that once entailed more than 1,000,000 family accounts and $3,500,000,000 in their mortgages. The HOLC he continued, lost more than $300,000,000, or around 10 percent in defaults, but that this will be more than made up by the time liquidation is completed.

SALE TO BANK HERE CITED

The outstanding accounts, Mr. Divers continued, are being sold in public sales to banks, loan associations, and other fiscal institutions, all at better than 100 cents on the dollar—at premiums ranging at a fraction of 1 percent to 2½ percent. As an example, he mentioned that the Dime Savings Bank of New York about 6 months ago bought the 42,000 outstanding accounts in New York State for more than $100,000,000.

Mr. Truman credited the Democratic administration in 1933 for passage of the Home Owners Loan Act. He added:

"In 3 years, the HOLC refunded the overdue mortgages of more than 1,000,000 families with long-term loans at lower interest rates. These loans, with later advances, amounted to nearly $3,500,000,000.

"Not only did these funds save families from foreclosure, but at the same time it enabled banks, insurance companies, savings and loan associations, and other real estate investors to exchange defaulted mortgages for $2,750,000,000 in cash and Government bonds. This new lifeblood saved many hundreds of financial institutions—permitting them to pay off their depositors or investors as necessary and to remain in business.

"Further, the HOLC program aided city and town governments in meeting their pay rolls and keeping up their essential services. As paying for the overdue taxes of HOLC borrowers, local governments received nearly half a billion dollars in less than 3 years."

House Resolutions 508 and 509

EXTENSION OF REMARKS
OF
HON. W. KINGSLAND MACY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. MACY. Mr. Speaker, inasmuch as my remarks in connection with House Resolutions 508 and 509 that I introduced last week were included in the RECORD of March 13 and 14, I include the text of these resolutions as follows:

House Resolution 508

Resolution calling upon Interstate Commerce Commission in view of recent accident to ascertain adequate safety devices of Long Island Railroad

Whereas a railroad accident of unprecedented severity and tragedy occurred on the Long Island Railroad at Rockville Centre, N. Y., on Friday night, February 17, as a result of which 32 passengers were killed and more than 100 were injured, many of whom were valued, useful, and long-time residents of Suffolk County; and

Whereas it is clear that the catastrophe could have have been prevented had the Long Island Railroad used one of the several recognized safety devices available for stopping automatically a moving train, where the engineer has disregarded a stop signal; and

Whereas the Long Island Railroad is at the present time under the control of and is technically operated by trustees in bankruptcy appointed by the United States District Court for the Eastern District of New York; and

Whereas the Interstate Commerce Commission is the agency responsible for the installation and approval of requisite railroad safety devices: Therefore be it

Resolved, That the Interstate Commerce Commission, the body having jurisdiction over railroad safety operations, be requested to undertake an investigation of the adequacy of safety devices upon the Long Island Railroad and take such steps as may be found necessary to make such safety devices modern, efficient, and secure in all respects.

House Resolution 509

Resolution for the investigation of organized crime

Whereas organized crime constitutes a growing threat to the general welfare and internal security of our Nation; and

Whereas it appears that criminal organizations, syndicates, and mobs are engaged in interstate gambling and racketeering and insidiously attempt to intimidate, bribe, corrupt, and interfere with the proper functions of government officials; and

Whereas such organized crime increases our tax burden by defrauding the Federal Government of millions of dollars of revenue annually in many ways, including the filing of false income-tax returns: Now, therefore, be it

Resolved, That there is hereby created a select committee to be composed of seven Members of the House of Representatives to be appointed by the Speaker, one of whom he shall designate as chairman. Any vacancy occurring in the membership of the committee shall be filled in the same manner in which the appointment was made.

For the purpose of determining whether additional legislation should be enacted in order to more effectively combat organized crime, the committee is authorized and directed to conduct a full and complete investigation and study of organized crime in the United States, and further directed as speedily as possible to report their findings and recommendations.

For the purpose of making such investigations, the committee is authorized to sit and act during the present Congress at such times and places within the United States, whether the House is in session, has recessed, or has adjourned, to hold such hearings and to require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memoranda, papers, and documents as it deems necessary. Subpenas may be issued under the signature of the chairman of the committee or any member of the committee designated by him and may be served by any persons designated by such chairman or member.

Administration of Law in Alabama

EXTENSION OF REMARKS
OF
HON. SAM HOBBS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. HOBBS. Mr. Speaker, a friend and constituent of mine has just sent me the original copy of my charge to the grand jury of Greene County, Ala., in the year 1921, when I was serving as the special judge under the orders of Gov. Thomas E. Kilby and Chief Justice John Anderson, of the Supreme Court of Alabama, holding a special term of the Circuit Court of Greene County. This charge was, of course, taken down by the official court reporter, and I suppose was written out and given by the reporter either to the foreman of the grand jury and after the adjournment of the special term of court got into the hands of my friend, who was especially interested, as he had been accidentally shot by a friend whom he was seeking to aid during a warning visit made by the local Ku Klux Klan.

Thinking that this ancient history might be of current interest, the charge is here set out:

CHARGE OF JUDGE SAM HOBBS IN EMPANELING THE GRAND JURY OF THE CIRCUIT COURT IN GREENE COUNTY, ALA.

Gentlemen of the grand jury, it is certainly a pleasure to be with you, and seek, as we are all seeking, to have justice fully, fairly, and impartially administered in Greene County. I know that many of you personally regret that Judge Jones is not to be with you at this time, and I sympathize with you in those feelings, but I hope that you will let me warm myself at the fireside of your friendship, and make new friends, and I bespeak the same consideration for Solicitor Thompson, who is to be with you in your deliberations and is to assist you in every way he can. We, over in the fourth circuit, think him the best solicitor in the State of Alabama. Of course, you have just as much right to your opinion as I have to mine, and I guess you esteem your solicitor as highly as we do ours. I assure you that it is a pleasure for both of us to be here and work with you, seeking the common good, as we are all sworn and bound to do.

In the darker days succeeding the dark and bloody days of the sixties, when a justly proud civilization lay prostrate in the dust, trampled upon by a horde of enemies drunken with the new wine of authority; when the last vestige of power—civil, political, and military—was in the hands of the newly freed slaves and scallawags and carpetbaggers; when ignorance was enthroned; when virtue was a vice, and culture a crime in the eyes of the authorities; in that night of despair, when the stars of hope had, one by one, flickered and faded and died, after superhuman endurance, through a long and terrible travail, from the mother of all invention, sired by the dauntless spirit of the men who followed Lee, the "invisible empire" was born and a new day dawned.

Out of the waste of untilled fields, from the ashes of ruined homes, the heroic remnant of our broken armies sprang silently but quickly to the new task. Ignorance was dethroned; vice suppressed; livable conditions established; civilization saved.

Then, the only legitimate ends of such an organization having been achieved, those brave men forever abandoned the mask and sheet, disbanded, and continued to build the new South, the blessings of which we now enjoy.

All honor to them, for they took the only course which was possible under the conditions they faced, and did their duty well, striving for law and order. But with the reestablishment of real self-government, the last reason or excuse for the existence of the Ku Klux Klan vanished. Our fathers realized this and voluntarily and gladly let the Klan pass into history. The klansmen thenceforth were and are the strongest supporters of our Government of law, administered by officials chosen by the legally qualified voters.

There can be no excuse nor valid reason for the new organization masquerading in the costume and disgracing the name of the old except the fat profits which go into the pockets of its paid organizers and officers.

Do they say the officers of the law fail to do their duty? We have a Supreme Court which has many times proven that such officials can and will be promptly impeached. And if any official in Alabama fails to live up to his oath of office and willfully fails to enforce the law he has sworn to uphold and enforce, he should be impeached. It is the duty of grand juries to recommend impeachment in such cases, without fear or favor.

There is no possible excuse for any man, or set of men, to seek to trample the law underfoot or take the law into their own hands today. I know that you gentlemen will agree with me fully on this.

There is a rumor in this State that you have such an organization in this county. Whether that is true or not, I don't know, and it is none of my affair except that under my oath I am bound to do what I can to see that our laws are enforced. I am told that these men who compose this organization are gentlemen; that some of them are gentlemen of the old school; that they are law-abiding citizens trying to do their duty to enforce the law, as they see that duty. If that be true, then I, in the name of law and

order, invite every one of them to act as a gentleman, to act the part of a law-abiding citizen, and come into this court and confess his wrong, plead guilty, and assist us in enforcing the law as the law says it should be enforced, and we will welcome each addition to the ranks of good government. But we cannot for an instant consider any compromise with this thing if it is here. There is no longer any occasion whatever that such an organization be allowed to exist in Alabama. Our citizenship must throw this thing off, and, gentlemen, it is squarely up to you in your deliberations this week to think of your sworn duty; to think of the oath you have taken; to diligently inquire and true presentment make of all indictable offenses given you in charge by the court, or which may come to your knowledge.

Gentlemen of the grand jury, I charge you that if there is any organization in Greene County, where two or more men have met together for the purpose of violating the law in any way, this is, of itself, without more, a violation of the law, and it is your duty to indict them. Furthermore, where any man, or group of men, commits an assault and battery on another, that is another violation of the law. Where any two or more men threaten, or whip another, and invite or order him to leave the county, and so obtain his promise to do so, that is another violation of the law. Then there is the law against mayhem, if the activities of any man, or body of men, work such injuries to the person of another. So you see the law covers and prohibits the meetings of any organization such as sanction the doings of the modern Ku Klux Klan prove it to be as well as a good many of its activities. This thing which was here conceived, no doubt, with good intentions, is really an organized embodiment of a spirit of lawlessness. It breathes defiance to constituted authority, authority which the members of this organization themselves helped to constitute, no doubt. Its mission is to administer laws not written upon the statute books of Alabama, but written according to the dictates of its own desires upon the winds of its passion and prejudice. The only authority this organization has or claims, is the rule of do it. They do not play the game of government by the rules of our forefathers, as handed down to us, and as they exist in the constitution and laws of the State of Alabama.

The Constitution of Alabama guarantees to every citizen (no matter how poor or humble, no matter how grave a charge may be made against him) that his life, liberty, and person shall be respected; that he have a copy of the accusation against him; that he be not accused or arrested, or detained, except in cases ascertained by law, and according to the form which the same has prescribed; and that the right of trial by jury shall remain inviolate. The new Ku Klux Klan says that no man shall have any of these rights if the Klan chooses to deny them. Like the Kaiser, they regard the Constitution merely as a "scrap of paper." Gentlemen, we can't stand for it. If it can't be handled intelligently and firmly by your body by reason of failure to produce witnesses who know the truth and will tell it, then we possibly can get some indictments and convictions which will enable us to get Ku Klux indictments next week, and if not then, the week after, and if not then, the next week, and if not then, the week after that, for this thing is going to be rooted out of Greene County, no matter what it takes in men, in money, or in time. This thing has got to go. Not because I say it: but because the law says it.

Do any of you envy Russia? I know you do not, because you have looked me in the eye and sworn here that you believed in the enforcement of all the laws of this land. They don't believe in that in Russia. They believe in what they call a pure democracy. The only thing pure about it is the purity of the blood and gold ground from those poor, misguided people, and the only reason it exists today is because of the spirit which, in a small degree, is being manifested in your county. Lenin and Trotzky would joyously endorse and praise this sort of thing, with all their hearts. They would ask no better than to be able to lead this so-called crusade. I don't say that all these men are like them; there may be some misguided gentlemen who have become involved in this thing without a full sense of the enormity of what they were doing. I can't help believing that there are many members of this organization in this county that have been inveigled into it without thinking, and I invite all of them to do the thing which gentlemen ought to do under the circumstances. I invite them to accept this invitation by assisting in the vindication and enforcement of the law, and if they will but give one-half as much time to helping enforce the law as they have been giving to the Ku Klux Klan, every grievance of which they complain can be wiped out, to their entire satisfaction.

If I don't please these self-constituted regulators of society, they can do what they please with me, but this thing is going if it takes every dollar in the Treasury of this State, and every solicitor and every judge and takes the last man in the jury box.

Gentlemen, the law is and must be supreme; it must be enforced. You have sworn (and I know that you will keep your oath) to assist in doing it. You and those who from time to time constitute the grand jury of this court are the fountainhead of law enforcement in this county, and if you allow the fountainhead to become contaminated with this impurity, then it will be a sad day for Greene County; I don't believe that you are going to allow anything to stay your hand in the rigid enforcement of the law. Take the knife of the law, gentlemen, and cut this cancerous growth out of the body politic of Greene County before it goes too far.

Whether or not there have been any violations of the prohibition laws in your midst, I don't know. But I am told that there have been; that there are flagrant violations of them in Greene County. If this be true, that is a condition of affairs which threatens the bedrock upon which the structure of the good citizenship of this county stands. Common violation of any law, without adequate punishment, produces a disregard of all laws. So even if there were no better reason, we should enforce our prohibition laws. But there are any number of better reasons. These laws should be enforced for the sake of the blessings which they have brought—the money with which our savings banks are bulging, which would have been spent for grog; the happiness of many a home which had been cursed by liquor; the wonderful diminution in the number of crimes.

Over in Bibb County a few weeks ago we had one of the foulest crimes that was ever designed in hell. The evidence obtained by the solicitor in his investigation showed that this foul fiend had deliberately cleared off a spot where the crime was to be committed; that he went there the evening before and waylaid that little girl as she was returning from a singing school, but lost his nerve, and that it was only when a white man sold him a quart of whisky the next morning that he was enabled to nerve himself up to do that crime. How would you like to be that white man?

Gentlemen, this mean liquor breeds crime just as a mosquito bite breeds malaria. One drink, as one bite, may be a small and trivial thing, but it may mean death. One violation of this law may be harmless, or freighted with awful consequences. This summer I was told of a young man who bought a quart of liquor at Calera and was dead when his train reached Birmingham. It is not only dangerous in its collateral consequences, but per se, and so the only safe course, as well as the only honorable course under our oaths, is to enforce this law rigidly and impartially.

Gentlemen, don't let our young men, and, God save the mark, our young ladies, too, be contaminated by this accursed traffic. Say to yourself, I am going to do my duty no matter if it is my brother who should be indicted, for this traffic in poison has got to go. And the minute you say it, the perfume of your resolution will make the atmosphere sweeter and cleaner, human life will be safer in Greene County.

Let me tell you this: There is no other conceivable reason why our land values down here are not as high as they are in Illinois or Indiana than that the people up there don't realize that their lives would be safe in Alabama. Those people talk as if we are so bloodthirsty that we can't get up an appetite for breakfast until we have killed a man. They have circulated such rumors about the South, and while churches and schools and good roads have much to do with land values, yet the fact which makes the greatest difference in values is that the people, deep down in their hearts, are afraid to come here. They think the Negro is as good as the white man and that they will be treated the way they believe the Negroes are treated down here. Gentlemen, we must make human life safe in Greene County, and when you do, then you have started on the road to prosperity. So, even when we pitch our thinking upon the lower plane of dollars and cents, leaving out of consideration the higher moral values, it certainly behooves us to throw every safeguard around the priceless gift of human life, and do all that we possibly can to make its sanctity felt and respected.

Gentlemen of the grand jury, I could go on at length discussing the various violations of the law; I will probably have something more to say to you later in the week, as there are other violations of the law which I am required to give you in charge, but I want to be sure not to divert your attention from these three things which I have tried to stress in this charge. I hope that you will concentrate upon them and stay with them, and "fight it out along this line, if it takes all summer."

It is my pleasure to be with you gentlemen and serve your county in any way that I can. If I can be of any assistance to you, either day or night, I hope that you will command me. Mr. Thompson will be with you. He also is anxious to be of service. I hope that you will esteem him almost as much as we do when you have come to know him. Retire to your room, gentlemen, and begin your work, and I hope that you may accomplish the things that need to be accomplished in Greene County.

The Saga of John R. Foster

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1950

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks, I include a speech recently made by the noted radio commentator Cedric Foster as reported in an article by the Clinton Daily Item.

Mr. Foster's brilliant speech was delivered at the centennial banquet celebrating the one hundredth anniversary of my home town of Clinton, Mass., an event which marked the beginning of a celebration which will continue the week of May 28.

The article follows:

THE SAGA OF JOHN R. FOSTER IS RECOUNTED BY HIS DESCENDANT IN BRILLIANT ADDRESS AT THE CENTENNIAL BANQUET

The Item regrets that the manuscript of the appropriate address delivered by Cedric Foster, internationally known Yankee network commentator, in responding to the toast, "Fond Recollections," at the centennial banquet, Tuesday night, failed to reach this office in time for its insertion in the Wednesday edition.

Mr. Foster held the undivided attention of the more than 700 guests, all of whom wished he might have extended his address as it revealed an unusual story that needed to be told to this generation, covering the life work of one of Clinton's philanthropists in a most intimate way.

The speaker's fine personality and his diction so typical of leading commentators over the air networks combined to present one of the highlights of the program.

The advantage of having in high places men such as Congressman PHILIP J. PHILBIN and Presidential Secretary Matthew J. Connelly was again demonstrated as, lacking the presence of these two distinguished Clintonians in Washington, the banqueters probably would never have been favored by Mr. Foster's presence here to pay tribute to the town and to his famous relative, the late John R. Foster.

It was while the speaker was in Washington that he came in contact with Secretary Connelly and Congressman PHILBIN whom he knew hailed from Clinton, a town that held deep interest to him and when they casually informed him that a centennial banquet would be served March 14 and asked him if he would be interested in attending the event he immediately and eagerly accepted the invitation.

In presenting Mr. Foster, Toastmaster PHILBIN said:

"The name of the next speaker is known throughout the Nation and in many parts of the world.

"It is particularly well known in Clinton not only because of the fame and success of our speaker—though that is gratifying—but also because it was closely and prominently identified with and indicative of the industrial progress, the civic spirit and benevolence of the town.

"His antecedents—one in particular, the late John R. Foster was a prominent citizen of Clinton during the last generation. It was he who donated to the town the beautiful water fountain which in resplendence and grace stood for years in Central Park until it was demolished by the hurricane of 1938.

"Our speaker is well versed in Clinton as you will now observe. Though not born and raised here he has caught the spirit of Clinton so completely that he is like a native son. And we are proud to claim him.

"Famed writer, lecturer, and noted radio commentator, he stands at the very top of his profession. It is very kind of him to be with us. I am highly honored to be present to respond to the toast, 'Fond recollections,' the distinguished and noted radio commentator and publicist—Cedric Foster."

DELIGHTED TO COME HERE

In his response to the toast, Mr. Foster said:

"I am delighted to be with you this evening, here in Clinton, Mass. I don't suppose that I have been in Clinton more than 3 or 4 times in my life. With the exception of your distinguished Congressman PHILBIN and Secretary Matthew J. Connelly, I don't suppose that I know any people from Clinton. Yet Clinton, Mass., holds a most affectionate place in my heart.

"Here in Clinton it was that my grandfather's brother, John R. Foster, came shortly after the Civil War, to settle and to start the beginnings of what I believe to be the first chain store system in the United States. Certainly that holds true of the clothing business to which he devoted his life and it may well be true of all types of business.

"Here it was that my father Arthur L. Foster, came to stay with his uncle, John R. Foster three-quarters of a century ago. My father, at that time was a lad in his early teens. He came down from the farm at Moretown, Vt., the same farm, incidentally, on which John R. Foster was born, at the request of his uncle.

"Here it was that John R. Foster afforded my father, his nephew, the opportunity of obtaining an education in the Clinton high school. There was no quid pro quo involved in that opportunity."

NO EXCEPTION FROM WORK

"John R. Foster, like so many of his contemporaries, was a rigid, and at times a hard taskmaster. The quid pro quo was not motivated, however, entirely by these qualities in his nature.

"John R. Foster believed that a boy should earn his keep and he was determined that my father, his nephew, should be no exception.

"The result was that in exchange for room and board and education, if you had been walking through the streets of Clinton 75 years ago, you might have seen in the wee hours of the morning, a tall, slender lad making his way to his uncle's barn there to water and curry and comb the horses and clean the stables.

"When these tasks were finished he would return to the house to carry in the fuel from the woodshed and to polish brightly his uncle's boots, left methodically by 'John R.' as he was known to his intimates to his face and as he was called behind his back by those who did not know him as well, or stood in awe of him, outside of his bedroom door."

TRAINING APPRECIATED

"In his later life my father, who died in 1922, often referred to his days in Clinton and he impressed upon me that it was the training that he received from the hands of his uncle which more than any other, contributed to his success in mercantile business.

"John R. Foster was born on a farm in Moretown, Vt., about the year 1830. He died in Clinton as I recall it, in the nineties. As a boy he was sickly and anemic. His father, who was my great-grandfather, had died when he was only 42 years old and John R. Foster's mother married a second time.

"John R. didn't like his step-father and the feeling was mutual, so my grandfather, Charles A. Foster, took the young boy—his youthful brother—to live on the paternal farm while the mother and step-father lived on in Middlesex, Vt."

JOHN R. FOSTER GETS $600 LOAN

"Farm work was too difficult for John R., and one day he came to his older brother, my grandfather, and told him he was going to get a job in the dry-goods business, in Waterbury, Vt., 4 miles to the north on the Winooski River. He worked there for 2 years or so and then he came to my grandfather asking whether he had any money.

"My grandfather told this brother of his that he had $600; that he had saved it from the money he earned hauling wood to the sheds of the Vermont Central Railroad, which used wood-burning engines in those days.

"He had hauled that wood for $2 a cord and that, by simple arithmetic, was 300 cords.

"John R. wanted that money to start in the clothing business himself and my grandfather loaned it to him."

CLINTON STORE STARTED

"John R. Foster came to Clinton and started the first store of what later developed into the Foster system and which, after that, developed an off-shoot known as the Besse system.

"Eight years later, John R. Foster returned to the farm in Vermont to visit his brother. He had already paid him the borrowed $600. He figured that the stock and good-will of the Clinton store was worth $10,000, and he had $8,000 in the bank.

"He wanted to sell the Clinton store and remove to Boston."

HUB JUST WAITING FOR A SUCKER

"His brother, my grandfather, remonstrated, 'Nope, John,' he said, 'I won't let you do it. Boston is a big city and they're just waiting for a sucker like you. Tell you what to do. You already have more money than you would have had if you had stayed on the farm all your life. You take $5,000 out of the $8,000 and start another store. If that doesn't make good you still have money in the bank and the store in Clinton.'

"That was the beginning of the first chain store in America and it started behind the barn in Moretown, Vt., where my great-uncle from Clinton and his brother, my grandfather, sat on a log, to discuss the financial future."

TAKES BROTHERS OFF THE FARM

"In gratitude, John R. Foster took his brothers off the farm and my father was one, to start them in the clothing business. In Bridgeport, Conn., where John R. Foster started his second store, my father, John E. Foster, my father's older brother, who was named after John R., and Lyman W. Besse were all working as clerks.

"About 1878, John R. Foster loaned my father and Mr. Besse $4,000 to start the first store of what turned out to be the Besse System.

"It was in Westfield, Mass., that my father started his first store and to that store he brought his brother, Charles F. Foster, whose widow is here at this dinner tonight.

"The store was sold, in Westfield, in 1884. Mr. Besse went to Springfield, my father went to Hartford, Conn., and my Uncle Charles went to Taunton. There they lived out their lives and there they died."

FORTY NEW ENGLAND CLOTHING STORES

"From the goodness and the largess of John R. Foster, who adopted Clinton as his home more than 40 clothing stores came into being in New England. They were individually owned and they were operated by men who lived in the communities they served. Yet they bought their merchandise as a unit and thus saved scores of thousands of dollars through wholesale purchases in large volume.

"Now you know my interest in Clinton, Mass. You know why I specifically asked your distinguished Congressman, PHILIP J. PHILBIN, that I be invited to this dinner and that I be permitted to speak.

"During the past 2 years I have traveled 80,000 miles in this country broadcasting each day and lecturing before civic organizations, schools, and colleges."

WORLD TRAVELER

"I have traveled 26,000 miles, in Europe, during the past year, from north of the Arctic Circle, in Finland, to the Grammos Mountains on the Greek-Albanian frontier, with the Greek Army in its campaign against the bandit-guerrillas. Two weeks ago, I was in England covering the British election.

"But I wanted to come to Clinton because my roots are deep. They are even in the soil of Clinton because my roots are deep here.

"To this son of Clinton I owe much as he gave my father the opportunity to go into business and to hand on to me the opportunity for an education."

AIM OF SPEAKER'S CAREER

"In this day and age, when so many people are searching for a substitute for work (when there is none), my father's description of the horses in that Clinton barn, the wood in the wood pile, and the boots outside the bedroom

door is an inspiration to me to continue my chosen career.

"The air of that career is to protect the free enterprise system and to fight tooth and nail against centralization of power. Thank you for listening to me."

The Federal Snoops Are After Me

EXTENSION OF REMARKS
OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1950

Mr. DAGUE. Mr. Speaker, the current issue of the Saturday Evening Post carries a story written by Robinson McIlvaine which sounds a clarion call to all since the ever-increasing tendency toward nationalization of industry and the regimentation of the small-business man. Mr. McIlvaine is the editor of my home-town newspaper and it is with appreciation of his honesty and integrity that I commend this article to your attention:

THE FEDERAL SNOOPS ARE AFTER ME

(By Robinson McIlvaine)

I am owner, editor, publisher, advertising manager, and janitor of a country weekly newspaper called the Archive, in Downingtown, Pa., a town of 5,000 people 32 miles from Philadelphia.

I acquired this impressive string of titles in 1946 when, after nearly 5 years in the Navy, I bought the paper and a supposed 1,750 subscribers with every cent I had, plus a small assist from the local bank.

The fact that all but 60 subscribers had died and that newsstand sales ran to a total of 5 copies per week—as I learned after the deal was closed—was discouraging at first. But with the help of my wife, who shares all my titles except that of janitor—she has two children and the house to clean—we managed to build up circulation to 2,800. In order to do this, we have worked from 12 to 24 hours a day, 7 days a week, for the past 3½ years at varying degrees of deficits.

We were just about beginning to eat regularly when the roof caved in, literally, on the plant where the Archive was being printed, and we were forced to find ourselves a building and the necessary printing equipment to put out the paper ourselves. Luckily, we found another ex-sailor, named Ed Russell, who had some printing experience and a few dollars, and together we hunted up the equipment and converted an old livery stable into a print shop.

With another assist from the bank and some ancient machinery, we incorporated as the Chester Valley Press, Inc., and began printing the Archive ourselves in November 1948. I became president, my wife vice president, and Russell secretary-treasurer. I still kept my other titles, including janitor.

For 6 months the printing concern operated in the red. Hardly a week passed when we didn't have to buy a new part or replace a broken machine. The fellow who came in to set up our books called this capital outlay. But to us it was losing money that we didn't have. In the summer of 1949 things stopped breaking down, and we acquired more job-printing work to keep the boys—both of them—in the back shop busy Thursdays and Fridays after the paper was out. Day-to-day operations went into the black, and we began paying off the long-suffering suppliers with whom we had run up bills.

Recently we produced the largest edition in the paper's 75-year history. It was a Tuesday, and we were getting three runs off our 40-year-old press. In the midst of all the clanking, grinding, and whirring of typewriters, saws, and the press, a tall man with a face like a beaked eagle and with a bulging brief case under his arm, edged in through the door and, as he approached the long board table we call the city desk, whipped out a card case and thrust it under my nose.

I was doing the lead story and, as I had already been interrupted 15 times, only half listened when he explained that he was from the Wage and Hour Division of the United States Department of Labor and wanted to make a routine check.

"Fine," I answered absently; "help yourself."

I introduced him to Mr. Peters, the retired railroad agent who works part time at our books, and went back to the typewriter.

When I finished the story, I noticed our visitor poring over the books, taking notes avidly. I was out in the shop, making up the next run, when he appeared at my side and said that he had a few questions to ask.

"I notice," he said, "that neither you as president nor Mrs. McIlvaine as vice president of the Chester Valley Press have drawn any salary."

"No," I laughed. "Sad, isn't it? But as you have noticed by the books, when we finish paying our compositor and linotype operator, our suppliers and the interest owed the bank, there isn't anything left over for us except a deficit. But," I added, hopefully, "the day may come soon when we can take out a few dollars."

"The law says," our Government man intoned without the trace of a smile, "that anyone working for a corporation must receive a minimum of forty cents an hour and time and a half for overtime."

I decided he had misunderstood the situation and hurried to explain that my wife and I were not employees, but officers of the company and, since we owned 75 percent of the stock, could make up our own minds what we were paid. I should have saved my breath.

"The law says," he repeated, "that everyone who works for a corporation is an employee and therefore subject to the Wages and Hours Act."

By this time I had forgotten the forms waiting to be put on the press.

"Do you mean to tell me," my voice cracked, "that we have to pay ourselves even though we don't have the money? That we must go to the bank and borrow enough to pay this minimum salary and then take it back, losing 6 percent on the way? That is, if I could persuade the bank to give me an added loan, in view of what I already owe?"

"I didn't say that," he replied with a shrug. "I merely interpret the law. I don't attempt to tell you how to run your business."

He left me sputtering like a Roman candle and returned to the outer office and our books. It was some time before I could pick up a stick of type.

In a few minutes he was back. "Do you have any business outside the State of Pennsylvania?" he asked at my elbow.

"No, we don't," I answered. "But if someone from New York, Chicago, or Timbuktu walked in now and asked us to print something for them, we certainly wouldn't turn them down."

He thought this over for a minute. Then, pointing his pencil at me, he continued, "Do you print any stationery or envelopes for Downingtown firms?"

I fell into a trap headfirst, "Sure, just as much as we can lay our hands on—after all, we are in the printing business."

I was completely unprepared for what came next.

"Would you have any way of knowing"—he let the words drop slowly, speculatively—"whether any of these envelopes you print for local firms are mailed out of the State?"

Surely he's joking, I thought, but a glance at his thin lips and narrowed eyes indicated otherwise.

"After all," I said, trying to keep my voice steady, "when we print a thousand envelopes for someone, we don't ask them whether they plan to use them for interstate love letters or wiping the floor. Our only concern is when their check comes in. Look," I said desperately, "if you're trying to establish the fact that we're under the heading of interstate commerce, why do we have to beat around the bush like this? We have a job pending that is from Connecticut. If that puts us in interstate commerce, then O. K."

When I finished, he just looked up and said calmly, "I never argue. I just interpret the law. The law says you are in interstate commerce."

Just then the office door crashed open, and in roared 26 kids ranging from 19 years down to 7. Our Government man almost swallowed his pencil as they whizzed past him shouting, "Hey, Bob, can we fold any papers today?"

Recovering slowly, our man asked, "What are these?"

I started to tell him how we could print only two newspaper pages at a time and that this meant folding and inserting each section by hand. While the men in the shop did the bulk of the job, a gang from the high school always dropped in after school, and we usually let five or six join the folding party and gave them cider, cookies, radio programs and lots of chatter for 2 or 3 hours, 2 days a week.

"It's sort of a private youth movement," my wife explained. "When they're not in here, many of them are running loose in the streets, getting into all kinds of trouble. Here they earn some money and, judging by applications, seem to have a good time."

But our investigator wasn't listening. He had already cornered the nearest kid and had begun to cross-examine him. The others tried to edge out the door, but he held up a warning finger, and they stood squirming, waiting their turns. As he began filling out detailed forms with names, ages, parents' names, and so on, I asked him why he was doing this. "They've all told you their ages, so why do you have to scare them?"

"It is illegal," he murmured, writing busily, "to employ children under 16. I have to check their ages and make sure they are telling me the truth."

I started to protest that the 2 or 3 hours a week they spent in our place could hardly be called oppressive or even employment.

He cut in, "I didn't say it was oppressive. I said it was illegal. In fact, it would be perfectly all right for them to fold papers out there," and he gestured toward the parking lot.

By this time I had been away from my work for an hour, which on that particular day so tied up production in the back shop that we ran into 4 hours of overtime. Aside from the wear and tear on my disposition, this "routine" check by Uncle Sam's man had cost me $25. It was only the beginning.

One of the children, a 14-year-old, was standing there with his lower lip going up and down like a loose piece of blubber. He had no father, and his mother had died a month before. His aunt, who worked for us evenings as a press feeder, was struggling to support him, and he came with her the three evenings she worked. He saw the older boys there folding and asked if he, too, could have a job. So we let him fold and also had him in Saturdays to sweep out the shop. For the first time in his life he had real spending money and now it was all over.

Outside, in the parking lot, the others were standing around in little groups, kicking at stones and glancing furtively at the door.

Once more I approached the inquisitor. "If it's illegal for the ones under 16 to work here, then we'll stop it. So why take down all their names?"

"But," he answered, "I must verify their statements by interviews at the school and at their homes."

Two days later I had a frantic call from the supervising principal. "What on earth are you doing down there?" he demanded. "Some character from the Government has been up here all day wanting to see the records of every kid who ever went to school. I had to dig them all out, and then he insisted on calling the pupils out of class for interviews."

This phase of the investigation took two full days and lost nobody knows how many man-hours to the school staff, not to mention the time the children spent away from their lessons.

It did keep him out of our hair for those 2 days, but he returned. This time he went through the petty-cash slips and came up with a fistful which he took to Ed Russell for an explanation. They were a bit cryptic. One read, "$3—Butch," another "75c—Red," and so on in that vein. There were 20 or 30 of them, and the wage-and-hour man obviously thought he had stumbled on the firm's private betting records. Ed, who was rushing to get a church program printed, replied quite simply: "Oh, those are chits for various guys who have folded papers."

It opened up a whole new line of investigation, and it was a honey because none of us knew the names of the individuals who at one time or another over the year had dropped in for a chat with a buddy and had ended up doing an hour or so's work. Most of them had long since graduated from school and were working, or were in the Army or Navy.

However, nothing was too much trouble for Uncle Sam's man. By reinterviewing most of the children he had already seen, he was able to tag full names onto "Butch," "Red" and most of the other names on the chits. Those he couldn't locate for personal interviews received mimeographed questionnaires marked: "Confidential. Do not show to your employer."

I first learned of the questionnaire one evening as I was walking home past the drugstore, where a group of the boys were hanging around holding up the wall.

"Hey, Bob, what am I supposed to do with this?" came a voice from the doorway. As I approached, the same Red who had been chalked up for 75 cents in the petty-cash box handed me the questionnaire. There were more than 40 questions, and they covered such essential data as date and place of birth, mother's maiden name, hours worked, when and by whom hired.

Putting our heads together, Red and I figured out his vital statistics, including his mother's name before she had married. The question of who had hired him and when he had worked was tougher. As he recalled it, Nancy, the president of the senior class, had passed him on the street and yelled out, "Come on over to the Archives and fold papers awhile." Since he worked 5 nights a week in the drugstore, and we only folded papers on Wednesday, he figured it must have been a Wednesday when he was off, and it was winter, because there was snow on the ground. "Rate of pay" we knew to be 75 cents because that was what the chit said, but he couldn't remember how long he had been there. He said he was quite surprised to get paid at all, because he had spent a half hour in a corner rehashing a basketball game, and by the time he got to the folding table there was a terrible argument going on about how many light-years it was to the moon, and he couldn't remember doing any work at all, though he supposed he must have folded a few papers. I bought him a soda while we threshed these fine points out, and finally arrived home exactly 1 hour late for supper.

That evening, and several thereafter, the rest of them dropped in at the office for help on their blanks. According to law, I was then serving at time and a half, or 60 cents an hour, and on that basis my advice ran to a little over $6. I still haven't paid myself.

Early in the second week of our routine check by the Wage and Hour Division of the Labor Department we stood charged with operating in interstate commerce, running some sort of a sweatshop for kids under 16 and discriminating against corporation executives. I couldn't help wondering when our man would get down to brass tacks and look into our four regular employees.

I didn't have to wait long. I returned to the office one afternoon late, after being out at a farm demonstration. The investigator had been there most of the time I was gone and had taken each employee off into a corner for cross-examination. According to the men, or rather, the boys—their average age is 24—he found something sinister in the fact that the 19-year-old linotype operator made as much as $110 a week. He showed great distress when he learned we didn't have a time clock, but just paid the men whatever they said we owed them at the end of the week. There was also something irregular about the fact that we paid the foreman a salary and gave him paid vacations, a practice we have since abandoned.

Very little work was done on the day of these interviews. Not that the actual questioning took so long, but by the time everybody had compared notes and told what he said and they said, it was about quitting time, so, rather than run into overtime, we closed up, and I stuck around till 2 or 3 in the morning to get the work finished and, incidentally, get myself some more overtime.

The chief result, to date, of the wage-and-hour visit is that we had to go out and get an automatic newspaper press that folds as it prints, thus eliminating all the part-time workers and the lady who fed the old press. Although we had hoped to put one in eventually, we were in no position financially to do it at this time. Even though we took it apart, moved it, and put it together ourselves, it had cost us $8,000 so far, despite the fact that it is at least 45 years old.

I don't know what the verdict of the wage-and-hour people will be, once all the data is filed. I suppose the three of us could go to the penitentiary or go broke. In talking about it with other small-business men around town, I am encouraged to believe we shall somehow survive. Most of them claim to have had more harassing experiences, and they are still operating at the old stand. Furthermore, they assure me that this is only the beginning, as I can expect another man from wage-and-hour along any day to check on the first one, and ultimately a third to check on the second; and, after all, I haven't been checked out by the State department of labor or the unemployment-compensation people, not to mention the income-tax man and the FBI.

There is, of course, one possible solution: We can close the paper.

Voyage of Ferdinand Magellan to the Philippines

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1950

Mr. STEFAN. Mr. Speaker, by leave granted me, I include as part of my remarks the statement issued recently by Maximiano Marmito Villareal:

THE SIGNIFICANCE OF THE EPIC VOYAGE OF FERDINAND MAGELLAN TO THE PHILIPPINES, MARCH 16, 1521

(By Maximiano M. Villareal, chairman, publicity committee, Club de las Americas, Washington, D. C.)

March 16, 1950, is the four hundred and twenty-ninth anniversary of the epic and adventurous voyage that brought Ferdinand Magellan and his fleet to Philippine soil. The greatest contribution was the bringing of Christianity and opening another part of the world to western man.

It is fitting that everyone and all unbiased thinking people everywhere, regardless of creed and race, should for a moment pay tribute to Ferdinand Magellan for his great service to the world in displaying his unusual courage and determination in crossing and passing the many unknown oceans and seas.

Magellan's voyage to the Philippines has greatly contributed to the present ideas of modern world travel, transportation, trade, and commerce, and economic problems of both the eastern and western worlds. It was unfortunate that Magellan was unable to return to Europe with his fleet. But Capt. Sebastian Elcano, his able companion, completed the round trip and back to Europe.

The great explorer was unfortunate that he was killed during an encounter against Lapolapo and his men, who were defending the island of Mactan, of which Lapolapo was the chief. The heroism and bravery of the defending natives led by Lapolapo marks the Philippines' heroism which became a legend and a tradition that inspired the generation to generation defense of the native soil which led to the establishment of the Philippine Republic.

Like the ancient Inca civilization of pre-Spanish Peru, the Mayan of Central America, and the Aztecs of Mexico, the Philippines had its advance culture and civilization many years before the arrival of Magellan and other Europeans.

Historic accounts show that about the year 700 A. D. the people of the Philippines had already been in regular contact with other civilized countries of the Orient in trade and commerce.

The Philippines was at one time a part of the ancient great Hindu Empire known as Hari-Visaya. Today the Philippines is one of the early members of the world organization, the United Nations.

The Spiritual Heritage of St. Patrick in the Modern Crisis

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, March 20 (legislative day of Wednesday, March 8), 1950

Mr. O'MAHONEY. Mr. President, the Hibernian Society of Baltimore held its one hundred and forty-seventh anniversary banquet in that city on last Saturday night, March 18. This organization was founded in 1803 by leading citizens of Maryland of Irish ancestry. Like many similar organizations established in the early days of the United States, and even before the Revolutionary War, it was entirely nonsectarian and nonpolitical, its only object being to assist emigrants from Ireland to establish themselves in the New World.

One of its early presidents, Mr. John Oliver, who served from 1818 to 1823, bequeathed $20,000 to the society for the establishment of the Oliver Hibernian Free School. This example of promoting education has been followed by the society which now uses its investment income to provide scholarships for higher education to worthy boys and girls of Irish ancestry.

At the banquet last Saturday evening, grace was offered by the Reverend Dr. Martin Luther Enders, pastor of the First English Evangelical Lutheran Church of Baltimore. At the speakers' table were seated the Very Reverend Francis X. Talbot, S. J., president of Loyola College, Baltimore, and the Right Reverend Msgr. John F. Eckenrode, pastor of St. Patrick's Church of Baltimore. The benediction was pronounced by Rev. Joseph P. Bradley, chaplain of the Hibernian Society.

Presiding at the occasion was a distinguished citizen of Baltimore, Mr. Martin J. Welsh, Jr., president of the Hibernian Society. Present also at the speaker's table was Mr. Edward A. Smith, president, St. Georges Society; Mr. Jones, of the Welsh Society; Mr. Lewis Kurtz, president, German Society; and Mr. William M. Patterson, president of St. Andrews Society.

The able senior Senator from Maryland, Hon. MILLARD E. TYDINGS, responded to the toast to the President of the United States. The Honorable Thomas D'Alesandro, Jr. mayor of the city of Baltimore, gave the customary response on behalf of the city of Baltimore, and the Honorable James J. Lacy, comptroller for the State of Maryland, spoke for the State.

The Government of Ireland was represented by Hon. Brendan Corish, T. D., parliamentary secretary for the minister of local government in the Republic of Ireland. I felt very much complimented that in this company I was permitted to respond to the toast, The Day We Celebrate. I ask unanimous consent that the text of this response may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE SPIRITUAL HERITAGE OF ST. PATRICK IN THE MODERN CRISIS

When St. Patrick died in Ireland almost 1,500 years ago all western Europe was plunging into chaos. The old Roman Empire had been wrecked. Pagan barbarians who had swarmed everywhere over the frontiers had assailed even the impregnable city of the emperors and Christianity itself was under attack. Freedom and religion had reached their lowest ebb since first Christianity had won the minds of civilized men.

Tonight I venture to compare the condition of Europe in 493 A. D., the year the Apostle of Ireland was laid to rest, with the condition now existing throughout the whole world. I venture to point out the challenge the modern crisis presents to men and women of Irish blood and lineage to justify the tributes of loyalty, devotion, and praise they pay annually to the memory of St. Patrick, for the same threat to civilization against which he fought confronts us now.

We are part of a world-wide struggle between the spiritual and the materialistic. Freedom and religion once more hang in the balance. The dictators of a new tyranny who respect neither God nor man would enslave mankind. The Irishman who honors Patrick tonight can look back with pride upon the contributions made by Irishmen during seven centuries following the death of their patron saint to the reestablishment of freedom and Christianity in Europe, but he must ask himself what part he is willing to play in the modern crisis between God and mammon.

THE APOSTLE OF FAITH AND FREEDOM

It is not for us to retell the well-known story of St. Patrick's life, but rather to consider the meaning of the heritage which he bestowed upon the world and particularly upon men and women of the Irish race. He began his career in Ireland as a slave. He ended it there a bishop. He was an apostle of Christianity; of necessity, he was also a defender of freedom. He knew, as many in our time have forgotten, that the concept of freedom is inseparable from Christianity. Like St. Paul, he preached the "liberty wherewith Christ made us free," and he implanted this knowledge so deeply in Irish character that during the fifteen centuries since his death Irishmen have been distinguished chiefly throughout the world for their unswerving devotion both to the religion St. Patrick taught and to the ideals of human freedom he never ceased to proclaim.

We have the record not only in his own writings, but in the writings of some who walked and talked with him. Throughout his life Patrick engaged in a constant intellectual attack upon the pagan philosophy, trusting in Divine Providence to preserve his life and his strength and to deliver him from persecution. Mindful of his own sufferings when he had been made a captive in his youth, it was his practice to ransom captives with whatever money he had. He constantly urged the pagan to accept the gospels and he always exhorted his people to join him in a common endeavor to achieve justice and freedom for everyone.

This spirit of the great Apostle of Ireland was recognized with wonder and surprise by his contemporaries. One of them whom we know as St. Secundinus wrote a hymn during the lifetime of the saint extolling Patrick for these qualities. Translated into English, it may perhaps lack poetic quality, but its meaning is plain, as may be judged from the following stanza:

"Christ chose him for Himself to be His vicar on earth,
Who from twofold slavery doth set captives free;
Of whom very many he redeems from slavery to men, and
Countless numbers he releases from the dominion of the Devil."

We have, however, Patrick's own words to confirm this judgment of his purpose. There has been handed down to us with complete authenticity not only St. Patrick's Confession, but also a letter which, in the manner of St. Paul, the Irish saint wrote to the British chieftain, Coroticus. The latter, whose name would indicate a Roman origin, had raided Ireland, had slain many of the inhabitants at the spot where he landed, and had carried others off to slavery. St. Patrick's letter, though addressed to Coroticus in the hope that it would in due course reach him, was also directed to his own flock. He told them how the Christian inhabitants of France labored to convert the heathen and release the captive.

"This is the custom of the Roman Gauls," he wrote. "They send holy and fit men to the Franks and other heathen with many thousands in coin to redeem baptized captives. * * * Thou rather slayest and sellest them to a foreign nation which knows not God.

"What manner of hope in God hast thou, or has he who consents with thee, or who holds converse with thee in words of flattery? God will judge; for it is written, not only those who commit evil, but those who consent with them shall be damned."

This is a stern and affirmative Christianity. No man has a right to rest when his fellow men are enslaved, for every man is a member of Christ and must help keep his brother free. Money, good will, prosperity, culture, human skills, all the qualities of mind and body are simply means to carry on the fight for freedom and spiritual redemption against the "foreign nation which knows not God."

So seriously did St. Patrick feel this responsibility which he accepted for himself and which he believed every man should bear to every other, and so completely was it understood by his contemporaries and his followers that it was recognized in the legend handed down to us in one of the early lives of the great saint. We are told that as he approached his death an angel appeared to him to grant four petitions. The last and most important of these was bestowed by the angel in these words:

"That all the Irish shall be judged by thee in the day of judgment, as was said to the Apostles, 'And ye shall sit and judge the 12 tribes of Israel,' that thou mayest be the judge of those to whom thou wast an apostle."

The legend may, indeed, have been the fond fancy of an ancient follower of Patrick who was urging the Irishmen of his time to remain loyal to the ideals of faith and freedom that Patrick taught. We, however, who live now in the middle of the twentieth century, almost 1,500 years after Patrick went to his reward, facing as we do the same threat to religion and freedom that he faced, may well ask ourselves on St. Patrick's Day, "Are we willing upon the day of judgment to have Patrick pass upon our service to the ideals he preached?" Surely it must be clear that if this generation spurns the spiritual heritage Patrick left, materialism will engulf the globe and dictatorship, not freedom, will take over the world.

It is not mere chance that in our time we have seen slavery in a most repulsive and cruel form reappear in the nations which know not God, for the cynical repudiation of religion is likewise the repudiation of freedom.

So, tonight we look to the past, but only as a guide to the future. Let us remind ourselves of what our ancestors did, not to shine in their reflected glory, but rather to strengthen our own determination to emulate their devotion and to make a new record of loyalty to faith and freedom which perhaps some future generation may be willing to cite to our credit.

SEVEN CENTURIES OF IRISH TEACHING

It will be remembered that the Roman conquest of Europe never extended to Ireland. It was always beyond both the military and political sway of the Empire. The Roman legions penetrated Britain and remnants are still there of the old military roads they built. The ancient Roman ruled in Britain before Christianity came, but Patrick took it to Ireland before Augustine became the Apostle of Britain. The inspiration of his teachings was so potent that thousands of Irishmen, fired with his zeal, made Ireland in very truth the island of saints and scholars in the years that followed Patrick's death. To the abbeys and schools founded by the saint's followers in the Land of the Shamrock there flocked in the sixth and seventh centuries thousands of eager students who could not satisfy their search for knowledge and religion on the continent where the barbarian had almost destroyed the foundations of both civilization and Christianity.

In these same centuries and in the centuries that followed, including the twelfth, the saints and scholars of Ireland returned to the continent everywhere preaching and teaching and reestablishing the structure of faith and freedom which had been laid in ruins. To a demoralized Europe, the missionaries and teachers of Ireland, heirs of

St. Patrick, carried back the flame of faith and freedom that had been almost stamped out by pagan barbarians not unlike Attila the Hun, who dared call himself the Scourge of God.

This brilliant record, covering a period of seven centuries of intellectual and religious labors, has been obscured and almost obliterated in recent times by the sorry story of the seven centuries of Ireland's bitter, but unremitting struggle against British conquest. Throughout that struggle the Irishman's will to freedom remained indomitable. He knew, that since God Himself had made man free, no earthly agent can deprive him of that gift. The military power of Britain is no longer a threat to the political integrity of Ireland. It is now at last a really free nation even though six counties are still excluded from the essential unity of the island. All of Ireland, like all Britain, all Wales, all Scotland, all western Europe, indeed, the whole world now faces another threat to basic human liberty from a foreign nation which knows not God. Thus, once again, there is presented to the followers of St. Patrick the opportunity to place their intellectual capacity, their will to freedom and their devotion to religion in the forefront of the spiritual struggle against an advancing materialism more diabolical even than that which overwhelmed the Roman Empire in the fifth century.

Does the missionary zeal of Patrick survive among the Irish of our time? Patrick felt that all Christians were closely bound together and that they should burn with his own zeal for peace and freedom, a zeal which was aroused in him by the efforts of the pagan barbarians of his time to dominate and enslave the free Christians of Europe. The sons and daughters of Ireland have migrated throughout the world, but wherever they are, in whatever land they serve, they are, like us tonight, paying honor to the memory of St. Patrick.

AMERICA THE LAST REFUGE OF LIBERTY

To Americans of Irish lineage, however, I speak not alone of Patrick's message, but of the message of human freedom handed on year after year by Irish leaders wherever fate had cast them. I am thinking particularly tonight of one great Irish leader, a non-Catholic leader who was imbued with the eternal devotion of the Irish heart to freedom. He was one of the greatest orators of the old Irish Parliament, the disestablishment of which was decreed by the British Act of Union. Resenting this depredation of the right of Irishmen to legislate for all Ireland, he turned his eyes westward across the Atlantic and in 1783, 4 years before the Constitution of the United States was drafted, he referred to this country as "the only hope of Ireland and the last refuge of the liberties of mankind." These were the prophetic words of Henry Grattan, patriot and orator. He died without knowing how accurate his vision of the future was.

America is, in very truth, the last refuge of the liberties of mankind. If here in America we should falter, if we should fail to see that communism is sweeping now across the face of the earth in a more tumultuous torrent even than that which engulfed the Roman Empire, if Americans should be lulled into a false concept that the danger is not real, then be sure that totalitarianism, armed with all the scientific implements of our time, will suppress the human soul in a degradation deeper than that to which it has ever sunk before.

We are drifting with terrible speed toward economic disaster and a third world war because we do not seem to realize how vital and necessary the heritage of St. Patrick is in our time.

We shall successfully defend faith and freedom, not with armies and with bombs, but with the conviction of our souls and the determination of our wills, accepting the message of Christianity and dedicating ourselves, in the spirit of St. Patrick, to the demonstration that all men are free, that none can rightfully be enslaved, that all are brothers and the children of God.

Surely the world has learned that there can be no triumph in war. In the competition of destruction, there can be no victor. We thoughtlessly call ourselves the winners of World War II, but we have not paid for that war yet. It will leave its marks upon us all for generations to come. The United States gave more than 300,000 lives in that conflict. More than a million men were maimed in body and spirit and are living victims of the war. Peace and prosperity for the whole free world were undermined by that war and too many now are giving way to the futile and dangerous thought that free men, by living to themselves alone, can somehow hide from the struggle that is here, or are entertaining the more terrible thought that a new and more destructive war should be launched. Even without the will to war we are already involved in an armament race that inevitably turns us from the paths of peace and may easily transform us into a garrison state and eventually bring on a war more appalling in scientific destruction than even World War II, the peace treaties of which have not yet been written.

There is no spot upon the whole face of the earth in which a free man can protect himself from the totalitarian purpose to destroy religion and to make gross materialism the ruling passion of man. There is no hope for mankind in resort to force. Science has released to us the awful secrets of nature which must be used in the spirit of Christianity for the purpose of ennobling men, or they will be used to plunge us all once more into the depths of misery and confusion. Total war can result only in total destruction, and we are faced with a dilemma from which only religion and democracy can set us free.

ECONOMIC FREEDOM IS ESSENTIAL

When I speak of democracy, I mean economic democracy as well as political democracy. I mean the right of the individual to the free use of his own abilities to support himself and to govern himself. In no company can one with more propriety plead the cause of political and economic freedom than in a gathering which has assembled to pay honor to St. Patrick.

It will be remembered that the youthful Patrick while only a boy of 16 was captured and taken to Ireland in slavery. He escaped to the continent of Europe, but he had made up his mind that he would return with the message of Christianity to the people among whom he had been a bondsman.

I have often thought he must have found something in the character and spirit of those ancient Irish that convinced him they were ready to accept his message of freedom. We are told that he codified the ancient Brehon laws. An examination of this code shows that in early Ireland economic and social justice for all was recognized as the basis of society. No man under those laws could retain in idleness any land which another member of his community could use. In other words, no vested interest could restrain opportunity for the ancient Gael. Land was the means of production, and we shall best learn the lesson of economic freedom that Patrick taught if we realize that the principal cause of modern social and economic turmoil is that we have not learned that men cannot be economically free unless there is free access for every single individual to the modern means of production.

The totalitarian fears that there is not enough to go around. Filled with the determination that he and his group shall survive, he seeks to dominate the world and exclude from opportunity all but those he chooses to admit to his society. Murder and slavery for those outside his circle is the logical program of the dictator, who is driven by fear.

Our task is to demonstrate to all, even to those behind the iron curtain, that there is enough to go around, that in a free and Christian society when men live like brothers one to another they can by cooperation and by constructive use of the achievements of science in an atmosphere of liberty raise the standard of living for all to a higher level than has ever before been achieved.

The Communist dictators are convinced that religion and democracy are dead. They are dead—if the world receive not the spiritual heritage of St. Patrick. We who call ourselves his followers, we who know the cause to which he dedicated his life, we who know as he knew that God Himself is the Author of Liberty, we know that the forces of materialism cannot overcome Christianity if only we have the courage in our own lives to accept the stern responsibility of every man to the spiritual virtues of faith and freedom that St. Patrick taught and lived.

Rent Control

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, March 20 (legislative day of Wednesday, March 8), 1950

Mr. CAIN. Mr. President, I ask unanimous consent that a letter which I have recently received from Mr. Joseph Weston, of Tacoma, Wash., be printed in the Appendix to the RECORD. Mr. Weston states nothing new in his views, but they are well stated and the example he uses is so typical of the results of continuing Federal rent controls in peacetime that I wish to bring the letter to the thoughtful consideration of my colleagues.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TACOMA, WASH., *March 14, 1950.*

Hon. HARRY P. CAIN,
Senate Office Building,
Washington, D. C.

DEAR SIR: You are reported to be opposed to a continuation of rent controls, for which we fervently say, "Thank you for these efforts to rid us of this instrument which can be explained only by political expediency." It may be that you will need some added ammunition for your debates. This letter, then, is to supply some material which may have been overlooked and to give you an example of the injustice of the rent-control laws.

We own a house in southern California. Hard work over a 10-year period cleared it. Our intention was to use this as a source of income when I can work no longer.

About 3 years ago I was transferred to Tacoma. The question arose as to whether to sell or rent the house we were leaving. At that time it was not under rent control, so we decided to hold on to it, although this decision meant careful economy of living on our part. We were offered $14,000 for the place, and could have used the money to reestablish ourselves in Tacoma.

Good people came to us asking to lease the place, and two figures were discussed—$90 with owner to care for the yard; $75 with the tenant to assume this responsibility.

(Incidentally, the house is on a 100 by 200 corner lot and was adjudged one year by the Los Angeles Chamber of Commerce and the Los Angeles Times as the outstanding half-acre ranch-type place in Los Angeles and Orange Counties. This was contingent on the garden more than the house. So nat-

urally we were concerned with having the place maintained.)

The tenant was happy—so were we.

Then last year the rules were changed. In itself an imposition, and I considered it a breaking of faith. Many people, like us, decided to rent instead of sell at the top of the market. Now where are we? Sales value has dropped and the rent is reduced one-third.

The rent, now set at $50—after maintenances, taxes, and depreciation—nets us less than nothing. (We have spent $193 so far this year on the sewage-disposal system.)

Aside from the fact that we are hurt personally, the larger phases of the subject are of profound importance.

Is it American justice—is it moral—for the Government to take from one man to give to another?

Why is every man's dollar except that of the person who has been thrifty enough to clear off a place for rental allowed to become inflated?

Per capita income has increased because of the lessened value of the dollar. Should the owner of a small rental place be discriminated against in this inflationary period?

Last year the American public is reported to have spent $9,000,000,000 on automobiles. This, in round figures, is two billion more than the total spent for new housing. I have no objections to people's buying automobiles. I quote the figures to prove the point that a rental subsidy particularly at the expense of individual American citizens cannot be justified on the grounds of inability to pay.

The people who own rental property pay taxes to support the local community as well as the broader taxes of State and the Federal establishment. Schools (for the renters' children), roads, library, police, and all the rest. Why is it the owner of a house which he rents is not permitted to bargain for his income? The law allows this to most everyone else.

In my case the tenant was well satisfied with our original agreement, and insofar as he is concerned his vote has not been purchased by the Rent Control Act. He wrote me this: "It is not difficult to understand your irritation over the Government restrictions. If our positions were reversed, I am quite sure that I would be extremely angry over the rent regulations."

I pay taxes to support the very rent-control people who tell me what I can and cannot do with a piece of property I worked for and bought and paid for with no help from any agency. How can any man accept such a control without anger and resentment?

It should be noted, too, that in my dealings with this governmental bureau I have found the most incredible inefficiency that can be imagined. Every step of the way has been filled with error from start to finish.

In April last year, trying to obey the law, I wrote from Iowa (I travel most of the time) and asked that instructions as to my procedure in filing the property be mailed to my Tacoma address.

Some time later a letter was forwarded to me which had been sent to me in Iowa. Guess what it said? "The rent regulations recognize only a lease under section (4), which provides for a 15-percent increase."

And so it went, back and forth, with docket numbers and forms that were impossible to understand clearly. Finally my son made trips to the rental headquarters in Los Angeles. He was told the place was only worth $35, but they would (out of the goodness of their heart) allow $45. Finally they settled on $50.

I am proud of the fact that I have had forbears in every war the United States has fought for governmental respect of the individual. I was in War I, my son was in War II. I am accustomed to standing on my own feet.

What bothers me terribly is that I cannot be proud of a legislative body that follows an administration which demands imposition of politically expedient regulations like those contained in the rent-control laws.

I wish you, sir, the best of good heart in your stand against such practices.

Respectfully,

JOSEPH WESTON.

Reorganization of the Maritime Commission

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, March 20 (legislative day of Wednesday, March 8), 1950

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial entitled "Maritime Shuffle," from the Washington Post of March 16, 1950.

The editorial points out that it is not enough to reorganize the Maritime Commission and consolidate it with the Department of Commerce, but that it is highly important that correct and proper personnel be selected for the new authority. The editorial calls attention to the fact that the Maritime Commission, according to the report of the Comptroller General, has flouted the law in granting excessive subsidies and that its flouting of the law has been confirmed by a report of the House Committee or Expenditures in the Executive Departments. The editorial says:

If the reorganization plan is accepted, the President has a great opportunity to get rid of the Commission members who have abused their offices. This gain would be nullified, however, if the President (as is now reported to be his intention) were to appoint as Undersecretary of Commerce for Transportation the present Maritime Commission chairman who has sided with the majority. By the same token it would be unfair to jettison Commissioner Raymond S. McKeough, who has fought a losing battle to administer the law as written.

Mr. President, I may say that Commissioner McKeough served with distinction in the House of Representatives for many years. At times we have been political associates, and at other times we have been opponents, but no one has ever questioned his great integrity and his great competence, and I believe the people of the United States owe him a debt of gratitude for the magnificent fight which he has been making to keep ship construction and shipping board subsidies down within the bounds of reason.

I renew my request that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MARITIME SHUFFLE

President Truman's long-heralded reorganization of the Maritime Commission is both drastic and plausible in many ways. The danger is that the President may be mislead into believing that the trouble in the Maritime Commission will be cured by a mere reshuffling of authority. Whatever the administrative defects of the present commission, and they are many, the basic difficulty has been in the outlook of its members.

What the President proposes is to abolish the Commission and divide its duties functionally as recommended by the Hoover Commission and other studies. Replacing the present 5-member body, a 3-man Maritime Board would be set up in the Department of Commerce to handle regulatory and subsidy functions. With respect to ship construction and operating subsidy determination, this board would be subject to policy guidance from the Secretary of Commerce; but its decisions, once made, would be conclusive. In such regulatory matters as approval of rates the board would act as an independent agency.

To carry out other duties of the Maritime Commission—administration of subsidies, management of the Government-owned merchant fleet, and similar functions aggregating $162,000,000 yearly—the plan would establish a separate Maritime Administration in the Department of Commerce. Separate, that is, except for the fact that the chairman of the Maritime Board would serve in a dual capacity as Maritime Administrator. In addition, the plan calls for the appointment of a new Undersecretary of Commerce for Transportation.

Insofar as it would bring about policy accountability on subsidy awards, the proposal would be a distinct improvement. The granting of subsidies is basically an executive function, and when this function is carried out by an independent agency, great abuse is possible. The plan would permit supervision to insure that presidential subsidy policy and maritime policy were not operating at cross purposes. Moreover, the plan recognizes the overlap of many maritime functions by providing for the use of the same staff by the Maritime Board and the Maritime Administration.

The question remains, however: How many ways can the same man be divided? Can an administrator responsible to the Secretary of Commerce in some matters remain genuinely independent in others? For that matter, would not the dual Maritime Board-Administration head be in a position to thwart other Board members, since all employees except personal staffs would be responsible to him alone? That has been one of the major complaints under the most recent reorganization of the Maritime Commission. Finally, if a Department of Transportation is the President's aim, ought not this issue to be met head-on? Should the already unyielding Department of Commerce be made more so?

Although the President's message does not mention it, undoubtedly a major factor in the shift was the report last summer by the Comptroller General dealing with the way the Maritime Commission majority had flouted the law in granting excessive subsidies—a report confirmed by the House Executive Expenditures Committee. If the reorganization plan is accepted, the President has a great opportunity to get rid of the Commission members who have abused their offices. This gain would be nullified, however, if the President (as is now reported to be his intention) were to appoint as Under Secretary of Commerce for Transportation the present Maritime Commission chairman who has sided with the majority. By the same token it would be unfair to jettison Commissioner Raymond S. McKeough, who has fought a losing battle to administer the law as written.

No reorganization plan can be stronger than the men chosen to administer it. In peculiar measure the chaos in the Maritime Commission is the result of incompetence. Far more important than the details of the reorganization plan, if it goes through, will be for the President to name as Under Secretary of Commerce a man specially qualified in the field of transportation and to appoint as Maritime Administrator and Board members men who have demonstrated that they can distinguish public from private interest.

Address of Gov. Adlai E. Stevenson at Dedication of New Sinai Temple in Chicago

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1950

Mr. O'HARA of Illinois. Mr. Speaker, in the district in Illinois which I have the honor to represent the event in the month of March which held the general interest of my constituents of all faiths was the dedication of New Sinai Temple at Fifty-fourth Street and South Shore Drive in Chicago.

The name of Dr. Louis Mann, the present rabbi of the Sinai Congregation is known not only in Chicago but throughout the Nation, as were those of his brilliant and consecrated predecessors, Dr. Kauffmann Kohler and Dr. Emil G. Hirsch.

The late Hon. Henry Horner, the first governor of Jewish faith in our State and beloved by everyone, was a member of the Sinai Congregation and on the occasion of the dedication of the new temple our present Governor, The Honorable Adlai E. Stevenson, appeared to address the large gathering numbering many who during the years had worshipped in the old temple with his illustrious and revered prodecessor, Governor Horner.

The address of Governor Stevenson, which I am including in my remarks, is a noteworthy contribution to the literature of religion in its relation to social consciousness. The masterful address of Governor Stevenson follows:

Sometimes, in the day to day activities of my office, I feel an oppressive sense of futility. So it is gratifying to be able to participate in something that is of more than fleeting significance—that holds promise of lasting, worthwhile values for a very long time to come.

I am grateful, then, for the opportunity to be here today, to see and to participate in the dedication of this splendid modern temple which will house for years to come an ancient religious heritage and our oldest scholarship. Dr. Mann reminds me that for 150 years the commencement address at Harvard was in Hebrew and for a hundred years at Yale, and I think I will have a little research done on this at my college, Princeton. And I am grateful for this opportunity to pay my respects to you, the Sinai Congregation who made this beautiful blending of the old and new possible, and to my esteemed friend, Dr. Louis Mann, who has stood fast for so much that is good in ethical and social life of this community.

This ultra-modern temple is in keeping with the history of this Jewish congregation which for 90 years has never been afraid to venture into new fields, even as five Jews were not afraid to sail westward with Christopher Columbus' little band so long ago.

Yours was the first reform congregation established in this country. You were the first to sponsor public forums for people of all faiths. You pioneered in adult education and in progressive methods of religious instruction. Your congregation was the first to employ a psychologist on its counseling staff. Even more important, you have squarely faced the social challenge of each succeeding generation.

As in all human affairs, spiritual as well as temporal, your greatness as a congregation has been due to leadership—to a sense of the connection between the values of the past and the problems of the present. You have treasured the rich heritage of your fathers, but you have realized that this heritage can be preserved only if it lives in the present and serves the present. A temple must not be just a museum to house the dead relics of a bygone civilization, but a spring from which men and women of today receive spiritual replenishment.

And again your congregation has recognized that religion is not an air-tight compartment shut off from the rest of life, but that it encompasses all human activity. Perhaps this explains, at least partially, why so many enlightened men, including my own illustrious predecessor, the beloved Henry Horner, have been members of Sinai Temple, and why the effective ministry of your religious leaders like Dr. Kohler, Dr. Hirsch, and Dr. Mann, has not been limited to your congregation but has extended to all Chicago and beyond. It explains also why this congregation is known everywhere for its emphasis upon prophetic Judaism, and its social consciousness.

As Dr. Mann has recently pointed out, a religious organization needs more than a temple. It is significant that you have erected here not only a house of worship, but also a house of study and a house of assembly. By making this a house of assembly, a community center serving members of all races and creeds, you have given concrete expression to your conviction that a religious organization must serve not only its own members, but all mankind.

We live in a time of torment, trial, and challenge—a time in which the Jews have been the worst sufferers. In the tense struggle for peace on which rests peace itself, the mighty, and mightily neglected, power of religious faith is peculiarly our western weapon. We need that power, that weapon, on the battlefields of peace now just as surely as we need it on the battlefields of war.

I sometimes wonder if the chief cause of discord in our troubled world is not so much the undesirable nature of beliefs as it is the prevalence of competitive indoctrination among them. Alfred Adler once offered the opinion that "it is easier to fight for one's beliefs than to live up to them." In effect this is what we have across the entire fabric of human affairs: rents and tears caused by the constant vendettas carried on by competing faiths, religious, economic, social, and ideological.

If there is anything that the whole idea of liberalism militates against it is the notion of competitive indoctrination. And therein lies our potential strength in this current era of grace. When we start with the premise that we want human brotherhood to spread and increase until it makes life safe and sane, we must also be certain that there is no one true faith or path by which it may spread. We must forever banish the notion that there can be universal brotherhood just as soon as everyone gives up his faith and accepts ours. That day will never come. The richness of human diversity cannot be abolished. It can be resented and fought, but only at what an appalling cost. Difference is in the nature of life. It is part of our moral universe. It should be gladly and enthusiastically welcomed. There is nothing wrong with the fact of difference. What is wrong are our futile efforts to abolish it, futile as abolishing Mars or Jupiter.

To convince ourselves and others that there is nothing to fear in difference; that difference, in fact, is one of the healthiest and most invigorating of human characteristics, without which life would become lifeless, is a great task. Here lies the power of the liberal way—not in making the whole world Catholic, Jewish or, if I may even suggest it, Unitarian; but in helping ourselves and others to see some of the possibilities inherent in viewpoints other than one's own; in encouraging the free interchange of ideas; in welcoming fresh approaches to the problems of life; in urging the fullest, most vigorous use of critical self-examination.

I have said nothing that is new here, because this is a liberal congregation that knows the world was peopled by a compassionate God who loves us all. And so, upon the dedication of this new temple, I congratulate you, not only for your past achievements but also for the increased opportunities for service that today open before you.

United States Ban on German Science

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, March 20 (legislative day of Wednesday, March 8), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Von Wiegand Hits United States Ban on German Science," which was published in recent issues of the Hearst newspapers.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICA, WAKE UP

VON WIEGAND HITS UNITED STATES BAN ON GERMAN SCIENCE

(By Karl H. Von Wiegand, dean of American foreign correspondents)

ROME, March 15.—Western policy under the leadership of Secretary of State Dean Acheson, commanding the sun of modern progress to stand still in Germany by forbidding scientific research in that defeated country, is strengthening the war and industrial potential of Communist Soviet Russia with some of the best brains in German science.

Freedom of research into every branch of science and scientific development, which has made this the greatest age of discovery and invention in history, is to the scientist what freedom of religion, press, thought, opinion, and human rights are to western democracy.

Soviet offer

The policy of America, Britain, and France toward Germany and its scientists of commanding the sun to stand still in that country is having the foreseeable consequence.

Moscow has made a new and wider "grand offer" in its bid to get a large number of German scientists, specialists, and trained men in every branch of science, research professors and teachers to come to Russia, according to reliable information which has reached Rome.

Inquiries which I have made in scientific circles in Germany have confirmed this information.

Moscow offers good pay, good living quarters, laboratories, research institutes, experimental stations and posts in institutes of technology with the fullest freedom of research and unlimited financial support.

Duty in China

Some of the German scientists sought by Russia are evidently wanted for duties in connection with China's reconstruction program which was agreed upon recently in Moscow between Stalin and Mao Tse-tung.

Private reports from Germany say many German scientists, professors, technologists, and specialists, intensely embittered by America, Britain, and France forbidding re-

search, have accepted Soviet offers and that others are preparing to do so.

Even such great scientists as Prof. Otto Hahn, of Stuttgart, works under the strictest supervision and control of the western occupation authorities.

Science in Germany had in part been driven underground, but more largely is now being driven into the service of Soviet Russia.

FEPC

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, March 20 (legislative day of Wednesday, March 8), 1950

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "FEPC," published in the March 18, 1950, issue of The State, of Columbia, S. C.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FEPC

The Saturday Evening Post, which by the greatest stretch of imagination could not be termed "a southern organ," yet indeed has been fair, had an editorial last month on FEPC which escaped our attention at the time. A friend kindly has forwarded it to us. The comment was occasioned by the celebration of Brotherhood Week.

We take the liberty of quoting the Post in part:

"The late Dr. George Washington Carver, Jackie Robinson, and Levi Jackson have done more to change attitudes contributing to discrimination than all the FEPC laws on the statute books. Force is always a tempting device, but in the long run the results of persuasion are sounder. The lengths to which the there-ought-to-be-a-law attitude can go was recently illustrated by the ill-advised effort of New York's Attorney General Goldstein to prohibit a bowling tournament because the bowling league which was holding the tournament restricted membership to white males. Perhaps bowling ought to be invariably interracial, but an effort to compel people to make it so runs into what Donald Richberg once called one of the most essential freedoms guaranteed by the Constitution—that is to say, 'freedom to choose one's associates because of personal liking and confidence or individual judgment, whether rational or irrational.'

"The truth is that even in areas where legal compulsion has some justification, it is usually the case that the public conscience and sense of justice have changed before the adoption of laws whose sponsors claim all the credit. Thus antilynching laws become a possibility after lynching has all but disappeared, and laws to protect the rights of minorities in jobs or housing come along when the prejudice which was behind discrimination in these fields has been largely liquidated. Indeed, it is quite possible that FEPC laws, which carry with them the danger of creating special privileges for groups at present regarded as the victims of discrimination, will set the clock back. In any case, such laws hardly promote brotherhood any more than religious unity would be promoted by forcing a Presbyterian into the college of cardinals."

If our readers will recall, the State has argued all along that FEPC will harm, instead of help, those whom professional vote lurers proclaim it would help. The Post, you will note, says FEPC would set the clock back.

Lions International—The Lions Code of Ethics

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, March 20 (legislative day of Wednesday, March 8), 1950

Mr. WILEY. Mr. President, in the March 1950 issue of Governmental News, a national publication for public officials, there is an excellent article by Mr. Melvin Jones, secretary general of Lions International. In this article, Mr. Jones cites the magnificent record of this great service organization in national and international activities.

He reports that the Lions Clubs performed a total of 101,736 separate and distinct activities for the betterment of their individual communities during the 1949 fiscal year, and he cites many other excellent statistics, as well as interesting illustrations of their concrete work.

I had previously called attention to the splendid articles published in Governmental News, which is issued by George F. Breitbach and Sons, in Milwaukee, Wis.

I believe that Governmental News has performed a real public service in carrying Mr. Jones' article. Naturally every member of Lions Clubs throughout my State of Wisconsin and wherever Lions Clubs exist will feel a deep and justified sense of pride in the achievement of Lions International. But individuals who are members of other service groups, or who, for that matter, are not members of any service club at all, will also be proud, as Americans, of the outstanding record of civic contributions of Lions International.

These Lions Clubs prove that in the American way it is not necessary for government to attempt to do everything. On the contrary, it is infinitely preferable that wherever possible, private civic groups meet local needs because they are best acquainted with those needs.

I ask unanimous consent that there be printed in the Appendix of the RECORD excerpts from Mr. Jones' article, followed by the Lions code of ethics.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

EXCERPTS FROM MELVIN JONES' ARTICLE

Describing what Lionism seeks to do in the fewest possible words, it might be said that its fundamental purpose is to make each club's home town, or community, a better place in which to live. This objective automatically puts the Lions into everything that goes on around town. It also points up a distinguishing characteristic of the Lions. No job is too small for them. This may explain why they have accomplished so many big ones.

Lions are international in scope, and international in interests, particularly in the promotion of good will and understanding among nations. International good will has a direct bearing on world peace and security under which civilization progresses, and thus the first object of lionism, as set forth in our international constitution, pledges Lions Clubs to create and foster a spirit of generous consideration among the peoples of the world, through a study of the problems of international relationships.

Closely correlated with this primary object are the other five objects of Lions Clubs:

"2. To promote the theory and practice of the principles of good government and good citizenship.

"3. To take an active interest in the civic, commercial, social, and moral welfare of the community.

"4. To unite the members in the bonds of friendship, good fellowship and mutual understanding.

"5. To provide a forum for the full and free discussion of all matters of public interest, partisan politics, and sectarian religion alone excepted.

"6. To encourage efficiency and promote high ethical standards in business and professions; provided that no club shall hold out as one of its objects financial benefits to its members."

FOUNDED IN 1917

This high aspiration to serve, in the fullest sense of the meaning, has been the guiding light of lionism through the 33 years of its phenomenal growth and expansion through 27 countries of the world.

LIONS CODE OF ETHICS

To show my faith in the worthiness of my vocation by industrious application to the end that I may merit a reputation for quality of service.

To seek success and to demand all fair remuneration or profit as my just due, but to accept no profit or success at the price of my own self-respect lost because of unfair advantage taken or because of questionable acts on my part.

To remember that in building up my business it is not necessary to tear down another's; to be loyal to my clients or customers and true to myself.

Whenever a doubt arises as to the right or ethics of my position or action toward my fellow men, to resolve such doubt against myself.

To hold friendship as an end and not a means. To hold that true friendship exists not on account of the service performed by one to another, but that true friendship demands nothing but accepts service in the spirit in which it is given.

Always to bear in mind my obligations as a citizen to my Nation, my State, and my community and to give to them my unswerving loyalty in word, act, and deed. To give them freely of my time, labor, and means.

To aid my fellow men by giving my sympathy to those in distress, my aid to the weak, and my substance to the needy.

To be careful with my criticisms and liberal with my praise; to build up and not destroy.

Middle-Income Housing

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Monday, March 20 (legislative day of Wednesday, March 8), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Set-back for Socialism," published in the Boston Traveler of March 17, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SET-BACK FOR SOCIALISM

The so-called middle-income housing bill that the Senate passed is a victory for sound and traditional financing, a defeat for the socialistic experimenters. There will be no disguised subsidies for the few at the expense of the many, no interest rates for housing cooperatives set low enough to knock out all competition from the Nation's banks. What was passed comprised an extension of present housing aids, chiefly administered by the Federal Housing Administration, with something new in the form of a loan fund for college housing.

The victory was mainly a defensive one and its margin was close but socialism has suffered a set-back. The taxpayers will not have to underwrite dream houses for people who can afford to finance their homes at the going rate.

In Search of Security

EXTENSION OF REMARKS
OF
HON. F. D. ROOSEVELT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. ROOSEVELT. Mr. Speaker, I am sure that all the Members of the House know of the views of the FBI on the question of security checks and clearances under the National Science Foundation bill. I should like to call to the attention of the Members the following editorial from yesterday's New York Times which is an excellent contribution to the debate which is raging about security measures:

IN SEARCH OF SECURITY

Two and one-half years ago the President's Committee on Civil Rights, under the chairmanship of Charles E. Wilson, drew attention to two possible dangers in any governmental loyalty program. One was that "the standards by which the loyalty of an individual or an organization is to be determined may not be clearly defined." The other was that "the procedure by which the loyalty of accused Federal employes is determined may not accord with our traditions of due process of law." We do not believe these dangers have been avoided under the existing Federal loyalty program. The antics of Senator JOSEPH R. MCCARTHY, of Wisconsin, in his current attack on the State Department have been prominent in the news. But behind the McCarthy episode is the difficult question, bound to be long-enduring in this time of cold war, as to how we can be wholly secure.

How difficult this question is can be seen from the current controversy over the House amendments to the National Science Foundation bill. One of these amendments would give the FBI authority to pass on the loyalty of candidates for Foundation employment of scholarships. The FBI, correctly foreseeing that such a measure would be a long step toward a "police state," does not want this authority. Unless we desire to turn our governmental employees into a set of identical wooden Indians, made to order for the purpose, we had better steer clear of this particular trap.

There can be no question that Russia will put her spies into the so-called sensitive departments of government if she can. In a few cases, in Canada and Britain as well as here, she apparently has done this. So long as our safety depends on keeping certain secrets we must do all we can to frustrate such spies. We must also do all we can to eliminate "poor security risks" who may not be consciously disloyal but who for one reason or another allow information to leak out to people who should not have it. It seems doubtful, after the experience we have had so far with the loyalty program, that the skilled, professional spy can be caught by any such network. Such a professional, for example, is not likely to join Communist-front organizations. He will probably present a seemingly flawless record and an unimpeachably respectable aspect. We have to keep an eye out for him—or her. But we cannot eliminate the spy by setting up foolish and unworkable standards of association or by turning a Congressional committee room into a circus for the display of private animus or personal lust for publicity. Surely this great Nation, fertile in political as well as scientific inventiveness, can do better than that.

If we cannot do better, if every Federal appointee to any important office is tried like a suspected criminal before he takes up his work and is thereafter likely at any moment to be assailed and denounced like an escaped convict, what sort of persons may we expect to have in public employment? Certainly they will not be the courageous, plain-spoken and intelligent men and women whom the urgency of our times demands. They are more likely to be weak mediocrities whose principal concern, like that of the minor functionary in far-away Russia, is to keep out of trouble. And democracy will become a pitiful mockery if its affairs are administered by people whose loftiest ambition is to make no mistakes.

There is a security inherent in democracy itself which may be lost, if we lose faith in free institutions. There is a security in the existence of intelligent men and women willing to make their own moral and intellectual decisions and abide by the consequences. There is a security in the fact that such men and women will not permit any agency of government, executive or legislative, to dictate such decisions to them. There is a security in the faith that does not shiver at every shadow or at the whistle of every wind. We must certainly devise a machinery, if we can, that will keep our essential secrets safe, but it would be far better for a few secrets to leak out than for this Nation to imitate the Communist of Fascist pattern and suppress, in the private citizen or the officeholder, the right of private conscience.

A Misguided Economist

REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. POLK. Mr. Speaker, on last Monday, March 13, our colleague, Mr. WOODRUFF, of Michigan, criticized President Truman's facilities for travel, vacationing, and entertaining. These criticisms have been completely and conclusively answered by a young Ohio newspaperwoman, Miss Jean Roberts, editor of the Clermont Sun, of Batavia, Ohio.

On March 16, 1950, Miss Roberts wrote an editorial entitled "A Misguided Economist," which is as follows:

A MISGUIDED ECONOMIST
(By Jean Roberts)

There are several Republican Congressmen in Washington whose screams of economy have turned them to attacking President Truman and some of the accoutrements of the office he holds.

Representative WOODRUFF, of Michigan, says that Truman is probably the best-paid man in the world, and seems to be complaining of the fact. Undoubtedly this same gentleman, in pointing out the glories of the democratic way of life, has stated that the American people are the best paid in the world. But he seems to draw the line at our top official having the same privilege.

In addition to the Presidential salary, he objects to the Presidential yacht, pullman car, automobiles, and planes. What he fails to mention, however, is that these are not the personal property of Harry S. Truman, private citizen, but Harry S. Truman, President, for only so long as he holds that office. He will not be taking all of them back home to Missouri when a new man takes his place.

Because of his position, any President is more or less required to have all of these things. A special vacation hideaway, as Representative Woodruff terms it, is necessary to the Chief Executive because of the insatiable curiosity of all Americans. You and I and John Doe next door can take our few days or week's vacation anywhere, and no one but our close friends are interested or concerned. What rest would President Truman get if he attempted to get a few days of much-needed rest at any of the more common vacation spots? Autograph hunters, newspaper and magazine reporters and photographers, crackpots with all sorts of ideas for solving the world situation, job seekers, politicians, and just plain citizens would be crowding around him all the time, requesting this, asking that, and demanding the other. Who could rest under such an atmosphere?

What happens when the President has a hurry-up call for a conference in some far-off spot in the world, or even in this country? A private plane, in this age of speed, is the only answer, not only for himself but for the use of members of his staff as well. A private pullman car is equally necessary, for both afford the privacy that is so vital to any serious undertaking.

A fleet of automobiles answers the same purpose for shorter trips. Since few Presidential decisions are made by the Chief Executive alone, he needs numerous vehicles to carry the people with whom he must constantly confer—Cabinet members, advisers, Congressmen, Secret Service men are always in attendance, and after the assassination of such Presidents as Lincoln and McKinley, and the attacks on many others, including Roosevelt, few can deny that their protection is needed.

For many, many years it has been a major complaint in America that that salary for high offices is so meager that the caliber of men so badly required are not attracted. They can do far better for themselves in private business, and not be open to the constant criticism and ridicule that accompany public office. President Roosevelt's death was more or less directly the cause of the position he held and the tremendous pressure of work. Who can say that a yearly salary of $110,000 was too much in such a case? Would you settle for a mediocre man who would be willing to work for less?

Congressmen recently voted themselves a raise in salary, feeling that they were underpaid for the work they did. Like the President, much of their entertaining and other expenses came out of their own salaries, most of them necessary expenses that could be cut only slightly. Public relations is vital for anyone in the public eye, and one good form of public relations is entertainment of visiting firemen, whether they come from your own voting district or State, or from another country.

A reduction of expenses made by cutting the Presidential salary, or whittling down the staff he maintains, or his transportation, would be merely a drop in the bucket. It strikes us that Representative WOODRUFF could accomplish much more if he would

attempt to talk some of his fellow Congressmen out of their pet projects instead. The consensus of opinion of Capitol Hill seems to be, "By all means let's put some economy measures into effect, but we can't possibly sacrifice the new Federal project in Podunk Center, I might lose a few votes there because some jobs would be lost. Let's abolish the construction in the neighboring State instead."

Less logrolling and more long-range thinking could accomplish wonders.

Matthew Connelly

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. PHILBIN. Mr. Speaker, the following article from the Clinton (Mass.) Daily Item, relating to the presence at the centennial banquet of Presidential Secretary Matthew Connelly, illustrates in some degree the high regard and real pride with which the people of his home town look upon Matt.

That he should have taken time out of such a very busy life to attend its centennial banquet will long be remembered by the people of Clinton.

OUTSTANDING FEATURE OF CENTENNIAL BANQUET WAS SECRETARY CONNELLY'S PRESENCE AT THE BIG EVENT

One of the outstanding features of the centennial banquet still being generally commented upon around town was the presence of Presidential Secretary Matthew J. Connelly.

Everyone in Clinton, especially officials of the centennial committee, were extremely apreciative of his attendance.

Secretary Connelly was hoping that his heavy responsibilities, in Washington, would permit him to get away for the Clinton event. President Truman's sojourn, in the South, apparently gave him the opportunity he was seeking.

Instead of taking the sea trip from Washington to Key West, Secretary Connelly came Clinton way post haste, thereby gracing the banquet table with the presence of a loyal Clinton boy very highly esteemed here and thus, from his standpoint, avoiding the seasickness pills and even more uncomfortable characteristics of the presidential cruise to Florida.

Because of his frequent talk about his home town, Clinton is often the subject matter of discussion and banter among the White House staff and in close Presidential circles.

On the night of the banquet, too late to be mentioned, a telegram was received from Washington pointing up Matt's presence in Clinton and concluding "Connelly for President."

After leaving here Wednesday, Secretary Connelly left Boston, by air, for Washington, to attend some businesses briefly at the White House and then took a plane for Key West, where he arrived in time to greet the Presidential party as it disembarked from its memorable trip through the storm-tossed seas off Cape Hatteras and other Southern waters, this morning. When the President and the boys saw Matt greeting them at the dock, somebody's face was red. And it wasn't Matt's.

Truly his presence here was a fine demonstration of his warm feeling for the old home town and was deeply appreciated by all. When he returns, in June, it is hoped he can persuade President Truman to come with him. A warm welcome awaits the President.

Food Is America's Greatest Bargain—To Further Reduce Farm Prices Endangers Our Country's Economy

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. POAGE. Mr. Speaker, at the last session of this House during the week just passed we discussed a bill to correct certain inequities in existing acreage allotments for cotton and peanuts. Although this bill did not involve the problem of price support for agricultural products except in an indirect manner, certain representatives of urban constituencies took advantage of the occasion to renew their insinuations that American farmers are enjoying unwarranted and unfair prosperity at the expense of American consumers.

Mr. Speaker, let us look at the record. What are the facts?

Fact No. 1 is that food is relatively cheaper here than elsewhere in the world. Nowhere else in the world today can an industrial or office worker supply his family with such abundant and nutritious food for so small a percent of his weekly wage or for so few hours of his labor. In this connection, I submit the following tabulation prepared by the United States Department of Labor and published in the November 1949 issue of Labor Review, volume 6, No. 5:

Minutes of working time required to buy 1 pound of food (or 1 dozen eggs)

	Flour	Rice	Bread	Beef average	Ham	Fish	Butter	Cheese	Milk	Eggs	Apples	Potatoes	Coffee	Tea	Lard	Oleo	Sugar
United States	4	8	6	20	28	19	32	26	9	27	7	2	23	56	9	14	4
Australia	4		5	22			34	25	10	53		4		43			6
Austria	15	37	15	92			164	132	22	244		12	308	538	108	53	33
Canada	4		6	42			45	38	9	33		2	39	64	16		6
Chile	13	18	16				182	103	23	122		6	88	241	102		15
Czechoslovakia:																	
Official	8	14	7	54	93		116	22	14	123	35	3	167	290	75	55	22
Black market	35	506	18	368	558		868	51	41	472	55	3	1,661	7,486	936	411	348
Denmark	6		11	53		14	64	36	8	108	9	2	57	141		27	4
Finland	6		8		78	32	108	76	12	109		2	214		48	30	18
France	20	40	10		60	41	146	122	22	106		3	124		56	76	27
Germany	12		9				120	85		298	51	4	640			57	27
Great Britain	5	17	5		44		34	25	16	57		3	76	72	23	11	10
Hungary	7	50	8	70			239	100	28	140		4			133	64	50
Ireland	7		8	77		48	87	69	20	170		4		87	38	57	11
Israel	10	12	6	78		45	41	25	22	77	19	5				31	8
Italy	22	21	17	136	300	74	222	151	28	112		6	191		108		46
Norway	6	23	5	41		15	61	25	10	79		3	40	192		10	8
Sweden	8		11	33	45	19	58	36	8	55	20	2	62			33	9
Switzerland	19	21	7		116		120	36	12	80	9	4	86	186	53		13
U. S. S. R.	52	145	25	254		294	542		59	158	141	6	706	1,506			141

To me, these facts prove conclusively that the American farmer is providing the American people with the lowest-cost food on earth.

As for the percentage of national income spent on food, the Bureau of Agricultural Economics has this morning advised me that, according to their latest calculations, the people of the United States spend about 22 percent of their national income for food, outside of restaurants, and of this 22 percent the farmers get only about one-half, or 11 percent. At the same time, the people of Great Britain spend about 27 percent of their income for food, and the people of France spend approximately one-third of their income. There are no figures for countries like India and Haiti, but the percentage must approach two-thirds of their national income. Surely, in view of these facts, one cannot very seriously argue that American farmers are taking an unfair advantage of their city brothers or that they are enjoying an unfair share of our national income.

In fact, in 1949 the average net farm income, including the net return to the great corporate farms of California, including the income of the pullman car wheat barons and cattle raisers of the Plains, including the income of cotton plantations of the Delta, and including the income of the corn and livestock growers of the Middle West was only $1,705 per individual, including owner, renter, and day laborer, who actually worked in agricultural production, as compared with an average income of $3,250 per year wage paid to the men who work in the Ford plant.

Fact No. 2 is that farm income has dropped materially. In spite of the statement on this floor by a distinguished representative from one of our greatest cities that, "Food prices have just about doubled, whereas all other prices have not," the price of food over the past 2 years, the period then under discussion, has not only not "just about doubled." On the contrary, it has gone

down—probably it has gone down further and faster than the price of any other major item in the family budget.

From the Bureau of Agricultural Economics, I learn that the farm price of all foods dropped 30 percent during the years 1948 and 1949. The total drop in net farm income during this period was 24 percent. It would have been much larger had a kindly Providence not blessed our land with especially bountiful harvests during this period. If the critics of our farmers object to a discussion of the farm price of food and suggest that their quarrel is with retail prices in the large cities, I would suggest that in the spirit of fair play, it might be interesting to note who gets the consumer's dollar. The man who delivers milk in the city of New York charges 20 cents per quart. The New York farmer who produced that milk got 10 cents at his milk room, and the man who produces similar milk in Wisconsin gets only 6.7 cents per quart. I am advised that the delivery costs within the city itself are actually greater than the Wisconsin farmer's entire return on his investment and his labor combined. Need I cite other cases? They all show that the man who works with a food for only a few minutes takes more for his labor from the consumer than the farmer who has spent hours producing the same food. Most of these costs go for the physical handling or processing of the foods, as distinguished from the profits of retailers, and most of these costs are paid to urban people. In other words, a large part of the retail cost of food in our large cities is paid to the residents of those cities, not to the farmers.

Fact No. 3 is that the price of food has declined and is still declining. During the recent debate there were some unfair intimations that the price of food was rising and that the acreage adjustment legislation then under consideration would in some unexplained manner further raise the price of food. The very day this discussion took place, the Washington Star carried an advertisement of a large retail grocery institution comparing many present day prices with their prices of last year. The next morning the Washington Post carried a similar advertisement. I know of no more conclusive answer to the question of whether food prices are advancing or declining in urban centers than the actual offers to sell—here they are as shown by an actual ad in the Washington Post:

	Price Mar. 16, 1949	Today's price
Evaporated milk:		
Cherub, 14½-ounce can	4 cans 49 cents	4 cans 45 cents.

In view of these facts, is there anyone who will still contend that food prices are rising? If food prices are not rising, how can agricultural income do anything but fall even faster than the volume of production falls? In view of the fact that many basic farm products are now under marketing quotas and many more are evidently soon going under such control, the total volume of production is surely headed downward. The peanut acreage allowed in my State this year, even with the extra adjustment granted by the House last week, is nearly 40 percent less than that actually planted 2 years ago. The cotton acreage in Texas in 1950 is approximately three-fourths what we grew in 1949. The same is true of other crops and of other States. Do the gentlemen from industrial areas believe that it is possible to thus drastically reduce the volume of agricultural production and at the same time further reduce the price of farm products and still maintain enough purchasing power on our farms to buy the products of their mills and their factories? Do these gentlemen believe that it will profit the worker for International Harvester, or General Motors, anything to bring the price of eggs down to 10 cents per dozen if in so doing they place that industrial worker in the ranks of the unemployed? Of course, there are those who will suggest that with such low food prices the family could live on unemployment insurance—to which the farmer must contribute but in which he does not share—or even on direct relief. Doubtless there are those who will look no further than this, but surely the Members of this House must know that our Nation cannot survive under such a policy. The fact is that the industrial worker cannot afford to allow farm income to drop much further.

Fact No. 4 is that farmers are not now maintaining their relative economic position. Farmers have never throughout the long history of the world enjoyed rewards for their labors which were equal to the rewards enjoyed by urban people. I referred to this discrepancy a moment ago when I called attention to the fact that the laborer in the Ford plant with no capital investment makes more per year than the average farmer gets both for his labor and as a return on his investment. When the comparison is placed on the basis of hourly income, the difference is even more striking. No one can say just exactly what hours a farmer works, or just what he produces for sale within a given hour. We cannot, therefore, be too certain as to the farmers' returns for an hour of labor. I am rather familiar with the methods of producing cotton. I realize that there has been some increase in the efficiency of production in recent years, but I know that any student of the problem would agree that one and one-half times the price per pound for cotton will reflect a very generous estimate of the return or wage per hour the farmer receives for his labor. The present parity price of cotton is just about 30 cents per pound; one and one-half times that amount is 45 cents. The market price is about 10 percent lower. Cotton has always been considered as one of the most profitable crops. Therefore, it cannot be contended that the farmers' average hourly wage exceeds 50 cents. How many of the urban consumers in whose behalf complaint is made earn as little as 50 cents per hour? Frankly, I don't believe that most of these people want our farmers to work for less—at least so long as city people continue to enjoy wage scales far in excess of this.

The truth is many urban workers are even today asking for more pay for shorter hours. Today the official publication of the Brotherhood of Railroad Trainmen, Trainmen News, carries a banner headline reading, "Shorter Work Week Held Vital, No Pay Cut Either." It has been but a few days ago that the soft coal miners received a new and more favorable contract. A little earlier the steel workers got an increase. I am not raising the question of the justice of these increases, or of the righteousness of the demands of most Government employees that their wages be increased and their work be reduced, but I know and you know that all of these demands are, if granted, bound to be reflected in the cost of the things farmers buy. The truth is that while urban wages continue to climb, farm income is going down, and the difference between the purchasing power of the two groups widens. Actually, each group is dependent on the other for full markets. Both groups can sell freely and enjoy maximum prosperity only when both have sufficient income to buy freely. The maximum opportunity to exchange goods and services is evidently reached when farm prices are at parity. Parity may be difficult of exact definition. Doubtless, our existing legal formula results in some inaccurate determination, but it approaches as nearly to the exact as our imperfect knowledge enables us to approach. Are we then to excuse our failure to use the knowledge we have on the theory that if we cannot be perfect, we won't try to approach a fair relationship between the price of the things farmers buy and the price of things farmers sell?

To listen to the complaints of some of our colleagues one might think that they do not want our farmers to be able to buy the products of their own cities' shops. We hear violent protests, for instance, against the support price of eggs. Right now the farmers of central Texas are taking from 23 to 30 cents per dozen for their eggs. This is only 90 percent of parity adjusted—cut down—for time

and place. Does the housewife of any city ask the farmer to take less than 23 cents for eggs? The truth is the support prices provided by our agricultural program do not hold the price of any food up to even a fair price. No feed is supported above 90 percent of a fair price. The farm price support program never has and does not now compel any consumer to pay more than a fair price for food. Any time the farm price gets above 90 percent of equality, the Government quits supporting that price. Any time the farmer is able to get above 90 percent of a fair price, it is due to causes other than the price support program. The program does help farmers get 90 percent of a fair price. It does not force any consumer to pay more than a fair price.

Do the city dwellers expect to be able to cut farm prices lower and keep enough farmers in business to enable them to always buy cheap food? Mr. Speaker, such a thought is twin brother to the ever recurrent but always disappointing belief on the part of some people that if we would but allow great trusts and monopolies to destroy all small business, the consumer would profit. Of course, he would enjoy the low prices resulting from the effort of the small-business man to compete with the monopoly, but as soon as the independent business is done in, the monopoly always raises the price higher than it was to begin with; and as soon as enough farmers are put out of business, the city worker is going to feel not only the added competition of the displaced farmer for his job, but he is going to find that the man who succeeded in staying on the farm will no longer sell his products at less than cost.

All our farmers ask is parity or equality in the price structure. I have never come before this House asking more. The so-called farm bloc, to which our distinguished colleague scornfully referred, asks for no more—but we do ask for justice. We do ask that we be allowed to continue to provide the market for industrial goods which is so essential to the welfare of our city people. We do ask the opportunity to continue to furnish the American people with the cheapest and best food yet available in this whole world. We do ask our city brothers not to pull the house down on all of us. We know all America can prosper together. We know no one segment of our society can long prosper at the expense of other segments. We know there is no such thing as the "free" lunch. We are ready to do a full day's intelligent work, but we don't like to be branded as leaches or Shylocks when we ask something short of a fair price for the products of that labor. We are willing to sell our produce for less if you are willing to sell the things we must buy for less. You set the wage and price pattern for the Nation. We are willing for you to set it high if you wish, but we insist that you cannot maintain high wages, high profits, and high industrial prices if you depress farm prices far below their present level.

Snooping Bureaucrats Versus Small Business

REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. DAGUE. Mr. Speaker, an article appearing in the current issue of the Saturday Evening Post entitled "The Federal Snoopers Are After Me" has placed my home town of Downingtown, Pa., in the forefront of the news and has emphasized in graphic manner the extent to which the Federal Government has proceeded in its harassment of the small-business man. Robinson McIlvaine, the author of the article referred to, is the editor of the Downingtown Archive and, incidentally, is the great-grandson of Abraham Robinson McIlvaine, who represented our district in Congress from 1843 to 1849. In the Post story Mr. McIlvaine recites a set of circumstances which would be extremely funny were it not for the fact they recount the ends to which bureaucracy will go to coerce its own citizens into obedience to governmental directives which Congress certainly never anticipated when it passed the wage and hour law. The pay-off in the story is found in the editor's conclusion that in order to comply with the governmental ukase he will either have to borrow from his local bank the funds necessary to pay his own salary or face the alternative of suing himself and going through bankruptcy. Nationalization—brother, it is closer than you think. The following news item is taken from the Coatesville (Pa.) Record and explores in more detail the incidents leading to the Post story:

GOVERNMENT ORDERS DOWNINGTOWN MAN TO PAY HIMSELF $582 BACK WAGES

An investigator for the Wages and Hours Division of the United States Department of Agriculture has just discovered that Robinson McIlvaine, editor of the Downingtown Archive, has violated the wages and hours law by not paying himself enough money.

Accordingly the Downingtown man has been ordered by the Labor Department to pay himself $582 back wages that his books show he owes himself. When McIlvaine pleaded that he did not have the money he was told to get it for the law must be served no matter how wacky it is interpreted.

As matters stand today, McIlvaine appears to have a choice of one or two ways out of his dilemma. He can go to the bank and borrow the money, pay himself and then put the money back in bank, but this will involve some interest expense. Or he can sue himself, get judgment, then go through bankruptcy proceedings.

Just how the Government investigator arrived at the amount of wages that McIlvaine owes himself is rather involved. It seems that the investigator spent many hours in the newspaper office going over the books. Under the law McIlvaine was supposed to pay himself a minimum of 40 cents an hour for 8 hours each day up to 40 hours a week and time and half time for all additional hours.

Considering the amount of time that McIlvaine spent working for himself he had underpaid himself to the extent of $582 at the minimum rate. The investigator also found that he had not complied with the law when he called a number of people to help him fold papers on press days, and he owed these people more than he had paid them for an hour or two of work once a week. But this matter was easily and quickly adjusted.

Ordinarily weekly newspapers with circulations under 4,000 copies are exempt from the provisions of the Wages and Hours Act, and because of this McIlvaine thought he was complying with the law. His troubles grew out of the fact that his newspaper and his printing plant are two different corporate entities and although he operates both his right hand is not supposed, according to Government investigators, to know what his left hand is doing.

He solved the paper folding problem by installing a folding machine and firing all of his part-time helpers who were quite satisfied to get some pin money for a few hours work each week. He is now trying to figure out how to solve his own problem by firing himself but he hasn't been able to come up with the answer yet.

According to reports the investigators are now busy going over the books of some other Downingtown industries with good prospects of making some more brilliant discoveries. Already it is said they made some discoveries in Kennett Square and Honey Brook that caused employers to feel the heavy hand of the law. And since the minimum wage has now been raised from 40 to 75 cents an hour there may be worse troubles ahead.

Electric Light and Power Companies Versus REA Loans

REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. MOULDER. Mr. Speaker, the big electric light and power companies have banded together and are on the march to destroy the rural electrification program. They are spending millions of dollars on radio programs and newspaper advertisements to spread misleading propaganda concerning the REA. The high-salaried executives of light and power companies have propagandized the public and have misinformed their employees and stockholders to believe that they will lose their employment or investments if the rural electrification program is successfully continued.

From the beginning of the development of our great country the farmer was the pioneer who cleared the wilderness and led the way for the cities and towns that followed. For many years the people living in cities have enjoyed modern conveniences provided by electricity. But the farmer and his family were compelled to continue to do without electricity and undergo the inconveniences and drudgery of the pioneer. Electric power companies could not make enough or as much profit in the rural areas because of the cost and distance of transmitting electricity to the farmer,

and their charges or rates were too high for the farmer's needs. Hence the rural areas were not served. For many years cities and towns have successfully owned and operated their own municipal light and power plants at great savings to the taxpaying citizens of such cities and towns. In the year of 1935 a similar plan was conceived to provide electricity for the farmers and rural areas. The Federal Government established the Rural Electrification Administration, generally known as the REA. Congress authorized this agency, the REA, to loan money to groups of farmers and people in the rural areas, who were not being served with electricity, and who organized and incorporated themselves into a legal company, generally known as electric co-ops, as and if authorized by State laws, for the purpose of generating and supplying electricity for their own use. Following the acts of the President and the Congress of the United States, the State Legislature of Missouri passed laws authorizing and controlling the incorporation of electric co-ops for the benefit of the farmers and the people residing in the rural areas who desired to provide and serve themselves with electricity.

The Rural Electrification Administration Act was enacted by Congress in the year of 1935 and it empowers the Administrator of the REA to make loans for the construction of power plants and transmission lines to serve rural areas. Before any loan is made to a rural REA cooperative, clear proof must be presented to show that the project will be self-liquidating, that there is need for the project, and that the Government will incur no loss. No loan is authorized for a project which would directly compete with any existing facilities, furthermore, the State and Federal laws so protect the private power companies.

You will recall the bitter opposition of the great power trusts against the beginning of the rural-electrification program in the years of 1935–36. The big power companies would not serve all the farmers and rural areas with electricity—but, like the dog in the manger, they did not want the farmers and the people in the rural areas to provide electricity for themselves. Why? They wanted to control and monopolize the supply of electricity and take "the cream of the business" by serving only a small percentage of the farmers in or near thickly populated areas. Neither did the power companies want the people to generally know that electricity could be produced and sold in sparsely settled rural areas at a price equal to or less than the power companies charged in the densely populated cities and towns.

Recently I have received numerous letters, the majority of which were from stockholders and employees of the Kansas City Light & Power Co. protesting against the REA loans to the Central Missouri Power Cooperative, of Missouri, and the Northwest Electric Power Cooperative, of Missouri, for construction of a steam electric power plant by each cooperative for generating electricity for sale and use by their members and consumers only. I know that the persons who wrote the letters complaining and opposing the REA loans for construction of the steam power plants, were and are sincere, but I firmly believe that they have been generally and specifically misinformed of the facts and misled into fright psychology by the power companies' use of the scare word "socialism." The letters complain against the false allegations that the taxpayers are paying for the steam plants; that the Kansas City Light & Power Co. paid taxes and the farmers' electric co-ops did not pay taxes; that the SPA transmission lines and rural cooperative steam plants would be a wasteful duplication of existing facilities owned by power companies; that the proposed steam plants would destroy free enterprise, and were socialistic.

I believe that the persons who wrote such letters to me will give my explanation and argument in favor of the REA loans as much unbiased consideration as they and others gave to the representations made by the executives and managers of the power and light companies, who, in fact, grossly misrepresented the facts with prejudicial propaganda to arouse feelings of opposition, which is in accord with the selfish propaganda program planned by the power trusts to control or destroy the rural electrification program.

I am not a stockholder nor an employee of a power and light company. I am not a stockholder nor an employee or member of a rural electric cooperative power and light company. Therefore, I have no selfish personal interests which could influence my judgment or opinion on the controversy between the power companies and the REA. I have carefully investigated and considered all of the facts surrounding and in connection with the power companies' fight against the REA. I will not straddle the fence on the issue, but will give you an honest answer and statement of my opinions and arguments concerning this controversy.

Almost everyone agrees that the farmers and people residing in the rural areas should have the opportunity of the advantages and conveniences provided and served by electricity. The farmer, especially, has as much or more use and practical need for electricity than most other people. He needs electricity not only for providing lights and conveniences for his home, barns, and storehouses, but he also needs electricity to provide power for his use in the many productive activities on the farm.

Now let us examine and consider some of the contentions and misrepresentations presented by the power companies, and being used as propaganda to prejudice the public against the REA program and the REA loans for the construction of the steam-generating plants which I have mentioned.

REA LOANS ARE NOT GIFTS AT THE EXPENSE OF TAXPAYERS

The loans by the REA for the construction of the two steam-power plants in Missouri, to be connected and integrated with the SPA's hydroelectric transmission lines to serve the farmers and rural areas, positively are not grants or gifts. The money is loaned by the REA to the Central Missouri Power Cooperative and the Northwest Electric Power Cooperative, both of Missouri, for construction of steam plants, and the loans will be repaid quarterly, with interest, and will not cost the taxpayers one cent. In connection with the subject of loans, I mention the activity of the RFC—Reconstruction Finance Corporation—a Federal finance agency, which was established and supported by the Federal Government. This agency was established during the period following the depression, and it loaned billions to big business corporations, such as banks, utilities, railroads, factories, and other business industries, to preserve our capitalistic system and encourage free, competitive enterprise. It was a worthy program of great benefit to the stability and resources of our country. But many of such big-business industries so saved and nourished back to health are now so strong and prosperous that they spread propaganda condemning and branding REA Government loans as socialism.

Again I emphatically state that the Rural Electrification Administration of the Federal Government loans the money to the farmers' electric cooperatives for the construction of the two steam-generating plants. They are sound loans and will be paid when the quarterly payments are due, with interest. Ninety-nine and nine-tenths percent of all installment payments due on the principal of all REA loans made in Missouri have been paid when due, and in addition, as of December 31, 1949, the farmers' electric cooperatives in Missouri have also paid all interest due on the loans, amounting to a total of $4,403,000. No bank has a better collection record, and no borrower has a better credit record of payments.

TAXES

The properties of the REA co-ops are taxable. The Federal Government does not have authority to exempt cooperative property from State or local taxes. It is true that the electric-power companies pay taxes into the treasury of the county wherein their property and transmission lines are located—so do you and every farmer and businessman in the county—but bear in mind that the electric-power company conducting business in your county also takes hundreds of thousands of dollars out of the county, too, in return for its services and electricity sold. There is nothing wrong about that—but no other business concern or industry demands or expects to monopolize all of a certain business because they pay their share of taxes. It is true that most of the REA co-ops do not pay income taxes because they have not and do not earn a net income profit. No person, corporation, or business concern, pays an income tax when they do not make or earn a profit or income over and above operating costs. However, generating plants, transmission lines, and all other properties owned by the REA co-ops are subject to taxation in Missouri to the same extent as any commercial power company. Such assessment, levy, and collection of taxes are provided for, controlled and executed by the laws and officials of the State of Mis-

souri. Again, I emphatically reiterate and emphasize the fact that there is no law, State or Federal, which exempts the REA co-ops from payment of taxes, and they are subject to the laws of taxation to the same extent as any other property owner.

DUPLICATION OF ELECTRICAL FACILITIES

The Federal Government, in its efforts and program to control floods, constructed flood-control dams in different sections of the country. Some of the dams are designed and equipped to generate electricity. Several years ago the Government constructed the Norfork Dam and the Bull Shoals Dam in Arkansas primarily for flood-control purposes, and in order not to waste the power and to liquidate and pay part of the costs of the construction of such flood-control dams, they were designed to also generate electricity. The Southwestern Power Administration, generally referred to as SPA, is an agency established by Congress for the purpose of constructing and operating transmission lines to transmit and sell the hydroelectric power, so developed, to REA cooperatives, municipal power and light plants, and commercial power and light companies.

It is generally admitted that additional generation and transmission facilities must be constructed if the growing electrical power needs are provided for. The rural-cooperative companies should have the right to construct those facilities which are necessary to properly serve their members. To do so cannot be considered a duplication of existing facilities any more than it would be a duplication to build a road where none exists, or to build a four-lane highway where an existing two-lane highway cannot carry the traffic.

Electrical engineers recommend and it is generally conceded that the greatest efficiency and economic benefits can be derived from hydroelectric power when integrated with steam plants, to firm the supply of electricity. The SPA's hydroelectric power is largely used to serve peak loads, and steam-electric power is utilized to serve part of the peak and much of the off-peak loads. Half, or less, of the SPA electric power will be firmed, the rest must be firmed up with fuel generating steam plants. The REA loan to the Central Missouri Power Cooperative, for the construction of a steam plant in Cole County, will be connected and integrated with the SPA transmission lines from the hydroelectric dams in Arkansas, and, likewise, the same arrangement is proposed in connection with the steam-generating plant to be constructed by the Northwest Electric Power Cooperative at Missouri City.

Power companies have always actively opposed the rural-electrification program and also definitely refused to contract with the SPA for use of the hydroelectric power from the Government dams in connection with their steam-generating plants to serve the rural electric cooperatives at their load centers. The power companies refused to do so even though they were offered a monopoly contract for the hydroelectric power from SPA—Southwestern Power Administration. Interchange of power and pooling of electric facilities arrangements are common practice and important devices widely used in the electric industry to reduce construction, reduce investment, operating expenses, and power costs. That is the proposed arrangement by and between the Southwestern Power Administration and the rural electric cooperatives of Missouri. As a result of this arrangement in the REA loans for the construction of the steam plants, thousands of farmers, still without electric service in the rural areas, especially in our Second Congressional District, will get electric service for the first time, and thousands already served by the rural electric co-ops will get better service at lower cost. That is the arrangement the big power companies object to—they want the rural electric cooperatives to be entirely dependent upon and at the mercy of the power companies for electric power. There is absolutely no reason or justification for singling out rural electric cooperatives and denying them the benefits and advantages of interchange of power and integration of such facilities arrangements, as practiced by the power companies.

And, again I reiterate that the rural electric cooperatives program of constructing two steam plants in Missouri, and the interchange of power and integration of facilities arrangements, by contract with the SPA—Southwestern Power Administration—will in no way whatsoever interfere or compete with the Kansas City Light & Power Co., or with any other commercial power company. As I have stated, Federal and State laws protect the power companies by prohibiting such interference or competition.

FREE ENTERPRISE AND SOCIALISM

We all agree on the principle and need for freedom of enterprise, but like the freedom of the individual, it should not be abused to injure the rights and free enterprise of others. I am unalterably in favor of free enterprise—not for just a privileged few—but an opportunity for honest free enterprise to all. The electric light and power corporations demand and are on a concerted march to monopolize free enterprise and to control all generation of electricity and the supply of electric light and power business. They are spending millions of dollars on radio programs and newspaper advertisements to propagandize and prejudice the public against the REA program. They and their high-salaried executives and lobbyists brand and condemn all efforts of the Federal Government to aid and raise the standard of living for the farmer and laboring man as socialism. They lobby and fight against the REA, farm price-support program, labor-union laws, unemployment insurance, old-age pensions, and other programs which have contributed so much to our economic stability. Yet they, the electric light and power corporations, have enjoyed special and privileged protection of a price-support program for many, many years. That price-support program for the power companies is provided for by State laws which, first, prohibits competition in any area served by the electric power companies; and second, establishes and enforces the collection rates and charges for electricity based upon investment and cost of operation to assure a substantial profit for the power companies. They are also empowered by law to condemn and appropriate private property for use in the operation of their business, and they use the public highways or road rights-of-way for erection of poles and transmission lines without payment for such valuable and specific use. Those are a few of the special privileges which the power companies enjoy, and I ask the electric power companies, Is that socialism, or is it free enterprise?

During the Coolidge and Hoover administrations the big electric light and power companies were entrenched with great power and authority—they were eating high up on the hog. They were not satisfied with a good profit and the many special privileges and monopolies they enjoyed, but were so greedy and grasping for money and political power that they formed and set up holding companies, sold stock to the innocent public for millions of dollars, then manipulated and exploited the companies, leaving the stockholder holding an empty sack. During that same period the electric power companies set up huge "slush funds" which they used to bribe and influence public officers and control elections. The Union Electric Co. of St. Louis, Mo., was one of such companies which had a big slush fund, amounting to several hundred thousand dollars, which was used by its executives and officers to elect and control State and county officers and to control courts and juries. Now, I ask the light and power companies was that free enterprise? However, that condition and practice was eliminated by laws passed by Congress known as the Corrupt Practices Act, and some of the light and power company executives who indulged in such infamous and fraudulent practice were indicted, convicted, and sentenced to the Federal penitentiary.

Many small towns and cities own and successfully operate their own municipal light and power plants at a great saving to the taxpayers of such towns and cities. I have never heard anyone refer to a municipal power and light plant as socialism. Why do the power companies attack a similar plan for rural light and power plants as socialism? In fact, no one ever referred to the REA program as being socialistic until the big electric light and power companies decided to move in to control and monopolize the source of supply of electricity for use in the rural areas. How would you, as a businessman, or as a member of any company or organization, like to be compelled to buy your supplies from one concern, and be deprived of the right to provide your own supplies or commodities, or the right to provide or buy such supply or commodity at the lowest price source available? The farmers and the people residing in rural areas were and are confronted with this situation. They are in a servitude position so far as the wholesale supply of electric power is available, because commercial power companies insist upon contracts, in the supply of electricity to the rural co-ops, which are

prohibitive and restrictive for resale and use of such electric power. In many cases, the power companies' suppliers imposed such restrictions on their sale of power to the farmers' co-ops which made it practically impossible for them to render full service in the rural areas. Thus, the power companies have exploited and abused their monopolized electric power supply so as to deprive the electric co-ops of electricity necessary to enable them to accomplish a real rural area coverage. In addition to the problem of adequate wholesale electric power supply in some rural areas, the high wholesale price or charge by the power companies for electric power has created difficult problems for the farmers' co-ops. As one example, the Boone County Electric Cooperative paid during the month of December 1949, 20.02 mills per kilowatt-hour for all power purchased from one commercial power company on two contracts operating on a 30-day cancellation clause. The records show that this cooperative is not only paying an exorbitant wholesale price, but adequate power is not available at any price. It is reliably estimated that the steam plants and integration of power facilities' arrangements with SPA, which I have mentioned and explained, will provide electric power to the rural cooperatives in Missouri at a wholesale price of 7 mills per kilowatt-hour, or less, which is approximately one-third of the wholesale price or rate paid by the Boone County Electric Co-op.

If the rural electrification program is to reach its objective, electric power must be available to the farmers and people of rural areas at a price that they can afford to pay and in quantities whereby they will not be limited in its usage. Electricity has many uses on the farm and it will be utilized if the farmer, who is a hard working businessman, is given the opportunity to have and use the electricity at a reasonable price.

The REA cooperative is a private enterprise engaged in transmitting and supplying electricity to its members, and is an electric cooperative company organized and existing under and by virtue of the laws of the State of Missouri, and to deprive such company or organization of rural people of the right to borrow money from the REA to construct a steam power plant to generate electric power for sale and distribution to its own members or rural consumers would actually violate and obstruct free enterprise.

ELECTRICAL WORKERS AND RETAIL BUSINESS

Executives and managers of power companies have organized meetings of electrical workers and power company employees to prejudice them with concern for their employment. Nothing could be more unfair and unjust to the electrical workers and employees than such propaganda. In the first place, as I have stated, the REA program does not conflict nor interfere with the power companies' business. The construction of proposed REA transmission lines and steam power plants are let by contract to the lowest bidder, and the contractor will employ labor and electrical workers as he would employ labor in such construction work for a power company.

Furthermore, the providing of electric power to farmers and people in rural areas has and will continue to create a greater demand and market for many electrical devices and machinery, such as electric refrigerators, electric motors and machinery, electric stoves, heaters, and miscellaneous electrical equipment, thereby creating additional business and employment in the wiring of rural homes and buildings, and in the manufacture, retail sales, installation, and maintenance of such electrical facilities.

Therefore, I cannot understand electrical workers union opposition, if any, to the REA program, unless they are being coerced and wrongfully influenced by the power companies. Surely the electrical workers union know that the power companies have always opposed organized labor unions and laws for the benefit of the worker.

The REA rural electrification program will attract industries to rural areas where the raw product of such industries are available and we all know that a substantial part of the merchants and retail dealers' business depends upon the prosperity and standard of living enjoyed by the farmers and people in the rural area. I hope and believe that the merchants, bankers, retail dealers, and electrical workers, will join with the farmer and rural people in their fight for a successful rural electrification program.

NATIONAL DEFENSE AND SECURITY

In addition to the great benefits which the REA program and steam-generating plants will provide for the rural areas, our national economy, defense, and security will also be improved.

An abundant and decentralized source of supply of electrical power is essential for our national security. In the present period of world strife and tension we must strengthen our national defense and security wherever possible. Such destructive explosives as the atomic and hydrogen bombs and the terrible mechanisms of warfare make necessary the decentralization of additional development of electric-power supply, so that, in the event of war and destruction of one or more power plants, we will have sufficient electric power from other sources to keep our industries producing. The widely separated steam-power plants and transmission lines of the REA program will provide this essential need for our security and defense of America.

Moviegoer To Get Full Amusement-Tax-Cut Benefits

EXTENSION OF REMARKS

OF

HON. F. D. ROOSEVELT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1950

Mr. ROOSEVELT. Mr. Speaker, one of the major issues before the Congress this year is the possibility of reducing those excise taxes which now represent a greater liability than an asset in the national economy. In the past month I have received several thousand letters from small-business men and other constituents in my district, urging the reduction or repeal of excise taxes, particularly on low-priced furs and jewelry products and on movie-theater admissions. These requests, it seems to me, have a great deal of merit, since the bulk of consumers in these fields are in the middle- and low-income groups.

One consideration in my decisions on any particular excise-tax reduction is the extent to which the benefits will go directly to the consumer in the form of lower prices. I know that many other Members share this view. For their information, I should like to present the following pledges by six motion-picture-theater executives. Almost all of the 18,000 movie theaters in the country are represented in the groups for which these men speak. Almost all of the 70,000,000 weekly movie admissions sold are in theaters covered by these groups. I have already turned these pledges over to the Committee on Ways and Means, and I urge other Members of the House to take them into consideration in connection with excise-tax reductions:

DEAR FRANKLIN: Replying to your letter of February 23, TOA has adopted the policy that any saving through the repeal of the Federal admission tax will be passed on to movie patrons.

In other words, if the present admission price is 50 cents, plus 10 cents Federal tax, or a total charge of 60 cents to the ticket purchaser, the moviegoer will be able to attend the same theater for 50 cents and save the extra 10 cents he now pays in Federal taxes.

Furthermore, we feel that the lower net admission will result in increased theater attendance and enable nearly all of the 8,000 marginal theaters threatened with closure to stay in business. Most of these marginal theaters are in small towns and villages where the average admission price ranges from 25 to 40 cents.

We are very happy to have you on our side in this fight, and I hope you will call upon me whenever I can be helpful.

All the best,

GAEL SULLIVAN,
Executive Director, Theater Owners of America, Inc.

MY DEAR CONGRESSMAN: This is in reply to your inquiry of the 23d as to whether the theater owners, in case the 20-percent admission tax is repealed, will pass on the savings to their patrons or pocket it themselves by increasing their admission prices.

When I accepted the chairmanship of this committee I stipulated that it must be understood that the public would be given the benefit of the saving resulting from repeal. I did this because I know from experience that that question invariably is asked by the Ways and Means Committee and I wanted to be prepared with the proper answer.

All the great theater circuits promptly announced that it would be their policy to pass on the saving to the public. In addition, all the independent theater associations have assured this Committee that their members also will give their patrons the benefit of the saving.

In some territories the theaters have signed individual pledges to this effect. For example, Allied Theater Owners of Texas, a theater association in that State, has sent us the separate pledges of over 700 theaters.

More compelling than all that, to my mind, is the fact that the trailers, posters, and other advertising accessories used by the theaters in reminding their audiences of the tax have stressed the fact that they pay the tax and that they will reap the benefit of its repeal. In view of this it would be a hardy exhibitor who would try to pocket the difference.

Let me say for myself that I have not the slightest doubt that the equivalent of the tax will be passed on to the theater-goers. Neither the theaters nor their customers like to handle pennies and the theaters, in collecting the tax, have generally adjusted their admission prices so as to arrive at a multiple of five. With the tax removed, I should expect the exhibitors to move their admission prices up or down to the nearest nickel break. For example, a 50-cent ticket today represents a 42-cent admission plus 8 cents tax. In that case, I should expect the exhibitor to drop to 40 cents. But a 70-cent ticket is made up of a 58-cent admission plus 12 cents tax and in that case the exhibitor may go up to 60 cents.

Assuming that this course is followed the increases and decreases in admission prices will pretty nearly balance and the moviegoers as a class will reap the full benefit of the repeal.

May I say in behalf of my New York associates that we have noted with deep satisfaction that you favor repeal of the tax. In addition, we greatly appreciate your interest in this subject as shown by your thoughtful inquiry. I am going to presume on this to the extent of enclosing a copy of the brief which we filed with the Ways and Means Committee last Tuesday. This is a comprehensive statement of our case for repeal.

With highest regard.

Yours very truly,

ABRAM F. MYERS,
Chairman, Committee on Taxation and Legislation, Council of Motion Picture Organizations.

(For Allied States Association of Motion Picture Exhibitors: Loew's Inc.; Motion Picture Industry Council; Variety Clubs International; Theater Owners of America; Motion Picture Association of America; Metropolitan Motion Picture Theaters Association; Trade Press Publishers; Society of Independent Motion Picture Producers; Pacific Coast Conference of Independent Theater Owners; Independent Theater Owners Association.)

DEAR MR. ROOSEVELT: The delay in answering your letter was occasioned by my absence from the city.

It is my position that the benefit from the repeal of the admission taxes should be passed along to the patrons of the theater.

The position of the Theater Owners of America which is in the forefront in the advocacy of the repeal of admission taxes can be obtained from Mr. Gael Sullivan, executive director of that organization which has its office at 1501 Broadway, New York.

Sincerely yours,

CHARLES P. SKOURAS,
President, National Theatres Amusement Co., Inc.

DEAR MR. CONGRESSMAN: We have put ourselves on record that if the amusement tax is eliminated, we will pass the benefits on to our customers. It may be that an attempt will be made to eliminate pennies; in some instances by cutting the admission price which accrues to the theater, and in other instances by adding a cent or two to try to eliminate the necessity of using pennies, which we have found to be an annoyance to patrons, and a difficult problem for us. These increases and decreases will practically balance, so that the movie-going public will receive full benefit of the cut in taxes.

May I express my appreciation to you for your kind help in the matter.

Very truly yours,

J. R. VOGEL,
Vice President, Loew's Inc.

DEAR MR. ROOSEVELT: I have your letter with respect to whether it is our intention to have the admission price, if the tax is reduced or eliminated, reduced in accordance with the previous amount of the tax. The answer is yes. We intend to pass the benefits on to the public.

I want to thank you for your inquiry and if at any time we can be of service in helping you to arrive at any conclusions in this respect or any other, do not hesitate to call on us.

I was always a great admirer of your father and have watched with a great deal of interest the progress you have made in the public field. Keep up the good work.

Very truly yours,

LEONARD H. GOLDENSON,
President, United Paramount Theatres, Inc.

DEAR FRANK: Thanks for your inquiry of February 23. One hundred percent of the admission tax as it is reduced will be passed on to the benefit of our patrons.

I want to thank you for the cooperation you are giving me, but then you and your family have always fought the fight of the poor man, so that this fight becomes traditional with you.

Sincere warm regards.

Sincerely yours,

HARRY BRANDT.
BRANDT THEATRES.

Labor's Role in Shaping Home-Building Policy and the Future of Cooperative Housing in America

---

EXTENSION OF REMARKS
OF

HON. RALPH A. GAMBLE

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, March 4, 1950

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks, I include herewith an address delivered by the Honorable Herman T. Stichman, New York State housing commissioner, at the meeting of the executive council of the American Federation of Labor at Miami Beach, January 31, 1950, entitled "Labor's Role in Shaping Home-Building Policy, and the Future of Cooperative Housing in America."

In this address Mr. Stichman discusses in part the defects of the pending Federal cooperative housing bill now before the House and contrasts the provisions thereof with the New York State housing laws. He also shows the progress which has been made in New York in connection with housing.

I regard Mr. Stichman as one of the best-informed men in this country on cooperative housing.

The address follows:

LABOR'S ROLE IN SHAPING HOME-BUILDING POLICY AND THE FUTURE OF COOPERATIVE HOUSING IN AMERICA

You, representing workers in the building trades, and I and my associates in the New York State division of housing as the persons to whom the task of bringing about the building of more housing in the State of New York has been delegated, have completely mutual interests in the field of home building. You are interested in having employment for your men that will be steady in volume over the years; that will support a living wage for the man and his family; that will provide him with decent, safe, and sanitary working conditions; you are interested in home building as an industry that will furnish Americans with good homes at prices they can afford, that will give builders a fair but not an exorbitant profit, that will keep on a steady keel so that not only will your members be employed, but also those who work in the forests, in the mines, in the mills, in the factories, on the freight trains and trucks that produce and transport the materials that go into the final product of the home. We are working to attain the same objectives.

NECESSITY FOR STABILIZING THE HOME-BUILDING INDUSTRY

However, the home-building industry has never functioned on a basis that would produce the beneficial results which I have mentioned. One reason why it has not, and I think it is a challenge to everyone here, is that labor has never taken its proper place as one of the forces that should have a part in shaping policy. Up to this time, you have been largely content to have that policy controlled by realtors, mortgage lenders, developers, builders, and the Government, and you have been satisfied to be heard from solely in connection with wages and working conditions. That might be all right if the results of the control by these other interested parties had been satisfactory to most of those concerned, but not only has the history of the home-building industry not been beneficial to labor, it has not even been beneficial to the other forces which have formulated policy.

The history of the industry, as long as you or I can remember, has been one of booms and busts, and that was its record even before we came on the scene. Let us just go back to 1920. The number of new permanent nonfarm housing starts has varied thus widely since then, including the war period: 1920, 247,000; 1922, 716,000; 1925, 937,000; 1931, 254,000; 1933, 93,000; 1934, 126,000; 1935, 221,000; 1937, 336,000; 1940, 602,600; 1943, 191,000; 1945, 209,300; 1947, 849,000; 1949, over 1,000,000.

You know the effect this erratic course had on your own members. You know that about 90 percent of the workers employed in building the 937,000 houses in 1925 must have been out of work in 1933, when only 93,000 homes were begun, and similar conditions existed for a number of years before and after.

This affected not only your members. It adversely affected many others as well. Let us consider the workers employed in producing the materials used in those 937,000 dwelling units in 1925. What were they doing in 1933 when the construction of only 10 percent as many homes was begun? Who was supporting all these workers and their families?

You were still experiencing the results of the unstabilized building economy in 1946, 1947 and 1948. You felt it particularly at the cessation of hostilities when demands were suddenly made on you to produce in a few months enough trained workers to build, in a year or two, all the homes that hadn't been built in the 1930's, all the homes that hadn't been built during the war years, all the homes that were wanted by families who had doubled up during the 15 years of economic distress, all the homes that were needed by boys who had gone off to war leaving wives with in-laws, by boys who came

back from war years older and then wanted to marry, and you were asked to build them—right away—fast.

You keenly felt the results of this unsound planning in the public press, when you were unfairly accused by some persons of having failed to train sufficient apprentices and of responsibility for inadequate production because the average age of building-trades workers was over 55. No attention was paid to the fact that this had to be true because your workers were in their prime in the building boom of 1925, in their thirties and forties, and that, of course, no apprentices were trained during the 1930's because no young man in his right mind would seek training as an apprentice in an industry where no jobs for journeymen existed. So, at the cessation of hostilities, necessarily the average age of the workers was 20 years more than it had been at the peak of the boom in 1925, since the bulk of men in the building trades were the same ones who had built those houses in the 1920's and who had managed to survive the depression years.

And, as I say, labor is not the only group hit by this unbalanced home-building economy. The lender too is affected by it. If he feels that there is a ready market for mortgage loans only 3 or 4 years out of 10, and that then there is bound to be a bust, he will try to get a sufficiently high rate of interest on his money during those 3 or 4 years to compensate for the other years when he is taking money on deposit but can't lend it out. It has its effect on the realtor and the builder who will try to make a high speculative profit in boom times to carry them along during the depressed years. It has its effect on our railroad workers, on the men who drive the trucks, and on everyone whose living is dependent in any degree on there being a considerable amount of home building in every year if they are to have steady employment in a feeder industry.

But most vitally it has its effect on the public and on you, as representatives of building trades workers. Therefore, I believe that, for your own protection if no more, you must take a vital part in shaping home-building economy. But I do think your efforts to bring about stabilization will help all others concerned.

WHAT NEW YORK STATE HAS DONE TO SPUR STABILIZATION

I believe that New York State's program of cooperative housing is one of the keys to the solution of the long-continued problem. But first, let's consider more recent history which led to our developing a laboratory of cooperative home-building in our State.

As we look back over the years since the war, we see that the national housing economy is not improving. At the cessation of hostilities, there was no effective way to meet the tremendous demands for housing throughout the country from families who had been doubled up, from veterans who wanted homes of their own, as well as from young people who sought to marry, and this was not due to the results of the war alone.

Of course, materials were in short supply, but this was not merely because stock piles had been used up during the war. It was also due to the fact that the factories which had been producing them during the boom 1920's had turned to producing other things during the 1930's when the building bust was on. Factories were retooled to produce building materials, but some producers and distributors sought to take advantage of the unparalleled demand, or permitted others to do so, and the products went into the black market, which held back home building.

Although money was in plentiful supply, efforts were made, even by the Federal Government, to force mortgage interest rates up to a figure that was unrealistic under existing conditions. Drastic measures had to be taken—it became necessary to provide makeshift shelter, but we thought it was for only a few years.

The State of New York was the first to adopt an effective emergency housing program. When we saw that we could not get the number of permanent homes that we needed, our legislature, at Governor Thomas E. Dewey's request, made available a fund of $69,800,000 with which we provided emergency housing and educational facilities. We built 75 temporary projects in 40 municipalities in New York State, and about 60,000 veterans and their families have been housed in about 11,000 temporary apartments and over 13,000 college-dormitory accommodations which were provided as part of our program. In addition, we furnished hundreds of other facilities, including classrooms, laboratories, and libraries to aid the colleges take care of the great enrollment of veterans. The Federal Government had a somewhat similar program.

The State of New York also has leadership in clearing slums and replacing them with decent homes for low-income families for whom private enterprise has not been able, over the years, to provide with adequate housing at rents which they can afford. Our rentals are about $8.95 per room, on the average, in these public-housing developments. We have a $735,000,000 loan fund for those purposes, coupled with permissive annual cash payments of up to $25,000,000 to help keep rentals low. Today our permanent public-housing program under contract includes 51 projects in the State, of which 17 are in New York City. Of these projects 21 have been completed, 16 are under construction with some of them partly occupied, and 14 are under contract or in the planning stage. Eventually this phase of our program will provide homes for about 300,000 persons in the lowest income-earning groups. The Federal Government has a new similar program.

So far as middle- and lower-middle income families are concerned, there still is something radically wrong. There are still, in this fifth year since the cessation of hostilities, about 1,000,000 persons living in converted barracks, in Quonset huts, and in other temporary shelter throughout the country.

The Federal Government has tried several programs which have not produced homes at reasonable costs or rentals within the means of families of average income, and yet it has not profited by experience, as its newest bills, those pertaining to cooperating housing, make clear. It seems to be continually playing into the hands of speculative builders, instead of devising means to limit the speculators and so help labor and the public.

If you will glance at one of New York City's Sunday papers of the last 2 weeks, you will see advertisements such as these for new housing: One and one-half rooms, $78 monthly; one-bedroom apartments, $85 per month; two rooms, $70 and $80; two and one-half rooms, $90; three rooms, $95; three and one-half rooms, from $145; four and one-half rooms with varying rates, one advertisement listing $120 to $135, another $122 and up, still another $105. Of course, this is not the top quality—that is much higher. Does that help the average man looking for a home? The Government insured billions of dollars of loans for new housing built under its FHA program. But most of the housing developed under this program has had rentals, so far as our metropolitan centers are concerned at least, of $25 and $35 per room monthly, and more, which is far beyond the reach of the average wage earner. And so, of course, it has had no discernible effect competitively in bringing about any reduction in rentals for other new housing.

So far as the Federal Veterans' Administration housing loan program is concerned, you are familiar with the criticism of the sales prices and quality of materials in a number of homes constructed under it.

No really effective control was exercised by the Federal Government, under its programs, over the profits of the developers with the result that some speculative builders skimmed the cream and gouged the public with high rentals while labor was given an unfair share of the responsibility.

Now, let me contrast what the Federal Government proposes to do with what the State of New York, under Governor Dewey, for some time has been doing to help stabilize the home-building industry, help show what true building costs are, prove that it is not labor that is responsible for excessive housing prices, and provide good homes for lower middle-income families.

We have a law in our State called the limited dividend housing law under which, lower middle-income families seeking to build housing for themselves, and sponsors of rental housing for such families who are willing to limit their earnings on equity invested to 6 percent, may obtain a waiver of all State taxes and exemption from municipal taxation on the value of the new housing, but not on the land. We wanted to show true building costs—to prove who was and who was not responsible for the excessive prices demanded for housing—to make clear to the public that good homes could be built for lower middle-income families by private enterprise at reasonable cost. We developed a cooperatively owned housing program under that law. But we adopted a number of safeguards. These included prohibition against unreasonable mark-ups in the price of land; initial limitation of profits to 5½ percent in builders' contracts with all profits between 5½ and 7½ percent being shared equally by the builders and cooperators, and all over 7½ percent going to the cooperators; audit by the State of the contractors' books, and State supervision of the management of the housing developments after they are built. I conferred with the heads of more than a dozen of our building trades unions and they endorsed the proposal enthusiastically. Every cooperation was forthcoming.

Using that law, we organized a number of cooperative housing projects in which the participants make down payments of about $250 a room and become mutual home owners with carrying charges of about $14 per room, which includes amortization and interest on the mortgage, heat, repairs, and full maintenance.

Although mortgage lenders were requiring 4 or 4½ percent interest in the prevailing market, we persuaded the Bowery Savings Bank to lend over $7,000,000 for our first 800 family garden-type development, Bell Park Gardens in New York City, at 3½ percent, a good saving. That institution believes in our program and is cooperating in connection with other similar developments. Other savings banks are following its leadership. The insurance companies have not yet done so. Most of the 800 families are occupying apartments in the development now, and they all say that it is much better than they expected.

So productive was labor at Bell Park, and so efficient the contractors, that there will be a dividend of about $400,000 for the cooperators, in connection with building construction of about $7,500,000, equivalent to reducing their down payments to about $140 per room. Or it can be used to reduce carrying charges. We have found that most builders are willing to accept limitations of their profits to reasonable figures under our program and that they are anxious to participate. We have also, as part of the same program and with the same profit limitation, authorized the construction of rental apartments with rentals of less than $15 a room monthly. Altogether, we have approved the

construction of more than 6,000 home units at about these charges, including one for 2,000 families sponsored by local No. 3 of the International Brotherhood of Electrical Workers and employers of its members, and one for 288 families sponsored by the Amalgamated Meat Cutters Union in New York City. A third for almost 800 families with a smaller mortgage and higher participation payments is sponsored by persons affiliated with the Amalgamated Clothing Workers. I anticipate the approval in the next few months of many more home units in the State to be cooperatively owned or rented at the figures I have mentioned.

This contrasts with the $25 to $35 and more per room monthly rentals and high sales prices demanded for housing built under FHA and Federal Veterans' Administration programs without the protective provisions found in the State programs. The reason for the difference is readily apparent. The State of New York has been seeking to help those who need homes, as well as labor. The Federal program seems designed to help the builder primarily. And many of those builders perform not a great deal more than the role of managers and takers of bids from subcontractors—with the actual job of building being handled by the latter. Profit is charged on profit and labor unfairly blamed for the result.

New York State's program proves that the responsibility for high costs has not been that of labor, because we have used the same workingmen, the same materials, paid the same prices for land, and used the same private lenders, but we have been watchful, we have required efficient building methods and we have eliminated speculative demands and have allowed fair and reasonable profits only. But the builders we have used have been more than satisfied—they are looking for more similar jobs.

DEFECTS THAT MUST BE CURED IN THE PROPOSED FEDERAL LEGISLATION

Now the Federal Government, despite the example of the State of New York, is continuing to play into the hands of the speculative builders. The Maybank-Sparkman cooperative housing bills will prove to be a $2,000,000,000 boon to some speculators rather than a benefit to labor and to lower middle-income families in need of housing, unless the profits of building promoters are specifically limited by Congress and the program made into a laboratory to determine true building costs, just as we have done.

There is room for Federal aid to cooperative housing and in reducing home building costs, but it should be such as will really help in those essential fields, and not of the kind that will really only aid speculative builders. The present Federal bills give no real help. They have no effective provisions for encouraging efficiency, reducing costs or lessening total financing charges. Instead, they seek to reduce annual carrying charges by providing for the lending of mortgage money by the Federal Government, through the device of a Federal guaranty, with an annual interest rate which it appears may be 2½ percent or somewhat more and lengthening the mortgage period to 50 years, or, in the event of refinancing, to 60 years, with provision for extending these periods three more years. This would increase the aggregate of carrying charges and merely spread the heavier burden over a longer period of years. So far as supposed savings are concerned, there is shadow through the device of a Government guaranty which would bring a lower annual interest rate but would carry with it greater aggregate outlays and obvious inflationary possibilities today. But there is no substance, no effort to cut real costs by spurning technological advances, encouraging efficient building practices and definitely limiting builders' profits, in return for the low interest rate, so as to eliminate a continuation of unfair and excessive builders' demands.

Indeed, the Maybank-Sparkman bills will in fact hurt the idea of cooperative housing as a laboratory to reduce costs by glossing over the present deficiencies in the home-building industry and concealing its speculative demands behind a curtain of extended amortization and interest payments.

It is as though the clothing or the radio, television, or automobile industries, instead of introducing efficient mass-production methods to lower true costs and meet competition, had asked that the Government provide purchasers with direct long-term loans or long-term Government guaranteed loans at a similarly devised lower interest rate to enable such consumers to buy their products and then offered the result as an example of cost savings. That would be a subsidization of inefficient methods in those industries—just as the present Federal bills would constitute a subsidization of present day builders' inefficiencies and their excessive demands. The price would not be cut, the monthly payments would be lowered but the purchaser would be paying more in the long run because of the higher aggregate of interest over a longer period of years.

Increasing the mortgage period from 34½ years to 60 years, under the Maybank-Sparkman permissive refinancing provisions which would undoubtedly be availed of, would increase total interest payments by 90.9 percent, almost double. That is, it would increase total interest payments by $5,510.62 on a loan in the principal amount of $10,000 at a 3-percent interest rate, and would effect only a 22.8-percent reduction in the amount of monthly carrying payment. Total interest payments over a 60-year period on such a loan would amount to $11,574.21, so that the borrower would be paying $21,574.21 to pay off a $10,000 loan. Whom would that help? Is that cutting costs? Increasing the mortgage period to 50 years would increase the aggregate of interest payments by 53.7 percent, that is, by $3,255.07 on a similar loan, and reduce monthly carrying charges only 17 percent.

The Federal bills, as I say, would demonstrate nothing to the country at large—the only people who would receive the benefits, questionable as they are in view of the increase in total carrying charges—would be those living in housing built under the Federal program. What we need instead in every State is an open laboratory, just as we have in New York, to demonstrate how all building costs can be reduced—whether built with Federal financing or private financing, unless it is proposed to have the Federal Government finance all the housing needed now and in the future.

I recommend that you take an active part in shaping any new legislation, and in seeing to it that the proper safeguards are inserted, instead of leaving it to building promoters and mortgage lenders.

The advantages and disadvantages of the pending Federal bills should be carefully considered by you so that you can determine whether they are really helpful to the home-needing public and to labor. While a reasonable rate of interest is advantageous and is a welcome contrast with Federal efforts in the past to increase the interest rates on mortgage loans, let's consider other possible disadvantages.

Direct Government lending at a rate too far below what savings bank depositors would like to get on their deposits, and below the amount of return life-insurance companies calculate on their investments in determining premiums, may adversely affect the loan market for saving companies and insurance companies. This, therefore, might decrease the amount of interest which savings bank depositors would receive as well as increase the premiums on life-insurance policies.

If the intent is not to reduce the interest rate substantially, then the proposed legislation is entirely unnecessary, since simply lengthening the mortgage period unduly would be disadvantageous. For such lengthening of the mortgage period to 50 and 60 and even 63 years, as is proposed, not only greatly increases the total amount of interest paid over such a long span of years, as I have indicated, but it abolishes, for all practical purposes, any ownership feature, even though the present bills purport to provide the basis for cooperative home ownership. If one bought at the age of 28 or 30, the executors of his estate would get the deed, provided he left enough to pay what is still owing. The Federal proposals would mean that 99 out of 100 so-called cooperators would never pay off their mortgages in their lifetime, but would die in debt. In reality, they would be renters throughout their lives, and their children would have to take over the mortgage debt or be left without the family home they thought was theirs.

The Federal cooperative housing bills can be justified only if the public is given benefits that at least balance the possible disadvantages to which I have referred. They can be justified only if excessive demands are eliminated and builders' profits are limited to a reasonable figure as we have done. They can be supported only if the Federal cooperative housing program is made into a great national laboratory to examine true building costs, which should have beneficial results in bringing down the cost of all housing. Builders should be willing to accept such a limitation of excessive demands if the program really is to aid them in the long run, as it must be supposed to do. They should not expect all other groups in the economy to make sacrifices for their sole benefit.

Of course, some will say that there is at least token recognition of what I have been urging by the language used in the bills that the proposed legislation is to be administered so as to assure that its benefits are not dissipated through speculative devices. That is not enough. A builder's profit of 20 percent may not be regarded by Federal personnel as speculative; certainly nothing in past performance indicates activity to curb profits that were even larger. A reasonable profit limitation should be written specifically into the bill if the public is really to benefit and learn who has been really getting rich. And the administrator of the cooperative housing program might well be appointed directly by the President so that the program can function as a true laboratory.

Otherwise, the Federal cooperative housing bills, which have mistakenly been called socialistic by some, will prove to be feudalistic instead. Socialism at least purports, no matter how it may fail in actual performance, to take from those who have and to divide it equally among those who have not, while the Federal bills would take, over a too long period of years in the form of high aggregate of interest payments, from those seeking home ownership, from savings-bank depositors and from those holding insurance policies, from labor in the form of an unbalanced building economy, and give to those who already have plenty—namely, speculative developers and builders.

New York State's program of cooperative housing brought clearly into focus before the public gaze all the facts which prove that we can get good housing for lower middle-income groups—the forgotten families with incomes just too high for public housing and too low to be able to afford rents and prices demanded by speculative builders—at costs within their means by using the same forces of private enterprise that have been used in the past, and that all that was needed was to eliminate abuses. We have proved that it was not necessary to substitute Government

UNIVERSITY OF MICHIGAN

for any factor of private enterprise, provided there is the proper control.

The Federal legislation, on the other hand, does nothing specifically to curb abuses and if, instead, all that it does is to spread costs over a longer period of years without materially reducing them, it will not help what you, as representatives of labor, and I are trying to accomplish: That is, to get building costs down to the minimum by eliminating speculative abuses and profits so that we can have a sufficient amount of housebuilding in every year to stabilize employment and the entire industry.

BENEFITS UNDER THE STATE PROGRAM

Every resident in the State of New York benefits by our nonpromotion cooperative housing. Let me recapitulate the benefits to the various groups:

1. Lower middle-income families who need housing and cannot pay current rentals or purchase prices.

Costs in cooperatives become about $14 to $15 per room monthly, including amortization, heat, interest, light, repairs, and maintenance, plus down payments of about $250 per room, with rentals of about $15 per room monthly, instead of $25 to $35 and more monthly. This is even less than New York City is charging in housing projects which it is building under its own so-called noncash subsidized program, and at least 40 percent less than other equivalent housing.

2. All those who need or may need homes.

While New York States recommends that only 5 to 10 percent of the homes needed be built under its nonpromotion plan with partial tax exemption, the results will aid others as well. The monthly savings of about $11 and more per room are not due solely to the value of the municipal tax exemption on the value of the improvement for a period of years, and the waiver of State taxes. This may be worth up to $3.75 per room monthly. The other savings of more than $7 per room monthly are becoming available to all families as builders reduce their prices to the public to reflect the actual costs, rather than speculative mark-ups, publicly demonstrated to be true by our projects as working laboratories. Our savings are achieved by:

A. Limiting the profit of the builder to 5½ to 7½ percent. In other building operations, builders' profits are twice as much or more.

B. Maximum production given by labor on these projects, since it is aware that an increased rate of production will not merely increase a builder's already large speculative profits.

C. State-supervised management of the developments, with maximum tenant cooperation and limited but reasonable dividends, results in reduced repair and maintenance costs.

D. Reduced interest charges on mortgage loans.

3. Builders and building-trades workers.

I have pointed out the booms and busts of our housing cycle. Elimination of speculative profits will make possible building even in so-called lean years, similar to the early 1930's, since costs will always be within the means of a major portion of the public. This will stabilize building and employment conditions, eliminate booms and busts, encourage sound apprentice training programs, and make possible a continuous flow of adequately trained workers.

4. All the public.

Demonstration that private enterprise, with cooperation from government at proper levels, can provide lower middle-income groups with good housing, is an answer to demands from certain quarters that Government must take over and build housing for practically all the people at public expense. Our program aids democracy by helping people to help themselves.

New York State's program proves that what we need is less Government interference and control but more public aid. If some of the forces in the field of private enterprise are abusing their prerogatives they should be controlled, but I do not think that Government should take over. That is the policy we have followed in New York State.

Not long ago, I visited a number of European countries and studied their housing and economic policies. Where the people, in order to correct abuses by private enterprise, allowed the pendulum to swing too far the other way and put government into business in competition with its people, we find economic distress. Let us not follow the same course here; instead, let us correct the abuses.

One way to make certain that we get that correction is for you to assert yourselves and take over your rightful place in the leadership of those who draft our housing policy. That is my first recommendation.

I also recommend that your member unions throughout the country take steps to have each State initiate a cooperative-housing program similar to ours, and, as I said before, that you see to it that our controls are made part of any Federal program. Indeed, the proposed Federal legislation might well be changed so as to provide matching benefits which would induce all the States to adopt nonpromotion cooperative-housing programs, and thus to ascertain true home-building costs. There then would be yardsticks to eliminate excessive speculative demands in the various parts of the country. If each State does what New York State is doing, I think we will soon produce enough housing at sufficiently reasonable costs and rentals to meet the needs of our lower middle-income families and all the public. We will also aid in stabilizing our home-building industry, with consequent benefit to you, to the employer, the developer, the builder, the lender, and to all America.

Alaska Statehood and National Defense

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1950

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to quote below an article appearing in the March 19 issue of the New York Journal-American written by Gov. Ernest Gruening of Alaska:

GOVERNOR GRUENING TELLS WHY ALASKA STATEHOOD DELAY INVITES INVASION BY REDS

(By Gov. Ernest Gruening of Alaska)

WASHINGTON, MARCH 18.—"Once to every man and nation comes the moment to decide in the strife of truth with falsehood for the good or evil side."

Thus wrote the great American poet James Russell Lowell.

His poem, The Present Crisis, dealt with the impending Civil War. Its great issue was clearly stated by Abraham Lincoln. Our Nation, he said, "could not endure half slave and half free." The American people decided that issue for the Nation.

Today the issue is no less clear. It is whether all mankind shall be slave or free.

DECISION UP TO PEOPLE

Again the American people—through no choice of their own—are called upon to decide, this time for the whole human race.

In the present crisis, the greatest civilization has ever known, the leadership is ours whether we will it or not.

We can only go forward to victory or face the extinction of every freedom Americans cherish and that man has achieved in his age-long struggle upward from darkness toward light.

Today in a far deeper and more terrible sense than when our forefathers created government by consent of the governed, the alternatives are liberty or death.

We face today the most ruthless, unscrupulous, and fanatical enemy the world has ever known. His are the instincts of the brute, the cunning of Satan, and the weapons of modern science.

We are now engaged in the cold war.

FREE SOCIETY BETTER OFF

This is a struggle just short of shooting war to persuade the neutral, the apprehensive, the wavering peoples of the world that a free society is better than a fettered one.

We must win the cold war in order to avert a shooting war with the horror of the H-bomb.

Two parallel policies are imperative for victory:

1. Our defense must be strong. The stronger, the less the likelihood of attack.

2. We must live up to our professions of democracy. Deeds, not declamations, are required. We must be strong in our faith.

The challenge is here and now. It lies before the Senate of the United States. It rests in the Senate's opportunity to grant statehood to Alaska.

ALASKA DEFENSELESS

Alaska lies within naked eye view of Soviet Siberia.

Alaska is today defenseless.

Alaska could be taken in a few hours by two air-borne divisions.

They could overwhelm the 8,000 men who are all Uncle Sam has provided to defend an area one-fifth as large as the United States with its long fronts on the Bering Sea and the Arctic Ocean.

Our Alaskan airfields would then become the enemy bases from which every point in the United States could be bombed.

For years the Territorial Americans of Alaska have pled for adequate defenses for Alaska in vain.

For years before World War II, Alaska's voteless Delegate in Congress prophesied what would happen unless Alaska were defended.

And Alaska was the only portion of America invaded and for a time held by the enemy.

That enemy was driven out. Driving out a far more powerful enemy trained from the cradle in Arctic living and know-how and supplied from adjacent terrain would be a far different matter.

The cities of the 48 States could be destroyed while we are deliberating how to expel him.

Gen. "Hap" Arnold, the great commander and creator of the United States Air Force, shortly before his death wrote in his book Global Mission:

"Through to this day, Alaska has never received the attention in national defense planning that it deserves * * * but we were never able to get the money or allocations for the Air Force that we really needed there to give us the kind of bases we required then, and need more than ever now."

Alaskans know why. They know that as long as Alaska remains a Territory it will not

be adequately defended. Not merely Alaska but the whole Nation and all mankind will pay the price.

BILLIONS FOR DEFENSE

In the last 3 years since the menace of a Soviet-enslaved world became crystal clear, Uncle Sam has poured billions of dollars into the still free countries of Europe to prevent the Soviet advance on an eastern front 4,000 miles from our shores.

It has undoubtedly been a good, calculated risk, and so far at least seems to have held back the Red tide over there.

The first session of this Eighty-first Congress unhesitatingly added $5,700,000,000 for economic aid and $1,400,000,000 for military aid to the billions voted in previous sessions. Virtually the full amounts requested were almost unhesitatingly voted.

But meanwhile the Communist hordes have overrun China and hold most of Asia.

On our western front neither a broad ocean nor free nations lie between them and us.

Yet the House of Representatives almost adjourned without action on the modest request for a mere authorization of $137,000,000 for Alaskan defenses. The decision to do so was announced last August.

HOUSE YIELDS

Finally, in response to the desperate outcry of Alaskans to secure a faint equivalent for our own national back door to that accorded the European front door, the House yielded.

However, it cut the requested authorization by one-third to $96,000,000.

If this pitiful fraction were immediately appropriated as well as the balance that was cut off and its expenditure speeded, it would be at least 2 years before Alaska could achieve a radar screen and the 25,000 ground troops which alone are contemplated as the Alaska defenses.

But action still lags.

It is now March and our principal construction season in Alaska is at hand.

We are in grave peril of losing another year. We are inviting attack through our back door left conspicuously ajar.

It is left ajar for invasion by an enemy who does not acknowledge the validity of the sale of Alaska by the Tsar.

It is from the Soviet standpoint still "Russian-America." They mean, if we will let them, to hold that part of America physically, permanently.

AMERICA'S ANSWER

Statehood—the full incorporation of Alaska into the Union—is the one clear answer America can make to this oft-uttered threat of annexation following invasion.

The people of Alaska 4 years ago requested statehood on referendum.

After 83 years under the American flag they are entitled to the equality of full citizenship. They are entitled to self-government on the established American pattern.

Can America continue to be concerned—convincingly—about the lack of democracy behind the iron curtain when it denies the simplest measure thereof to its citizens?

Can America lead the world effectively—toward its principle of government by consent of the governed, when it retains its own obsolete colonialism in Alaska and Hawaii against the expressed wishes of its citizens there?

Can we in America effectively preach to the whole world what we do not practice at home?

"Once to every man and nation comes the moment to decide."

The moment is here and now.

The Senate of the United States can decide by an affirmative vote on statehood at this session of Congress that America will continue to fight the good fight and keep the faith.

International Trade Organization

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1950

Mr. JAVITS. Mr. Speaker, the following letter by a business leader on ITO should serve to refute the confusion which its opponents are trying to create. This letter should make it clear that ITO means what it says, that is, that it proposes to open up the channels of trade of the world now hampered by many avoidable restrictions. ITO does not deprive the United States of any freedom of action in our national interest; on the contrary, it is in the best interests of the United States because it is one of the greatest single means of attaining world recovery:

FEDERATED DEPARTMENT STORES, INC.,
Cincinnati, Ohio, January 19, 1950.

Hon. JACOB K. JAVITS,
House of Representatives,
Washington, D. C.

DEAR MR. JAVITS: I wish to urge ratification of the proposed Charter of the International Trade Organization which is scheduled for early hearings before the House Foreign Affairs Committee. In its broader aspects, the Charter, in my opinion, lays the foundation for the establishment of a more rational world-trading system and thereby can strengthen our own economy and implement this country's foreign policy.

It seems to me that as a matter of practical self-interest, we are obliged to support measures which will stimulate the foreign trade of those nations we are seeking to help. If they are to become self-sustaining, the world's markets, including ours, must be opened to their export products. The alternative is that we shall be compelled to continue direct financial assistance and tax ourselves accordingly to pay for it.

As between these two choices, I believe that our course is clear. The European recovery program is essentially a stopgap measure and one that is intolerable for the long pull. There can be no lasting stability for any country in an economy which is based on American gratuities and our own economy cannot indefinitely stand the strain which this aid imposes on it.

I believe that the ITO Charter is a necessary adjunct of the European recovery program. By leveling the artificial trade barriers which now interfere with the export business of nations dependent on our help, it can serve to lighten our tax burden and protect the present American investment in European recovery.

I favor the charter for the following additional reasons:

1. It strengthens the free-enterprise system by substituting competition in international trade for artificial government controls. By helping the economy of participating nations, it will promote prosperity which is essential to the survival of the free-enterprise system.

2. The Charter is a logical extension of our foreign policy which is seeking to contain Communist expansion. The restoration of the world's economy through the encouragement of international trade can be the strongest bulwark against that dangerous trend.

3. The Charter gives wider scope to the reciprocal trade agreements program. It applies to a larger number of nations and covers many more aspects of international trade relationships such as commodity agreements, cartels, full employment, and economic development.

4. It supplements the functions of the International Monetary Fund and the International Bank for Reconstruction and Development. Neither the fund nor the bank can operate with maximum efficiency in improving world financial conditions unless there is a free flow of goods from one country to another and unless each country can export enough to pay for its imports.

5. The Charter simplifies customs practices which at present set up a maze of conflicting regulations, all different for different nations. These have become in effect invisible trade barriers which hamper international trade.

6. It seeks to prevent discrimination by one nation against the trade of another.

7. The Charter enables foreign nations to remedy their dollar shortage by use of quotas to keep imports within their means of payment. But, at the same time, it provides an orderly procedure for applying these quotas and for their termination when a country's balance of payment difficulties are ended.

There are only two articles of the Charter to which I would take exception. These are Nos. 11 and 12, relating to international investment. Their purpose is of the highest importance—to stimulate private international investment. But I believe they are ambiguously stated and can be eliminated without weakening the main body of the Charter.

Although the Charter is not a perfect instrument, I believe it represents a notable start toward remedying some of the serious economic illnesses of the world. To reject it because it includes compromises which are essential in the drafting of any multilateral agreement would be a mistake. It provides, at least, a framework in which improvements can be sought and is flexible enough to permit such improvements to be made.

With the International Trade Organization, we shall have a code of rules which eliminates or controls many of the most harmful trading practices. We shall have a mechanism for interpreting, enforcing, and improving these rules and a forum in which trade problems may be handled in a spirit of international cooperation. Without the ITO, it is to be feared that we shall face a progressive stagnation of world trade.

It seems to me that our political and economic supremacy among the family of democratic nations obligates us to take the leadership in making the ITO a functioning body.

Yours very truly,

FRED LAZARUS, Jr.

Library Service

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1950

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks, I am including a copy of a letter I am sending today to Mr. Joseph D. Keenan, director of the League Reporter. It refers to a completely erroneous and apparently intentionally deceptive article at page 3 of the issue for March 20. I am confident that all readers of this paper will be interested in the clear facts which led a

majority of 196 Members of Congress to vote against the passage of this bill.

MARCH 18, 1950.

Mr. JOSEPH D. KEENAN,
Director, League Reporter,
Washington, D. C.

DEAR MR. KEENAN: I have just read your analysis of the vote on H. R. 874. I am sure you realize that the author of the article deliberately overlooks the convincing argument of the gentleman from Massachusetts, Mr. KENNEDY, that "There is no State in the Union that cannot afford to pay $40,000 a year for library services." His conclusion that those of us who agreed with Mr. KENNEDY were against furnishing library service to farm families completely ignores the fact that Massachusetts has realized that objective without calling upon the Federal Government to contribute one cent. Moreover, you must know that all Federal funds are collected, sent here, and then a substantial administrative fee is deducted before returning those funds to the sources from which they came. Probably the author does not yet know that Massachusetts has accomplished this result at a local expenditure of $1.21 per capita, while West Virginia was represented vigorously by its Representatives as being in need of Federal assistance but contributed only 13 cents per capita, and the great, rich State of Texas, also begging for this Federal grant, has contributed only 10 cents per capita.

I realize that you will not print this letter in the report. Consequently, I shall make it available, through the CONGRESSIONAL RECORD, so that members of organized labor can compare the facts with the conclusions you seek to draw.

Sincerely yours.

Clinton Opens Centennial Celebration

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1950

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Clinton (Mass.) Daily Item of March 15, 1950:

CLINTON OPENS CENTENNIAL CELEBRATION—BANQUET IN THE FALLON MEMORIAL AUDITORIUM, TUESDAY NIGHT, WITH GOVERNOR DEVER, LIEUTENANT GOVERNOR SULLIVAN, CONGRESSMAN PHILBIN, AND OTHERS, RESPONDING TO TOASTS IN HONOR OF THE ONE HUNDREDTH ANNIVERSARY OF THE INCORPORATION OF THE TOWN—BRILLIANT SOCIAL EVENT IS ATTENDED BY APPROXIMATELY 700 GUESTS WITH THE PROGRAM INCLUDING VOCAL AND INSTRUMENTAL SELECTIONS BY GROUP OF THE TOWN'S TALENTED ARTISTS

Graced by the presence of the two highest officials of the Commonwealth of Massachusetts, His Excellency, Gov. Paul A. Dever and His Honor, Lt. Gov. Charles F. Jeff Sullivan, of Clinton's favorite son, Congressman Philip J. Philbin, and other distinguished speakers, approximately 700 guests at the centennial banquet held in the Fallon Memorial Auditorium and the banquet hall, of the municipal building, Tuesday night, will cherish the memory of a delightful event until their dying day.

In as brilliant a social function as the auditorium has witnessed since it was dedicated 41 years next November, the event went into history as a fitting opening of the 100th observance of the incorporation of the town by the Massachusetts Legislature, March 14, 1850.

The appropriate decorations, the tables resplendent with silver and china, many of the guests in evening dress, the appetizing dinner professionally served, the unique menu cards typical of two plants of Clinton's "beehive of industry"—the Miron Mills, Inc., and the Colonial Press, Inc.—coupled with the presence of many former Clintonians who joined with their relatives and friends in recounting bygone days, the fine civic spirit dominating the event, the stellar addresses and the voices of the town's outstanding vocalists and instrumentalists, all provided a setting that will long abide with all so fortunate as to have had a part in it.

FIFTY VERSUS ONE HUNDRED YEARS

The banquet was in marked contrast to a similar event of 50 years ago at the time the town observed its semicentennial when a diversity of opinion militated against that feature of the celebration.

The memorial volume issued following the fiftieth anniversary of the incorporation of the town said:

"No feature of the semicentennial gave rise to more discussion than the banquet. To what degree should it be self-supporting? Where and when should it be held? What should be the price of tickets? Who should be the caterer? Should the speakers be distinguished men from abroad, or would it be better to rely on home talent?

"The subcommittee originally appointed grappled with these questions and after they had settled them in accordance with their own judgment and obtained the sanction of the general committee, tickets were offered for sale."

EVENT WAS ONCE ABANDONED

"One hundred and seventy-five seats were engaged at $2.75 per plate, but as a guaranty of 300 was required by the caterer, the committee did not feel justified in going further and reported that it seemed inexpedient to hold a banquet on the lines proposed.

"It seemed best, however, to the general committee that another attempt should be made, so a new committee was appointed to lead the forlorn hope.

"This committee, after a careful investigation, decided to follow the plans proposed by the original committee.

"The sense of responsibility for the banquet was so awakened among the members of the general committee, and the semicentennial in all its phases was finding such growing favor among the citizens, that this part of the celebration was carried to a successful issue by the new committee. Considerably more than the 300 tickets required for a guaranty were sold and the Town Hall was none too large to accommodate those who were anxious to attend."

ENCHANTING SCENE

"It was decided that it would be wise to set the banquet at an early hour, so that people might come with fresh appetites. By 6:30, Bigelow Hall, which had been tastefully decorated for the occasion, began to be filled by the arriving guests. There was a half hour of merry greetings and of conversation, with pleasing reminiscence as its central theme.

"Meanwhile, the Salem Cadet Band added to the cheer by its excellent music. Shortly after 7, those assembled marched to the hall above. The scene was one of enchantment. Through the art of the decorators, the ceiling and walls, with their flowing streamers and graceful folds were one mass of glowing color, in which red, white, and blue, with their emblematic significance, predominated, while touches of yellow and green were tastefully intermingled. From the center hung a great bell. To the illumination of the incandescent lights above was added that of the candelabra, with fairy lights on the tables below."

HARMONY IN 1950

Happily, this year, the preliminary arrangements were conducted with the utmost harmony and lack of criticism, perhaps indicating that Clintonians of the present generation are more united and more civic-minded than were some of the citizens of 5 decades ago.

From the very outset of the initial announcements of the centennial banquet a spirit of full cooperation by residents was in evidence and where, 50 years ago, only about 300 guests attended the semi-centennial event the 1950 program was participated in by almost twice that total, all imbued with the thought that the one hundredth anniversary of opening event must attain the heights as a harbinger of the main program, May 28 to June 4, next, which will conclude the anniversary.

PERFECT SETTING

Then again, the 1950 event was staged in one of the handsomest auditoriums in this Commonwealth, as contrasted with the 1900 banquet which was served in the old Town Hall, later destroyed by fire, on the site of which progressive Clinton erected ere the end of the first decade of the twentieth century one of the finest municipal buildings to be found in the Bay State.

Many of the out-of-town guests, Tuesday night, glimpsed their first view of the architectural beauty of the auditorium as they had removed from town before the new structure was built.

The horseshoe balcony where guests were seated who had been served the menu in the banquet hall, is vastly more attractive than was the gallery at the south end of the old town hall.

EVENT REPLACED BALL

Fifty years ago the semicentennial banquet was held the night of June 18, the fiftieth anniversary program having been opened with a concert and ball, in the old town hall, the night of March 14, 1900, as the initial event of the program, but this year, the date of incorporation fell in the Lenten season and the centennial committee wisely decided that it would be imprudent and would adversely affect the observance if dancing should be included and in its place the 1950 banquet was substituted, a decision that was heartily approved by all citizens of the town.

During the serving of the menu music was featured by Paul Redmond's orchestra and artists, Lilla Shaughnessy, violinist, and Mrs. Walter Shaughnessy at the piano.

After the diners finished the last course Chairman Kittredge announced that Patrick Henry Lynskey of New York City, native of Clinton would render the Star Spangled Banner, to open the fine program.

PROCESSION

At 7:45 the procession of speakers and special guests marched down the center aisle and included:

Judge and Mrs. Austin J. Kittredge, Governor Paul A. Dever, Congressman Philip J. Philbin, Lieutenant Governor and Mrs. C. F. "Jeff" Sullivan, Representative Henry W. Pickford, Matthew J. Connelly, Rev. James S. Barry, D. D., Patrick Henry Lynskey, Cedric Foster, Joseph M. Duffy, John Redmond Lynskey, Rev. and Mrs. E. Maurice Bussey, Rabbi Aaron Twersky, Paul P. Lavelle, Judge and Mrs. Morton C. Jaquith, Mr. and Mrs. Roy A. Freitag, Mr. and Mrs. Robert E. Freel, and Mr. and Mrs. John J. Mitchell.

INVOCATION

The invocation by Rev. E. Maurice Bussey, pastor of the First Congregational Church, was as follows:

"Our Father and our God, Thou great unseen spirit, eternal and majestic, ruler of the heavens and the earth, before whom a

thousand years pass as a watch in the night, yet who art mindful of each one of us, we invoke Thy blessing upon us as we inaugurate our centennial anniversary.

"We are grateful for those sturdy pioneers whose imagination and devotion built bridges over which this generation is now passing—bridges of good government, churches, schools, industry.

"May we never be unmindful of their efforts and, building upon the foundations they layed, move on to greater accomplishments in the years ahead.

"Give us strong vision and a will for hard work that we may wisely weave from the patterns set before us, products of character and industry that shall endure.

"We, thy people, stemming from differing races, religion, and languages, would pause in humble acknowledgment of every gift which thou hast so graciously bestowed—peace in a world of conflict, liberty and justice within our borders, a beloved democracy rooted in our common life and kept secure through blood, labor, and tears.

"May the spirit of cooperation; unity of purpose; community pride and confidence in thy guidance, be our watchwords as we enter the years of mystery in the century we now face.

"May we be always aware of our spiritual and moral responsibilities and dedicated to every principle that shall enable us to remain strong as individuals and as a people.

"Lord God of Hosts, whose stewards we are, thy name be praised for ever and ever. Amen."

Judge Kittredge presented John Redmond Lynskey, of Hackensack, N. J., another native of the town, as master of ceremonies and the famous composer was given a tumultuous welcome.

Chairman Kittredge expressed the pleasure of the guests in having Matthew J. Connelly, secretary to President Harry S. Truman, present at the head table and asked the modest Clinton native to take a bow.

Next came one of the high lights of the program when the personable and popular John Redmond Lynskey stepped to the microphone to render, for the first time, in public, the Clinton Centennial Song, which he composed, with the recording by Carroll Gibbons, another native of the town and his famous Hotel Savoy (London) Orchestra, which has been the featured attraction in Great Britain's leading hostelry for more than a decade.

Never before in the history of Clinton have two musicians collaborated in presenting in the town of their nativity a composition which will be sung and hummed by the present and succeeding generations and which formed one of the high lights of the banquet.

CLINTON CENTENNIAL SONG

Mr. Lynskey dedicated the composition with these appropriate words: "Affectionately dedicated to the good folks of my old home town on its one hundredth anniversary. Sincerely, John Redmond Lynskey."

On the title page are the words, printed in blue, Clinton Centennial Song, words and music by John Redmond Lynskey, and the seal of Clinton, with 1850 at the left and 1950 at the right. The town seal, as almost everybody knows reads "Town of Clinton, Massachusetts, Incorporated 1850" with a picture of the old town hall building forming the center.

Mr. Lynskey has set the words to music that provide not only a catchy composition that in coming days will become Clinton's theme song, but one that will inspire marching feet wherever it is heard.

The offering is all inclusive in that it stresses the popular nicknames of sections of Clinton that have been familiar to every Clintonian since the town came into being.

Listen to the words he sang for the first time in public:

"You won't find a better town,
Than this seven-letter town,
C-l-i-n-t-o-n,
Visit once you'll call again.
Clinton! Clinton!
Happy anniversary!
Proud of you and should be,
Good old Clinton, Mass.
Cheerful, friendly,
Show me any city,
That is half as pretty,
Clinton has the class,
Cal-i-for-nia, the Acre,
Burditt Hill, and Germantown,
Duck Harbor, the North-End.
The prettiest town for miles around.
Clinton, Clinton!
I have been a rover,
Roamed the whole world over and say,
'You're the capital of the U. S. A.'"

SURPRISE SPRUNG

Next came the surprise number of the program when it was announced that Chairman Kittredge would talk with Carroll Gibbons, director of the Hotel Savoy orchestra, London, England, who had made the recording of the theme song which was repeated instrumentally. Stepping to a telephone at the left of the stage Judge Kittredge called London and in a comparatively few seconds he and Mr. Gibbons were talking over 5,000 miles of wire.

The chairman said, "This is Austin Kittredge, Carroll, how are you?" "Hello, Austin, I'm all right, how are you?" with the words clearly heard by all at the head table and by many seated near that area.

"I'm fine, Carroll," replied Judge Kittredge and then came the inquiry, "Where are you, Austin?" "In the Clinton town hall, Carroll, where we have just presented your recording of John Redmond's Centennial Song and we want to thank you for what you have done to make this great occasion memorable in the annals of Clinton."

Asking to speak with Congressman PHILBIN the toastmaster stepped to the phone and said: "Hello, Carroll, this is PHIL PHILBIN." Came the clear reply, "Hello, PHIL, how are you?"

Then Mr. Gibbons asked if he might speak to Mr. Redmond and the latter seized the phone and said, "Hello, Carroll, this is John Redmond Lynskey Korsakov," a sally that brought laughter and applause from the audience.

Mr. Gibbons said, "I am sorry I can't be with you, tonight, but I hope to be back in Clinton sometime in the near future."

Mr. Redmond asked the audience to send its greetings to the orchestra leader which it did by rising and expressing its appreciation of the hands-across-the-sea telephone conversation which will long be remembered by the banqueters as a novel and unexpected feature of the program.

FOSTER ADDRESS HERE

George Connors, for many years one of Clinton's popular vocalists, rendered One Hundred Years From Now, and Miss Dolores Baldyga was heard in a selection.

Mr. Redmond announced that when he learned that Secretary Connelly would attend the banquet he immediately composed a song which he hoped the President's right-hand man would sing, but learning that he was in good voice he would attempt to render it himself and out came the words, "I am wondering about Harry?" a bon mot apropos to the President's rough sea voyage to Key West, Fla.

Musical reveries of the past and present which included spiritual, classical, and popular numbers followed the speaking program. Miss Mary Cassidy sang The Last Rose of Summer; Will You Remember, was rendered by Miss Barbara Mooney; The World Is Mine, by Miss Jean O'Brien; Galway Bay, by Edward J. Walsh; Somewhere a Voice Is Calling, by Mrs. John E. O'Malley; Dear Hearts and Gentle People, by Joseph E. Fontana, Jr.; Thine Alone, by Miss Ethel Hester, concluded with Ave Maria, composed by Rev. Father Tracey and arranged by Mrs. T. Frank McDonald.

The benediction was pronounced by Rabbi Aaron Twersky, of Congregation Shaarei Zedeck, as follows:

Rabbi Aaron Twersky, in pronouncing the benediction spoke in both Hebrew and English, as follows:

"And concerning all the people that dwell in this community, Blessed art Thou O Lord our God, King of the Universe who has kept us in life and hast preserved us and enabled us to reach this hundredth historical anniversary.

"O Heavenly Father, as we leave this auspicious banquet of our beloved community, bless, keep, and safeguard the duly elected officers and inhabitants that live herein.

"Bless our Governor, Congressman, and all who are guiding us in the development and furtherance of the bastion of democracy of our country and our community. As we conclude our brilliant program instill in our hearts, O God, a love of Thy teaching, help us to live in peace and contentment as brothers under one flag.

"Raise aloft our country so that it shall shine as a beacon of light to a tottering, unstable world.

"Give us this day new inspiration to work for the greater glory and progress of our community.

"May it reach its two hundredth anniversary in freedom from fear, want, hate, and destruction.

"May we derive great civic pride in our accomplishment.

"Lead us, Heavenly Father, in Thy faith of righteousness and goodness forever. Amen."

With the stage darkened and a spotlight playing on the American flag, the chorus and audience joined in singing Auld Lang Syne and America.

The program came to an end at 12:30 o'clock this morning and even then many of the guests were reluctant to leave the auditorium. Hundreds lingered to meet out-of-town patrons, all of whom were former residents and whose love for the old home town made them eager to join with its citizens of today in the memorable event that marked the initial observance of century-old Clinton.

THE DECORATIONS

When the diners entered the auditorium they were greeted by a striking decorative motif. Draped on the balcony railings were festoons of the national colors, with the stage the center of attraction.

At the left were the figures "1850" in 2-foot high silver numerals and at the right, "1950," while in front of a green velvet drop extending the width of the stage was a silver motto, "1850—Our Centennial—1950."

Mounds of ferns, spring flowers, and potted plants marked the "1850," "1950" figures and the area surrounding a staff carrying a silken American flag spotlighted and waved by an electric fan.

The head table which filled the entire area between the east and west doors leading to the stage was ornamented with three large mounds of spring flowers and tapers in silver candelabra, while on all tables where the guests were seated were vases of jonquils.

A basket of artificial red roses made by Mrs. John F. Flannagan was a feature of the stage design. Giant palms reared their leaves at either side of the stage, all presenting a picture that will be long remembered by the guests.

Immediately after the serving of the menu scores of guests rushed to the head table where they kept Governor Dever, Lieutenant Governor Sullivan, Congressman Philbin, John Redmond, and other dignitaries busy for 15 minutes attaching their autographs to the menu cards.

DEBT OF GRATITUDE

Every resident of Clinton owes a deep gratitude to Chairman Austin J. Kittredge for the herculean work he performed in carrying to a successful and brilliant conclusion the most appropriate program. He was the motivating power of the big event and it was he who conceived the unusual features including the recording of the theme song by Carroll Gibbons, the toasts, and all of the countless angles of the banquet.

Paul Redmond's Orchestra provided the dinner musical program and Mrs. T. Frank McDonald and George Connors served as musical directors.

The hostesses, in evening gowns, included the Misses Margaret M. O'Malley, Bette Ann Kittredge, Mary Jaquith, Mary E. Freel, Shirley Coccione, Bamby Philbin, Gretta Nordstrom, Carrole Nordstrom, Joan Perla, and Janice O'Malley, all daughters of members of the general committee.

The menu included fruit cocktail, sweet mixed pickles, hearts of celery, roast tenderloin of beef, mushroom sauce, baked potatoes, frosted peas, banana and pineapple fritters, with wine sauce, chef's salad with French dressing, assorted cake, macaroons, assorted ice creams, frozen pudding, rolls, butter, and coffee.

Special Justice Austin J. Kittredge served as general chairman of the notable event.

The banquet committee included Austin J. Kittredge, chairman; Matthew J. Connelly, vice chairman, Congressman Philip J. Philbin, Representative Henry W. Pickford, Rev. James S. Barry, D. D., Wesley J. Officer, Paul J. Lynskey, Francis J. Coleman, Mrs. Hawley E. Morton, William J. Schott, Mrs. David E. Gallagher, Leo J. DeBlois, Dante F. Coccione, and Mrs. John T. Flannagan.

The executive committee was composed of Congressman Philip J. Philbin, honorary chairman, Member of Congress; Roy A. Freitag, honorary vice chairman; Dr. Charles R. Abbott, vice chairman; Miss Sarah L. O'Toole, vice chairman; Joseph T. Peters, treasurer; Mrs. Harold J. Mason, secretary; Robert E. Freel, Attorney Morton C. Jaquith, and John J. Mitchell.

The general committee includes Rev. James S. Barry, D. D., Rev. E. Maurice Bussey, Oresta J. Fontana, Selectman Paul P. Lavele, Mrs. Edward H. Mackay, Joseph F. McCaffrey, Attorney John P. McGrail, Axel P. Nordstrom, Joseph R. O'Malley, Daniel Paul, Mrs. George V. Raynsford, David B. Reisner, Deputy Sheriff Hugh F. Ruane, Orra L. Stone, and Walter E. Stuka.

The reception committee included members of the general committee.

Subcommittee on banquet in charge of following arrangements:

Dinner: Dante Coccione, Francis Coleman.

Tickets: William Schott.

Decorating: Mrs. David Gallagher, Mrs. Hawley Morton.

Stage settings: Leo DeBlois, Dante Coccione.

Arranging menus: Wesley J. Officer, Representative Henry W. Pickford, assisted by Henry M. O'Toole.

Public address: under direction of Fred Vorspohl.

Decorating interior, town hall: Paul Foley, Worchester, assisted by decorating committee.

Floral decorating: A. W. Schneider, florist. One hundred red roses were made by Mrs. John Flannagan.

Entertainment: Francis Coleman, Paul J. Lynskey.

Major Parties and Civil Rights

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. JAVITS. Mr. Speaker, the appended two editorials from the Chicago Defender bearing on the outlook of American Negroes on the prospects for civil-rights legislation, when taken together, bear out a fundamental principle which I have been advocating. It is that civil-rights legislation, if it is to pass, must be bipartisan and that the administration must lay it aside as a partisan issue. This was again illustrated by the inability to muster on the House floor the necessary votes to pass an FEPC with enforcement powers, many votes of Representatives from the border States being lost on the Democratic side and many Republican votes for northern and western areas which should have supported such a measure being also lost. Dissatisfaction with both major political parties is a most unsatisfactory state of mind as far as both major parties are concerned to be driving the American Negro into. I urge most thoughtful reading of these two editorials by every Member:

[From the Chicago Defender of February 18, 1950]

THE REPUBLICANS STATE THEIR CASE

Of all the comment in the Nation's press on the new statement of aims and principles released by the Republican Party last week, the report of W. H. Lawrence, of the New York Times, seems most interesting.

Mr. Lawrence reported that:

"The proposal on the civil rights issue stirred considerable controversy and brought protests from Senator LODGE and Representative JAVITS. The party pledge as approved read: 'The right of equal opportunity to work, to vote, to advance in life and to be protected under the law should never be limited in any individual because of race, religion, color, or country of origin. Therefore, we shall continue to sponsor legislation to protect the rights of minorities.'

"Senator LODGE wanted the party to declare its 'forthright determination' to enact civil rights legislation at the present congressional session 'and to break a filibuster if necessary,' but he was overruled. Republicans have often found common ground with southern Democrats in blocking administration bills.

"Since the party had picked a Lincoln Day rally to unveil its 1950 manifesto, Representative JAVITS said he regretted that the statement 'did not declare unequivocally for FEPC, antilynching, and anti-poll-tax legislation in the best Lincoln tradition'."

Reporter LAWRENCE goes on to point out that Senator MARGARET CHASE SMITH, of Maine, "asserted that the platform was filled with vague generalities which would appeal to persons who voted Republican anyway, but which would have no special appeal to the 'rank-and-file of the people who win elections'." The gracious Republican lady from Maine took the words out of our mouth.

[From the Chicago Defender of March 11, 1950]

PROMISES VERSUS PERFORMANCE

As we enter the 1950 election campaign the Democrats, both locally and nationally, should do a little soul searching.

Locally there seems to be a growing conviction on the part of Boss Jack Arvey and company that the Negro vote is "in the bag" for the Democratic Party. As the song goes, they seem to think that they have the world "in a jug" and the stopper in their hands.

We would like to remind them of the delightful tune from Porgy and Bess, It Ain't Necessarily So.

The Democrats here have, as we pointed out some weeks ago, ignored the wishes of the people in the first and fifth senatorial districts by putting up hand-picked "hacks." They have shown similar stupidity by refusing to give Judge Wendell Green the designation for the superior court.

As a matter of fact, the Democratic Party as a whole seems to be suffering from indigestion. They have apparently been eating too high on the hog, and now they are sleeping on a full stomach. The Democrats in Illinois and in the Nation have been and are now in a position to live up to their promises.

Here are some of the questions in the minds of the voters:

1. When will the people see some leadership in breaking the bottleneck on Mayor Kennelly's housing program?

2. Can Governor Stevenson compare his record to date with past administrations?

3. What happened to the administration's leaders in Congress in the fight for a strong FEPC?

4. How did it happen that Chairman Boyle of the Democratic National Committee stated that Congressman DAWSON was vice chairman of the committee, and now nobody in Washington is quite sure what position DAWSON has on the committee?

5. Why were the qualified Negro candidates overlooked in the appointment of the new Governor for the Virgin Islands?

The action promised by the Democrats in 1948 caught the imagination of the people. Now, 2 years later, we have more promises and few accomplishments. This lack of action is cause for grave concern among voters who turned the tide in 1948 and who may turn the tide again.

The wishes of the people have been ignored and forgotten for the benefit of a small group of selfish men concerned only in maintaining their own little selfish political interests.

They have forgotten the people, but the people have yet to be heard.

Performances, not promises, will set the course.

Acheson, a Belated Convert to Reality

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an article by George Sokolsky, noted columnist, who directs attention to the record of Secretary Acheson's in the China situation and his change of attitude. I commend it to the attention of all Members:

THESE DAYS

(By George Sokolsky)

Dean Acheson is now a convert to reality. After a career of error, beginning in 1941 and ending a week ago, he has finally come to a realization of the errors, but not to a recognition of his responsibility for them. His last gamble with destiny was a bad throw. He had fantastically assumed that reality was at fault and he played to lose on Mao Tze-Tung.

In any country other than ours, any man who had been so consistently and obstinately wrong would have been driven from public life. He would long since have been forced to resign.

All he seems to do here is to announce a change of policy, not even confessing his errors, and we are expected to accept his conversion without scrutiny or even wonder.

Acheson asks us all to unite in a total diplomacy against Soviet Russia, but how can we unite with him? From 1941 until last week, he and his teammate, Alger Hiss, were responsible for the appeasement of Russian policy. The record is clear.

Dean Acheson, graduate of the Harvard Law School, like so many others of the confused employees of our Government, entered upon his career in the Treasury, where he did not agree with Mr. Roosevelt's fantastic fiscal conceptions and was dropped.

In 1941 he entered the State Department as Assistant Secretary of State; then he became Under Secretary of State, a position he held until 1947 when he resigned. He returned as Secretary of State in 1949.

The Acheson influence in the State Department has been enormous. He was the smart man. His principal adjutant was Alger Hiss.

Alger's brother, Donald, became a partner in Acheson's law firm, which specialized in representing foreign countries in Washington, particularly such as had special relations with the State and Treasury Departments, Colombia, Greece, Iran, Denmark, Pakistan and Soviet Poland.

We must now go back a step to the Harold Ware Communist cell organized in 1934. That cell was organized to penetrate high levels of administration and it is clear from the evidence at both Hiss trials that Alger Hiss was of this cell.

At any rate, in 1939 Dr. J. B. Matthews, of the Dies committee gave to the Department of Justice the names of the members of the Ware cell. Among those names was that of Alger Hiss. Matthews showed me the list at the time.

Also in that year, Whittaker Chambers and Isaac Don Levine discussed most of the evidence that was brought out at both Hiss trials with Adolf A. Berle, then of the State Department.

Berle has testified under oath that as early as 1941, he had warned Acheson that the loyalty of both Alger and Donald Hiss was doubtful. In 1944, Berle, then security officer of the State Department, warned Acheson and others in the State Department that their pro-Russian policy was wrong.

The Acheson group, with Alger Hiss as Acheson's principal assistant, fought Berle, had him transferred to Brazil, and as Berle said: "That ended my diplomatic career."

Subsequent to Berle's reports on Alger Hiss, Acheson had his friend transferred from the Far Eastern Affairs Division, where he had no business to be as he knew nothing about the subject, to the Office of Special Political Affairs which Acheson ran and which had to do with all the peace efforts of the Government.

This was no place for a man whose loyalty was in doubt and who could have an affiliation with a foreign government that might imperil the negotiating power of the United States.

Acheson cannot plead that he did not know about Hiss; he can only say that he did not believe what he was told. But in his position, could he risk a doubtful personality as executive secretary of Dumbarton Oaks or as President Roosevelt's adviser at Yalta, or as secretary general of the San Francisco Conference setting up the United Nations?

Dean Acheson succeeded Joseph C. Grew as Under Secretary of State after Grew insisted upon prosecuting the spies in the Amerasia case. What power in our Government drove Grew out and put Acheson in his place?

Freedom or Bondage—That's the Choice

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 20, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including a letter that appeared in the Racine Journal-Times recently and in which the writer calls attention to the important choice that confronts this Nation. It carries a message that every citizen should fully understand:

[From the Racine Journal-Times of March 14, 1950]

FREEDOM OR BONDAGE, CHOICE OF AMERICANS

DEAR TEX: The constitution of the former American slave States generally specified that the masters must provide their slaves with adequate housing, sufficient food, medical care and old-age benefits. The Mississippi constitution also contained this sentence "The legislature shall have no power to pass laws for the emancipation of slaves expect where the slaves shall have rendered some distinguished service to their country." The greatest reward a slave could get was freedom.

Slaveholders then, like Government now, believed that they knew what was best for their charges. Proof of the error of their belief is that personal responsibility for one's own welfare brings increased material well-being.

Consider the remarkable progress of the Negroes who in 1862 were almost 100 percent slaves, and who today are about as self-supporting as any other American citizens. Compare their progress to that of the American Indians who were made wards of the Government and given State-guaranteed security instead of freedom. They have become less self-supporting and more dependent upon aid from "The Great White Father in Washington." There appears to be no scientific basis for belief that Indians are an inferior race. Those left to their own responsibility have proved as great a capacity for understanding and advancement as the Negro. Yet, there are 12,000 Federal employees directly taking care of 233,000 Indians at the present time.

GOOD INTENTIONS

Apparently most of the planners and advocates of government paternalism honestly desire to help the people, but their efforts always result in some form of bondage. For example, leaders of England's labor government never dreamed of bringing compulsory labor to England, but that's what happened. Lenin and Stalin probably never intended to bring slavery into Russia. Their expressed plan was to free Russia from the Czarist government. But look what happened.

Our ancestors knew that electing or appointing a man to office did not endow him with wisdom, only with power. Government can and should use force to punish crime, but cannot use force to create kindness, charity, to make people work, to solve their medical problems, to make them live in specific houses.

IT'S NOTHING NEW

State-guaranteed security is nothing new. It was written in the code of Hammurabi over 4,000 years ago. In one form or another, it has been tried without success throughout history. The Romans called it bread and now we call it New Deal or Square Deal.

It is not too late to turn away from government-insured security.

The choice is ours. When one choses freedom—that is, personal responsibility—he should understand the decision is not a popular one, immediately. He will be called vile names while attempting to explain ultimate results of Government-insured security, housing, free medicine, compulsory security, and guaranteed jobs. The choice of freedom never has been easy. Freedom can only be held by the strong, not the weak whose character has been snapped, whose principles have been lowered, and who has lost the God-given right to help himself and exercise his own free will.

ALBERT LEVIN.

P. S.—Any expression in favor of government-secured security is an expression against our form of government. The two clash in principle.

Equal Perils—Not Equal Rights

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1950

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Daily Compass of March 17, 1950:

AMENDMENT REPRESENTS NEITHER SOUND LAW NOR SOUND BEHAVIOR

(By Representative EMANUEL CELLER, Democrat, New York)

Although I could not—dare not— pretend to be an authority on women, I do believe this choice will provide a fascinating challenge to most American women. They have a well-developed spirit of adventure, liberally mixed with common sense, imagination, intuition and humor—a delightful, charming combination. American women are regarded everywhere as the most beautiful, intelligent and capable in the world. Since she won the right to franchise, she has made tremendous strides in business, in politics, and in the professions. She is the motivating force in every community, the impetus, usually, to all forms of civic betterment and progress. The American male is justly proud of his mate, her talents and her achievements in a multitude of endeavors.

It is interesting to note that while the colonel's lady and Judy O'Grady are sisters under the skin, fundamentally indivisible, they not only have "fashions" in clothes but in attitudes. Females have run the gamut from the Amazon to the clinging vine. If we should succumb to the allurements of a study of social organization, anthropology or archeology, we are piqued by references to former thriving civilizations in which matriarchies flourished.

One conjures up a picture of ancient man quite content with his lot of peeling what served them for potatoes, bustling around with the pots, dusting and polishing the lares and penates, firmly convincing junior of the general utility of the then current equivalent of hat, shoes, and overcoat in the middle of a cloudburst.

To bring it even closer to home, there are definite quiverings along my spinal column as I read the undoubted reports of the ambidextrous efficiency of the picturesque Carrie Nation and her hatchet. As an ardent foe of prohibition, waves of gratitude roll over my soul that the formidable Carrie "came, saw and conquered" in an era other than my own. I mumble prayers of thanksgiving that I shall never be exposed to the hazards of a personal encounter with that colorful creature!

Then, too, we have the recent advertising slogan, "Never underestimate the power of a

woman," and believe me, I don't. I've been married for 34 years.

With such heartfelt compliments, I optimistically hope that I have succeeded in riveting the attention of the fair sex. I have taken a verbal pounding, comparable to an artillery barrage, from representatives of various groups who have espoused the cause of the equal-rights amendment. I seem to recall an ill-found or perhaps idle rumor attributing to me sole responsibility for the tabling of the resolution in the House Judiciary Committee of which I am chairman. Actually, however, at the suggestion of my very charming, distinguished and able colleague, Representative KATHARINE ST. GEORGE, for whom I have the highest regard, I referred the bill to a subcommittee of the House Judiciary Committee.

Several years ago the House was adorned by the eminent and able former Representative from Connecticut, the Honorable Clare Boothe Luce. She would utter lively yet bitter complaint because women were judged as a different kind of people. Quoting from her own experience, she emphasized that her femaleness was always underlined; that more attention was paid to what she wore than what she said. She urged women in all walks of life to fight for the right to be judged equally with men.

Needless to say, Mrs. Luce found a willing and able audience. It is, then, in a mood of quiet desperation, staunchly clinging to whatever may be left of my legislative courage, that I am again sticking my neck out in the hope of compelling the women of the United States to give deeper consideration to the implications of the momentous innovations involved in the equal-rights amendment, which contains many economic and political pitfalls; yes, even social ones. These provisions can ensnare the unwary, possibly uninformed, too busy women of today. If their futures alone were involved, perhaps one would be tempted to place this fateful legislation in the laps of the legislative gods and await its destiny with equanimity and with the poised and casual air of smug sophistication.

The proposed amendment, however, would erase from the statute books laws relating to widows' pensions, the right of dependent wives and children to the support of the husband and father, alimony, and guardianship. Having washed away the protective legislation for wives, mothers, and widows, the so-called equal-rights amendment offers no alternative safeguarding measures.

We cannot deny that discrimination against women is present. Some States still have laws which forbid women to serve on juries, to hold certain offices, to handle their property without the consent of their husbands, etc. It is not defense of these laws that makes for opposition to the proposed amendment. It is the method that is decried. Using the Constitution for a broom with which to sweep away indiscriminately the good with the bad is neither sound law nor sane behavior.

Surplus Foods

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 16, 1950

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the executive secretary of the International Convention of Disciples of Christ and the resolution adopted by the Council of Agencies:

INTERNATIONAL CONVENTION
OF DISCIPLES OF CHRIST,
Indianapolis, Ind., March 7, 1950.

Hon. JOHN W. HESELTON,
House of Representatives,
Washington, D. C.

DEAR MR. HESELTON: We are pleased to enclose a copy of a resolution adopted by the Council of Agencies of the Disciples of Christ, a Protestant communion representing 1,800,000 members. This resolution is a petition for the United States Government to distribute surplus foods to hungry peoples of the world rather than destroying the same.

We understand that you have introduced measures somewhat along this line and we think that it would be of interest and value to you and to us if it could be known that this representative group of the Disciples of Christ has gone on record in support of such legislation. If we can be of any help to you in your efforts, aside from commending you for introducing such humanitarian proposals, we will be glad to help if within our power.

Cordially,

GAINES M. COOK,
Executive Secretary.

RESOLUTION CONCERNING DISPOSITION OF SURPLUS FOOD BY THE UNITED STATES GOVERNMENT TO HUNGRY PEOPLES OF THE WORLD

Whereas there is continuing widespread hunger, poverty, and suffering throughout our world, resulting largely from a global war, to which America contributed a significant part, and thereby is implicated deeply in bringing about the tragic conditions of our time; and

Whereas the Disciples of Christ have set for themselves the goal of $1,500,000 for relief to be raised during the week of compassion, March 5–12, 1950; and

Whereas the Christian people of America are being called upon to participate sacrificially in the "one great hour of sharing" on Sunday, March 12, 1950, in order to bring relief to suffering and destitute peoples; and

Whereas there are great stores of food of various kinds being held by the Government of the United States that could be used to supply the needs of millions of hungry people around the earth; and

Whereas all the Christian people of America are also loyal citizens of our country whose Government holds in storage a vast quantity of food which has been purchased in part by the expenditure of tax money which these Christian citizens have paid into the Government; and

Whereas the gift of these large quantities of food to needy peoples in various areas of the world would show that America has the deep desire to aid all peoples in their distress; and also might lessen greatly the tensions created by fear, greed, hatred, and suspicion which lead to the increase of armaments and the preparation for war; and by such aid give greater hopes for peace and release energies for constructive purposes: Therefore, be it

Resolved by the Council of Agencies of Disciples of Christ through the international convention, That we appeal to all other religious bodies in America to join in an immediate petition to the Congress of the United States to promptly take the necessary action to give and to deliver to the peoples of the world the surplus food supplies which the Government now holds in storage, where and to whom, it will bring the greatest good to the health and happiness of mankind.

Adopted, Indianapolis, Ind., February 7, 1950.

Questions and Answers on Housing Act of 1950—H. R. 7402, Eighty-first Congress, as Reported February 23, 1950—Housing for Middle-Income Families (Cooperative Housing)

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1950

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following questions and answers on the Housing Act of 1950, H. R. 7402, Eighty-first Congress, as reported February 23, 1950:

QUESTIONS AND ANSWERS ON THE HOUSING ACT OF 1950, H. R. 7402, EIGHTY-FIRST CONGRESS, AS REPORTED FEBRUARY 23, 1950—HOUSING FOR MIDDLE-INCOME FAMILIES (COOPERATIVE HOUSING)

1. Question. What is the purpose of this title?

Answer. The purpose of this title is to provide a means whereby good housing of adequate size for families with children can be produced for families of middle income. (1) By furnishing technical assistance to cooperative or other nonprofit housing corporations; (2) by making financial assistance available to such corporations for housing which will promote economy both in construction and in operation and maintenance; and (3) by facilitating the investment of private capital in the development of such housing.

The title would carry out the recommendations made by the President in his State of the Union message when he said: "To aid middle-income families, I recommend that the Congress enact new legislation authorizing a vigorous program to help cooperatives and other nonprofit groups building housing which these families can afford."

2. Question. What organizations are eligible for assistance under this title?

Answer. The two types of organizations eligible for assistance under this title are: (1) private, cooperative ownership corporations which will provide housing the permanent occupancy of which is restricted to the members of the corporations; and (2) any other private, nonprofit corporation authorized to provide dwellings either for sale to a corporation of the character described above or for rent to the families which will occupy the housing.

3. Question. Why are other organizations not eligible?

Answer. The basic purpose of this title is to provide a means whereby adequate housing is produced and made available at monthly costs which middle-income families can afford. The problem is essentially one of further cost reductions in construction, financing, and operation. Cooperative housing and other nonprofit housing offer the greatest promise of achieving such cost reductions and are the only forms of private enterprise capable of translating every possible economy directly into corresponding reductions in the monthly charges which the individual consumer must pay for the housing. Housing operated for profit (even though the profits or dividends are limited) necessarily involves additional charges which are passed on to the consumer. To that extent, if such housing were made eligible for assistance under this title, the purpose of the title would correspondingly tend to be defeated. It should be noted, too, that lim-

ited dividend or other corporations which are not eligible for aid under this title I may have recourse to government aids provided in other legislation, such as the mortgage insurance aids administered by the FHA.

4. Question. What type of housing can be built under this title?

Answer. The housing built under this title must be of sound design and construction; located in well planned neighborhoods; and designed for economy and efficiency in construction and operation. It may not be of elaborate or extravagant design, but must be of adequate size for family living. These requirements are designed to carry out the basic purpose of the title to provide good housing which middle-income families with children can afford. Within these limitations, the cooperatives and nonprofit corporations would be free to build whatever type of housing is best suited to the needs of their members and is acceptable in the community where it is located. Projects aided under the bill are not restricted to particular materials or types of construction. Masonry, wood, or other construction materials may be used if sound standards of design and construction are met. The projects may consist of large multiple dwelling structures, garden apartments, or two-family houses, and may also consist of single-family dwellings, including row houses and detached or semi-detached houses. Well designed projects combining several structural types would also be permitted.

5. Question. Who are the "middle-income" families?

Answer. The middle-income housing market for urban families in the country as a whole can be taken as comprising those urban families of two or more persons whose cash incomes were between $2,800 and $4,400 a year. One-third of the urban families in this country had annual incomes within that range during 1948, according to the latest Census Bureau study. Of course, the actual income range which defines middle-income families in any given community will vary considerably from the national average range. Thus, in cities with a population of 1,000,000 or more, one-third of the families in such cities had incomes within the range of $3,135 to $4,841. In smaller communities the income range for the middle third of the population dropped somewhat, until in communities of 2,500 to 10,000 population, the range was $2,451 to $3,929. Further variations will, of course, be found among communities within each population class.

6. Question. Is this title proposed as the single or major solution to the problem of housing middle-income families?

Answer. No. The statement has been made by an opponent of this title that the program authorized by the title is intended to serve all middle-income families, that there are about 8,000,000 such families; and that there is danger, that, once started, the program will snowball into huge proportions. However, the fact is that it is merely a supplementary program to aid additional, middle-income families obtain good housing they can afford. The great proportion of middle-income families will continue to be served by existing housing which they find satisfactory, and many others will be served by new FHA sales and rental housing which is coming on to the market at prices and rents which a considerable number of middle-income families can afford. Indeed, aids provided under title I of this bill are intended to supplement aids for moderate cost housing which are contained in existing legislation or which would be provided by amendments to existing legislation, particularly the amendments to the National Housing Act contained in title II of this bill and in H. R. 6070 passed by the House last August and now pending before the Senate. Thus, the program under title I was never intended to, nor can it, furnish a single answer to the housing problems of middle-income families. It does represent a very important and necessary means of rounding out our efforts in this field.

7. Question. What monthly charges for housing are middle-income families able to afford?

Answer. On the basis of the usually accepted rule that monthly expenditures for shelter should not exceed 20 percent of income, housing for middle-income families should be available at shelter rents ranging from $47 per month to $73 per month, or at a median shelter rent of approximately $60 per month. This range is for the country as a whole, and, of course, the ranges would differ for different communities. Gross rents, that is to say, rents which include utility costs, would run about $8.50 per month higher.

8. Question. Is sufficient housing being produced within the rents or charges which families of middle income can afford?

Answer. No. Various attempts have been made recently to prove that the middle-income housing market is being served adequately and that therefore the additional aids which would be provided by this title are not necessary. In each instance the arguments involved a misuse of national averages. The arguments were based on data purporting to prove that a given percentage of all the housing produced in the country during 1948 or 1949 was sold or rented at prices or rentals which were within the means of a given percentage—and it was always stated as a substantial percentage—of all American families. The fallacy inherent in such statements is that it balances off the low-cost homes, most of which are produced in the South and in parts of other sections where prevailing construction costs and income levels are lower or where savings in home construction are possible because the climate is milder, against the housing needs of middle-income families in higher-cost areas, such as New York, Chicago, or Detroit.

Another misuse of statistics to support the attempted proof that all middle-income families are being served adequately arises from the fact that so many of the houses and apartments coming on to the market, especially those which sell or rent at charges low enough to be within the means of middle-income families, are not large enough for families with children.

A detailed discussion of this misuse of statistics, and a summary of the actual facts concerning prices, rents, and room counts for new construction in many different localities may be found in the section of the committee report devoted to this title of the bill. These facts prove conclusively that a considerable number of middle-income families have been priced out of the market in most areas and that a wide range of such families have been priced out of the market in high-cost areas. Similarly, the Right Reverend Monsignor John O'Grady, secretary of the National Conference of Catholic Charities, testified how, in a number of cities visited by him, builders tried to convince him that they were meeting the needs of middle-income families, but how an actual inspection of the houses which middle-income families in that locality could afford showed that they were too small for families with children.

9. Question. Is financial assistance to cooperative organizations new?

Answer. No. For example, in 1921 the War Finance Corporation was authorized by the Congress to make advances to any bank or trust company or "to any cooperative association of producers in the United States which may have made advances for agricultural purposes." The Federal intermediate credit banks were established in 1923 to make loans to cooperative associations. The Federal Farm Board was created in 1929 to make loans to cooperative associations of farmers to promote the establishment and financing of a farm marketing system. The Home Loan Bank System was established in 1932 to provide a credit reserve for member home financing institutions, chiefly mutual savings and loan associations. The Rural Electrification Act of 1936 authorized loans to cooperative nonprofit, or limited-dividend associations for financing the construction and operation of generating plants.

10. Question. To what extent can rents or charges for housing under this bill be attained below rents for new housing now being produced?

Answer. Taking full advantage of the provisions of this title, it should be possible for cooperatives to provide housing at a monthly cost about 25 percent below the rents charged for comparable conventionally financed housing. For example, a 4½-room apartment costing $8,000 to build will bring a rent of about $90 a month (thereby permitting a normal profit to the owners) if it is financed under section 608 of the National Housing Act. In contrast, the same unit, if built as part of a cooperative housing project aided under this title, could be made available at about $65 a month.

11. Question. What items which enter into the monthly cost of housing will be reduced under this bill to make such lower charges possible?

Answer. Cooperatives aided under this title will be able to provide housing at charges 25 percent below conventionally built and operated rental project rents because they will be able to:

(1) Eliminate promoter's profits (as distinguished from the profits of the building contractor) and profits on investment. This follows from the nonprofit nature of the enterprise. Also, cooperatives will not inflate their initial investment by carrying their land investment on their books at a sum higher than was actually paid or by allowing for the standard 5 percent of project cost for architect's fees when actually less was paid.

(2) Reduce operating and maintenance costs through self-help and better care by the occupants. This follows from the fact that the occupants as owners will be in a position to do a great deal of the maintenance work, particularly painting and redecorating, themselves. Experience has also shown that families living in cooperative housing will, as a matter of common prudence, as well as because of natural pride of ownership, take the best possible care of the housing in which they live and which they themselves own.

(3) Minimize vacancy and uncollectable rent losses. This assumption is based on a large body of actual experience in the field of rental housing and on a lesser—but nevertheless very substantial—body of experience gained since 1927 under New York State limited-dividend legislation. Smaller vacancy losses for housing built under this title will follow not only from its nonspeculative nature, but also from the fact that vacancy losses always tend to be much lower—particularly when economic conditions are less favorable—in moderate-cost housing than in higher-cost housing.

(4) Demonstrate greater stability in values hence permitting a longer amortization period. This follows from the fact that nonspeculative housing is designed to fill a long-range need, and that moderate-cost housing will serve a more stable market. Speculative housing, on the other hand, is often designed, constructed, and operated so as to obtain a quick profit rather than for long-range stability of value. Also, higher-cost housing fluctuates more in value than lower-cost housing.

(5) Obtain financing at a lower interest rate estimated to be about 3⅛ percent as opposed to a 4-percent rate (plus a one-half of 1 percent premium) for 608 projects. This follows from the aids provided by the bill, particularly the guaranty by the Government of the debentures issued by the National Mortgage Corporation for Housing Cooperatives, and from the greater stability of value.

12. Question. What groups support this title?

Answer. The following national groups have endorsed this title to the Congress: American Association of Social Workers, American Federation of Labor, American Legion, Congress of Industrial Organizations, Cooperative League of the United States of America, Jewish War Veterans, National Conference of Catholic Charities, National Cooperative Mutual Housing Association, National Housing Conference, National Negro Council, Veterans of Foreign Wars of the United States.

There are no doubt other groups who will support the title (many have supported similar proposals in the past) but who have not yet had time to obtain an expression of opinion from their memberships.

13. Question. What forms of technical aid would be made available to cooperatives under the title?

Answer. The Cooperative Housing Commissioner would be authorized to furnish plans and methods for the sound organization of housing cooperatives, including technical advice and assistance in their formation and in the planning, financing, construction, and operation of their projects.

The following excerpt from a statement by Mr. William A. Clarke of the Mortgage Bankers Association gives a concrete example of the type of aid needed. Mr. Clarke is chairman of a committee of the American Friends Service Committee which is now engaged in setting up a housing cooperative in Philadelphia.

There is really very little in the form of literature or very little in the form of proposed corporate set-ups and what-not on which we can draw. I confess that many of us are feeling our way along with it. It would be, in our opinion, helpful to have some spot in the Government where that kind of thing could be done.

* * * * * * *

"We think the cooperatives are fine and I think the matter of giving assistance in the formation of them by advice, counsel, and planning is excellent."

14. Question. Are there precedents for such technical aid by the Federal Government?

Answer. Yes. There are numerous precedents. For example, the technical aid would be similar to the professional guidance furnished to agricultural production and marketing cooperatives and to rural electric utility cooperatives by various agencies of the Department of Agriculture. It is also comparable to the variety of services rendered to the building industry, land developers, mortgage lenders, and individuals by the Federal Housing Administration. Similar assistance was given to Federal (mutual) savings and loan associations by the Federal home loan bank system, particularly in the early years following the creation of the system in 1932.

15. Question. Will the Federal Government build or operate this housing?

Answer. No. The Federal Government will neither build nor operate the housing. The housing will be built and operated by private cooperative or other private nonprofit corporations. These corporations may either enter into contracts with private builders who will do the actual construction work or they may act as their own general contractors. In some cases, the members of a cooperative may wish to do some of the construction work themselves on a mutual self-help basis. The corporations will also operate and manage the projects themselves.

The Government will exercise certain limited controls as a condition of giving financial assistance under the title. These controls will assure the soundness of the mortgage loan; that the borrower is a bona fide cooperative or nonprofit corporation; that the housing is of sound and economical construction and of adequate size for families with children; that the location and planning will afford reasonable assurance of a stable neighborhood; and that the housing will serve families of moderate income. Similarly, under the mortgage-insurance programs, the FHA now approves construction plans and specifications, passes on the location of the housing, inspects the construction, and passes on the credit rating of the mortgagor. These functions and the final approval of the insured mortgage amount are performed by the FHA to assure that the housing is well designed, well built, and well located, and that the insured mortgage is economically sound or represents an acceptable risk.

16. Question. How would preliminary planning of projects aided by the title be financed?

Answer. The Cooperative Housing Commissioner would be authorized to make preliminary advances of funds to soundly organized cooperative and other nonprofit housing corporations to enable them to formulate specific plans for the projects they proposed to undertake. The advances would be limited to the amount required for necessary work preliminary to construction. They would not exceed 5 percent of the estimated development cost of the projects, would bear interest at the going Federal rate plus one-half of 1 percent, and would be repaid out of any subsequent loans for the projects. It is probable that the maximum authorized advance loan would be required only in the case of relatively small projects, and that on larger projects the advances would run to about 3 percent of estimated project cost. The advances would be paid out only as actual progress was made in the formulation of the project and in the actual preparation of plans, thus reducing the risk involved in making them. Excessive fees, salaries, or charges in connection with a housing project would not be permitted.

17. Question. How much money would be authorized for preliminary advances?

Answer. A revolving fund of $25,000,000 would be authorized.

18. Question. Why are preliminary advance loans essential to the program under this title?

Answer. Experience has demonstrated the extreme difficulty which cooperatives have encountered in their efforts to obtain funds from normal lending sources for preliminary planning and development of specifications. Indeed, very few banks and other lenders have had any experience in making any type of loans to housing cooperatives. Without provision for some small preliminary advances to enable cooperatives to undertake and pay for the complicated job of formulating a housing project, the proposed program to aid cooperatives, which are a relatively new form of private enterprise in the field of housing, may well be seriously impaired. Also, with the aid of preliminary advances, cooperatives will not be in a position where they are forced to turn for help to promoters who will perform planning services in the hope of later gaining an excessive profit in connection with a construction contract or with the sale of land to the cooperative. Similarly, the preliminary advances may make it possible for the cooperative to purchase architectural and other technical services on a more economical basis than normally results when such services are purchased on a contingent-fee basis.

19. Question. Will advance loans lead to speculation?

Answer. No. Ample safeguards have been provided in the title to prevent speculation. Preliminary advances of funds cannot be made until the Commissioner has determined that the borrower is a bona fide cooperative housing corporation or other nonprofit housing corporation; that the borrower will undertake a housing project which will meet a need for housing families of moderate income in the locality; and that there will not be excessive fees, salaries, or charges in connection with the project. Also, as explained in the answer to the previous question, preliminary loans will enable the cooperative to purchase necessary planning, architectural, and other technical services on a sound economic basis. Without such advances, the cooperative might be forced either to purchase such services at greater cost on a contingent-fee basis, or else to turn for planning help to speculators who are interested primarily in selling land to the cooperative or obtaining a highly profitable building contract. Thus, the advance loans will tend to eliminate rather than to encourage speculation.

20. Question. What provisions of the title are designed to assure that the mortgage loans will be made available only to bona fide cooperatives and nonprofit corporations for housing within the financial reach of families of moderate income?

Answer. Before a mortgage loan could be made under the title the Cooperative Housing Commissioner would be required to certify to the National Mortgage Corporation for Housing Cooperatives that (1) the borrower is a bona fide nonprofit cooperative housing corporation or a private nonprofit corporation authorized to provide housing, (2) the proposed housing project will meet a need for housing for families of moderate income, (3) the proposed project will meet sound standards of design, construction, livability, and size for adequate family life, and (4) the development and management of the project will be such as to promote the economies contemplated under the title. Elaborate or extravagant construction would not be eligible for aid under the title.

The borrower would also agree not to pay any excessive fees, salaries, or charges and to establish and maintain schedules of rents or charges, satisfactory to the Corporation, which will permit the dwellings to be made available to families of moderate income. The title would also provide that the mortgage loan may not exceed the development cost of the housing project nor the amount which the Commissioner determines to be the upper limit within which housing can be provided for families of moderate income in the locality at rentals or other charges within their means. In the case of a loan to a cooperative corporation, the borrower would be required to have, to the extent permitted by State and local law, a priority in the purchase of the interest of each of its members in the event of sale of such interest. It should be noted too that a cooperative would be required to have 50 percent of the members proposed to be served by the housing at the time of making an application for a mortgage loan and at least 80 percent prior to receipt of any proceeds from such a loan. These provisions, plus provisions for democratic voting, would likewise assure that the cooperatives served would be bona fide cooperatives.

Penalties are provided for false statements or misrepresentations made to obtain benefits under the title.

21. Question. What are the major functions of the Cooperative Housing Commissioner under this title?

Answer. The major functions of the Cooperative Housing Commissioner would be to give technical advice and assistance to housing cooperatives and other nonprofit housing corporations, to make advance loans to them for preliminary planning of their projects, and to supervise the National Mortgage Corporation for Housing Cooperatives. These functions would be required to be administered in a manner which will encourage the development by housing cooperatives and other nonprofit housing corporations (individually or through joint undertakings) of sufficient skills and services so that the technical advice and assistance by the Government may be gradually reduced and terminated.

22. Question. What functions would be performed by the National Mortgage Corporation for Housing Cooperatives under this title?

Answer. This proposed Corporation would make and service loans to private cooperative and nonprofit housing corporations in order to enable such corporations to provide housing for families of moderate income. In accomplishing this primary objective, the Corporation would perform such incidental functions as are authorized by the provisions of the title, including the issuing of obligations to obtain funds with which to make loans, over and above those which may be made from capital-stock funds.

23. Question. What is the nature of this Corporation?

Answer. This Corporation would be a mixed-ownership corporation and would carry out its functions under the supervision of the Cooperative Housing Commissioner. The Corporation would be managed by a board of five directors appointed by the Commissioner. Eventually two of the directors would be appointed from among members of stock-holding corporations or other persons representative of housing cooperatives.

Initially the capital stock of the Corporation would be subscribed for and purchased by the Secretary of the Treasury on behalf of the United States. But as loans are made to cooperative and nonprofit housing corporations, these borrowers would subscribe to capital stock of the Corporation in an amount equal to a designated percentage of any particular loan. From the capital stock paid in by private borrowers, all of the stock held by the Secretary of the Treasury would eventually be retired.

24. Question. Is there any precedent for this type of mixed-ownership corporation?

Answer. Yes. The Federal home-loan banks, the Central Bank for Cooperatives, and the regional banks for cooperatives are among such precedents. The Federal home-loan banks, for example, were established in 1932 and began lending operations with $125,000,000 invested by the Government. Member lending institutions were required by statute to subscribe to stock in an amount equal to 1½ percent of their home-mortgage loans. The home-loan banks have gradually retired $50,000,000 of the stock investment of the Federal Government, and member lending institutions now hold stock in excess of $136,000,000.

25. Question. Who would subscribe to the capital stock of the Corporation?

Answer. A portion of the capital stock of the Corporation would be subscribed for by the Secretary of the Treasury. The balance would be subscribed by nonprofit cooperative ownership housing corporations and nonprofit corporations borrowing funds from the Corporation.

26. Question. How much capital stock would the Government purchase?

Answer. The maximum amount of capital stock of this Corporation which the Federal Government would be authorized to hold at any one time is $100,000,000.

27. Question. How much stock would be subscribed by cooperative and nonprofit housing corporations?

Answer. The maximum amount of capital stock of the Corporation which could be purchased by borrowing cooperative and nonprofit housing corporations is not prescribed in the title. The title does provide that a participating cooperative or nonprofit housing corporation shall, as a condition of obtaining a loan, subscribe for capital stock to be purchased over a period of time in an amount at least equal to 10 percent of the particular loan involved. Cooperatives would be required to purchase for cash 2½ percent when applying for the loan, 2½ percent when the project is completed, and 5 percent in installments within 20 years. Nonprofit corporations would be permitted to pay for their stock in installments over a 20-year period.

28. Question. What return would be paid on capital stock subscribed to by the Secretary of the Treasury?

Answer. The capital stock of the Corporation purchased by the Federal Government would be preferred as to dividends and assets; also, it would be entitled to cumulative dividends at a rate determined each year by the Secretary of the Treasury, taking into consideration the probable period of the stock investment and the current rate on outstanding obligations of the United States.

29. Question. What provision is made for returning the Government's investment in the stock of the Corporation?

Answer. The Government's investment in the capital stock of the Corporation would be returned to the Government in this manner: After the paid-in capital stock from participating cooperative and nonprofit housing corporations equals $50,000,000, the Corporation would begin to retire dollar for dollar, out of privately paid capital, the stock held by the Secretary of the Treasury at par plus accrued dividends. Retirement of such stock would not be authorized, however, if the net capital, reserves, and surplus of the Corporation would thereby be reduced to an amount less than $150,000,000.

30. Question. What would be the terms of mortgage loans made by the Corporation to cooperatives?

Answer. Mortgage loans to cooperatives and nonprofit housing corporations could not exceed the development cost of the housing project involved nor an amount determined by the Cooperative Housing Commissioner to be the upper limit within which housing can be provided for families of moderate income in the locality at rentals, prices or charges within their means.

Complete amortization of these loans would occur within 50 years by periodic payments. This period could be extended by the Corporation up to 60 years if the project should be refinanced at a higher interest rate (made necessary by increased cost to the Corporation of its borrowings in the private market). However, such an extension could only be made if the increased interest rate would otherwise result in increased rents or charges which would adversely affect the stability of the project.

Interest on these loans would be at a fixed rate on unpaid balances, which is determined on the basis of the cost to the Corporation of its capital and borrowings, plus its costs of operation and its reserves. See also the answer to question 41 which explains in greater detail how the interest would be arrived at.

Provisions could be made in the loan for deferment of principal and interest payments provided that the deferments did not extend the loan maturity for over 3 years.

31. Question. Is the maximum mortgage maturity permitted under this title too long?

Answer. No. In the case of conventional sales and rental housing, mortgage maturities are generally established at periods which are far less than they would be if they were based on the anticipated physical life of the buildings. These maturities are generally related to the shortest anticipated economic life of the structures. In the case of one- and two-family homes, particularly, maximum allowance is made for the possible encroachment of inharmonious and blighting uses of land in the neighborhood. In the case of rental housing, further allowance is necessarily made for the fact that business investors in such housing are often motivated by a desire to obtain the highest possible yield during the early life of the project. For this purpose, corners are often cut in the design, construction, and maintenance of rental housing. This fact and factors such as depreciation schedules for tax purposes or the mere traditional practice of lending institutions often lead to shorter maturities in the case of rental housing.

Experience has shown, however, that residents of an area, if motivated and combined by a common purpose, can sucessfully prevent the encroachment of undesired uses or blight, and that conservative operation of rental housing can prolong the economic life of such housing for periods far longer than customary mortgage maturities. These facts are particularly true of cooperative projects, in which the occupants form a closely organized group from the outset, and in which first choice of purchase of a member's interest is required to be given to the cooperative. It should be noted, too, that, under this title, a mortgage loan would be approved only after a determination that the "location and physical planning of the housing project will afford reasonable assurance as to the stability of the neighborhood." Furthermore, the cooperative and other nonprofit corporations eligible for mortgage loans under this title will not be motivated by desire for profit and will not attempt (as business investors often do) to obtain a maximum financial yield by "milking" the project during the early years. Instead, they will be motivated, in their planning, construction, and maintenance, by the desire to obtain maximum usefulness and stability of the projects during the entire period of their physical life.

32. Question. Is mortgage credit presently available to housing cooperatives from private sources?

Answer. No. The evidence presented to the Banking and Currency Committee established overwhelmingly that mortgage credit is not generally available from private lending sources to this relatively new form of private enterprise. Even where FHA mortgage insurance is available, many lenders are reluctant to enter into a transaction which may prove somewhat troublesome to them merely because it is, for the time being, unfamiliar.

33. Question. How would the title permit private capital from other sources to be invested in construction loans to cooperatives in place of construction loans by the Corporation?

Answer. The title would expressly permit a borrowing cooperative or nonprofit housing corporation, with the consent of the Corporation, to pledge the contract or commitment of the Corporation that it will make a mortgage loan as security for a construction loan to be obtained by the borrower from a private lender. Thus, where construction credit is available from other private sources, the title would encourage reliance on such sources, rather than on the Corporation.

34. Question. How would the Corporation raise the money to make the loans, apart from subscription to capital stock?

Answer. The Corporation would be authorized to issue and have outstanding on and after July 1, 1950, obligations guaranteed as to principal and interest by the United States, in an amount not to exceed $300,000,000. One year later this amount could be

increased, with the approval of the President, by additional amounts aggregating not more than $1,700,000,000. In no event could the total outstanding obligations of the Corporation exceed $2,000,000,000; or 15 times its capital stock and surplus; or the amount of the unpaid balance of the mortgages contracted for or held by it, plus its investments and cash on hand and on deposit.

35. Question. Would there be any loss in connection with the Corporation's construction loans because of the cost of inspections or other services?

Answer. No. The cost of inspection and other services during construction of a project is to be borne by the borrower, as is customary in the case of construction loans. In addition to interest on the mortgage loan, the Corporation may charge up to 2½ percent of the loan principal for this purpose.

36. Question. What provisions are made for reserves of the Corporation to cover possible losses on mortgage loans made by it?

Answer. The Corporation would be required to establish a reserve for losses into which one-fourth of 1 percent per year on the outstanding balance of mortgage loans would be paid in semiannual installments. The Cooperative Housing Commissioner would also be authorized to require the Corporation to establish and maintain such other reserves as he deems to be necessary, and to make appropriate charge-offs for depreciation or impairment of assets. Dividends would be declared only from net earnings after such reserves and charges, and with the prior approval of the Commissioner.

37. Question. How does the Corporation's reserve for losses compare with FHA mortgage insurance experience?
